ABSTRACT

The New Brunswick Mineral History Database was compiled over a five-year period and edited/formatted for quick keyword searches. The data on metallic mineral occurrences have also been coded to comply with the New Brunswick Mineral Occurrence Database. One hundred and nineteen new occurrences have been entered into this system.

The database comprises more than ten thousand records of transcribed articles, primarily derived from old newspapers on file (i.e., microfilm format) at the Saint John Public Library, but also from the files of the New Brunswick Department of Natural Resources and from less accessible archived sources.

RÉSUMÉ

On a compilé les données de la base de données historiques minérales du Nouveau-Brunswick au cours d'une période de cinq ans et on les a révisées et formatées de manière à permettre des recherches rapides de mots-clés. Les données sur les gisements de minerais métalliques ont aussi été codées pour se conformer à la base de données informatisée des gisements minéraux du Nouveau-Brunswick. Cent dix-neuf nouveaux gisements ont été entrés dans ce système.

La base de données comprend plus de 10 000 enregistrements d'articles transcrits, provenant principalement d'anciens journaux conservés sur microfiches (c.-à-d. sur microfilms) par la bibliothèque publique de Saint-Jean, mais également de dossiers du ministère des Ressources naturelles du Nouveau-Brunswick et de sources archivées moins accessibles.

AKNOWLEDGEMENTS

Funding for the production of this document was provided by the New Brunswick Department of Natural Resources, Minerals, Policy and Planning Division. The manuscript was reviewed by Paul Rennick and Malcolm McLeod. Paul Rennick and Erinn Arnold modified the original dataset (ASCII) and imported the data into a MS Access database. The data in the MS Access database was revised and edited by Sara Johnston, then reformatted to create the PDF files attached.

Appendix 6 Hydrocarbon occurrences 1349

Appendix 7 Miscellaneous coded data 1731

INTRODUCTION

The data collected and compiled here is the product of work over a five-year period accessing various archival storage facilities around the province. Most data was accessed through microfilm and hard copy reports and publications held at the Saint John Public Library. Some research was also carried out at the Provincial Archives in Fredericton, at the Department of Natural Resources offices in Fredericton and Sussex, and at the Halifax Public Library and Nova Scotia Provincial Archives in Halifax. A small amount of data was derived from miscellaneous sources.

DATA COLLECTION PROCEDURES AND QUALITY

At all data sources, the publications were quickly scanned for any item of a mining, prospecting or geoscientific nature. A few rechecks of some sources (primarily the newspapers) suggests that over 95% of the targeted items were identified for transcription. Appendix 1 gives a listing of the newspapers covered and the time period covered by each publication. Searching and transcribing data is at least 90% complete for the pre-1890 period, 70% complete for the 1890-1900 period, with decreasing percentages of coverage for each successive decade through to the present day.

Data from hardcopy sources was transcribed in ASCII format directly from the original documents or from photocopies of the original documents. The quality (ie. readability) of the data was excellent. Subsequently, the final versions of edited documents were converted to Microsoft Access format and exported to PDF files. Data from microfilm sources was transcribed from either photocopies of the microfilm, and or from copies made by a digital camera, viewed on one computer screen as they were transcribed on to another computer. For the most part, the quality of the data was good, however, a small percentage of the microfilm copies were difficult to read and the transcription may not be 100% accurate. Where a word or phrase was unreadable the symbol sequence "...?..." was used.

Due to the large volume of data transcribed, the initial transcriptions have only gone through a cursory editing. The data was spell-checked and corrected, however, where spelling errors occurred within the original data they were usually not corrected in the transcriptions, particularly for names of places or individuals, mineral names, etc, where the correct spelling or use was unclear. Subsequently, further edits and reorganization of the data was conducted by departmental staff.

During the cursory editing procedure some items were found to be incomplete or partially lost (since transcription). Those discovered have been corrected. However, since these errors were found through random searches, more may be present. For the correct version of any incomplete or garbled items, the user should refer to the original source of the item.

CODING SYSTEM

As the data was being transcribed a letter + number code or codes (e.g. A6, Z2, etc.) were assigned to each item, primarily referring to individual mineral occurrences, but also to more general topics. Some of these codes were eventually changed to existing metallic mineral codes (0001 to 1405) used within the department's Metallic Mineral Occurrence Database (see Appendix 2 for listing). Some were changed to new code numbers (2000 to 2118) if they were readily identifiable as new bona fide mineral occurrences (see Appendix 3 for listing). These occurrences have since been added to the Metallic Mineral Occurrence Database. Metallic mineral occurrences that are too vague in their description or location to be definitely identified have retained their original letter + number codes (see Appendix 4); as have industrial occurrences (see Appendix 5), hydrocarbon occurrences (Appendix 6) and miscellaneous topics (Appendix 7).

The codes are searchable within the historical database, on the basis of their assigned codes, as well as by user-defined keywords in the description table.

DATA USAGE

This data has a number of uses from an historical and a practical point of view. A comprehensive overview of the data will give a much fuller and complete history of the activities and politics of the exploration and mining industry than is currently available. For example, it can be seen that the legal and political climate for much of the 1800's was not very conducive to exploration, particularly for the precious metals. This is the most likely the main reason for a lack of gold exploration within the province until more recent times.

For the prospector, a number of deposits and old mines have been brought to light which have long been forgotten. These are definitely worth re-evaluating given the advancements in exploration and mining techniques, as well as the changes in demands and prices of various commodities since historical times. Further, the data set often describes deposits which have not yet been included in the provinces datasets due to their descriptions being too vague to quantify for the file. Many of these may be well worth investigating further. New data on the Giberson gold occurrence, for example, can be found in this data set.

For the geologist, there are a few drill logs or descriptions of outcrops that are not included on the current maps that may be useful in interpreting or re-interpreting the geology or metallogeny of several areas. These descriptions have been made by amateur and professional geologists over the years but are not contained in easily accessible reports. For example Gesner wrote a series of 7 articles on the geology of southern New Brunswick in 1837 before he became provincial geologist. Various other geologists wrote articles or gave lectures that appeared in various provincial newspapers that include data and ideas that may not have appeared in their more formal reports.

AN EXAMPLE OF THE USE OF THE DATA (The history of the Piskahegan gold mine)

In the fall of 1838, Dr. Samuel Gove of St. Andrews, was returning from a house call at Peltoma, at the headwaters of the Piskahegan River. A year previously (1836-7) the more educated citizens of St. Andrews had formed the Geological and Mineralogical Society of St. Andrews and had Capt. Yule of that town acquire a collection of rocks, minerals and mineralogical equipment in England when his ship had journeyed there. Dr. Abraham Gesner had donated several specimens representing Charlotte County to the association a month or so previous to Dr. Gove's visit to Peltoma, following his initial geological survey of the county. Consequently Dr. Gove had minerals on his mind as he made the long drive back from Peltoma. As he passed through the sparsely settled neighborhood of Piskahegan he noted a white rock by the side of the road which he supposed to be marble. On closer examination he found the white rock to contain several shiny particles, which he concluded were mundic (pyrite or fool's gold).

He collected a sample for the association's collection and did not think of it again until gold was discovered in California in 1848-9 when Dr. Gove decided that the marble was actually quartz and the mundic was gold. However, he did not have time to follow up on this revelation. Twenty years later, in 1868, D.B. White, a Scotsman and local science and geology teacher, was rambling through the woods near the Piskahegan and discovered some quartz veins containing a metallic mineral. As he had a hammer with him he collected some samples for later examination. He was familiar with the story of Dr. Gove's gold discovery and when he returned to St. Andrew showed the specimens to Dr. Gove without informing him of where the quartz had been found. Dr. Gove identified the particles as pure gold, varying in size from "snipe" up to BB shot.

Over the next five years they kept their discovery secret and attempted to acquire the land in the area, with limited success. Gove acquired a land grant in his own name and apparently purchased three properties, one from Josiah True and two from Sergt. Mitchell, totalling about 600 acres. They do not appear to have acquired any of the other properties in the area.

In 1871, Dr. Seymour of Calais, had reported finding gold on his farm, 25 kilometres from St. Stephen on the old Fredericton Road and to the west of Piskahegan. This discovery would appear to be located at or near the bridge crossing Clarence Stream (in the immediate vicinity of the present Clarence Stream gold occurrences).

With this new discovery in mind and in anticipation of a gold rush, Gove and White, in 1872, announced their discovery and were soliciting potential investors, again with some success. They advertised their property as hosting several quartz veins varying from a few inches to three feet in width, which "from present appearance are equal to the richest lodes in California."

Gove and White seem to have been unaware at the time of their announcement that gold on land grants was reserved for the Crown, so that it was not until the 30th of August in 1873 that they received a mining license covering the four lots of land that they owned, all in the name of Dr. Gove. This license gave them the precious mineral rights, as well as the right to develop the property, subject to royalties to the Crown. No result of their work at this time is currently available.

The provincial legislature, in 1873, had instituted a program of prospecting grants to help develop the mineral resources of the province. In 1874 Samuel Gove applied for and received a $150 grant. In those days this would have been enough to pay a prospector for a full year. No record of how this money was spent has been found.

No further work in the area is reported until 1890 when the Encyclopedia Britannica reports that near St. Stephen "gold occurs in quartz veins in micaceous schist, and in the same neighborhood in a black plumbaginous slate". (NOTE: plumbaginous = graphitic). This may refer to the Moore's Mills area, however, at this time Dr. Gove's son Harry, reports finding a coal mine at Piskahegan, on which he intended sinking a shaft to evaluate its potential. Since the Musquash coal mine was then under going development, coal was on everyone's minds. The following year, in 1891, Prof. Roberts, a mineralogist from Philadelphia was visiting the Musquash mine, in order to evaluate its potential. Harry Gove invited the professor to visit the Piskahegan area to give an opinion on the coal bed. The professor pronounced the bed to actually be a plumbaginous slate and that it looked more promising for its gold and silver potential "in seemingly paying quantities. Gleams of gold." were " visible by the aid of the microscope in pieces of the ore." Prof. Roberts was reportedly "astonished at the apparent richness and extent of the vein. It" was "totally unlike the formations around it." Gove announced the property was not for sale until they had fully evaluated its gold potential.

This report of gold had apparently leaked out prematurely, however. In 1891 a new Mining Act had been introduced making mineral claims surveyable for up to 5 square miles. In July of that year Daniel Dewitt had staked the old Shear mine to the east, drawing attention to the commodity gold. (The Shear mine had originally been discovered by a Mr. Talent in 1868 who tried to operate it as a silver mine. DeWitt sank the shaft to 14 feet at that time and worked the property until 1905 when John Shearer appears to have taken over.) On the 27th of October of that year James McLean, a prospector and developer of some of the Letite copper deposits staked a claim at Piskahegan, 2 miles by 2 1/2 miles square, covering part of Gove's area of interest, excluding the area of Samuel Gove's original 1873 mining license which was still in effect. Harry Gove responded quickly and staked a similar sized claim on the 11th of November adjacent to the McLean claim. No record of either of their work has been found.

The land grant to Gove included the site of the present Piskahegan bridge. Since this area was well known as an excellent fishing and hunting area the Gove's built a fishing lodge, probably close to the site of the present bridge. The lodge was frequented by fishers and hunters year round (possibly as a commercial operation) and the guests were encouraged to prospect for gold when not fishing. One such guest, Joseph Johnson, while hunting, found a quartz vein. "He had fired at a partridge, and the shot had unloosed the secret of the hills." The vein when sampled and assayed in Fredericton contained $500 gold per ton (gold at the time was fixed at $20.67). Johnson reportedly acquired the necessary licence to the vein, although no record remains of this.

The Gove property at Piskahegan was eventually sold in 1913 at an estate sale to William Carson for $501. Soon after there was "a mild stampede, on for the new gold fields. Staid citizens, men of wealth, men of mining experience in Alaska and Klondyke, and men with no experience" participated. Among the prospectors to the area were the Grimmers (who were at the time actively involved in the St. Stephen nickel mine) and Nathan Treadwell. The latter was one of the "men of experience in Alaska". Treadwell was one of three brothers extensively involved in mining in California, Alaska, and the Yukon, who together were millionaires several times over. The Treadwell mine near Juneau was the largest and richest gold mine in the world at the time. The Treadwells, as it turns out, were St. Andrews born and bred and maintained ties with New Brunswick and its prospecting activity (but this is another story!). Treadwell reported that he "had found considerable float quartz with stringers running through it, carrying gold in minute quantities ...... spread over a large area, and it does not seem to vary in its percentage of richness." He thought that unless a greater body of gold was found he did not think that it was worth the working. Given the Treadwell reputation for highly successful gold, coal and mercury mining, this statement probably killed off the enthusiasm of the local prospectors and these gold discoveries have since been forgotten until the recent rediscovery of the Clarence Stream deposits by Reg Cox.

APPENDIX 2

PREVIOUSLY CODED MINERAL OCCURRENCES REFERRED TO IN DATA

URN	NAME
0001	New Horton copper
0002	Quaco manganese
0004	Quispamsis lead
0007	Lake George antimony
0019	Wheal Louisiana copper
0027	Peekaboo Corner lead-zinc
0030	Teahan Mine
0031	Sloop Cove
0033	Scott Falls
0035	Cape Spencer
0036	Goshen
0038	Red Head Harbor
0039	Rogers Farm - St. Stephen nickel
0040	Elgin (Coverdale) gold
0041	Jordan Mountain copper
0043	Hall-Carroll - St. Stephen
0044	Mount Pleasant
0045	Burnthill
0048	Manzer Giberson
0049	Tetagouche Falls Manganese
0051	Bathurst Copper
0054	Brunswick #12
0056	Lumsden
0059	Shippegan uranium
0062	Orvan Brook
0065	Pabineau Lake
0069	Austin Brook
0084	Serpentine River
0087	Dorchester copper
0125	Beresford copper
0126	Nigadoo
0144	Brunswick #6
0156	Blue Mountain gold
0164	Shear Mine
0228	S.J. River gold
0248	Dominion #1
0261	Biggar Ridge gold
0263	Centreville gold
0275	Woodstock Fe (contains data on all Woodstock Fe occurrences)
0276	West Beach
0309	Welshpool
0310	Adams Island
0311	Letete

0320	East Memramcook
0368	Keymet
0425	Millstream iron
0427	Rocky Brook #2
0469	Gold Brook
0489	York Mills
0530	Pokiok River
0533	Temple
0543	Lorneville
0544	Frenchman's Creek
0547	Gooseberry Village
0550	Loch Alva
0563	Lepreau River
0577	Beaver Harbor
0579	Woodlands Cove
0582	Crow Cove
0586	Magaguadavic River / Silver Island
0590	Lepreau magnetite
0597	Simpson Island
0599	Long Island
0603	Frye Island
0604	Simpson Mine
0605	Letang Peninsula
0606	Hatt Farm
0607	Letang Peninsula
0608	Dick Farm
0612	Oliver Cameron
0632	Moores Mills
0633	Basswood Ridge
0639	Dickson Brook
0643	Gowland Mountain
0645	Waterside manganese
0646	Albert manganese
0651	Midway
0662	Vernon mine
0663	Mild Brook
0666	Muniac River
0669	Tobique River
0678	Quaco Road
0681	West Beach magnetite
0688	Gold Mine Gully
0690	Glebe manganese
0691	Markhamville manganese
0692	Marrtown
0693	Stewarton
0696	Stewarton

0697	Hampton uranium
0705	Tantramar copper
0707	Dawson Settlement
0712	Memel manganese
0713	Shepody Mountain copper
0719	Turtle Creek
0721	Shepody mountain manganese
0722	Sawmill Creek
0723	Memramcook
0732	Swallowtail Point
0743	Adamsville bog manganese
0744	Coal Creek
0755	Annidale mine
0756	Cobbler Sexton
0757	Bull Creek
0758	Britton mine
0762	Windgap Brook
0763	Jordan mountain
0783	Nauwigewauk
0802	Martin Head
0880	Goose Creek
0901	Elmtree
1071	Bull Creek #1
1079	Tetagouche copper
1405	Clarence Stream

URN: 0001 / Names: New Horton Copper;

Weekly Freeman - Jul. 22, 1882 A copper mine is said to have been discovered on Chas. Teed's farm, parish of Dorchester, Westmorland Co."

Moncton Daily Times - Jul. 21, 1882 The Albert Maple Leaf learns that two or three mines of copper and coal have been found in that county and give promise of abundant yields. Albert county no doubt contains valuable mineral deposits."

Moncton Daily Times - Jun. 9, 1882 Albert Co. - Messrs. Carvell, Judge Steadman and Mr. Wilder were in town last week and visited several places in the county, searching for profitable mines. Mr.Harrigan has six more men working steady at the copper mine on Mr. Reid's property in New Horton."

S.J. Globe - May 29, 1882 and Daily Telegraph - May 29, 1882Copper Mine. - Dr. A.A. Chandler, of the firm of Carvell, Wilder & Co., has, during the past week, located some valuable copper veins in New Horton, Albert County. He has also discovered a large deposit of manganese onthe same property upon which the company have already commenced to sink shafts. The company have been busily engaged during the past few months in developing their mining property at Malagash, N.S. –

S.J. Globe - Feb. 3, 1882 and S.J. Daily Sun - Feb. 3, 1882 Copper in Albert County. - The Albert Maple Leaf reports that Messrs. Steadman & Bennett have refused an offer of $10,000 for the copper mine on the Wilbur farm, New Horton."

Moncton Daily Times - Jan. 30, 1882 The copper mine of Messrs. Steadman and Bennett, at New Horton, A.C., bids fair to outstrip the Dorchester bonanza. Ten thousand dollars have been refused by the proprietors. - Ex."

Weekly Freeman - Jan. 21, 1882 Copper has been discovered on the Dixon property, Harvey, A.C."

Daily Telegraph - Jan. 17, 1882 Copper. - A discovery of copper ore, said to be rich, has been made on the old Dixon estate, parish of Harvey, A.C. This property is owned by a number of the heirs of the late Thomas Dixon. It is reported that the Wilder party, with headquarters at Moncton, have been informed by a gentleman from Albert that the discoveries are very promising, but we have not learned of any negotiations as yet. - Times."

Moncton Daily Times - Jan. 16, 1882 Copper. - A discovery of copper ore, said to be rich, has been made on the old Dixon estate, Parish of Harvey, A.C. This property is owned by a number of the heirs of the late Thomas Dixon. It is reported that the Wilder party, with headquarters at Moncton, have been informed by a gentleman from Albert that the discoveries are very promising, but we have not learned of any negotiations as yet. A fine deposit of copper ore, it is said, has been found on the farm of John Fisher, Upper Woodstock."

S. J. Daily Sun - Feb. 27, 1883 Albert. - ....New Horton.- .... Pockets of rich grey carbonate of copper have been found, and an attempt to work it was made several years ago by Messrs. Harris & Co., of St. John. A number of tons of ore were raised, but as no well defined seam was found it was abandoned. Numerous explorations have since been made, but no vein has yet been discovered. .... There are many indications that it is aprobable coal bed. The freestones of Harvey are sub-carboniferous and contain many small seams and pockets of coal, evidently forced into crevices when in a semi-fluid state. ....In front of it and superior to it is the more recent gray sandstone. Geologists who have made superficial examination assert that the ice and other dissolving agencies have removed all the carboniferous deposit from this section. But the coal shales, which overlie the coal, still exist and may be seen in many places outcropping. In the lower portion of the plain coal has been found. In the explorations for coal in Albert County this section appears to have been entirely overlooked."

St. John Star - Apr. 25, 1901 and N.B. Reporter - May 1, 1901 Mining experts, representing American companies, have recently been prospecting for copper at New Horton, Albert Co. Promising deposits are reported to have been found."

S.J. Daily Sun - Apr. 11, 1881 The Mineral Wealth of Albert. - Hillsboro, April 4th, 1881. Mr. Editor:- I have noticed from time to time that reference has been made to the mines and minerals of Albert County. So the Frenchman said of London, it is a province covered and filled with mines and minerals; and - much has been said and written, perhaps the half hasnot yet been told. Beginning at the boundary line between Albert and St. John Counties, we find copper all along the bay shore as far east as Salmon River, where a company is about being formed by Messrs. Cleveland and Steadman, with a capital of $100,000. We wish the enterprise every success. Coming up to Harvey we find a valuable depositof the same mineral at New Horton. At Harvey Point wefind the famous freestone quarries of Messrs. Roberts & Stevens. From these quarries a large number of the stone buildings of Boston and New York have been built. Coming up to Hopewell are the famous stone quarries of Messrs. Hayden, employing a number of men. At or near the Hill Corner has been discovered of late, manganese said to beworth $130 per ton. The company is about commencing operations on a large scale. In Salem manganese has beendiscovered on the farm of Jeremiah Steeves, only awaiting further developments. The lime stone worked by Messrs. McHenry, as well as the plaster quarries of J.T.Tompkins, are considered inexhaustible. That yellow metalso much coveted called gold has been discovered at New Ireland. We learn that searching and exploring willcommence immediately. We are indeed sorry to say that thefamous Albert coal mine is about to close, the deposit of Albertite, worth $25 per ton, having about run out. During the twenty-two years it has been worked, about $4,000,000 worth of that wonderful coal has been raised. Yet it is the opinion of experienced miners that the Albert mine is only a branch of the grand trunk and that the grand trunk is in Baltimore, about four miles west of the Albert mine. Miners tell us that the course of the coal in the Albert Mines is east and west, and as the mountains of shale in Baltimore more correspond exactly with the shale at the Albert mines, and the course is directly west, it looks both reasonable and probable that the Albert coal, so called, exists in mammoth deposits in Baltimore; and, as further proof of coal in that place, small pieces of coal precisely like the Albertite coal can be picked up at any time in the small brooks and rivulets running through those shale regions, which, of course, have been washed out in times of heavy rains. And as those undeveloped coal fields, as we believe them to be, are only four miles from the Albert Railway, and a level grade to and from, the means of transportation would be both cheap and easy; and we believe that if a little capital now lying idle in England and other countries was expended in Baltimore, the remuneration might be counted by millions. Yours, A.B."

URN: 0001 / 2035 / Names: New Horton Copper; Harvey Manganese;

Moncton Daily Times - Nov. 11, 1881 Albert County News Items . - (Maple Leaf). -Manganese. - The mine on Mr. Newcomb's farm is being steadily worked. One of the leads has been lost but by sinking deeper two other leads have been struck that are being profitably worked. W.C. Pipe, Esq., was put in charge by the Hopewell Manganese Co., and keeps two and three men at work. Copper. - A sample of copper ore was left at this office the first of the week by Mr. Chipman Reid, which was taken from his farm, at New Horton, Harvey. The mine on this property was worked by Messrs. Harris & Allen, of St. John twenty years ago. At that time the firm fearedto expend a large amount of money in sinking a shaft, and were also carrying on a successful foundry business which they could not neglect."

St. Croix Courier - Dec. 15, 1881 and Moncton Daily Times - Dec. 19, 1881 The property of the St. Martins Manganese Companyis located at West Quaco, N.B. about thirty miles east of St. John, and immediately adjoining the Bay of Fundy. Work on the mine has been prosecuted diligently for over a year, all necessary machinery having been first provided; and the property has been brought to a satisfactory paying condition. A large quantity of ore has been developed, all of it averaging a high value. At present, the management devotes its attention strictly to development, its membership including some of the most eminent business men of Boston. - Mining Journal."

Chignecto Post - Oct. 27, 1881 St. Martins shipped 200 tons of manganese last week."

S.J. Daily Sun - Apr. 8, 1881 At the annual meeting of the St. Martin's Manganese Company held at its office in Boston on Tuesday morning, the following officers were elected; President, Wm. B. Fowler; Directors, Frank B. Dole, Oscar F. How, C. Warren Osborne and J.H. Harding; Secretary and Treasurer, J. Wesley Kimball."

S.J. Globe - Jun. 19, 1882 St. Martins. - The Manganese mines, under the direction of Mr. Jno. W. Burgess, of Boston, are doing excellent work, the output for this year being largely on the increase. The price per ton ranges from $18 to $24 and is proving a very valuable investment."

Daily Telegraph - May 20, 1882 St. Martins. - The St. Martins Manganese Co are doing a good business, and are making extensive improvements in their works; they have now a schooner running in connection with the mine, which carries the ore direct from the mine to St. John."

St. Croix Courier - May 11, 1882 The St. Martin's Manganese mine at West Quaco, N.B., is being actively and successfully worked by a Boston Company, of which Wm. B. Fowle is President, and Oscar F. Howe, C.W. Osborne, Frank B. Dole of Boston and Simeon Jones of St. John are Directors. Twenty men are employed and large quantities of manganese are being taken out and shipped to Boston. The vein is said to be over thirty feet wide, and the property of the company embraces

URN: 0002 / Names: Quaco Manganese;

S.J. Daily Sun - Feb. 23, 1886 St. Martins. - Mr. Stockbridge of Boston, president of the Quaco Manganese Mining Co., has written to some parties here that the company intend operating the manganese works in Quaco in the spring. It is generally conceded that the whole Head on the west abounds with this mineral, that it is of excellent quality, and would prove a great source of wealth to the operator."

S.J. Daily Sun - Jul. 7, 1888 The Brunswick Manganese Co.- The Sun is informed that the Brunswick Manganese Co., on account of whose property and operations at St. Martins was recently given in the Sun, are meeting with fine success as the work of prospecting progresses. Good pockets are being discovered in the various drifts, the ore is of first class quality, and altogether the developments are of a most promising character. The company seem to have a good thing, and what is more they have the energy essential to success."

S.J. Daily Sun - Jun. 21, 1888 Fair St. Martins. - ...The Brunswick Manganese Company. - An industry that promises to do much for Quaco is that being at present prosecuted by the Brunswick Manganese Co. Some years ago mining operations were carried on there by a company who from a pocket which they discovered shipped between 300 and 400 tons of manganese to the English market. That company ceased operations, and for a long time nothing further was done. A new company has now been organized under the above title and work has been resumed. The company hold, partly in fee and partly by long lease, over a thousand acres of land, including Quaco Head, where the former work was carried on. There are indications of the presence of manganese in large quantities, and better facilities for the profitable prosecution of the work could not be found anywhere. The writer paid a visit last week to the spot where the employees of the new company had just commenced work. They were clearing away the debris that had accumulated since the old company ceased operations at the same place. The mine, if so it may be termed, is in the notch at the extremity of Quaco Head near the lighthouse, and overlooking the Bay of Fundy. The face of the rock rises almost perpendicularly from the water for nearly 200 feet. In the face of this rock the excavation was made by the old company, and here the new one will direct a portion of its energies to the further development of the work. A wharf built away above the highest tide mark, fits into the notch and forms the base of operations. Standing on the wharf the visitor is perched between the beach, a considerable distance below, and the top of the cliff which looms above, the latter being reached by means of a long stairway down the face of the declivity at one side of the notch. There is a wild grandeur about the place which words cannot describe. The frowning heights above, rising first abruptly, and then sloping back and densely wooded, the waters breaking on the beach below, and the wide stretch of bay and distant shore combine to render the effect sublime. From the wharf a pier was formerly built out far enough to enable a vessel to lie alongside and take in cargo. On the wharf the manganese can be wheeled from the hole in the rock, against the face of which the wharf is built; here it can be dried, washed, broken, separated according to grade or quality, packed into kerosene barrels and placed on board the vessel to be carried to market. To what extent the old company exhausted the ore to be found in this particular spot, remains of course to be determined, but the present operators are confident that the old wharf has not yet outlived its usefulness. They are now, as before stated, clearing away and getting ready for actual work. They will also prospect on other portions of the property, at the same time. Their force will be for the present small. From twelve to twenty men will be employed at different points during the summer making excavations. The manganese is found in pockets, and the operators are confident that these occur frequently in the rock forming Quaco Head and adjacent heights. A substantial blacksmith shop is being built on the height above the wharf already described. Walter R. Stockbridge, manager and treasurer for the company, and who by the way is a brother-in-law to Joe Howard, so well known to readers of the Boston Globe and other great American papers, as well as the Life of Beecher, written immediately after the great preacher's death, informed the Sun representative that the company proposed to make their operations a permanent thing, feeling warranted by the indications in the belief that there was room for a profitable development of the industry. The work, therefore, is not a mere experiment, and there is reason to believe that ere long it will be one of the prominent industries of Quaco. One of the great advantages in carrying on the work is the facility for shipment of the product. The company is composed of Boston capitalists. The superintendent of the work is J.C. Morrison of Quaco, a gentleman of considerable experience and who expresses a firm conviction that Quaco Head is a mine of wealth as well as a striking feature in the scenery of that picturesque region. The Sun representative was shown samples of manganese fresh from the rock. It was of excellent quality, showing clearly the peculiar crystalline form taken by that mineral. Mr. Stockbridge, speaking of the village and its surroundings expressed great admiration of its beauty, and appreciation of its varied charms as a healthful and pleasant resort for summer visitors."

Daily Telegraph - Jun. 11, 1888 St. Martins. - June 10. - Mr. Stockbridge, of Boston, president of the St. Martins Manganese Mining Company, is here, and intends opening the manganese mine at Quaco Head. On Monday next Mr. John C. Morrison, of this place, will be in charge of the operation."

S.J. Daily Sun - May 22, 1888 Manganese. - It is said that W.H. Rourke of St. Martins proposes to develop the manganese mine in that locality. The mineral is known to exist there, Mr. Gould, lately connected with the Stockton mine of Sussex, having operated there some years ago. Mr. Rourke, the Sun's informant says, will have an experienced miner at work next week."

Moncton Daily Transcript - Aug. 10, 1888 and Weekly Record - Fri., Aug. 10, 1888 The manganese mines at St. Martins near the lighthouse which was opened about five years ago and abandoned after a few months work, has been lately reopened by an American capitalist under whose management, large and paying quantities of very fine ore are being taken out. It is only a matter of time when our province will take the rank which belongs to it as one of the finest mining fields on this continent."

URN: 0002 / Names: Quaco Manganese;
Daily Telegraph - Jul. 26, 1889St. Martins. - It is understood that a new company formed in Boston with H.H.D. Pierce as president, has purchased the manganese mines at this place, and the work of opening the mines is to be proceeded with at

Moncton Daily Transcript - Dec. 30, 1889 Manganese in large quantities has been discovered on a property near St. Martins owned by St. John parties."

S.J.Globe - Dec. 28, 1889 and S.J. Daily Sun - Dec. 30, 1889 Manganese in large quantities has been discovered on a property near St. Martins owned by St. John parties. The mineral is believed to be of a very superior quality, and some specimens shown local geologists were pronounced to be very pure. Samples have been sent to Boston to be examined by experts, and if the report is favorable steps will be taken to commence mining at once. The property comprises about 50 acres, all of which is understood to be this valuable ore. -[Globe"

S.J. Evening Gazette - Dec. 6, 1890 St. Martins. - The manganese mines are closed down for a short time on account of the cold weather, and the short days."

Daily Telegraph - Sep. 8, 1890 St. Martins. - The Brunswick manganese mines will soon be ready for operation, the machinery being nearly all in position. The improvements will yield about 150 tons of the mineral a day, and if from this 10 per cent is realized in manganese then the mines will be very profitable."

Daily Telegraph - Aug. 25, 1890 The plant at present being put in position at the St. Martins manganese mine is the most perfect and complete on the continent, and the prospects of paying business are good."

Weekly Record - Fri. Sept. 19, 1890 According to an account in the SUN recently the parties interested in the development of the manganese mine at Quaco are making good progress in opening up the same. A lot of new machinery has been and is being placed in position. It is said the rock which holds the manganese carries fully 30 per cent of the ore and a large building is about completed for containing necessary machinery. They have a 40 HP engine and 50 HP boiler. The mill will have capacity for handling 150 tons of rock per day. There are about 20 men at work and it is intended to increase the force to about 80. Mr. Lyons, the superintendent, is a practical and experienced man in the business."

Fredericton Daily Gleaner - Sep. 24, 1890 A Big Manganese Bed. - James Rourke, M.P.P., of St. Martins, St. John, is about to develop one of the richest deposits of manganese in America on property at St. Martins within easy reach of shipment. Experts pronounce the find a most valuable one."

S.J. Evening Gazette - Jun. 12, 1890 The Manganese Company, West Quaco, have resumed work, the old company having sold out to the present management."

S.J. Daily Sun - Sep. 24, 1890 A big manganese bed. - Jas. Rourke, M.P.P. of St.Martins, is about developing one of the richest deposits of manganese in America on property of St. Martins within easy reach of shipment. Experts pronounce the field a most valuable one."

URN: 0002 / Names: Quaco Manganese;

S.J. Daily Sun - Sep. 13, 1890 Quaco Manganese. - The Brunswick Mine Being Fitted With the Latest Improved Machinery. - That there is an almost inexhaustible supply of manganese at West Quaco is well known. Ore was taken from this mine about 40 years ago and since then several companies have worked it, but only to sink money. These companies removed probably 3000 tons of the ore, which was shipped to the United States and Europe. Satisfied that the mine could be made to pay handsomely, a number of American capitalists formed the Brunswick Manganese Mining company and took hold of the mine in May last. When the superintendent, H.A. Lyons, reached West Quaco he found that there were no appliances on the spot for separating the ore from the rock. A large quantity of rock had been brought to surface in which there was about 30 per cent. of the ore. As it stood it was utterly useless. It was then determined to erect a mill for separating the ore from the stone and since that time a gang of men have been engaged in its erection. The mill is just about completed and is the most complete mill of its kind in America. It is 24 x 29 feet, with an ell for the engine and engine and boiler. The machinery is of the best make and takes in all the latest improvements. Once the rock containing the ore is brought from the mine it is not handled again until it is shipped. The rock is first dumped into a Gates crusher, which grinds it up into small pieces. Then it is carried by a set of elevators to a set of chilled rollers just above the crusher. These rollers grind the stock still smaller, the largest pieces coming from them being about one quarter of an inch in diameter. These small pieces of rock and ore then pass into a screen four feet in length, which separates the large and small pieces. From this screen the rock and ore go into two jigs, which separate the rock from the ore. These jigs are filled with water which is continually moving. The ore being so much heavier than the rock sinks to the bottom and is retained while the rock is carried away by the moving water. The ore then passes into a large tank where it is thoroughly cleansed. From this tank it is carried automatically to a large store room. A run has been built from the store room leading to a small wharf where a vessel drawing 12 feet of water can lie. This wharf is only a few yards distant from the mill so that it will be seen how cheaply the ore can be handled. As stated above, the mill is almost ready to be put in operation. Already the machinery has been given a test and worked very satisfactorily. The engine is 40 horse power and the boiler 50 horse power. It is the intention of the company to ship the ore by schooner to Bessemer, Pa., for use in the extensive steel works there. The mill has a capacity of handling 150 tons of rock per day. There are 20 men at work now, but 80 men will be required to keep the mill running at full blast. The superintendent of the company, Mr. Lyons, is a man of great experience, having been in charge of the mines at South Wallingford, Vermont, for some years. He is sanguine of the success of the undertaking."

S.J. Globe - Sep. 25, 1891 The Brunswick Manganese Co. Machinery at West Quaco was attached recently, judgments having been entered against the company in favor of Mr. Mosher, Messrs. Thos. McAvity & Sons, and Messrs. W.H. Thorne & Co. Sheriff Harding on Wednesday undertook to sell the seized machinery, but before he had sold all he had realized enough to satisfy the judgments in his possession. Mr. C.J. Milligan bought in the portion sold."

S.J. Daily Sun - Sep. 26, 1893 Manganese Near St. Martins. - The manganese mine situated a short distance from St. Martins has again been opened up. This time a strong company has been formed and it is believed that a paying industry will soon be established there. Some years ago an American company operated a manganese mine in the same locality, but it was understood that the ore could not be found in sufficient quantities to pay, and so the mine was abandoned. The Sun is informed that the present company have struck a very rich seam near the old mine, which promises to yield valuable returns. The new company has already begun operations. John McCallum, a gentleman well known in this city and who has had considerable experience in mining, has a large interest in this mine."

URN: 0002 / 0276 / Names: Quaco Manganese; West Beach;

S.J. Daily Sun - Dec. 2, 1887 Iron Deposits. - In the Immediate Vicinity of St. John. - The talked-of establishment of large smelting works in this city, by American capitalists, has had the effect of directing attention to the iron deposits in the vicinity of Courtenay Bay. Though little is known as to the extent and value of these deposits, it would appear from historical records that they attracted the notice of the earliest European visitors to our shores. In Champlain's Voyages (1604), American editionof 1878, the discovery of St. John is thus described: Sailing west some six leagues we arrived at a littleriver [Quaco River] at the mouth of which is quite a low cape extending out into the sea; and a short distance inland there is a mountain [indicated on the charts Mt. Theobald] having the shape of a cardinal's hat. In this place we found an iron mine. There is anchorage here only for shallops. Four leagues west southwest is a rocky point extending out a short distance into the water, where there are strong tides which are very dangerous. Near the point we saw a cove about half a league inextent, in which we found another iron mine, also very good. [The rocky point here mentioned is McCoy's Head, four leagues west of Quaco; the cove may be that on the east into which Gardiner's Creek flows, or that on the west at the mouth of Emmerson's Creek.] Four leagues further on is a fine bay running up into the main land, at the extremity of which there are three islands and a rock; two of which are a league from the cape towards the west, and the other is at the mouth of the largest and deepest river we had yet seen, which we named the river St. John, because it was on this saint's day (June 24th, 1604) that we arrived there. By the savages it is called Ouygoudy. This river is dangerous if one does not observe carefully certain points and rocks on the two sides. It is narrow at its entrance and then becomes broader. A certain point being passed, it becomes narrower again, and forms a kind of fall between two large cliffs, where the water runs so rapidly that a piece of wood thrown in is drawn under and not seen again. But by waiting till high tide you can pass this fall very easily. [Champlain was under the misapprehension about passing the falls at high tide. The only time for passing the fall is when the waters of the sea are on a level with the waters of the river. At low tide there is a fall outward and at high tide there is a fall inward, at neither of which times can the falls be passed.] Then it expands again to the extent of about a league in some places where there are three islands. We did not explore it farther up. But Ralleau, secretary of Sieur de Monts, went there some time after to see a savage named Secondon, chief of this river, who reported that it was beautiful, large and extensive, with many meadows and fine trees, such as oaks, beeches, walnut trees, and also wild grape vines. ..... At its mouth, which is in latitude 45ø46, [should be 45ø 16] there is an iron mine. D.R. Jack, in his centennial prize essay on the History of St. John, City and County, thus refers to this mine: About this period [1607] the colonists of Port Royal frequently visited St. John for the purpose of buying beaver skins from the Indians, for the savages had a permanent settlement there, independently of those further inland. The French, ever on the alert for mineral treasures, discovered in the rocks near the falls some iron, which was converted into a knife by an ingenious mechanic. Whether any such mine exists at the present day is a question for our Provincial geologists; but if the French statement be correct, it must have been of excellent quality, for the knife so made is described as capable of cutting like a razor. Prof. Bailey, of the N.B. University, in his report on the mines and minerals of New Brunswick, submitted to the legislature in 1864, thus speaks of the iron ore on the West Beach of St. John county: The West Beach locality of iron ore was visited by me, in company with Mr. Matthew, in the summer of 1862, at which time we spent nearly a fortnight in the examination of the country in this vicinity. Soon after our return a short account of the locality was drawn up by Mr. Matthew for the Natural History society, which for convenience I shall introduce in his own words. The bed of ore at this place in which the mine has been opened is included in the upper part of a large mass of coarse, reddish-grey conglomerate, dipping to the S.E. at an angle of about 30ø, and distant a furlong from the shore. The pit or quarry, from which the ore has been extracted, has been opened in a bed of dark, reddish- brown hematite. One or more schooner loads have been taken away and a quantity still remains awaiting shipment. The conglomerate is abundantly seamed with quartz, containing scattered masses and veins of micaceous and specular iron, in tabular crystals. Two or three miles eastward from the mine the iron ore again appears on the hillside. Here, however, three or four beds of ore (one of them twenty feet thick) are visible and the associated rocks are different, consisting of beds of trap-ash, trap-ash slate and talco-micaceous slate. The ore beds were not traced on the eastern side of Black River. Were it not for their variable thickness they might be sought for here with much probability of success. A continuation of the same rocks holds beds of limestone at Emerson's Creek, a few miles to the eastward. The facilities for working this ore are therefore, in some respects, unusually good, but no smelting operations have hitherto been undertaken, From its association, it would appear that this ore was originally deposited in the state of a finely divided ferruginous mud, in a shallow sea, and within the influence of active volcanoes. Prof. Bailey adds to Mr. Matthews report, that the ore is favorably situated for mining, the fuel and flux being both abundant in the vicinity, while the transportation to Black River, or the shore in the immediate neighborhood, would not be difficult. The ore yields, as I am informed by Mr. Allison, about 68 per cent of metal. In his Observations on the Geology of Southern New Brunswick, made principally during the summer of 1864 (two years after the facts above were obtained by Mr. Matthew), Prof. Bailey, page 73, says: Iron Ores - The principal locality for this metal is the district in the vicinity of West Beach and Black River, where several large beds of hematite occur. As they are well known and were described in my report of last year it is not necessary to make further allusion to their character, than to say that one portion of the ore occurs in a coarse, reddish-grey conglomerate; the other, two or three miles to the eastward, in beds of trappean and micaceous slates. These rocks have been shown by Mr. Matthew clearly to form a portion of the Cordaite Shales in the Devonian Series. Besides the ore-beds alluded to, iron is abundant in seams and veins through most of the rocks occurring in this district, and it is not improbable that further search would reveal

URN: 0002 / 0691 / Names: Quaco Manganese; Markhamville Manganese;

Daily News - Jan. 5, 1881 New Brunswick Manganese Ores. - To the Editor of the Daily News. - Sir, - With a view of obtaining information for an English gentleman interested in manganiferous ore, I submit the following questions for answer in your paper: 1. Where and in what abundance are manganiferous ores found in New Brunswick, and what quality of ore is obtainable as per analysis. 2. In what condition, wet or dry, large or small, could it be shipped and in what quantity? 3. What degree of regularity in quality may be expected? 4. Can freight be obtained to a Bristol Channel port, and if so, what would be the price per ton of ore j.o.b. per unit of manganese? Any general information as to the iron ores in New Brunswick, such as how far the mines are developed; means and cost of transport, etc., would be acceptable. Yours, Thomas Gailey, Toronto, Ont. [A full consideration of the questions enumerated in the above would require more elaborate study and enquiry than we have at present at disposal. Manganese ores are found in numerous places in New Brunswick. Manganese usually occurs in pockets in the province, as at Markhamville, near Sussex, where the country rock is said to be an impure limestone. Large quantities of the ore have been exported from Sussex for a number of yearspast. The metal is some times accompanied by barytes orheavy spar. Owing to its occurrence in pockets, search for the metal is often attended with a good deal of delay and expense. Among places where experiments have been made, Shepody, in the county of Albert, is a manganese location. A good deal has, in former years, been mined there and exported. Tatagouche has also near the falls a number of veins of very pure oxide of manganese running through hard slates. The width of these veins is, however, very small. One hundred tons are said by Gesner to have been exported from Bathurst many years ago by the late Mr. Stevens, who started the iron works at Woodstock. Manganese mining is also carried on near Quaco to some extent. As to the purity of the ores occurring in the places mentioned we cannot speak, as to ascertain this a long and expensive explanation and chemical analysis would be required. Wad or bog manganese is said to occur in many places throughout the Province. The location of our manganese ores, their quantity and quality is a subject which it might be well for our Local Government to have investigated and reported upon. - Ed. News]"

URN: 0002 / 0691 / E5 / Y1 / Names: Quaco Manganese; Markhamville Manganese; Sussex/ Plumwesweep Salt; Salt Springs salt;

Daily Telegraph - Jul. 15, 1869 Geological. - We understand that Dr. Hunt and Prof. Bailey went on Monday morning to Sussex, where the Doctor intends to thoroughly examine the Salt Deposit. This is a subject to which this learned gentleman has of late given especial attention, having investigated most of the more remarkable localities in the Upper Provinces.They will next visit Salt Springs (so called) in Kings County and the Manganese Mine, and then proceed to Quacoto survey the manganese and other valuable deposits in that neighborhood. Mr. Weston, who for a time has been collecting fossils in the vicinity of St. John for the Museum at Montreal, went yesterday to Lepreaux for a like purpose. He will visit the principal localities surveyed last year by Prof. Bailey and Geo. Matthews, Esq."

URN: 0002 / A2 / Names: Quaco Manganese; Albert / Kings County Oil Shales;

Daily Sun - May 23, 1901 John H. Harding obit. - ... From lumberingand milling Mr. Harding turned his attention to gold and coal mining, and not very many years ago to the development of manganese in St. Martins. He was foremost in taking hold of Nova Scotia gold, when most men scouted the presence of the precious metal in that province inpaying quantity as the dream of a lunatic, and was one of the first to catch on to the value of Albert county's oil regions. Mr. Harding erected the first quartz crusher in Nova Scotia, and not only extracted gold from the product of his own mine at Rexford, but handled the output of several other mines. From Nova Scotia gold to the oil regions of Albert Co. was but a step in Mr. Harding's onward march. He was at the forefront of the development of the natural wealth of the two provinces, putting up his money and his brain as capital and risking all on the cast of a die. Nowadays promoters risk nothing. They give politicians in power the tip, a charter with a subsidy from the public treasury follows, and the credulous public subscribe the rest of the cash. Mr. Harding operated quite largely in Albert Co. He bought areas, built a refinery to extract the oil from the shale, made several large shipments to the United States of an illuminating oil superior to all others, that commanded some 80 cents a gallon, and the enterprise was on the high road to making all concerned millionaires, when the discovery of oil wells across the border came like a bolt out of a clear blue sky. The Albert shale oil company could not compete with the new product, oil fell rapidly in price, and the concern had to wind up its business. Nothing daunted by the reverse, Mr. Harding turned his attention to coal mining in Nova Scotia, and was one of the pioneers in developing the Springhill mines, now among the best coal properties in Canada. Prior to Mr. Harding starting the mines on a practical basis, there had only been some surface scratching by farmers, who sold what coal they gathered up to local blacksmiths. ..."

Interest payable on calls shares in arrear. In arrears. 16. Liability for 7. Advance payments on stock corporate debts. Receivable on interest. 17. Bye laws may be 8. Shareholders in arrear for made. Calls may be sued. 18. Annual and special 9. Declaration in such suit. Meetings; votes. 19. Act void if 25 per cent of capital be not subscribed within one year. Passed 9th April 1860. Whereas a Joint Stock Company has been formed for opening and working Mines in the Parish of Saint Martin's, in the County of Saint John, and for carrying on Mining and Manufacturing business and operations, who have expended a large sum of money in Mining operations, and in purchase of lands, and otherwise; And whereas it is deemed advisable that the said Company should be incorporated;- Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That William Henry Scovil, Otis Small, Frederick W. Hatheway, Albert Betts, and Michael Henry Furrell, their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Saint Martin's Mining and Manufacturing Company,"" and by that name shall have all the general powers and privileges incident to a Corporation by Act of Assembly of this Province, for the purpose of opening and working Mines in the Parish of Saint Martins aforesaid, and for establishing and carrying on Mining and Manufacturing business and operations, and for the convenient managing of the same. 2. The capital stock of the said Corporation shall be twenty five thousand pounds of current money of New Brunswick, divided into one thousand shares of twenty five pounds each, and the said Company shall have the power to increase its capital stock from time to time, in such sums as they may deem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power from time to time to increase the number of shares accordingly. 3. The first meeting of the Corporation for the organization therof, may be called by the said William Henry Scovil, or in case of his death, neglect, or refusal, by any one of the parties named, at such time and place as he may appoint, by publishing notice of the same in two of the Newspapers published in the city of 3 Saint John, at least one calendar month before such meeting is held. 4. Every person owning a share in the capital stock of the said Company, shall be a member thereof, and be entitled to vote at all meetings of the said Company; and absent members may vote by proxy, such proxy being a stockholder and authorized in writing. 5. It shall be lawful for the Company, or the Directors if empowered by the bye laws, from time to time make such calls of money upon the respective shareholders, in respect of the amount of capital respectively subscribed or owing by them, as they shall deem necessary; provided that the amount of any call shall not at any one period be more than twenty per cent on the amount of capital or stock belonging to any individual, and that three calendar months at the least shall be the interval between the successive calls, and that thirty days notice of payment being required for any call, shall be given in one or more Newspapers printed and published in the City of Saint John, in the said Province; and every shareholder shall be liable to pay the amount of the calls so made in respect of the shares held by him, not however, to exceed in the whole the amount of the stock subscribed by him, to the persons and at the time and places from time to time appointed by the said Company or the Directors thereof. 6. If before or on the day appointed for payment, any shareholder does not pay the amount of any call to which he is liable, then such shareholder shall be liable to pay interest for the same, at the rate allowed by Law, from the day appointed for the payment thereof to the time of the actual payment. 7. It shall be lawful for the said Company, if they think fit, to receive from any of the shareholders willing to advance the same, all or any part of the moneys due upon their respective shares beyond the same actually called for, and upon the principal moneys as paid in advance, or so much thereof as shall from time to time exceed the amount of the calls then made upon the shares in respect of which such advance shall be made, the Company may pay interest at such rate, not exceeding the legal rate of interest for the time being, as the shareholder paying such sum in advance and the said Company may agree upon. 8. If at the time appointed by the said Company or the Directors thereof for the payment of any call any shareholder fails to pay the amount of such call, it shall be lawful for the said Company to sue such shareholder for the amount thereof in any Court of Law or Equity having competent jurisdiction, and to recover the same, with lawful interest from the day on which such call was payable. 9. In any action or suit to be brought by the said Company against any shareholder to recover any money due for any call, it shall not be necessary to set forth the special matter, but it shall be sufficient for the said Company to declare that the defendant is the holder of one share or more in the said Company, (stating the number of shares,) and is indebted to the said Company in the sum of money to which the calls in arrear shall amount, in respect of one call or more upon one share or more, (stating the number and amount of each of such calls,) whereby an action hath accrued to the said Company by virtue of this Act. 10. On the trial or hearing of such action or suit, it shall be sufficient to prove that the defendant, at the time of making such call, was the holder of one share or more in the said undertaking, and that such call was in fact made, and such notice thereof given as is directed by this Act, and it shall not be necessary to prove the appointment of the Directors who made such call, and there upon the said Company shall be entitled to recover what shall be due upon such call and interest thereon, unless it shall appear either that any such call exceeds the prescribed amount aforesaid, or that due notice of such call was not given, or that the prescribed interval between two successive calls had not elapsed as aforesaid. 11. The production of the register of shareholders shall be prima facie evidence of such defendant being a shareholder, and of the number and amount of his shares. 12. If any shareholder fail to pay any call payable by him, together with the interest, if any, that shall have accrued thereon, the Directors of the Company, at any time after the expiration of two calendar months from the day appointed for the payment of such call, may sell the shares in respect of which such call was payable, by public auction, giving at least thirty days' notice in one or more of the Newspapers published in the City of Saint John in this Province, of the time and place of such sale, and shall sell the same to the highest bidder, and a new certificate or certificates of the shares sold shall be made and delivered to the purchaser, and thereupon he shall be deemed the holder of such share, discharged from all calls thereon due prior to such purchase, and he shall not be bound to see to the application of the purchase money, nor shall his title to such share be affected by any irregularity in the proceedings in reference to such sale. 13. The said Company shall not sell or transfer more of the shares of any such defaulter than will be sufficient, as nearly as can be ascertained at the time of such sale, to pay the arrears then due from such defaulter on account of any calls, together with interest and the expenses attending such sale, and if the money produced by the sale of any such forfeited shares be more than sufficient to pay all arrears of calls and interest thereon due at the time of such sale and the expenses attending the sale thereof, the surplus shall on demand, be paid to the defaulter; provided always, that such defaulter shall in all cases be liable to the said Company for any deficiency arising by means of such default, and recoverable in any Court in this Province having competent jurisdiction for that purpose. 14. No shareholder shall be entitled to transfer or vote upon any share after any call shall have been made in respect thereof, until he or she shall have paid all calls for the time being due on every share held by him or them. 15. No dividend shall be paid in respect of any share until all calls then due in respect of that and every other share

held by the person to whom such dividend may be payable shall have been paid. 16.The joint property and stock of the said Company alone be responsible for the engagements and and debts of the said Company. 17. The time and place of holding annual and special meetings of the said Company, the manner of calling such meetings, and the mode of giving notice of same, the number of votes which the shareholders shall be entitled to give in respect of the shares held by them respectively in said Company, as also the number, eligibility, duties and powers of Directors, officers and servants, their continuance in office, removal or disqualification, and the manner of election or appointment, and any other matter connected with the objects and purposes for which the said Company is incorporated, may be established or regulated by bye laws of the said Company made at any meeting of the Company or an adjournment thereof. 18. Unless when otherwise provided or directed by the bye laws of the Company, an annual meeting of the stockholders of the said Company shall be held in Saint John on the second Tuesday in the month of June in each year, which may be adjourned from time to time; and special meetings of the stockholders may be called by any number of the stockholders representing at least one fourth of the issued stock of the said Company; and notices of the time and place of holding any meeting of the stockholders of the Company, may be given by publishing the same in any one or more of the Newspapers of the City of Saint John aforesaid, twenty days prior to the date fixed for holding such meeting, and members may give as many votes as they hold shares. 19. Unless twenty five per cent

URN: 0004 / Names: Quispamsis Lead;

Morning Journal - Jan. 13, 1868 Another Mineral Discovery. - We are informed that a valuable Lead and Silver Mine has been discovered in the vicinity of the Quispamsis Station, and that the proprietors intend very shortly to open up and develop the property. We are pleased to learn that such valuable mineral as those described are to be found so near our city, which must very greatly enhance their value. We expect shortly to be in a position to furnish our readers with further details."

Daily Telegraph - Jan. 14, 1868 Discovery of a Lead Mine. - We were shown yesterday, by Mr. John H. Harding specimens of ore found a short distance to the west of Quispamsis Station on the railway to Shediac. One of the samples is almost pure Lead - such as is used in the ""sheet lead"" with which tea chests are lined, and for an hundred other purposes; the other samples were smaller, but scarcely inferior in purity. A quantity of the ore has already been taken out. The seams - four in number - give some eight feet in thickness of the lead. It is not improbable that Silver will be found in the ore."

Miramichi Gleaner - Jan. 18, 1868 Valuable Mineral Discovery. - We learn from the St. John Journal that a valuable lead and silver mine has been discovered in the vicinity of the Quispamsis Station, near St. John, and that the proprietors intend very shortly to open up and develop the property."

S.J. Daily Sun - Oct. 19, 1882 Silver at Quispamsis. - It has been known for years past that deposits of silver exist in the vicinity of Quispamsis Station, on the I.C.R., but until very recently prevailed that the quantity and quality of the ore were not such as to make the working of it a payable speculation. Careful examination of the place where the silver was alleged to exist, by geologists and miners has led to the discovery of ore of very good standard, and it is now believed that it is present in sufficient quantities to make mining operations there remunerative. Preparations are being made to sink a shaft on the property of Mr. W.H. Hayward, about the upper end of the I.C.R. switch, and, as the vein is believed to extend under the railway track, to tunnel in that direction. It is understood the work will be commenced on Saturday or Monday next."

URN: 0007 / Names: Lake George Antimony;

Morning Freeman - Sep. 13, 1862 and Carleton County Sentinel - Sep 27, 1862 The Antimony Mine. - Mr. John Henneberry, of Indiantown, who discovered the mine of Antimony at Lake George in Lower Prince William, York County, has left a sample of the mineral with us. Specimens were furnished to Dr. Jackson, a Boston chemist, who pronounces it a superior article, and this mine the only one in America. Mr. Henneberry states that he found the mine last fall, and has traced the vein - which is two feet wide in many places - for a considerable distance. It is expected that arrangements will be made to work it before long. We might add that the lease of the property was obtained in March last by Mr. Henneberry from Messrs. Donnelly and

Carleton County Sentinel - Sep 20, 1862 A rich mine of Antimony has been found at Lake George, near Woodstock. Several pure specimens have lately been shown in the City, and it is said that some one or two gentlemen belonging here are interested in it. So says a St. John exchange."

URN: 0007 / Names: Lake George Antimony;

N.B. Reporter - Sep. 19, 1862 A most beautiful fragment of the antimony found in Prince William may be seen in the shoe store of Mr. William A. Clarke of this city. Those who have seen Printers Types before they have been soiled by use, will easily recognize their peculiar colour and brightness in this specimen. We also understand that a vein of the same rare and valuable mineral has been found on the farm owned by John T. Smith, Esq., in the vicinity of Fredericton. The Courier speaking of a vein of Antimony in Prince William says:- ""Next in order of discoveries is that of a valuable mine of Antimony at Lake George, in Lower Prince William, York County, by Mr. John Henneberry of Indiantown."" We are assured that this is incorrect in one particular, as Mr. Philip Schleyer positively declares himself to be the discoverer."

N.B. Courier - Jan. 16, 1864 Antimony Company. - The Royal Gazette of Wednesday last announces that Benjamin C. Perkins, of South Danvers, Massachusetts, William Jack, of the City of St. John, Spafford J. Barker, of the City of Fredericton, Andre Cushing, of Lancaster, and George B. Cushing, of St. John, have filed the necessary papers, for the incorporation of the ""Brunswick Antimony Company"", for the purpose of mining for Antimony and other ores and metals, with a capital of $100,000, to be divided into twenty thousand shares of $5 each. The principal office of the Company is to located

S.J. Daily News - Jan. 15, 1864 and Morning Freeman - Jan. 28, 1864 ANTIMONY COMPANY. - We perceive by the Royal Gazette that an association has been formed under the title of the ""Brunswick Antimony Company"", for the purpose of mining for and working of Antimony and of other Ores and Metals, with a capital of $100,000, to be divided into 25,000 shares of $5.00 each. The principal office is to be in St. John. A memorandum of association for the incorporation of the Company has been filed in the Provincial Secretary's office by Benj. C. Perkins, of South Danvers, Mass., William Jack, of Saint John; Spafford J. Barker, of Fredericton; A. Cushing, of Lancaster; and Geo. B. Cushing, of St. John."

St. Croix Courier - Apr. 7, 1866 A Valuable Mine.- There is an antimony mine situated near a lake in this vicinity, the ore of which has been pronounced by competent assayers to be of the most superior kind. We regret that owing to the limited time at our disposal we could not visit it, but we hope to do so soon. The precious deposit is owned by Messrs. F. Hibbard and D. Gillmor, St. George, and Jed Frye, New York. A properly qualified smelter has been engaged, and it is intended to carry on active operations during the coming summer."

St. Andrews Standard - Apr. 13, 1866 We understand the antimony mine near St. George's Lake on the Magaguadavic River is to be worked this summer. A quantity of ore has been sent to New York and smelted, and is pronounced superior to any yet discovered in any part of the world except that in France, and equally as good as that. The mine is said to be very extensive, and the gentleman who assayed some of the ore says it is of incalculable value. The mine is owned by Messrs. Hibbard and D. Gilmore of Magaguadavic, and Jed Frye of New York."

N.B. Reporter - Oct. 11, 1867 and Carleton Sentenil - Oct. 12, 1867 Valuable Discovery. - The silver mine a reality!- In Saturday's Telegraph we published a telegram from Fredericton, stating that Silver had been discovered in one of the Antimony Mines at Lake George, Prince William Parish, York Co. We have since been placed in possession of information of the most reliable character confirming the report. The Antimony mines of Prince William have been worked without a suspicion of their containing of greater value than the metal for which they were opened. Quite recently, however, the presence of silver on the property of Messrs. Hutchinson & Lawrence was suspected, and on careful examination being made, one of the leads was found to contain a vein of silver of surpassing richness. A careful assay has revealed the fact that the Antimony of the lead contains silver in the proportion to one ounce of the latter to a pound of the former. Lake George Mine is in the vicinity of an abundant stock of fuel, and is quite close to a good road leading to the St. John river, from which it is distant only four miles. With every facility at hand for successfully working the mine, the richness of which has now been made apparent, we can readily conceive that it will become a source of immense profit not only to the enterprising proprietors, Messrs. Thos. Hutchinson & B.R. Lawrence, but also to the county of York and the Province at large. We have been shown a specimen of Silver taking from the Antimony - namely, fifteen dwts. 15 grains silver from sixteen ounce Antimony! The jewellers pronounced the article genuine and pure, and there can not be the slightest doubt of its richness. Although there are other properties in Prince William yielding antimony, this is the only one in which Silver has been found - and only in one vein of this but it is of great extent. We intend to visit the Mine at an early day and may give a further description of this valuable property. - Telegraph"

URN: 0007 / Names: Lake George Antimony;

Morning Journal - Dec. 20, 1867 and St. Andrews Standard - Dec. 25, 1867 and Union Advocate - Jan. 9, 1868 A MINE OF UNTOLD WEALTH. - We are informed, onwhat appears to be reliable authority that the silver mine discovered in Prince Wm is capable of producing silver ore to the value of $10,000 per day, and that the antimony extracted from the ore is sufficiently valuable to pay all the expenses of mining. We have been further told that Mr. Lawrence, the owner of the mine, has refused $200,000 for a single acre of the silvery soil. He owns, it is said, a thousand acres, thinks the mine inexhaustible and supposes himself to be the richest man on this continent. This Mr. Lawrence was a large owner of a mill in Charlotte County, in connection with Mr. Prescott.- They realized it is said by the business and sale of the mill some $100,000 each so that Mr. Lawrence is quite rich enough without his silver mine. A Mr. Anderson of Ontario we believe, has some connections with him in mining operations. This report of exhaustless wealth so near at home seems too good to be true, but a friend, in this city, to whom we are indebted for the information, thinks it is true, and is going to ascertain the facts of the case and has promised us faithful account of the results of his observations. If this statement be correct, then New Brunswick must be the richest country in mineral wealth of its size in the world.-[Visitor Mr. Hutchinson, well known by his Directories, is the joint proprietor of the above property. It was by him that the mineral wealth was in the first instance developed, and it was from him that Mr. Lawrence purchased one half of the interest. - These silver mines are in the neighborhood of the rich antimony mines of Messrs. Cushing and Hibbard."

S.J. Daily News - Dec. 23, 1867 and St. Croix Courier - Dec. 27, 1867 A MINE OF UNTOLD WEALTH. - We are informed, on what appears to be reliable authority that the silver mine discovered in Prince Wm. Is capable of producing silver ore to the value of $10,000 per day, and that the antimony extracted from the ore is sufficiently valuable to pay all the expenses of mining. We have been further told that Mr. Lawrence, the owner of the mine, has refused $200,000 for a single acre of the silvery soil. He owns, it is said, a thousand acres, thinks the mine inexhaustible and supposes himself to be the richest man

Chignecto Post - Jul. 27, 1871 The Antimony Mines at Prince William, York Co., are to be worked by a company which has been formed."

Oct. 1871 - Copied from: St. Croix Courier - Oct. 3, 1901 30 Years Ago. - The Antimony Mining Company of Charlotte county has commenced operations in their mine at Lake George with good prospects of success."

St. Croix Courier - Oct. 6, 1871 Antimony.- The Telegraph says the Antimony Mining Company of Charlotte County have commenced operations in their mine at Lake George with good prospects of success."

S.J. Daily News - Nov. 29, 1871 and Morning Freeman - Nov. 30, 1871 The Antimony Mines of Francis Hibbard, Esq., MPP, at Lake George, are proving very remunerative, and are now in fine working order. A steam engine and some new machinery has recently been added to the works, and the cost, it is said, will be somewhere between six and eight thousand dollars. One of the most interesting portions of the machinery is the Concentrator, which takes the ore in the state in which it comes from the crusher, and separates the metal ready for crushing. The mines are being well developed, and should meet with success."

St. Croix Courier - Oct. 3, 1872 Mining Company.- The Lake George Antimony mine is to be worked by a company with a capital of $200,000 in $100 shares. The present stockholders Messrs. Jed Frye, of New York, Francis Hibbard of Saint George, John J. May, of Boston, A.H. Gillmor, Jr., Tobias Gillmour, Kinsman P. Gillmor, and Eldorado Gillmor, of St. George."

N.B. Reporter - Oct. 2, 1872 The last Royal Gazette contains a notice to the effect that Jed. Frye of New York, John J. May, of Boston, Francis Hibbard, A.H. Gillmor, Jr., Tobias Gillmor, Kinsman P. Gillmor, and Eldorado Gillmor, of Saint George, Charlotte county, have files in the office of the Provincial Secretary a Memorandum of Association, for the incorporation of a company to be styled ""The Lake George Antimony Company,"" for the purposes of mining for, and working of Antimony, and other ores and metals, with a capital of $200,000, to be divided into two thousand shares of one hundred dollars each. The Office or principal place of business of the said Company will be at Fredericton. A meeting will be held for the election of officers and transaction of other business on the 23rd of October next."

Daily Telegraph - Oct. 4, 1872 Mining Company. - The Lake George Antimony Mine is to be worked by a company with a capital of $200,000 in $100 shares. The present stockholders are Messrs. Jed Frye of New York, Francis Hibbard, of St. George, John J. May of Boston, A.H. Gillmor, Jr., Tobias Gillmor, Kinsmen P. Gillmor and Eldorado Gillmor, of St. George. The first regular meeting of the company is to be held next month."

URN: 0007 / Names: Lake George Antimony;

S.J. Daily News - Feb. 15, 1872 Antimony Mines at Lake George. - An esteemed correspondent and subscriber writing from Lake George in York County, under date of 12th inst., says: ""Steam is up and the engine going at the Antimony Mines for the first time to-day, and the work of crushing and smelting the ore, will be in complete operation in the course of a few days."" We shall be glad to hear from our friend again. -Ed. NEWS"

Daily Telegraph - Oct. 18, 1873 Mining Engineering. - We had the pleasure yesterday of a visit from Mr. Arthur F. Wendt, Mining Engineer and Metallurgist. He is a graduate of one of the most famous schools of minerals in the world, that of Columbia College, New York, which is hardly second to Fryburgh. Mr. Wendt has been on a visit to the antimony mines, in Prince William, owned by Mr. Hibbard and others. Mr. Wendt's card and address will be found in our columns. We believe he would be a great acquisition to the Maritime Provinces, if his services could be retained. We hope therefore that he may obtain as much business as will warrant him in spending some time in this province. He is taking a look at the province on his own account, and went up river yesterday, accompanied by Mr. Edward Jack."

Daily Tribune - Oct. 17, 1873 The Antimony Deposits of York County, New Brunswick. - Mr. Arthur F. Wendt, E.M., a graduate of Columbia College, New York, has just returned from a professional visit to the York County antimony region. He informs us that, of the three mines opened near Lake George, only one - the Lake George Antimony Co.'s - is at present in active operation. The mine has heretofore been worked as an open cut, but during the coming winter a slope will be sunk and the vein attacked by stoping. This, it is expected, will reduce the cost of the ore. As raised from the mine the ore is crushed and then concentrated, by which operation the gangue or enclosing rock is separated from the ore, which is then ready for smelting. The Company at first built dry concentration works, but, finding the loss of mineral in the tailings to be too great, this method was abandoned, and wet concentrating machinery substituted with perfect success. As soon as first class machinery shall be secured the yield will reach two tons of metal a week, which will leave a fair profit to the investors. The smelting is done in a reverberatory furnace, and not in crucibles as is the European practice. The breakage of the crucibles, labour and fuel are thus saved, although the loss of the metal in the smelting is somewhat larger. With well built machinery and furnaces there can be no doubt of the ultimate establishment of large smelting works capable of supplying the American and home market. The ore, although not very rich, is found in such quantities that by a judicious course of mining another source of great wealth will be added to the resources of New Brunswick."

Daily Telegraph - Oct. 18, 1873 Lake George Antimony Mine. - Visitors to the late Provincial Exhibition, who searched for something to attract their attention in the mineral department, found only a few specimens of native metal, and only one sample of ore - that exhibited by the Lake George Antimony Company. Mr. A.F. Wendt, mining engineer, who has visited the works of the company, informs us that they can raise, with machinery which they intend to procure, ore which will produce two tons of metal a week. One very important characteristic of the ore in this deposit is that it contains no iron."

Royal Gazette - Apr. 15, 1874 Notice. The Lake George Antimony Company. We, the undersigned, being a majority of the subscribers to the Memorandum of Association under which the above Company was incorporated, do hereby call a meeting of the said Corporation, for the purpose of organizing, such meeting to be held at the Railway rooms. McAusland's Building, in the City of Fredericton, in the County of York, on Wednesday the twenty ninth day of April next, at eleven o'clock in the forenoon. Dated this 28th day of March, A.D. 1874. Francis Hibbard, Eldorado Gillmor, Kinsman P. Gillmor, A.H. Gillmor, Jr."

S.J. Daily Sun - Jul. 8, 1880 New Brunswick Antimony Co. - The annual meeting of the New Brunswick Antimony Company was held yesterday morning at the office of Messrs. Andre Cushing & Co., Prince William street, when the following Board of Directors for the ensuing year was elected:- Geo. B. James, Esq., Boston; John F. Nickerson, Esq., Boston; Henry Kenny, jr., Esq., Boston; Simon W. Pavlin, Esq., Malden, Mass; Andre Cushing, Esq., St. John."

Daily Telegraph - May 12, 1880 Lake George Antimony Mining Co. - A meeting was held in Mr. C.A. Stockton's office, yesterday afternoon, for the purpose of organizing this company and transacting other business for the successful operation of the Lake George antimony mines. At the meeting it was decided to purchase the land owned by Messrs. Lawrence and Hutchinson, situated at Prince William, York Co. The officers elected are as below:- President - Edelbert P. Adams, Boston; Secretary-treasurer - Winthrop M.B. Hammond, Boston; Transfer Agent - J. Parker Lynch, Boston; Directors - Edelbert P. Adams, Winthrop M.B. Hammond, J. Parker Lynch, Boston; Charles A. Stockton, St. John; John A. McCallum, Fredericton."

Daily News - Jun. 24, 1880 Antimony. - The outlook for the Lake George Antimony Mining and Smelting Company would seem to be growing better daily. The company is now negotiating with a London firm who will place fifteen hundred to two thousand tons of their ore at extremely remunerative prices. Two orders for ore are now being filled, and the mines are being put into shape to meet the demand which is increasing beyond all anticipation. The men are now working day and night, and their number will be increased as fast as capable miners can be hired. Everything goes to show that the company has got a permanent business, and one that will pay the stockholders large and regular dividends."

S.J. Daily Sun - Oct. 5, 1880 Prince William Antimony Mines. - We hear that a number of Boston gentlemen who are interested in the Hibbard Antimony Mine, Prince William, have just returned from a visit to the locality and are well satisfied with the prospect for successful mining. There is a good authority for the statement that five hundred men will be at work in this mine before many months."

S.J. Daily Sun - Oct. 18, 1880 Silver. - Word comes that the Lake George Antimony & Smelting Co. have struck a large vein of silver ore, the specimens shown being very rich. This mine is employing from 25 to 50 persons, and has made two shipments of very pure ore to Britain lately."

S.J. Daily News - Jul. 7, 1880 Brunswick Antimony Co.'s New Directors. - Geo. B. James, Esq., John F. Nickerson, Esq., and Henry Kenny, jr., Esq., Boston, Mass.; Simon W. Palvin, Esq., Malden, Mass.; Andre Cushing, Esq., St. John."

S.J. Daily Telegraph - May 1, 1880 New Brunswick Antimony. - We notice the statement made in the Mining and Engineering Journal of the 24th of April that New Brunswick Antimony stock opened in Boston during that week at $31, and advanced on the 20th to $40, since which, on sales of small lots, it declined to $32 1/2 and closed at $32 bid; and that $1,000 was paid for a call of 1,000 shares at $45, 60 days."

Daily News - Sep. 10, 1880 Antimony. - While some of the Antimony Companies about Lake George are projecting their enterprises in view of disposing of their produce in the American market, the lake George Antimony Mining and Smelting Co. is experimenting for sending their ore across the water. The ship Charles which sails from St. John in a few days will take six tons of antimony to Liverpool. Nine tone more are in the freight house of the St. John and Maine Railway at Carleton, and will be shipped in a short time if the present venture proves successful. It is acknowledged by all that the rubber boom does not amount to so much as was first thought, though doubtless it will form one of the many ways in which the mineral can be

Fredericton Capital - Oct. 19, 1880 and Morning Freeman - Oct. 23, 1880 The Brunswick Antimony Company have ceased working their shaft on the Hibbard lode, owing to the quantity of water. They will resume operations on their old shaft on the east vein, which was the first one worked upon by the company. The vein where they left off working on the Hibbard lode was of quartz, and was four feet thick, the antimony being disseminated all through; the largest quantity, however, being found in the neighborhood of the footwall. The Hibbard vein has before been proved for a distance of 1,800 feet, by sinking. Its course is as true as if run by a compass, the bearing being north, 65 degrees west. A survey of the direction of undercurrents of the vein was made a few days ago by Mr. Jack, of this city, who reports that from surface indications, in the shape of quartz boulders lying on the surface and carrying antimony, other veins exist on the south of the hill in the rear of the Lake George

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - Aug. 12, 1880 Antimony. - The Hibbard, Brunswick and Hammond Mines at Lake George, York County. - A Description of the Mining Operations Now in Progress. - Situation of the Mines, Etc. - The antimony mines at Lake George, which have of late received a great deal of public attention and have been noticed in the Telegraph, were visited by your correspondent on Saturday last. The mines are situated in the parish of Prince William, York county, near Lake George, a beautiful sheet of water four miles long by about two broad, about 25 miles distant from Fredericton and ten miles away from Harvey Station on the St. John & Maine Railway, by the main road. It is now about 17 or 18 years since mining was commenced at Lake George, the Brunswick company being the first to commence operations, followed shortly afterward by the Hibbard Company. During these years the mining has been carried on only at intervals, the Hibbard company having probably done more than the others, as it took a long time to prospect, and there were numerous other difficulties regarding the possession of the land, etc., which had to be overcome; these difficulties have now been nearly altogether removed, and anyone who has visited the mines cannot fail to see that they must become, in time, one of the great industries of New Brunswick. All that is needed to make them so is time in which to develop, and capital and energy to put them through. The ore is of a very superior quality, and the supply, practically unlimited; in fact, all scientists and practical miners, who have visited the mines, agree in saying that they never saw such rich ore in such large quantities. Antimony is much used in the arts and sciences, and its economic value is very great. It has hitherto been chiefly used as a base in silver plating, for type metal, anti friction or Babbitt metal, and for medicinal purposes; lately, however, it has been discovered by experts and chemists that it can be used in the production of a variety of brilliant colors, suitable for dyes and pigments. It has also been ascertained that it is of use in the manufacture of a great variety of rubber goods, such as engine hose producing, as a Boston paper has it. an article superior in strength, elasticity and durability to those manipulated with any other known ingredient. Antimony is the only material that will produce lasting colors in rubber fabric, and it can also be made into a worm proof paint for the bottom of vessels. Having considered the uses of antimony, the inquiry naturally occurs: Where has the Supply Come From? - Antimony is a rare metal. The supply has come nearly altogether from large mines in Borneo, but it is said that the ore is giving out there, the demand being more than equal to the supply. There is also an antimony mine in Australia, but it is too far away to be of much use to the people in this country who need the metal; that mine cannot greatly interfere with the sale of the metal produced at the Lake George mines. Antimony has lately been discovered in Utah in the vicinity of Salt Lake City, but nothing definite is yet known as to the quality or amount of the ore. Among the localities noted for antimony are Sahlberg in Sweden, Kremnitz in Hungary and several places in Bohemia and Bavaria. It was once found freely in Cornwall, England, but the supply seems to have become exhausted. Small veins have been found in the state of Maine, but they are comparatively worthless and are too small to pay their development. These with the Lake George mines are the only ones at present known in the world, and scientific men are of opinion that the supply of antimony, for America, at least, will have to be furnished for years to come by those now under notice. The metal is quoted at $400 a ton in the New York markets. The ore brings about $90 and can be raised from the mines for $15. Considerable trouble is now experienced in shipping the ore or metal, but there is talk of building a tramway from the mines to Harvey station by a short route, and this would be a very great boon to the companies. The veins of ore at Lake George do not occur in continuous lines, but come up as Prof. Hinds expresses it in his report in segregated masses. We come now to the description of the operations at present carried on at Lake George, which are small, however, in comparison with what they will be in a few months, when from three to four hundred men will be actively employed. The Hibbard Mine, of which the Hon. Francis Hibbard is president and manager, is not now in operation, but will be in two months, when the company intend commencing operations, beginning with from fifty to sixty hands, and increasing in time to about four hundred. Your correspondent was shown over the works by Mr. Bowden, by whom he was hospitably entertained during his visit, and by a leading member of the company. The main shaft of the Hibbard mine is 12x7, and a hundred and twenty feet deep. The ore is brought up into the mill from the bottom of the shaft on wagons, drawn by machinery. Air is forced down into the shaft through a pipe by a Sturtevant blower, and by this means the workmen are constantly afforded a fresh supply, which is necessary when blasting with gun powder. The pump, which keeps the mine free from water, is down a hundred feet, and is forced by steam, and thrown a four inch stream of water. At this season of the year it is necessary to work it only about four hours a day, but in the spring and fall it is kept constantly at work. The ore when hoisted is in lumps of different size, and the veins from which they are obtained vary in thickness from four inches to four feet. The first process to which the ore is subjected after coming from the mine is being crushed, which is done by means of a Blake's crusher, a valuable piece of machinery, that can crush two tons of the ore an hour. From the crusher the ore passes to a set of Cornish rollers which further pulverize it. It is then elevated thirty feet and carried against a series of sieves, which divide the ore into three grades by the wet process, the dry process having been disused at these works. After this grading, the ore is placed in jigs, so constructed as to remove the rock from the ore, and is further graded according to its size from ore as fine as cornmeal up to the size of peas. The very finest ore is cleaned on what is called a German table. After passing through the jigs the ore is said to be concentrated, that is the rock has been removed from it. Processes. - The motive power in the mill is a 175 horsepower engine with a 20 « inch cylinder. After being concentrated the ore is passed on tramways from the mill to a building a short distance from it, when it is further treated. In this building the concentrated ore is placed in the sulphurizing or oxidizing furnace, which consists of five ovens or chambers. Five hundred pounds of the ore are at first placed in the oven furthest away from the fire box; after four hours the ore is moved into the second oven and five hundred pounds of new ore placed in the first; after four hours more the ore in this second oven is moved into the third, that in the first into the second, and a new supply placed in the first, and so this process goes until the ovens are all full, when a charge can be taken from the last oven every four hours. The object of this furnace is to remove the sulphur from the ore; although 25 per cent of sulphur is taken from the ore, yet the amount weighing 500 pounds put in, in the first place, weighs considerably more when taken out, which fact is owing to the combination of the oxygen. After being desulphurized the charge of ore is ready for the smelting furnace, which takes about six hours to reduce the metal. In the smelting works large quantities of salt cake, charcoal and rosin are used as fluxes to overcome the volatility of the antimony. Large stocks of these materials and fire brick are kept constantly on hand. The average amount of metal produced from the ore is about 75 per cent. The ore can be prepared for the desulphurization furnace in two hours from the time it is hoisted. In these mines an air compressor is used to drive the drills under ground, for if steam were used it would suffocate the workmen. The air is forced into the compressor by a steam engine worked by a vertical boiler with a hundred and twenty six tubes. The compressor forces the air into an air tank, with the pressure of a hundred pounds to the square inch, from which the air can be carried by pipes and will drive four drills at any distance within two miles. The steam drill cost $1,200, the compressor $2,600, the boiler $600 and the tank $100. There is also a quantity of valuable machinery used in charging and blasting, including a costly battery. At a short distance from the large buildings is the Laboratory, stocked with chemicals and instruments for assaying. The Hibbard company own between seven and eight hundred acres of mining area, and are working two lodes of ore fifteen hundred feet long and ninety feet apart. The main shaft we have already described; the second shaft is sixty two feet deep, and it cost $10 a foot to sink it. In two months, this concern will be in full blast, under a somewhat different management than heretofore, and if matters take the turn expected, employment will be given to over three hundred hands. The Brunswick Mine is in full operation, under the management of Mr. A.G. Adams, mining engineer, formerly of Boston. When your correspondent visited the mine, he found the men busily engaged bringing up rich- looking ore from one of the shafts, fifty feet deep, where work has been carried on for a little over a month. This company have four shafts sunk, one of which they are now working, employing twenty men. The pump for keeping the mine clear of water and the hoist are both worked by horse power, but new machinery is expected to arrive soon. This company send the ore just as it comes from the shaft to Boston, where they have buildings on the Mystic River, where it is treated and smelted. At the bottom of the shaft three men were at work by candlelight digging out beautiful rich lumps of ore from a vein of fully four feet in width. This is known as shaft no. 3. Shaft no. 1, situated in the main building, is a hundred and six feet deep, and from it a drift two hundred feet long runs towards shaft no. 2. This shaft is now partially full of water, but a steam pump will be soon put in, as it is now in St. John and will be forwarded in a few days. The work at these mines under the new management commenced on the tenth of April last and when the works get in full operation employment will be given to not less than fifty men. The combustible used in blasting by this company is rock rend which is nearly allied to giant powder in its composition; it is kept in a building apart from the others. The manager, who is a mining engineer, says that he has no doubt, judging from the work of the last three months, but that the enterprise will prove a great success as the operations during that time clearly demonstrated that the quantity is unlimited and the quality cannot be surpassed. In shaft no. 3, in one day of eight working hours, between five and six tons of the ore were thrown out and hoisted. Among the pieces of ore at the mine was one lump that weighed one hundred and sixty two pounds and contained no rock whatever. Shipments. - Since June 1st, seventeen tons of No. 1 ore have been sent to Boston. Only No. 1 ore is shipped as it requires but little treatment, as it contains only a small proportion of rock. Mr. Adams thinks there is not the slightest chance of failure, as all that is necessary is energy and a little capital. He believes that if the mines were in California twenty million dollars would be invested in them. After saying goodbye to Mr. Adams, your correspondent proceeded to what is commonly called the Hammond Mines known by charter as the Lake George Antimony Mine and Smelting Company, where he was welcomed by Mr. Boddy, the manager. Mr. Boddy, who is a Cornish man, of experience in mining, says he never saw any Borneo antimony as pure as that which he is now working. The company are running two shafts, giving employment to twenty five men. Operations were commenced on the seventh of June, and since the first of July thirty tons of ore have been turned out, ten being first quality. A quantity of new machinery is expected soon, including concentrating works, and in about six weeks the manager expects to give employment to fifty men. The machinery is now being run by horses, but steam will be introduced soon in order to keep pace with the demands. The main shaft is the deepest of any at the mines, it being a hundred and seventy five feet to the bottom, and in going down the thickness of the vein has ranged from four inches to three feet. The No. 2 shaft is sixty feet deep and the vein has been steadily increasing in thickness and ore since beginning the shaft. The ore is at present being cleaned by hand, but the machinery for the purpose is expected soon. Mr. Boddy firmly believes that with proper machinery and competent management the mines will prove a paying speculation. The company's office is near the mines. This concluded the tour of the mines, and it only remains to add that any information was most readily given by the parties about the mines. Notes. - The grey antimony ore or stibnite is said to be the stibium of the ancients, which was used by eastern beauties to give a dark hue to their eyelashes. The fact is mentioned for the information of lady readers. The men working in the mines are not troubled by any bad gases, and the supply of air given them is chiefly to keep away the gun powder smoke. A number of Cornish men are working the mines; they all say they never saw such rich ore. Two enterprising youths have ingeniously fitted up what is known as a floating battery. It consists of a raft with a small house built on it, in which they keep a supply of liquor for sale. When the authorities try to take them they push

Chignecto Post - Oct. 21, 1880 Mr. Hibbard's antimony mine, in York Co., has been sold to the Hibbard Antimony Mining Company for $200,000; one half to be paid in cash, the other half in stock of the Company. The latter is said to be composed of strong men financially."

Daily Telegraph - May 28, 1880 The Lake George Antimony Mines. - Our special correspondent, who has just returned from a visit to the Lake George antimony district, reports that ore is being hauled from the Brunswick Antimony Company's shaft to the St. John river. He states that the Lake George Antimony Mining and Smelting Company (Lawrence mine) has (in the course of the explorations) made within the past three weeks, on its 720 acres of mining property, by the company's prospector, Mr. Boddy, a Cornish miner of many years experience, discovered two very promising veins of sulphide of antimony running the same course as those on the Hibbard property. This prospector has also found antimony in boulders (one of which weighs about one hundred pounds) on the Nicholson farm, which is half or three quarters of a mile southeast of the

Lake George Mining and Smelting Company's shaft. No doubt the vein can be easily found by trenching. Our correspondent found at this spot a place of native antimony associated with a quantity of the sulphide. The Nicholson farm is under lease to the Lake George company. Our correspondent further states that the assertion made by a company in Boston that it has om its property veins of antimony outcropping for a distance of over one mile across its property is absolutely false, and that he was unable to learn from any person in the vicinity of this lease that there was a particle of antimony on the premises. He reports abundance of antimony on the Hibbard, Lake George and Brunswick Companies properties but states that he can hear of none any where else in the neighborhood, and that in his opinion the best ore and the most numerous veins are to be found on the Lake George Antimony Mining and Smelting Company's property."

Daily Telegraph - May 26, 1880 The Prince William Antimony Companies. - We learn that in addition to the Brunswick Antimony Company and the Lake George Antimony Mining and Smelting Company, both of which Companies are well organized and possess properties from which they can take an unlimited amount of antimony, there have been started other companies which have taken up land upon which no antimony has ever been discovered, and which are not even legally organized. Our readers should be careful before investing in said companies, to investigate closely their prospects for success. The standing of the Brunswick Antimony and the Lake George Antimony Mining and Smelting Companies is unquestionable, and we foresee for them a permanent and prosperous business."

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - May 21, 1880 The Lake George Antimony Mining and Smelting Company, whose property adjoins the Brunswick, is coming into the Boston market under favorable auspices. It has 100,000 shares of the par value of $5, of which 25,000 shares are in the treasury. The officers of the company are Edelbert P. Adams, president; Winthrop M.B. Hammond, secretary and treasurer; directors, Messrs. Adams and Hammond, John Parker Lynch, of Boston, John A. McCallum, of Fredericton, N.B. and Charles A. Stockton, of St. John, N.B. The Boston office is in Equitable building, Boston. The reports of experts as to the amount of ore in the 720 acres of the company, are very favorable, large amounts of ore are being got out, and the assays run from sixty-six to seventy per cent of antimony. In a market which treats antimony so generously, the Lake George will start off in good style. - Boston Globe."

Daily Telegraph - Aug. 16, 1880 The Boston Mining Exchange. - We notice that, through Mr. Hammond, the President of the Lake George Antimony Company, the Maritime Provinces are represented in this Exchange. There is such a remarkable development in mining matters in Canada and elsewhere at present, it might be of some importance to us to be so represented. We find that the following is the personnel of the Board:- For Maine, Hanson Gregory, jr., of Rockland, president of the Douglass copper mine; for New Hampshire, E.C. Goodrich, real estate operator in Exchange place, formerly with the Dover Stamping Company; for North Carolina, ex-alderman John T. Clark; for New Mexico, Isaac B. Rich, publisher of the Banner of Light and president of the Plymouth Rock Mining Company; for California, the Hon. William A. Simmons; for Nevada, Pierre Humbert, jr., mining engineer; for Arizona, Levi Newcomb, the architect, best known as architect of the Lowell Railway station, and the pioneer from Boston in Arizona mines; for Colorado, E.H. Goff, the transportation agent; for Utah and Idaho, General Joseph Hayes, a well known Boston operator, and president of the Tremont mine; for the British Provinces, W.M.B. Hammond, treasurer of the Lake George Antimony Company; and at large, S.A. Carleton, president of the Security Bank. The meeting authorized these trustees to secure an incorporation, to secure rooms, collect the subscriptions, and draft and inaugurate a code of bylaws for the conduct of the business."

Daily News - Sep. 3, 1880 Testimony of an Expert. - Mr. Parsons, adistinguished mining engineer of Boston, a short time since visited, examined and reported on the Lake George Antimony Company's property. In which report he states that at the present prices offered this company for regulus, oxide of ore, with prudent management the mine should pay well, and that the quantity of ore is only limited by the extent of lead worked upon and the number of men employed."

N.B. Reporter - Jul. 14, 1880 The Lake George Antimony Mining and Smelting Company. - The following account of the Lake George Antimony Mining and Smelting Company of Prince William, was written for the St. John Globe, and gives some very interesting and valuable information regarding the mines. - the mines of the Lake George Antimony Mining and Smelting Company are situated in the Parish of Prince William, York Co., distant from Fredericton about twenty five miles, and within five miles of the St. John river. The road leading to the mines, from Fredericton, continues along the bank of the river for more than twenty miles. It is the Woodstock road. Leaving Fredericton in the early dawn of a July morning, before the sun had got up, and heated the atmosphere, and when the coolness generated by the night air was refreshing, and the air redolent with odiferous exhalations from flowers and plants; with the atmosphere so clear that distant objects stood out distinctly defined, and apparently nearer than they were, the exhilaration of the feelings can hardly be described; to appreciate it, it must be felt. One drew deep inspirations of the sweet morning air, and felt that a surfeit of it never could come. Once well on the road, and when the beauties of the scenery began to be unfolded the view from the road's elevation was magnificent, changing with each turn in the direction, but with the river always in sight, it presented a panoramic view not easily forgotten. It is well called the 'Rhine of North America', said an American gentleman who had travelled much in Europe, and if those steep cliffs had the battlements of castles peeping out here and there in the foliage, and a village occasionally on the lower lands, it would require no effort of the imagination to believe oneself transported to the veritable Rhine and its beautiful surroundings. Within five miles of the mine, we left the main road by the river, and turned off abruptly to the left. Arrived at the camp we found the head house, originally erected by the proprietors who held the property previous to the present Company, covering a slope that had been sunk to the depth of 150 feet, also another shaft of smaller dimensions distant some 100 feet from the main shaft, and sunk at a higher angle than it. Your reporter descended the main shaft in company with T.J. Prescott, Esq., President of the Milton Silver Mining Company on the Sullivan lode, Hancock County, Me., a gentleman whose lengthened experience in the great mining districts of the West, and whose conservatism opinion has made his dictum a password in the Stock Exchanges of Boston and the Eastern cities. The dip of the slope is about 45 degrees and the strike of the vein is nearly due north and south. At the depth of about 60 feet levels have been made along the vein, and the ore is being mined at present from this depth. The thickness of the vein at this place is about two feet, but it varies in different places from a few inches to six feet. The ore is the antimony ore, and there is not the slightest doubt that it occurs here in large quantities as a subsequent examination of the area disclosed some ten or twelve prospecting pits, each distinctly showing the vein exposed by the removal of the earth that had covered it. The ore is brought to the surface in cars, the motive power being a large horse gin. In the smaller shaft the vein was producing the richest ore, and between the two shafts on an extensive deal platform, were great piles of first, second and third class qualities of the mineral. There were at least 100 tons of the different grades above ground, and the output is about ten tons per twenty four hours. These mines were first operated some twelve to fifteen years ago, but were abandoned for a time. At present there are 25 men employed by the Company, and it is the intention to open the property in a thoroughly scientific manner, and to equip it with the best and most modern appliances. Although this is a New Brunswick Company, the principal amount of stock is held in Boston by American capitalists, and the present development of this most important minerals resource is due to the enterprise, intelligence and energy of Winthrop M.S. Hammond, Esq., of Boston, a gentleman who holds the important position of Business Manager. He has revived this apparently defunct industry, and is floating it along, with constantly increasing promises, in the right direction. The first quality ore is worth from œ15 to œ18 in the English markets and the company have entered into a contract to supply a large quantity at the former figure. Professor Bailey, of the University, speaks very highly of the ore found here, both as regards quality and quantity, his analysis giving 69 of pure Antimony, 28 of sulphur and less than 4 of iron and gangue. Antimony is a very rare mineral, and is found in profusion in but two other places, Borneo and Nevada. Our possession of the mines situated at

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - Jul. 8, 1880 At the annual meeting of the New Brunswick Antimony Company, held this morning at the office of Messrs. Andre Cushing & Co., Prince William Street, the following board of directors were chosen for the ensuing year: Geo. B. James, Esq., Boston, Mass. John F. Nickerson, Esq., Boston, Mass. Henry Kenny, Jr., Esq., Boston, Mass. Simon W. Palvin, Esq., Malden, Mass. Andre Cushing, Esq., St. John, N.B."

Daily Telegraph - Aug. 27, 1880 Notes From Lake George. - The Antimony Mines. - Times are brisk here at present and money is circulating freely. Many persons are employed about the various antimony mines, upon the success of which all our hopes are centred. The Lake George Company is shipping to Great Britain 15 tons of first-class ore, the best which has ever been exported from Lake George. The vein on which this company is working at present, carries ore of the richest character. Some of the vein stone is lime spar, in which the miners occasionally fing beautiful crystals of gray antimony. Some of these as fine as hair; in other instances, they appear as if set in the semi-transparent calcite, so firmly are they imbedded in it. Captain Adams, of the Brunswick, is working on a four foot lead and is turning out a large quantity of ore. He is the right man in the right place and is universally popular with all. Mr. Hibbard is erecting new concentrating works, and it is said that his company are going to export the crushed and concentrated ore. Some who are connected with the works here say that the use of antimony in the manufacture of rubber goods is a complete success, and that rubber cloth, equalling in fineness and softness the best moleskin, has been made by using oxide of antimony, by which, also, the disagreeable odor resulting from the use of other substances is entirely avoided. It is also said that carpets can be made by the use of this material, which may be of any pattern or color, and can be easily washed as oil cloth; it is also much more lasting. Antimony seems to be very abundant in our vicinty, the Lake George property alone having five distinct veins on it. The Lake George and Brunswick Companies are keeping their mines free from water by means of buckets hoisted by horses. In this system great loss is entailed both of time and money, and really good results cannot be overlooked for from either of these properties until good steam engines are used for keeping out the water, as well as for hoisting, crushing and concentrating. It is said that they intend shortly to procure these."

Daily News - Sep. 1, 1880 Hibbard Antimony co. - The change in the proprietorship of the Hibbard mine. Lake George, goes into effect on the 16th inst. The mines and works there have been run for many years by the Hon. Francis Hibbard. The increased attention which is being given to antimony mining by American speculators has necessitated a like revival in the Hibbard property. The corporation which now assumes the management is a joint stock company wielding an aggregate stock of $650,000. Mr. Hibbard is president of the company and for the purpose of giving greater attention to the enterprise thus greatly enlarged, is about to take up his residence near the mines. Several other buildings are to be put up for the accomodation of workmen. The concentrating works are to be placed in a new apartment 40x20 feet, which is now being built. This will be completed in about a week. Almost entirely new machinery, driven by an engine of 175 horse-power, are to be used in the works. The new machinery will give the works a capacity for manufacturing thirty tons of metal per day. Very little manual labor will be required. In about four weeks the new corporation will commence to ship metal to England. Instead of being brought down the St. John river by woodboat as formerly, the ore will be brought to St. John by the St. John and Maine Railway and shipped to England direct. The new company start operations under very favorable auspices."

S.J. Daily Sun - Sep. 1, 1880 The Lake George Antimony Company's Veins, by Edward Jack. - As pointed out by me formerly, it is now evident that there are two distinct series of antimony bearing veins in the vicinity of Lake George, both of which are found on the property of the Lake George Antimony Mining and Smelting Company. The one on which this Company is now working, Mr. Parsons says has a strike of N30øE. According to Professor Hind the strike of one of the other series is S50øE. The individual members of each series seem to be nearly parallel to one another, but the series themselves to be inclined at a high angle to each other. Such an occurrence of these veins is not uncommon. The ore of the veins bearing N30øE seems to be richer than that of the other series, being in a more condensed state, as can be readily verified by inspection of the results of the mining at the Lake George Company's shafts up to the present time, there being much more first class ore in the product of the one than in that of the other. I have lately noticed a considerable quantity of calcite in the gangue of the vein on which the Lake George Company is working. This mineral appears to have been deposited subsequently to the quartz, filling up existing cavities, or it may tell of a disturbance subsequent to that which first formed the fissures. I have in my possession a piece of lime spar which I obtained at this mine a few days since, weighing about 3 lbs. Upon making a transverse section of it, from left to right, we find first, the wall rock of quartzite, intersected by a string of quartz which carries a thread of grey antimony. A few lines further we find a deposit of ore about one-tenth of an inch thick. Upon this rests the calcite, into which the antimony protrudes in irregular masses or is disseminated in beautiful minute feathery forms on the plates of the crystals of lime, as clouds are often seen scattering over a clear sky."

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - Jul. 9, 1880 New Brunswick Antimony and Its Cost of Production. - Nearly all the antimony of commerce is obtained from the grey ore or sulphide of antimony. This sometimes carries silver, as in the case of the mines of Arany-Idka and sometimes gold, as at Magurka in Hungary, and in Australia. Nearly all of this ore, which is consumed in England, comes from Singapore, in the East Indies. The first publication of any importance which called the attention of the world to the New Brunswick antimony deposits was the ninth edition of the Encyclopedia Britannica, now in course of publication. The New Brunswick ore is remarkable for its great richness and purity, being free from arsenic, which is a very deleterious substance, and one which it is difficult to get rid of. We are now in a position, through a well informed correspondent, to place before the public such a state of facts as will enable capitalists to deposits. He informs us that he has frequently visited the antimony district of Lake George, where he has seen many veins of the sulphide on the Hibbard, Lake George and Brunswick properties. The area on which these ores occur he estimates at about a mile square, that there are two series of veins nearly at right angles to each other; that the property of the Lawrence or Lake George Company is intersected by members of both of these series of veins, and the ore on this property is especially rich, much of it being pure stibnite. We learn that considerable quantities of first class ore was sent from this mine during the past spring to London, England, to a leading house engaged in the antimony business, who valued it at $90 per ton delivered in London. We learn further that two parties are now taking ore out of the Lawrence shaft, by contract, at the following prices:- Party No. 1 No. 1 ore per ton… $15 No. 2 … $8 No. 3 … $4 Party No. 2 No. 1 ore per ton …$10 No. 2 … $6 No. 3 … $3 All that the company are required to do is to keep the shaft free from water and hoist the ore to the mouth of the pit. The New York quotations of antimony on the 3rd of the present month were Cookson's 19c., Hallett and Johnson's 17c., being about the same price as copper, which is quoted at from 18 5/8 c. to 18 3/4 c. per lb. With prudent and economical management there can, therefore, be no doubt but that the mining and manufacture of antimony may be made one of the most profitable businesses in New Brunswick. There is a fair hum at Prince William."

Daily News - Jun. 5, 1880 Lake George Antimony Mining Company. - This company organized but a few weeks ago is entering upon an era of activity. As is well known, the discovery a few months ago, that antimony ore could be utilized in the manufacture of rubber goods, has given an impetus to this enterprise which promises to make the antimony districts of Lake George the most valuable mining property in New Brunswick. During the last month Alexander Moody, foreman at Lake George, pursuant to instructions received from the main office at Boston, prospected for new veins and found a number that promise very well. The works at Lake George have been shut down for several years, but now a large party of men are at work, putting the buildings in repair and cleaning out the old shafts. Two hundred tons of ore of 1st, 2nd and 3rd classes are now on the ground, and will be brought to St. John by woodboat, and from here shipped to England where œ18 per ton is offered for crude material. The preparations which are being made for this seasons operations are very extensive. Smelting and crushing works are to be erected either on the grounds or on the St. John at Prince William, which will cost about $40,000. New machinery, pumps, etc., to be driven by a powerful engine are to be put up immediately, and the direction contemplate constructing a tramway of four miles leading from the mines to the river St. John at Wasson's, whence the ore will be shipped. Foreman Moody has received instructions to employ as many experienced miners as can be obtained. A fair start on these projects is to be made next week, when probably some thirty miners will commence operations. The Lake George antimony mines are of 720 acres in extent and situate on the high ground lying between the Hibbard and Brunswick properties, and being thus free from the expenses of drainage the success of the venture is assured. The directors of the corporation are: - F.F. Adams, John P. Lynch, Winthrop M.B. Hammond, (Boston), C.A. Stockton, (St. John), and J.A. McCallum, (Fredericton). At the last meeting of the company in May, E.T. Adams was elected President, M.B. Hammond, Sec'y-Treasurer, and C.A. Stockton, Solicitor."

Weekly Freeman - May 15, 1880 The Lake George Mining Company was organized on Tuesday. The officers and directors are nearly all American gentlemen. It was decided at the meeting to purchase land situated at Prince William, York Co."

Daily News - Aug. 4, 1880 Antimony. - The activity that was predicted in the mining and smelting of antimony ore on account of the discovery of the uses to which the mineral could be put in the manufacture of rubber goods in the United States, have not as yet been realized, though there seems still to be evidences of a permanent revival. At Lake George more than the usual quantity of men are at work and it is probable that a larger number would be furnished with work if skilled labor were available. As yet, however, little improvement is visible and that provincial diffidence against speculating in mines prevails, notwithstanding the glowing reports that have been published. The horse-power apparatus is still in use and it is probable that the winter will arrive before any mechanical change takes place in the aspect of the mines at Lake George. At the Brunswick mine twenty men are employed who, on account of favorable weather (very little water flowing into the pits during the season), have been enabled to ship 16 tons of ore to the Boston market. The ore is now being brought to the surface at the mine at the rate of about a ton a day. If the works at Mistic River ever reach completion a great change will be made about the mine. The Lake George Antimony Mining and Smelting Company have mined very little thus far and are said just now to be wrestling with a mixed lode. A rumor, probably correct, is going the rounds to the effect that a very radical change is to take place at the Hibbard mine shortly."

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - Apr-Jun. ????, 1880 A new use, it is said, has been found for Antimony. Used in the preparation of India rubber, it makes it much more elastic and more durable. In consequence of the increased demand so created, it is said that the mines at Prince William, in this Province, have become much more valuable than they were formerly supposed to be. The Farmer says:- There is, according to the Boston Herald, great activity in the mining operations at Lake George, Prince William. The supply of antimony will be equal to the greatest demands. New and seemingly inexhaustible veins having been discovered. A hundred and fifty tons are already on the dump ready for shipment down in small schooners to Boston, from whence they will be taken to East Medford on the Mystic River, where works have been just erected for the reduction and treatment of the antimony ore. It is stated that the product of these works is already sold in advance, at a price which will yield upward of $140 per ton profit. - With a sufficient crew of laborers 100 tons a day, it is said, may be easily mined and shipped. The increased mining operations will give work to a number of men in the vicinity, which with a share of profits of shipment which it may be fairly shared in by some owners of New Brunswick schooners, will, we imagine, be all the advantage that the Province will derive from the richest antimony mine in the world in its midst."

S.J. Daily Telegraph - Feb. 14, 1880 Prince William Antimony Mines. - A Fredericton despatch states that a Mr. Adams, of Boston, has made a shipment of antimony from the antimony mines at Prince William, York county, to Boston. A stock company has been organized, which will commence operations on a large scale in the coming spring."

N.B. Reporter - Feb. 18, 1880 and S.J. Daily Sun - Feb. 20, 1880 The Antimony Mines. - A company are about pushing operations at the Antimony mines, Prince William. A cargo has already been shipped to Boston by Mr. Adams, a gentleman of that city, and during the ensuing spring extensive operations will be commenced."

Carleton Sentenil - Feb. 21, 1880 Work at the Antimony mines, Prince William, will, it is said, be resumed with vigor in the

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - Feb. 26, 1880 The Lake George Antimony Veins. - By Edward Jack. - The existence of numerous veins of antimony ore near Lake George, in the Parish of Prince William and County of York, has been known for a number of years. They are distant about 25 miles from Fredericton, following the post road leading to Woodstock as far as the road to Magundy, and taking this for about 4 miles until the summit level between Lake George and the St. John River is reached. They are distant 9 miles form Harvey Station, on the St. John & Maine Railroad, by a good winter road. They have been examined by various geologists and mining engineers who all, so far as I have heard, have expressed most favorable opinions of their richness and extent. The country rock is slate and quartzite (a hard fine grained sandstone). It belongs to one of the ancient formations which has been called by some the Quebec Group. I am not aware of any characteristic fossils having been found by which the exact age of the rocks in this vicinity could be determined. The point where the veins occur is not far from the granitic belt which crosses the St. John at and below the mouth of the Pokiok. Bernard Von Cotta, in his excellent work on mineral veins, says that nearly all of the mineral wealth of Cornwall is found within two or three miles on each side of the junction of the slate and granite; indeed one of the few tolerably certain facts with regard to the occurrence of mineral veins is, that they are found not far from the junction of dissimilar rocks. The strike or direction of the rocks in which the antimony occurs, assuming it to be parallel with the course of the granite belt referred to, is not far from N. 50ø E. There are three separate properties which may be characterized by the names of the Hibbard, Lee, and Lawrence mines. The lode which is being worked on at the Hibbard mine, from bearings taken by me under favorable circumstances, has a course of about S. 66ø E. cutting across the strike of the rocks at a high angle. The lode worked at the Lee mine seems to be but a prolongation of this one; they may therefore be safely assumed, unless the contrary be known, to be one and the same vein. The third series of veins - for there are a number of them according to Mr. McCallum's survey - occur to the south and west of the others, on mining property owned by R.R. Lawrence, Esq., of St. John, and another. On these Lake George properties pits have been sunk in three places to a depth of between 100 and 200 feet on the slope of the veins; and much ore taken out. At the Lawrence mine I saw a few days since perhaps 40 tons of ore piled up under cover. Much of this was very rich. At the Hibbard mine I have also seen splendid specimens of sulphide of antimony, many of which appeared to have occupied nearly the whole width of the vein to the exclusion of quartz, so much so that some of the workmen at the smelting works said that they had crushed and smelted quantities of it without any washing. Veins are usually richest at the point of their intersections with others. In the Lake George explorations and mining operations had vein junctions been more sought after on the surface and less money spent in sinking, more favorable results might have been attained at less expense. From the size, weight and richness of the pieces of ore seen lying about at the mouths of the various pits, the casual observer would be led to suppose that mining operations should certainly pay here. On inquiry of some Cornish miners who were here working some three years since at the Hibbard mine, I was informed that for the first class ore, nearly pure sulphide of antimony, they were paid $20 per ton, $12 for second quality, and $5 for the third. There is said to be another lode at the Hibbard mine running parallel to the one now being worked. As a rule, lodes occur associated together and are generally arranged in groups tolerably parallel to one another, and as Von Cotta says, form what the Germans call a gangzug, of which several may traverse the same district in different directions, as for example at Frieberg, and we may also add at Lake George; the Lawrence lodes forming one group and the Hibbard and probably the Lee lodes another, which fact would seem to confirm Professor Hind's observations regarding the rock dislocations in this neighborhood. Dr. Bailey, in the summer of 1866, visited and reported on the Lawrence property. After noticing its favorable situation on the slope of very elevated land as being extremely favorable for drainage, he states that the Donelly vein is a true and well defined vein, appears both from its character and its position as regards the associated beds, that it possesses a nearly uniform thickness of about two feet, that the amount of antimony contained in it increases with its descent, and that a mass of very rich ore at the time of his visit occupied the bottom of the pit and gave promise of yet greater richness at moderate depths below; that numerous smaller and vireguern ore veins penetrate the associated rocks and tend to confirm the productive character of the lode. The following analyses made from selected samples are given by the Doctor in his report, and show how pure the quality is:- Bailey Bailey Chilton Antimony 68.98 69.00 66.00 Sulphur 28.86 27.28 23.40 Iron .85 .85 .60 Gangue .87 1.50 10.00 99.50 98.63 100.00 In conclusion he adds that he may safely express the opinion that the antimony deposits of Prince William give promise of great and permanent productiveness, a conclusion which will be concurred in by any one visiting the locality and giving the subject careful consideration. The minerals of New Brunswick may yet take the place of the forests which are disappearing so fast before settlers made fires. This subject of our mineral resources has not yet received anything like the attention which its importance demands, the Geological Survey of Canada doing all or nearly all that has been done so far. We should put our own Provincial shoulders to the wheel, using the excellent work already performed by the Dominion officers as our preliminary guide; supplementing it by other and careful explorations in the various locations pointed out by them as places worthy of investigation in our search after the ores of the various metals."

Daily Telegraph - Mar. 17, 1880 New Brunswick Antimony Mines. - A correspondent of the Boston Traveller, writes to that paper as follows, evidently referring to the antimony mines in this Province. You would confer a favor to parties interested in mining, and the public generally, if you can get reliable information as to why the stock of the Brunswick Antimony is selling at 17 3/4 to 16 today. It is an undeveloped mine, and has been lying idle for the last ten years. Is there any good reason for the late great rise! The editor of the Traveller replies that the company that is now engaged in the development of the Brunswick Antimony Mine is a comparatively new organization, and reliable facts relative to its exact condition are difficult to obtain. Its stock is reported to be held almost entirely by parties especially interested in the company, and as a consequence its price is controlled by them. So far as can be learned no changes or discoveries of any great importance have been made of late, which should occasion or warrant the rise referred to."

URN: 0007 / Names: Lake George Antimony;

Fredericton Capital - Nov. 27, 1880 Hon. Francis Hibbard, M.L.C., died on Thursday morning, in the 63rd year of his age. Mr. Hibbard entered into public life at the time of the confederation elections in 1866. His views were, for the most part, progressive, and in the early part of his career made a strong effort for retrenchment and reform. Whether he was discouraged by the lack of interest which the Assembly, since confederation, has taken in matters of the most vital interest; or felt that he came into the political arena too late in life to hope to accomplish much, or whether the development of his mining property demanded his whole attention, we do not know; but in 1874, he accepted a seat in the Legislature Council, of which he was an industrious member, although no longer the war horse of the House, as he was familiarly known among his associates. He was deservedly esteemed by all who knew him, and taking him all in all, he filled a place in public life, and filled it well, if not brilliantly. His business experience was long and varied, as has been above mentioned; his late years were devoted to his mining property at Lake George. He was a firm believer in the value of the antimony deposits, and spared neither time nor money to attract the attention of capitalists to them. In this he was successful just a short time before his illness. Mr. Hibbard was twice married. His widow is a sister of A.H. Gillmour, M.P. He had two sons, who survive him."

S.J. Daily News - Oct. 21, 1880 Silver. - It is reported that the St. George Antimony Mining and Smelting Company have struck a streak of silver in their diggings at Lake George. Mr. W.M.B. Hammond has left for the mines and confidently expects to confirm the report."

S.J. Daily Sun - Dec. 6?, 1880 Mining Notes. - F.A. Alger, Esq., President of the Lake George Antimony Co., of Boston (this mine being located at Prince William, York Co., N.B.,) left St. John for home on Saturday after nearly a fortnight's visit to our Province. Mr. Alger has made an excellent impression on our business men and has done much to create a warm New Brunswick interest in the success of the enterprise in which a number of Boston capitalists have invested their means. We hear that Mr. Alger, though a comparatively short time at the head of this promising enterprise, has his arrangements so far perfected that the services of a first-class mining engineer will be utilized immediately; an offer has been received from a leading smelting house in New York city to erect smelting works for the reduction of the Company's ore; and one of the first metal houses in New York stands ready to buy the entire refined product of the mine. It is understood that the Company can

Daily Telegraph - Jan. 12, 1880 The Antimony Mines of Prince William, York County. - Our esteemed contemporary, the American Cultivator, devotes a couple of columns to these mines, treating the discovery of antimony there as new and of great interest; also giving an account of the antimony mine in Borneo, which has hitherto been the chief source of the supply of this metal. The statements are not new to us; nevertheless our readers may wish to see the description of the New Brunswick mine given by our contemporary, which remarks on the increased interest now felt in mining all over the United States and including Maine, in which there is a great revival in mining interests. We quote: The veins of antimony run N., 70 degrees W. and S., 70 degrees E. They dip at an angle varying from 48 degrees to 60 degrees, and vary in width from 6 inches to 27 inches. The breadth and parallelism of the fissures, coupled the fact that veins of ore have been discovered in one prevailing direction for more than a mile, afford sufficient evidence of the great extent of the antimony- bearing veins embraced in this area. Their depth, the axis being anticlinal, with a downfall, doubtless extends through the Lower Silurian rocks, which are here several thousand feet thick. Numerous analyses of these ores, made by distinguished chemists, show an unusual percentage of metal. It is worthy of notice that, until a depth of 60 feet was reached, the ores consisted uniformly of gray antimony ore, but at that depth an admixture of lamellar or native antimony began to show itself as the work progresses downwards. This native antimony has a brilliant metallic lustre, with the characteristic tin-white streak. The ores yield an average of about 70 per cent pure sulphide of antimony, some specimens assaying as high as 90.8. This exhibits a most remarkable richness of mineral wealth. Few mines in the world present so great a length of well-defined vein, containing ores of such a high percentage. Copper-bearing veins yielding two or three per cent of ore, without dressing, are considered very rich. The celebrated copper mines at Cornwall, England, do not yield over one half of one per cent of copper from vein rock. Large quantities of copper ore are shipped to market not dressed up over ten to twelve per cent. It is stated on undoubted authority that these antimony ores can, by the most simple process, be dressed to 80 or 90 per cent, and, as stated above, in some portions of the vein they are found to yield 90 per cent in their original state. The mining and smelting of ores so highly concentrated can but prove highly remunerative. Even if it were a deposit of iron ore, it would be valuable; but in considering a metal of six or seven times the value of iron, the estimate must be far higher. To produce a ton of pure metal from an ore yielding two per cent, over 50 tons of ore must be dressed and handled; whereas to produce the same quantity of pure metal from an ore yielding, as the New Brunswick Antimony Mines do, fully 60 per cent less than two tons need to be worked. To carry out the same idea, a good copper mine, yielding 1,000 tons of pure metal per annum, would require the transporting and treating of 50,000 tons of ore; while the New Brunswick mine, to produce 1,000 tons pure metal, would require the working of but 2,000 to 3,000 tons. The immense amount of labor saved must yield a proportionate increase in the profits of working. Scientists make no record of any valuable ores in this country averaging the high percentage carried by those of the New Brunswick mines, which alone makes them of exceeding interest to men of science. We shall be glad to hear that the following sanguine predictions of our contemporary are likely to be realized:- The Borneo mines are now managed and controlled by a trading company whose headquarters are in London, England. This concern have made a vast fortune in the control of the antimony trade of the world, which traffic now bids fair to be divided with the New World competitor, the New Brunswick antimony mines. It is hardly possible that the Borneo mines, with all their drawbacks, can long be worked in competition with the New Brunswick mines, surrounded as are the latter by a fine farming country, cheap and intelligent labor, low cost fuel, timber, provisions and transportation. This discovery adds one more to the long list of commodities with which America can supply the world. Antimony shipments from New Brunswick will soon astonish the English dealers in metals, in

URN: 0007 / Names: Lake George Antimony;

N.B. Reporter - Dec. 1, 1880 Lake George Antimony Mine. - Since the death of Hon. Francis Hibbard, President of the Lake George Antimony Mining Co., Mr. E.A. Alger, Jr., of Boston has assumed the management of the works and preparations are being made on a large scale for an immediate extension of mining. The Telegraph says that arrangements have been made whereby the ore can be shipped to New York and smelted. The international steamers have taken away 13 barrels this week. At present the ore is teamed to Prince William and brought to the city over the St. John and Maine line. When the ice is sufficiently strong on the lake the shipping point will be from Harvey. One cargo has been shipped to England, though the probabilities are that in future the greater part, if not all the ore, will be placed in the New York market, as the risks of an ocean voyage will be avoided by the latter course. Plans for buildings to be erected in the spring are in course of preparation. It is the intention of the directors to put in the necessary machinery required for the successful working of the mine, including an 80 horse power boiler, an engine of 50 horsepower, stamp mill, crusher, steam hoisting apparatus and concentrators. These, it is thought, will be in operation in about 60 days. There is a large force now working at the mine and the men are to be employed all winter."

N.B. Reporter - Dec. 1, 1880 Death of Hon. Francis Hibbard. - The death is announced of Hon. Francis Hibbard, which occurred at his residence, St. George, N.B., on Thursday morning last. Mr. Hibbard had been identified for many years with the lumbering interests of the Province. He was elected to the House of Assembly at the Confederation election in 1866, and held a seat in the House for eight years, when he was elevated to the Legislative Council. He continued to hold his seat there until his death. Mr. Hibbard has latterly been engaged principally in mining pursuits. He was largely instrumental in bringing the antimony minesof Prince William into note, and was Managing Director of the Hibbard antimony mines at the time of his death. As a politician, he was conscientious, fearless and patriotic, and was determined in his opposition to extravagance; as a business man he was energetic, determined and straight forward, and in private life exemplary and highly esteemed."

St. Croix Courier - Nov. 11, 1880 The Hon. Francis Hibbard.- For some days past it has been known that the Hon. Francis Hibbard, M.L.C., has been lying dangerously ill at his residence in St. George. It is only about ten days since the writer met him at McAdam Junction on his way from the Prince William Antimony mines, to remove his family there, he having been appointed Manager of the Works, as well as Director. In our last issue we referred to the labor which Mr. Hibbard has expended upon those mines, and the success which had ultimately crowned his efforts. Now that he is about to reap the results of a life-long struggle he is called upon to leave it all. What shadows we are and what shadows we pursue. Mr. Hibbard has been in politics since 1866, in which year he was selected on the Confederation ticket. He sat in the House of Assembly from 1866 to April 8th, 1874, when he was appointed to the Legislative Council. In politics it has often been our fortune to differ from Mr. Hibbard, but we have always found him as square and honorable in his treatment of public affairs as he is acknowledged to have been in his private business transactions. It was in local politics only that the Courier has sometimes differed from him, but in the great questions of the day we have always stood shoulder to shoulder. He is a man of comprehensive views and of broad, national and patriotic sentiment. In response to an enquiry from this office yesterday afternoon we received the following telegram: Cannot report any great change in Mr. Hibbard's condition to-day, he rested very well last night. Mortification slowly but steadily advancing. He may probably last two days longer. When not under the influence of opiates he is as clearheaded as he ever was, understands his condition thoroughly and is perfectly resigned. Should Mr. Hibbard's death occur at this time, his departure cannot be regarded otherwise than as a public loss, St. George will lose one of its best citizens and the province one of its most valuable public men."

Bay Pilot - Oct. 28, 1880 The Hon. F. Hibbard is reported to have sold his interest in the Prince William Antimony mines for $200,000 cash and $20,000 stock. Mr. Hibbard is to be general manager of the mine. He together with his family are about to remove from St. George to take up their residence temporarily at least, in the vicinity of the mine, on the St. John road about 20 miles from Fredericton."

URN: 0007 / Names: Lake George Antimony;

S.J. Daily Sun - Nov. 2, 1880 Mining Matters. - The Hibbard Antimony Company. - We find the following interesting statement of the value of the resources of this Company in the Boston Journal of the 23rd Oct:- The above named Company has just been organized under the laws of the Province of New Brunswick, with a capital of $650,000, divided into 130,000 shares of $5 each, and $100,000 in the treasury. Among the stockholders of this company may be found some of the most influential capitalists of Boston. Hon. W.B. Fowle is President, Hon. Francis Hibbard of New Brunswick, Lewis Coleman, Stephen N. Stockwell and Thomas F. Temple of Boston, Directors, and J.W. Kimball, of Newton, Secretary and Treasurer. During the past week the company has completed the purchase of the valuable mining property formerly owned by the Lake George Antimony Company, situated in the parish of Prince William, York County, N.B., and the title deeds have been passed and placed on record. The President and Directors have just returned from a visit to the mine and express themselves as greatly pleased with the developments and prospects of the Company. The property of the Company consists of 900 acres of land, on which there are extensive deposits of antimony ore. The buildings, machinery and other improvements have cost over $70,000, a description of which may be found in the prospectus of the company, which may be had at their office, No. 2 Herald Building, Boston. Although this property is fully equipped with all necessary machinery for doing a large mining business, the new company is removing everything which falls below the present standard, and are replacing the same by latest and most approved inventions, among which is one of Bradford's celebrated concentration works, which will be in operation in a few weeks, and is guaranteed to concentrate 30 tons of ore in 10 hours. No less than six shafts, or slopes, have been sunk on the property, ranging in depth from 40 to 130 feet, all of which develop very rich ore in great quantities. The veins are true fissure veins, dipping to the north at an angle of about 45 degrees. At the surface they are from three to four inches thick, and increase in thickness and purity as they descend, till, at a depth of 130 feet, the vein or lode is 36 inches thick and of remarkable purity, assaying 75 per cent. pure metallic antimony. Two of these veins have been opened about 75 feet apart, and have been traced on the company's property for considerable more than a mile in length. Four gangs of men are now at work in the shafts, taking out very rich ore, and, after some further preparation, the company expect to employ over 100 men. The property is situated in the midst of a large farming district , where supplies of every kind are abundant and cheap; hardwood can be bought, laid down at the mine for $1.25 per cord, and the usual price of labor is $1 to $1.25 per day. The mine is three miles from navigable water on the St. John river, and only six miles from railway communication by a level road, now in course of construction. The ores or smelted metal can be shipped from the port of St. John, N.B., to any port of the United States or England at a trifling cost. The supply of antimony for the past 50 years has been derived almost entirely from the island of Borneo, but this supply is now running short, while the demands and uses of the article are increasing on every hand, so much so that this company has received no less than three inquiries from large dealers in England, wanting to know if they could obtain anything like a large supply of antimony in this country. A written offer has been received from one of these parties, the largest smelter and dealer in the article in the world, offering to enter into a contract for 500 tons of antimony ore per month for a period of three years, on a basis of about $110 per ton for such ore as this mine will produce, payable in cash on delivery; and, when it is remembered that this ore can be mined and laid down at the port of delivery at less than $30 per ton some idea can be formed as to the immense profits that will accrue to the stockholders of this company. Another very important feature in this enterprise is that it has passed through all experimental stages of uncertainty and doubt, and has now become an assumed fact, a reality that can hardly fail to produce the most gratifying results. Therefore, when all these facts, and the class of men that have the enterprise in hand, and the large working capital they have at their command are considered, it must be admitted that no mining enterprise has started out with more unquestionable evidences of success than

N.B. Reporter - Nov. 3, 1880 Valuable Mines. - By the development of the Antimony mines at Prince William in this County they are destined to be among the most remunerative enterprises of the Province, and with the capital already invested are sure to yield handsome profits to the wealthy gentleman composing the company. The Telegraph says that the Hon. F. Hibbard is reported to have sold his interest in the Prince William mines for $200,000 cash and $20,000 stock. Mr. Hibbard is to be general manager of the mine. He, together with his family, are about to remove from St. George to take up their residence, temporarily at least, in the vicinity of the mine, on the St. John road, about twenty miles from Fredericton."

URN: 0007 / Names: Lake George Antimony;

St. Croix Courier - Nov. 4, 1880 The Hibbard Antimony Co.- We congratulate the Hon. Francis Hibbard, M.L.C., on the organization of his Antimony Company on an extended and firm basis. He has been engaged in the development of the mines at Prince William for nearly a score of years, and it must be a proud satisfaction to him to see his labors, after extending over so long a period, crowned with success. He has not only derived a handsome fortune from it himself, but has had the satisfaction of seeing a work, small in its beginning, develop into a great industry. It is understood that he has sold his interest in the mines for $200,000 in cash and $50,000 in stock in the new company, of which he is also a director. Together with his family he is about to remove to Prince William to take up his residence in the vicinity of the mines. We find the following interesting statement respecting the company in the Boston Journal of 23d ult.:- The above named Company has just been organized under the laws of the Province of New Brunswick, with a capital of $650,000 divided into 130,000 shares of $5 each, and $100,000 in the treasury. Among the stockholders of this company may be found some of the most influential capitalists of Boston. Hon. W.B. Fowle is President, Hon. Francis Hibbard of New Brunswick, Lewis Coleman, Stephen N. Stockwell and Thomas F. Temple of Boston, Directors, and J.W. Kimball of Newton, Secretary and Treasurer. During the past week the company has completed the purchase of the valuable mining property formerly owned by the Lake George Antimony Company, situated in the Parish of Prince William, York County, N.B., and the title deeds have been passed and placed on record. The President and Directors have just returned from a visit to the mine and express themselves as greatly pleased with the developments and prospects of the company. The property of the company consists of 900 acres of land, on which there are extensive deposits of antimony ore. The buildings, machinery and other improvements have cost over $70,000, a description of which may be found in the prospectus of the company, which may be had at their office, No.2 Herald Building, Boston. Although this property is fully equipped with all necessary machinery for doing a large mining business, the new company is removing everything which falls below the present standard, and are replacing the same by the latest and most approved inventions, among which is one of Bradford's celebrated concentration works, which will be in operation in a few weeks, and is guaranteed to concentrate 30 tons of ore in 10 hours. No less than six shafts or slopes have been sunk on the property, ranging in depth from 40 to 130 feet, all of which develop very rich ore in great quantities. The veins are true fissure veins, dipping to the north at an angle of 45 degrees. At the surface they are from three to four inches thick, and increase in thickness and purity as they descend, till, at a depth of 130 feet, the vein or lode is 36 inches thick and of remarkable purity, assaying 75 per cent. Pure metallic antimony. Two of these veins have been opened about 75 feet apart, and have been traced on the company's property for considerable more than a mile in length. Four gangs of men are now at work in the shafts, taking out very rich ore, and, after some further preparation, the company expect to employ over 100 men. The property is situated in the midst of a large farming district, where supplies of every kind are abundant and cheap; hardwood can be bought, laid down at the mine for $1.25 per cord, and the usual price of labor is $1 to $1.25 per day. The mine is three miles from navigable water on the St. John River, and only six miles from railway communication by a level road now in course of construction. The ores or smelted metal can be shipped from the port of St. John, N.B., to any port of the United States or England at a trifling cost. The supply of antimony for the past 50 years has been derived almost entirely from the Island of Borneo, but this supply is now running short, while the demands and uses for the article are increasing on very hand, so much so that this company has received no less than three inquiries from large dealers in England, wanting to know if they could obtain anything like a large supply of antimony in this country. A written offer has been received from one of these parties, the largest smelter and dealer in the article in the world, offering to enter into a contact for 500 tons of antimony ore per month for a period of three years, on a basis of about $110 per ton for such ore as this mine will produce, payable in cash on delivery; and, when it is remembered that this ore can be mined and laid down at the port of delivery at less than $30 per ton some idea can be formed as to the immense profits that will accrue to the stockholders of this company. Another very important feature in this enterprise that it passed through all the experimental stages of uncertainty and doubt, and has now become an assured fact, a reality that can hardly fail to produce the most gratifying results. Therefore, when all these facts, and the class of men that have the enterprise in hand, and the large working capital they have at their command are considered, it must be admitted that no mining enterprise has started out with more unquestionable evidence of success then

Daily Telegraph - Dec. 4, 1880 Lake George Antimony Mine. - Mr. William Seccombe, the new manager of the Lake George Antimony Mining and Smelting Co.'s mines, arrived last evening by steamer. He will proceed today with Mr. Alger, the president, and one of the directors, to the mines at Prince William. He left Dakota on the 18th ult., and after a short visit to his family at Dartmouth, N.S., he will take the entire management of the company's property. Mr. Seccombe is highly endorsed as a mining expert, and the company is to be congratulated on having secured so valuable a man."

Bay Pilot - Nov. 11, 1880 The Mineral Wealth of Canada. Word comes that the Lake George, N.B., Antimony Mining and Smelting Co. have struck a large vein of silver ore, the specimens shown being very rich. This mine is employing from 25 to 50 persons, and has made two shipments of very pure ore to Great Britain lately; and that Mr Hibbard's mine has been sold to the Hibbard Antimony Mining Company for $200,000, one half paid in cash and the other half in the stock of the company."

URN: 0007 / Names: Lake George Antimony;

S.J. Daily Sun - Nov. 23, 1880 Mining Notes. - The Lake George Antimony Mining and Smelting Co., are now making regular shipments of their ore to Boston and New York, and facilities for increasing their output are being arranged for by E.A. Alger, jr., Esq., of Boston, President, who is at present here for that purpose. The company have arranged with a large refining and smelting company of New York to do the work of smelting, for owing to the fact that there is no duty on the ore for entry into the United States, it is found to be more profitable to ship the ore in concentrated form and to have the smelting done there. Concentrating works are now about to be constructed at the mines, and it is the company's intention to increase the amount of labor and to get the greatest possible amount of ore obtainable with the present mining machinery in use, at the same time, with the purpose in view of placing new and more powerful machinery in the works at an early date. About twelve tons of No. 1 ore are now en route for shipment on Thursday per I.S.S. Co. line, and the steamer New Brunswick takes on her present trip a quantity of ore to fill the order of a leading chemical firm in Boston. The American demand is increasing, and as it pays better, it is the intention to discontinue further shipments to England, although English orders have been coming in for the No. 1 and common quality ores running from 10 to 35 per cent. metallic antimony. The ore is shipped from Prince William station on the St. John & Maine railroad and forwarded from here per I.S.S. Co. Messrs. Robt. Robertson & Son are the forwarding agents."

S.J. Daily News - Nov. 27, 1880 Hibbard Antimony Mining Co. - In the death of the President of the Hibbard Antimony Co., Hon. Francis Hibbard, Mr. E.A. Alger assumes charge of the property."

Daily Telegraph - Nov. 27, 1880 Lake George Antimony Mines. - Some of the shareholders in the Lake George Antimony mine, including Mr. E.A. Alger, jr., of Boston, the president, have returned from a visit to the works, and report that the operations are proceeding in the most satisfactory manner. Arrangements have been made whereby the ore can be shipped to New York and smelted. The international steamers have taken away 13 barrels this week. At present the ore is teamed to Prince William and brought to the city over the St. John and Maine line. When the ice is sufficiently strong on the lake the shipping point will be from Harvey. One cargo has been shipped to England, though the probabilities are that in future the greater part, if not all the ore, will be placed in the New York market, as the risks of an ocean voyage will be avoided by the latter course. Plans for buildings erected in the spring are in course of preparation. It is the intention of the directors to put in the necessary machinery required for the successful working of the mine, including an 80 horse power boiler, an engine of 50 horse power, stamp mill, crusher, steam hoisting apparatus and concentrators. These, it is thought, will be in operation in about 60 days. There is a large force now working, at the mine and the men are to be employed all winter."

S.J. Daily Sun - Nov. 29, 1880 Mining Notes. - The News of the 27th inst., in an article under the head of Hibbard Antimony Mining Co., was quite incorrect in the following statement:- In the death of the President of the Hibbard Mining Co., Hon. Francis Hibbard, Mr. E.A. Alger assumes charge of the property. The late Hon. Francis Hibbard was manager of the Hibbard Antimony Mining Co. and a Mr. Fowle, of Boston, is the President. Edwin A. Alger, Jr., of Boston, is the President of the Lake George Antimony and Smelting Company and is at present actively engaged in discharging the duties of that position. The Lake George Antimony Mining and Smelting Co. are soon to have the services of Mr. Wm. Seccombe, of Dartmouth, Halifax, N.S., who has had long experience the past few years in the mines of Nevada and Arizona in the best methods of American mining. Mr. Seccombe is now in Arizona, but is expected to start for home at once."

S.J. Globe - Dec. 30, 1881 ADVERTISEMENT: Brunswick Antimony Company. St. John, N.B., December 24, 1881. The Directors of the Brunswick Antimony Company have levied an assessment of Three Dollars per Share upon the Capital Stock of said Company, payable in sixty days from date. The Boston Office of the Company is at Nos. 64 and 65 Mason Building, Kilby street, Boston, Mass. A.O. Morgan Secretary and Treasurer, 12-23 4w liew"

URN: 0007 / Names: Lake George Antimony;

S.J. Daily Sun - Nov. 15, 1881 The Hibbard Antimony Mines. - An Interview with Sheriff Temple. - A Sun reporter having learned that Sheriff Temple of Fredericton had recently visited the works of the Hibbard Antimony Company at Lake George, sought an interview with that gentleman and from him received a large amount of information which is given below. The Hibbard Company, said the Sheriff, have made great improvements in their facilities for prosecuting their enterprise during the past year. I was kindly shown around by the manager, Mr. John Hardman, who gave me every information and made my visit exceedingly pleasant. Will you give me some idea of the improvements that have been made, Sheriff? asked the reporter. The surface improvements consist of a boarding house; a dwelling house; two large barns, a new blacksmith shop, with set of tools and good stock of iron; a large two-story carpenter shop and storehouse; an office and laboratory; a large new building containing the new concentrating machinery; a tank house; a new ore house, and buildings over the smelting plant. In addition, there is a large building with wings or sheds, covering the engine, boiler, hoisting machinery, main working shaft, etc.; and there are also houses over three other shafts. These buildings are all substantial, many of them entirely new, and in good repair. Are the Company well provided with machinery, questioned the reporter. Yes. The machinery, consisting of two boilers, a horizontal engine of 125 horse-power, pulleys, hoisting gear, etc., is in good condition and complete running order. The concentrating machinery is all new, and embraces three of 'Bradford's Patent Ore Separators,' or jigs, with the necessary elevator, shutes, rotating screens, sprinklers, valves, etc.; a Rittinger Stossherd, or 'Shaking-table;' one set of twenty four inch (chilled shell) Cornish rolls; one Blake Crusher, and the tanks and sluices requisite for operation. The machinery is complete, and is now running, having a guaranteed capacity of 30 tons in twenty-four hours. In addition, there is a smelting plant of five roasting reverberatory furnaces and one smelting hearth, with dust-flues and ventilators. What is the extent of the deposit? The mineral of the property (so far as has been determined) lies in two distinct veins or lodes, running nearly N. 70ø E., dipping northerly at an angle of 45ø- 50ø, and distant about 80 feet apart. Will you kindly tell me what you discerned in inspecting the works more minutely? I first visited the ore shed, where the company have about 150 tons of ore piled ready for concentrating; then passing through the packing shed, where lump ore and concentrates are packed, weighed and shipped, I came to the ore floor, where ore from the Hibbard vein is dumped and shovelled into the larger ore crusher. After leaving the crusher the ore is handled automatically, passing into the building wherein the concentrates are built. These machines are Bradford's Patent Ore Separators, and can treat 30 tons of crude ore per day. They separate the ore from the waste rock, and make a product assaying 90 to 95 per cent. pure ore. These concentrators are kept running night and day. A portion of the ore concentrated is conveyed to the furnace houses, where the plant is most complete, embracing both roasting and smelting furnaces, and here the ore is reduced and refined, the product being a very pure regulus of antimony. This metal has been pronounced by American consumers to be superior to the imported article. The company have a large force of miners at work, and employ in all over 50 men. Besides the Hibbard vein, the property has another very fine lode called the Prout Vein. Upon this vein is a shaft 94 feet deep, with levels running east and west for a distance of 60 feet. This vein, so far, surpassed the older vein (Hibbard vein), and bids fair to be the 'mother' vein of the property. There were hoisted from this shaft alone in one day over 10 tons of very pure ore. The company own 820 acres of land, and have proved the two veins mentioned above for a distance exceeding 1,200 feet. The deepest shaft on the property is 204 feet. Besides the buildings already mentioned, the property includes a new mill and well built blacksmith shop, carpenter shop, office and storehouse. At present the Company is erecting a plant of hoisting machinery at the Prout shaft, with a capacious shaft house, dumps, etc. The property as already developed shows over 3,000 tons of ore in sight, and mining is going on vigorously. And you consider the Company are doing a fine business? Yes, and their operations must prove of great benefit to Lake George and its vicinity, which is a scene of activity and a place of much promise from the fact of having such an enterprise in its midst."

N.B. Reporter - Aug. 31, 1881 Mr. John H. Reid has some very fine specimens of antimony from the Prince William Mines, both in the natural and chrysalis state, which he intends sending to the Dominion Exhibition at Halifax."

Fredericton Capital - Aug. 27, 1881 The trouble between the company who are the lessors of the Lake George Mine bids fair to be soon at an end. Mr. Lawrence, of St. John, who was a joint owner of the property with Mr. Hutchinson, (who is now out west) is still in the possession which he has re-taken. The understanding between Mr. Lawrence and the company was that when the mine had ceased working for any certain length of time, he should be entitled to re-take possession. As operations ceased in it some time last winter, he thought he had waited long enough, and on that account took matters in his own hands once more. An amicable settlement will likely be reached between him and the company next week. The company, it is understood, expended $5000 at the start in preparing for work, and $12,000 other general expenses connected with it in Boston."

URN: 0007 / Names: Lake George Antimony;

Daily News - Jan. 5, 1881 Antimony Deposits of New Brunswick. - The Natural History Society listened last evening to an explanation by Mr. E. Jack, of the Antimony deposits of the Province. Mr. Jack said that antimony had been found in many places in this Province, but that it occurred in the greatest quantities at Lake George in the County of York, where there were at least seven well defined quartz veins, carrying large quantities of sulphide of antimony, many of which can be traced at least half a mile. One of these showed a true vein more than three feet wide and the miners, while sinking seventy-five on the slope of one of these took from the shaft alone with but very little drifting upwards of sixty tons of ore. During the past summer these veins were visited by two mining engineers of distinction from the United States who reported most favorably upon them and pronounced the supply of ore to be apparently inexhaustible. The course of some of the principal veins appears about N. 60ø W. These run with great regularity and cross the properties of the Hibbard, Lake George and Brunswick Companies. These lodes run to the north of the summit of a high hill, whose elevation Mr. Jack said had much to do with the formation of the fissures which had been filled with quartz and sulphide of antimony. Mr. Jack entertained no doubt but that other large veins of ore would be found lying to the southward of this hill, in confirmation of which, he said that he had himself found antimony in drift in the situation referred to. Besides the veins above mentioned, Mr. Jack spoke of two other sets. Two on the Lawrence property running about S. 40ø W., and one on the Brunswick, whose course was east and west. The best ore he had seen came from the Lawrence vein, where an average sample from ten barrels of ore gave 60 per cent of metallic antimony. The formation in which these veins occurred, Mr. Jack said, extended northeasterly to the Bay of Chaleur, not far from Bathurst, and he recommended the prospecting of the forest covered country through which it runs, in order to ascertain whether other mineral veins might not be found in Northumberland and Gloucester. In conclusion, Mr. Jack said that he had no doubt that any company, starting on a sound basis and working these Lake George deposits in a scientific and economical manner, would find ample remuneration, where were the largest and best developed metalliferous veins which he had met in this province, which were not only of good size, but pursued a direct course for a very long distance. Mr. Jack illustrated the length and courses of the antimony leads at Lake George by a plan of the mines. His lecture as will be seen, was interesting and instructive."

Chignecto Post - Sep. 29, 1881 On account of the default of the Lake George Antimony Mining and Smelting Company in carrying out their agreement with the owners of the mine, B.R. Lawrence, on the 18th inst., entered upon the mining premises occupied by the company, and took possession of the same, leaving Mr. W. Boddy in charge for the owners."

Fredericton Capital - Aug. 20, 1881 and S.J. Globe - Aug. 25, 1881 On account of the default of the Lake George Antimony Mining And Smelting Company in carrying out their agreement with the owners of the mine, B.R. Lawrence, on the 18th instant, entered upon the mining premises occupied by the company, and took possession of the same, leaving Mr. W. Boddy in charge for the owners. We suppose that this valuable property will not remain long idle, as we are assured by Mr. Jack that it is valuable, if not more so, than any of the mining properties in the vicinity, and that the ore which has already been raised is richer, for the same quantity, than any that he has seen obtained from the several veins on the other properties."

Daily News - Jul. 23, 1881 Antimony. - Work in the Lake George Antimony Mining Co.'s mines at Prince William, which have been suspended, is to be resumed next week."

S.J. Globe - Jul. 9, 1881 At the annual meeting of the New Brunswick Antimony Company held on the 6th instant, at the office of Andre Cushing & Co., the following named gentlemen were elected Directors for the ensuing year: Messrs. John H. Marsh, New York; Nathan Cushing, Boston, George B. James, Boston; Andre Cushing, St. John; Henry Kenney, jr., Boston."

Fredericton Capital - May 17, 1881 The Prince William Antimony Mine.- Mr. Alton E.Ayer, of Boston, Secretary-Treasurer of this mine company, is in the city, having come to engage working- hands for the industry, which is the fourth that has been started in the vicinity. The other three, the Hibbard, Lake George and Brunswick, are in full blast, having made considerable money since they were started. The Prince William was incorporated by the Legislature of the State of Maine about a year ago, when capital stock of $250,000 was subscribed, and divided into 25,000 shares, of $10 each. By their act of incorporation, the company have secured two square miles of territory in Pokiok Settlement, lying south-west of the Brunswick Antimony property. It has been found to contain a vein of the ore, which, on examination, was discovered to be about three quarters of a mile in length. Up to last week the only persons employed by the concern were prospectors, who made careful investigations with the above results. Now there are five men actively engaged in getting things in good working order for next month, when a gang of ten or fifteen men will be employed in sinking a shaft. The land has been leased from the Provincial Government, and the operators have to pay a royalty on whatever amount of the ore they take out of the Province. In addition to the territory so leased, Mr. Turney Whitehead also secured for them three farms which were found to contain traces of the metal. The company as now constituted, consists of G.W. Ayer, Superintendent, C.R. Ayer, Dr. H.M. Angell, oculist, and Dr. H.M. Jenegan, physician, of Boston, and Mr. F.F. Haley, broker, of Portland, Me. The Superintendent, who has just come from the business office of the company, in Boston, left for the mines last week."

URN: 0007 / Names: Lake George Antimony;

S.J. Daily Sun - Jan. 5, 1881 Natural History Society. - At the meeting of the Natural History Society last evening Mr. Edward

Jack read a paper descriptive of the antimony deposits of New Brunswick. This metal, Mr. Jack said, was found in many places in New Brunswick; that it had even been detected by A. F. Wendt, E.M., in the iron ores of Carleton, but that it was found only in paying quantities in the vicinity of Lake George, in the County of York, where it occurred in veins of quartz, with which was occasionally associated calcite or lime spar. The speaker defined antimony to be a brilliant silver grey metal, having a foliated texture, cakes of it presenting a very peculiar appearance from the tendency which it has to assume a crystalline structure. It was found in the native state, but only to a small extent, the native metal yielding to the knife, being somewhat sectile and easily broken. It frequently contains a small quantity of silver. When heated before the blow pipe it takes fire and continues to burn without further heating. It is occasionally found at Lake George. Mr. Jack said that he had found it himself there on the Nicholson place, imbedded in a large boulder of quartz. The usual way in which antimony is found is as a sulphide, in which form it occurs at Lake George, where there are no less than seven distinct veins which are well known, though there may be a great many more which may hereafter be discovered. He said that several of these veins can be followed for some thousands of feet; that they are of large size and carry much metal. At one point the vein exceeded three feet in thickness and sixty tons of ore had been taken from it in sinking 75 feet, only a small amount of stoping having been done. Three of these veins cross the three mining properties the Hibbard, Lake George and Brunswick - as shown by a plan which he exhibited - so that all will share in their benefits. An analysis of an average sample taken from 10 bbls. of ore gave upwards of 60 per cent. of metallic antimony. He said there were three different sets of veins having different courses. This, Mr. Jack said, was the best and most promising metallic property in New Brunswick and he declared without any hesitation that a company fairly started and nicely and economically working any of these properties ought to be remunerative to the stockholders. He said he was not alone in this opinion, as this locality had been visited last summer by two well known mining engineers from the United States who entertained the same views. Mr. Jack also remarked that in a locality half a mile distant from the veins now known, he had found antimony in drift, and that there was not the least doubt but that there were veins of it in the vicinity of the spot where these were found. Among other uses to which antimony was applied, he mentioned the fact of its application to that of rubber goods, some specimens of which he exhibited, remarking that this alone would utilize large quantities of the oxide which was easily made from the sulphide by roasting, and that as antimony has a great affinity for sulphur it prevented its escape from the rubber when heated."

Fredericton Capital - Jan. 29, 1881 The value of the Antimony Mines at Lake George is only beginning to be understood. The market for antimony is practically unlimited. The Boston Herald says: The inquiries at the Company's (the Hibbard), for sulphide of antimony, by large rubber manufacturers, show that there will be a market for all the mine can produce. There seems to be no limit to the demand."

Daily News - Mar. 19, 1881 Antimony. - The Lake George Antimony Mining Company have just made a shipment of thirteen tons of antimony to Boston. Mining will be prosecuted this summer with much greater vigor than last season."

St. Croix Courier - May 11, 1882 The Hibbard Antimony Company, operating at Lake George, N.B., are working over sixty men, and are taking out from fifty to sixty tons of ore daily. One shaft is down 240 feet and another 180 feet, connected underground. The company own 800 acres of land, giving them over a mile on the vein they are now working, which is five feet wide at the present depth. The ore is concentrated and shipped, and finds a ready market in the United States and

S.J. Globe - Jul. 25, 1882 Antimony. - A specimen of the first dipping, not merchantable, from the Hibbard Antimony Company mine, is on exhibition in Messrs. H. Chubb & Company's office."

S.J. Daily News - Oct. 19, 1882 Mr. C.A. Stockton leaves for Boston on Sunday night to attend a meeting of the Lawrence Antimony Mining and Smelting Co. Supt. Whittier and Secretary Loring have recently been very ill and, operations thereby delayed, will be at once opened up at Lake George."

S.J. Globe - Oct. 27, 1882 ADVERTISEMENT: Brunswick Antimony Company. October, 21, 1882. Notice is hereby given that an assessment of two dollars ($2) per share has this day been levied on the capital stock of the Brunswick Antimony Company, payable at office of the Company, Nos. 64 and 65 Mason Building, Kilby Street, on or before Monday, January 1st, 1883, by stockholders of record at close of business, November 1st, 1882, after which date no stock can be transferred until said assessment is paid. Upon all amounts paid under this call prior to January 1st, 1883, interest at the rate of six per centum per annum will be allowed. Per order of Directors. A.O. Morgan, Treasurer."

Fredericton Capital - Jul. 8, 1882 To The Mines.- Yesterday morning, a party consisting of Mr. Geo. B. James, the President of the New Brunswick Antimony Mines, and several other gentlemen and ladies, were driven from the Queen Hotel to the above Mines in Orr's large stage coach and four horses, in charge of Mr. John Orr. After an inspection of the Mines, the party returned, arriving at the Queen about 9.15 last night."

URN: 0007 / Names: Lake George Antimony;

S.J. Globe - Jul. 6, 1882 Fredericton. - Personal. - Andre Cushing, Esq., was registered at the Queen last night. He left this morning for Lake George Antimony Mines, Prince William, with several American gentlemen who are interested in the Mines."

Fredericton Capital - Jul. 4, 1882 Antimony.- There came down by the Florenceville yesterday - besides a large number of passengers, 35 casks of hemlock bark extract and other freight - twenty casks of antimony from the Hibbard Antimony Mines, to be shipped from here to Boston."

N.B. Reporter - Jun. 7, 1882 While at Lake George last week we had an opportunity to visit the Hibbard Antimony mines, and found it in full blast under the competent management of a gentleman of Boston, Mass. The operations of the company are being pursued with much energy. We brought some specimens with us which experts pronounce to be a rich ore."

S.J. Daily Sun - May 31, 1882 A meeting of The Lawrence Antimony Mining Company was held at the office of C.A. Stockton, Esq., Barrister-at-law, yesterday, the 30th inst. The following gentlemen were elected directors of the company:- Elias Grout, Ashland, Mass.; H. Selden Loring, Isaac P. Gregg, James A.L. Whittier, of Boston, Mass.; George W. Young, of Lowell, Mass.; Howard D. McLeod and Charles A. Stockton, of St. John. N.B. At a subsequent meeting of the directors, James A.L. Whittier, Esq., was chosen President and H. Selden Loring, Esq., Secretary and Treasurer. The meeting of the directors of this company will be held monthly. The annual meeting will be held on the 3rd June next."

Daily Telegraph - Aug. 8, 1882 ADVERTISEMENT: Brunswick Antimony Company. --------- There will be sold at public auction, on Wednesday, August 30, 1882, at 11 o'clock, a.m., at the office of Andre Cushing & Co., 61 Prince William street, St. John, N.B., for nonpayment of assessment:- 1500 shares of the capital stock of the Brunswick Antimony Company, standing in the name of B.B. Perkins; 1500 shares of the capital stock of the Brunswick Antimony Company, standing in the name of T.C. Weeks. A. O. Morgan, Treasurer. St. John, N.B., July 25, 1882."

Daily Telegraph - May 31, 1882 Lawrence Antimony Co. - This company met in Mr. C.A. Stockton's office, yesterday afternoon, for organization. J.L. Whittier was elected President; H.S. Loring, secretary-treasurer, and C.A. Stockton, solicitor. The following Board of directors were selected: J.L. Whittier, Elias Grout, C.A. Stockton, H.D. McLeod, Isaac P. Gregg, Geo.

N.B. Reporter - Feb. 15, 1882 Antimony. - The antimony mining Companies of Lake George, York Co., are now paying concerns, employing upwards of 100 men. The Lake George Antimony Co. purpose putting in a powerful engine to draw off the water and hoist the ore, and have issued tenders for 3,000 cords of wood to be delivered in the spring. This company crush the ore and send it to the large Vulcanized Rubber Co., in Massachusetts, to be used in hardening the rubber. The Hibbard Co.

S.J. Daily Sun - May 5, 1882 Isaac P. Gregg, R.C. Nichols, H.S. Loring, James A.L. Whittier, of Boston, David W. Child, of West Newton, Elias Grout, of Ashland, and George W. Young, of Lowell, have filed in the office of the Provincial Secretary a memorandum of association for the incorporation of a company to be styled the Lawrence Antimony Mining Company, for the purpose of mining and smelting of antimony and all other kinds of ore and minerals, and doing such other things as are incident to the attainment of that object, with a capital of $500,000, to be divided into 100,000 shares of $5 each. The office or principal place of business is to be at the City of St. John, in the Province of New Brunswick."

URN: 0007 / Names: Lake George Antimony;

Daily Telegraph - Mar. 17, 1882 A Recent Visit to the Hibbard Antimony Mine. - By Edward Jack. - The existence of large deposits of antimony at Lake George, 24 miles distant from Fredericton, has been known for a long time, and desultory attempts have been made, not only at mining the ore, but also at reducing it. So little has been done hitherto, however, in the production of ore or metal that the public have been accustomed to regard the subject as one unworthy of much attention. To one, however, who has estimated the subject with care, the various failures which have taken place in the development of the mines are easily explained. Mining and metallurgy are processes whose successful prosecution depends on the employment of large capital, aided by skilled labor and much scientific knowledge. These operations, in this case, have been attempted by unskilled persons, with but little capital. The result, as might have been expected, has been a failure. A grocer, who has always resided in a city, hires men and horses and goes into the woods to cut logs or timber; let the chance be ever so good, failure must naturally be the result. All can understand this; it is just so with mining and metallurgy, success in the prosecution of which cannot be expected from the efforts of persons who are strangers to the business. These considerations were forcibly brought to my attention by a recent visit to the Hibbard antimony property, at Lake George. Until within the past year operations were carried on there in a manner calculated to insure only failure. I need refer to but one instance. The ground at the Hibbard mine is very low, and the influx of water into the levels and shafts is a thing to be specially guarded against. Now, under former management, one of the veins was opened at the surface and a good deal of ore taken out for a distance of 380 feet, an open trench being thus left, presenting a drain to catch the surface water and conduct it into the workings. The present manager, Mr. J.E. Hardman, M.E., had to have this filled up at a cost of probably not less than $1,500, and then could only partially remedy the evil. One may, therefore, readily conceive the difficulties and disadvantages which the present company had to labour under when they assumed the direction of this work about a year ago. Representations had been made to them that everything was ready for the taking out of ore, when exactly the contrary was the fact. Those acquainted with the subject know that the sinking of shafts and running of levels, in nearly every case, are operations which are done at a positive loss, so much so that miners call this dead work. It is only when these are completed that stoping, or, in other words, the removal of ore, can be profitably carried on. Now this running of levels had nearly all to be done by the present company, involving the loss of much time, and the expenditure of much money. This has now been done for a very considerable distance, and much ore has been exposed to view, which can be cheaply and expeditiously removed. The present season will, no doubt, witness a large output. There are on the property two large and well- defined veins of sulphide of antimony, of extreme purity, free from arsenic and lead, the only impurity, indeed, observed, being that of iron pyrites, which occasionally makes its appearance. On the Hibbard vein, a shaft has been sunk on the slope to a depth of 204 « feet; from this two sets of levels have been run - the upper east level to a distance of 153 feet, lower east level 11 feet, upper west level 208 feet, lower west level 50 feet. The course of the Hibbard vein is N. 65øW., and it dips to the south at an angle of 27ø. The Prout vein, which, so far as known, is the champion lode of the whole country and which, no doubt, intersects the Hibbard, is a large well defined vein, having well marked walls, the foot wall especially presenting, in many places, where exposed, a smooth and clean surface. From the shaft at the depth of 105 feet, on the slope, two drifts have been run, one to the west for a distance of 77 feet, that to the east for a distance of 188 feet. The west drift shows a vein, having an average width of about 18 inches, with ore disseminated through it, and having next the foot wall a streak of nearly pure sulphide of antimony, almost entirely free from quartz, of the average width of about 10 inches. At the western extremity of this drift I found it 16 inches in width nearly free from quartz. In the east drift there is also a large vein carrying ore, which is in some places many feet thick. The company has now got ore enough in sight to supply them for several months, and they will probably soon take out 30 tons per day, if sufficient force be put on. Indeed, from 3 to 4 men can now take out 10 tons per day by stoping out from what is now in view. The manager, Mr. Hardman, is devoting all his energies to pushing matters along, and from him the work is receiving the greatest care and attention. Mr. Smart, the superintendent, I am also informed, is a gentleman who has had much experience in mining, and who is doing his part of the work well. Mr. Hardman called my attention, when in one of the levels, to the formation of an oxy-sulphide of antimony (kermisite) on the walls of vein, caused by the action of air and water. It is of a bright red color, and is abundant, and under the glare of our candles made the rock around us look as if stained with blood. This coloration is a sure indication of antimony. The development of the Lake George mines must be regarded as a matter of great importance to the Province; indeed, so far as I can learn, and from all the information which I can obtain, it appears probable that we have got in New Brunswick the champion antimony deposit in America. I may add that the principal difficulty which presents itself to the company at present is that of the transportation of the ore to Harvey station, the nearest road to which (around Lake George) is impassable in summer from the fact that it has never been yet completed. When a good road has been completed the cost of this transportation will be quite moderate. We may add that this ore, in its purest and most concentrated form, is worth $100 a ton, a fact which gives some idea of the immense wealth of the unique deposits of antimony at Prince William."

S.J. Daily Sun - Apr. 14, 1882 New Antimony Mining Co. - It is stated in the Royal Gazette that Isaac P. Gragg, R.C. Nichols, H.S. Loring, James A.L. Whittier, of Boston, David W. Child, of West Newton, Elias Garrit, of Ashland, and George W. Young, of Lowell, and State of Massachusetts, United States, have filed in the Office of the Provincial Secretary, a memorandum of association for the incorporation of a company to be styled the Lawrence Antimony Mining Company, for the purpose of mining and smelting of antimony and all other kind of ores and minerals, and doing such other things as are incident to the attainment of that object. The capital is to consist of $500,000, to be divided into 100,000 shares of $5 each, and the office or principal place of business is to be at the City of St. John."

URN: 0007 / Names: Lake George Antimony;

S.J. Daily Sun - Mar. 15, 1882 A Promising Mining Enterprise. - Some Interesting Facts Relative to the Hibbard Antimony Mine. - Yesterday, Mr. W.I. Smart, superintendent of the Hibbard Antimony Mine of Prince William, York Co., N.B., being in the city, was interviewed by a Sun representative relative to the present operations of the Company and the condition of the Mine, with the following result:- How are your mining operations succeeding, Mr. Smart? We have been very successful indeed. What is the present condition of the Mine? We have about 700 feet of levels. We have three different shafts open - one 280 feet, one 110 feet, and the third 87 feet deep, showing by actual measurement a body of ore in sight and ready to take out for shipment of 2,586 tons. Besides this there is 2,500 tons which could be extracted, or a total of over 5,000 tons, lying ready for removal from the mine. What are your facilities for operating the mine? The mine is equipped at the main shaft (No. 2) with a 125 h.p. engine, 2 crushers, 1 set of Cornish rolls, three of Bradford's jigs for concentrating, all ready for running, with a capacity of 30 tons per day. At the Prout shaft we have a large hoisting engine and boiler complete, which will hoist from the Prout and No. 4 shafts all the ore which may be blasted, which ore is delivered to the main shaft or mill, where the richer portions are cobbed out and the poorer classes passed through the crushers and concentrated. The mine from these three shafts is now prepared to put out thirty tons of crude ore per day of 12 hours. Are you shipping at present? We commenced shipping last week by rail via Vanceboro to Boston. The first car load has gone. The second car load is being packed to ship. As soon as the rolls, which are now on their way to the mine, are in place - in a few days - we shall be able to ship from three to five tons of fifty per cent. ore daily - ore that is worth in the market over $75 per ton. The mine is so promising now that there is but little question that it will surpass in value the hopes of the most sanguine friends of the enterprise. How does the mine hold out as you go down? It keeps improving all the time, both as regards the extent and quality. The vein keeps enlarging as it goes down and we get a larger percentage of first class ore. Mr. Smart, from all we can learn, has an excellent record as a practical mining engineer, and the Hibbard Company are regarded as fortunate in being able to secure his services. Mr. Smart has conducted large and very successful operations in the Western, Southern and New England States, and his success in bringing the Hibbard Antimony Mine up to a paying condition will be another feather in his cap."

S.J. Globe - Mar. 6, 1882 The Antimony Mines in York County. - Bear Island, Feb., 1882. - Having occasion to visit that part of York in which the Antimony mines are situated, I thought it might interest your readers to give you a slight sketch of the business. The mines are situated on the top of a plateau or ridge of land, being a divide between the St. John River and Lake George, and about three miles from each. There are three distinct Companies operating here, the heaviest operator being the Hibbard Company. They employ a large force. There are several shafts on this property, some of them being unsatisfactory in quality of ore and others in quantity, and not being profitable have been abandoned and allowed to fill with water and loose rock. The first point seemingly in sinking one of those shafts is to go down perpendicular until indications of ore and finally the vein itself are struck; when, after breaking through the vein, the underlying rock is reached, then the vein is followed, either the dip or incline, the dip being such an angle as will scarcely permit a six foot miner's head to clear the rocky hang wall over his head as he works or walks along, the width of the ore and ore mixed with quartz, being on an average about six feet in thickness. Once in a while the ore will be found in an almost pure state, lying in what looks like cakes pressed between the two immense layers of rock. In this state it can be dug out with a pick-axe. With this exception all the ore has to be broken up by blasting. Some immense charges are put in the face of the wall of ore and rock, and the concussion at times is immense. The careless and unwary miner, working in some distant gallery, at times has his light extinguished, and if he should be just out of matches what a position he will find himself in. Imagine yourself, dear reader, two hundred and eighty feet underground, in a side gallery, filling dump cars, when an explosion comes from a distant shaft; the rush of air and smoke suddenly puts out your light; you have some hundred or more feet to go in utter darkness, and such darkness! Egyptian darkness might have been something like it; but the man who saw it so dark that he could cut it in chunks with his knife, and pile it up, had a fair idea of what it was like in a mine. You would run your nose against a rocky protruberance and not see it until your nose brought you up. Just then there would be plenty of stars, even if they did not throw much light on the subject. Now after skinning your knuckles against the wall get down on your hands and knees, find the car track and follow it. Now on one side, and not far from the track, is an old shaft eighty feet deep; rocks, sharp ones too and water, I don't know how much, at the bottom. You will think by the time you get out you have travelled at least five miles. In this mine the ore is raised by the steam engine which also keeps the mine clear of water. Getting above ground once more we find several large buildings, in one a large engine driving powerful machinery. There is also a stamp mill for crushing the ore, another for screening, also a smelting furnace. Smelting frees the ore from many impurities, also removing ore from large quantities of rock. There are also other buildings connected with the working of this mine, including an office and blacksmith shop. A large amount of money has been expended here by this company and they richly deserve success. The second is owned by Captain Adams, an American gentleman, of an urbane and kindly disposition. His mining operations are at present suspended, but he is about to employ steam in raising the ore. The depth of this mine, if I remember right, in two shafts, is two hundred and seventy feet. He is contracting for a large quantity of wood suitable for the engine furnace. This mine will want some eight hundred or one thousand cords of wood. The Hibbard Company have engaged 1800 cord, most of which is already on the ground and the remainder soon will. Some person might wish to know what the ore looks like. It is mixed with quartz when nearly pure, it is grey in color, nearly the color of lead or Babbit metal, in fractured ore the grain has a shining appearance. XYZ"

S.J. Daily Sun - Apr. 19, 1883 The New Brunswick Antimony Company. - A meeting of the stockholders was held on Tuesday, when the proposed increase of the capital of the Company was agreed to."

S.J. Globe - Jun. 23, 1883 ADVERTISEMENT:Notice. -- The annual meeting of the stockholders of the Brunswick Antimony Company will be held on Wednesday, the eleventh day of July, 1883, at the office of the Company at No. 61 Prince William street, in the City of St. John, at 10 o'clock, a.m., for the purpose of electing officers for the ensuing year, and transacting such other business as may legally come before it. A.O. Morgan, Secretary. St. John, N.B., June 11, 1883."

URN: 0007 / Names: Lake George Antimony;

Daily News - Jan. 24, 1883 Brunswick Antimony Mine. - The Capital is informed by Mr. E. Jack, that a somewhat rare ore of antimony called valentinite, has been discovered lately at the Brunswick Mine, at Lake George, in Charlotte County. It is a heavy gray mineral, and is an oxide of antimony, while the ore commonly named stibnite, is a sulphite. Valentinite has this singular property, that when it is heated to redness on coal, and the original source of heat then removed, it remains melted and glowing for some time, evolving dense white fumes. This phenomenon arises from the heat generated by the rapid oxidation of the surrounding air. Work at this mine is being rapidly pushed on."

S.J. Globe - Jun. 23, 1883 ADVERTISEMENT:The annual meeting of the stockholders of the Hibbard Antimony Company will be held on Wednesday, the eleventh day of July, 1883, at the office of the Company, no. 61 Prince William street, St. John, N.B., at 11 o'clock, a.m., for the purpose of electing officers for the ensuing year and transacting such other business as may legally come before it. J. Wesley Kimball, Secretary. St. John, N.B., June 11, 1883."

Fredericton Capital - Jan. 23, 1883 Brunswick Antimony Mine.- We are informed by Mr.E. Jack, that a somewhat rare ore of Antimony, called valentinite, has been discovered lately at the Brunswick Mine, at Lake George, in this county, it is a heavy grey mineral, and is an oxide of Antimony, while the ore commonly named Stibnite, is a sulphite. Valentinite has the singular property, that when it is heated to redness on coal, and the original source of heat then removed, it remains melted and glowing for some time, evolving dense white fumes. This phenomenon arises from the heat generated by the rapid oxidation of the surrounding air. Work at this Mine is being rapidly pushed on. The ore, when taken from the Mine, is at once roughly dressed without crushing or concentration, and thus shipped to Boston, where it is made use of in an extensive rubber cloth factory, owned by the proprietors of the Mine. The ore, we understand, instead of being reduced by fire, is freed from impurities by being dissolved in a hot alkaline solution, from which it is afterwards precipitated in the form of a fine powder."

Daily Telegraph - Apr. 9, 1883 ADVERTISEMENT: Brunswick Antimony Company. March 13th, 1883. -- A special meeting of the stockholders of the Brunswick Antimony Company, will be held at the office of Messrs. A. Cushing & Co., No. 61 Prince William street, St. John, New Brunswick, on Wednesday, April 11th, 1883, at 10 o'clock, a.m., to see what action, if any, the company will take in relation to an Act of the Provincial Parliament of New Brunswick passed April 6th, 1882, authorizing an increase of capital, accepted by the company at the last annual meeting. To see what section, if any, the Company will take upon the question of amending, changing or repealing certain by-laws. To transact any and all other business that may legally come before the meeting. By request of the board of Directors. John J. Marsh, President Brunswick Antimony Comp'y."

S.J. Globe - Jun. 17, 1884 Notice. -- The annual meeting of the stockholders of the Brunswick Antimony Company will be held on Wednesday, the ninth day of July next, at the office of the company, No. 61 Prince William street, in the City of St. John, New Brunswick, at 9.30 a.m., for the purpose of submitting to the stockholders an Act of the General Assembly of the Province of New Brunswick, passed at the last session thereof, entitled An Act relative to the Brunswick Antimony Company, and to consolidate the Capital Stock of said Company, and to see what action they will take thereon. Also to see if the stockholders will surrender the certificates of stock which they now hold for new certificates of stock in the Capital of said Company as increased to five hundred thousand ($500,000) dollars. Also to transact any other business which may legally come before it. A.O. Morgan, St. John, N.B., May 24, 1884. Secretary."

S.J. Globe - Sep. 8, 1886 and Daily Telegraph - Sep. 9, 1886 and Daily Times - Sep. 9, 1886 A Boom in Antimony. - Golden sulphide, a product of antimony, which is being largely made use of in the manufacture of rubber goods, is in so much demand that it is the intention of some of the antimony companies in New Brunswick to perform the process of separation of the rock from the ore on the ground, and thus save the cost of transportation of waste material. The Lake George antimony company have an agent now in Great Britain who has gone there for the purpose of interesting capitalists in the development of the extensive veins of antimony which are to be found on this property. - Gleaner."

St. Croix Courier - Sep. 23, 1886 The antimony mines at Lake George are now said to be furnishing golden sulphide, a product of antimony that meets with a great demand in the manufacture of rubber goods. The owners of the mines are convinced that there is a fortune in their property and have sent an agent to England to interest English capitalists in its development."

Chignecto Post - Sep. 16, 1886 The Lake George antimony company have an agent now in Great Britain who has gone there for the purpose of interesting capitalists in the development of the extensive veins of antimony which are to be found on this

Moncton Daily Transcript - May 15, 1886 and Weekly Transcript - May 19, 1886 and Daily Telegraph - May 15, 1886 New Brunswick Antimony Mines. - The New Brunswick antimony mining company resumed operations last week at the antimony mines in Prince William in York county. They have twenty men employed in the mining operations besides a number of men who are employed in making repairs, etc., about the buildings. The company, it is said, intend operating the mines on a much more extensive scale than at any time in the past. These works have been idle for two or three years. - F'ton Gleaner."

Fredericton Capital - Mar. 30, 1886 Antimony Mine, Prince William. - Preparations are being made for re-opening the Antimony Mines in Prince William. A party of men are engaged in pumping the water out of the old workings, so that all may ready for a fair start as soon as the spring opens."

Daily Telegraph - Mar. 1, 1887 Sale of Antimony Mines. - The Hibbard Mines at Lake George Purchased by the Brunswick Antimony Company. - (Gleaner). The Hibbard mines at Lake George, Prince William, pursuant to the directions of the order of the supreme court in equity, were sold at public auction at noon Saturday, in front of the county court house, Fredericton. The Brunswick Antimony Co. became the purchasers. Messrs. J.W. Townsend, general manager, Boston; Walter L. Frost, J.J. Nash, Thos. Sanders, Haverhill, Mass.; and John A. Loring, North Andrews, directors of the company, arrived in town by the western train on Tuesday, and were in attendance at the sale. Messrs. Hugh McLean and J.B. Warner, of St. John, solicitors, were also present at the sale. The Hibbard mines and premises are adjoining the mines operated by the Brunswick company. They have operated for several years and have been held under mortgage by the Boston Safe Deposit and Trust Company. The sale was conducted by Mr. Geo. F. Gregory, referee in equity for the county of York. The members of the company intended to drive up to the mines, but owing to the heavy storm, were unable to do so. Mr. Townsend went up to the mines today. The other members of the company left for Boston this morning. It is the intention of the company to work these mines as soon as spring opens."

Daily Telegraph - Jun. 9, 1887 and Moncton Daily Transcript - Jun. 9, 1887 The Lake George Antimony Mines. - Report says that work at the antimony mines (at Lake George) is to be resumed at an early day. A party of men are at work at the old mine near Mr. Moody's taking out the water. They intend to work that also."

URN: 0007 / Names: Lake George Antimony;

S.J. Globe - Nov. 24, 1888 Work Stopped in Antimony Mines. - Special to Globe. - Fredericton, Nov. 24. - The New Brunswick Antimony mines have been shut down. They were fitted up with new machinery at considerable expense this summer, but could not be operated profitably on account of the export duty. They gave employment to a large number of men."

S.J. Globe - Jul. 11, 1888 and S.J. Daily Sun - Jul. 12, 1888 and Daily Telegraph - Jul. 12, 1888 Annual Meeting. - The annual meeting of the stockholders of the Brunswick Antimony company was held at the company's office, Princess street this morning. The following directors were elected: Messrs. J.J. March, Walter L. Frost, T. Saunders, J.W. Townsend, J. Franklin, John Hind, Jr., and Chas. W. Weldon."

N.B. Reporter - Jul. 14, 1888Antimony Company. - The New Brunswick Antimony Company have elected the following directors: Messrs. J.J. March, Walter L. Frost, T. Saunders, J.W. Townsend, J. Franklin, John Hind, jr., and Chas. W.

Fredericton Capital - Apr. 21, 1888 Operations will be resumed at the Prince William Antimony Mines in the early part of next month. It is understood that the company in starting out anew will carry on the operations in a much more extended scale than formerly."

S.J. Globe - Apr. 16, 1888 Antimony. - It is learned that work will be resumed at the Prince William Antimony Mines in a short time. The operations will be carried on on a larger scale than before, and it is hoped with greater success."

Moncton Daily Transcript - Nov. 26, 1888 The New Brunswick Antimony mines at Fredericton have been shut down. They were fitted up with new machinery at considerable expense this summer, but could not be operated profitably on account of the export duty. They gave employment to a large number of men."

Carleton Sentinel - Dec. 1, 1888 Work at the Antimony mines, Prince William, which was resumed last season has again been stopped, throwing a number of men out of employment. It is said the Works could not be profitably operated on account of the export duty; this is a mistake as there is no export duty on Antimony."

S.J. Daily Sun - Jan. 10, 1889 and Moncton Daily Transcript - Jan. 10, 1889 The Antimony mines at Prince William, York County, have been reopened."

Daily Telegraph - Jul. 12, 1889N.B. Antimony Company. - The annual meeting was held on Wednesday at the office of Messrs. Weldon & McLean. Messrs. John J. Marsh, Thos. Saunders, Haverhill, Mass.; J.W. Townsend, Jonas Frankle, Francis H. Pearl and Boyd D. Jones, all of Boston; and C.W. Weldon, of St. John, were elected directors."

Evening Gazette - Jul. 12, 1889 The directors of the New Brunswick Antimony Co., were elected a day or two since as follows: John J. Marsh, Haverhill, Mass; Thos. Saunders, Haverhill, Mass; J.W. Townsend, Jonas Frankle, Francis H. Pearl, and Boyd D. Jones, all of Boston, and C.W. Weldon, of St. John."

S.J. Globe - Jul. 3, 1889 ADVERTISEMENT: The New Brunswick Antimony Co'y, 49 Mason Building, Kilby Street, Boston, June 10th, 1889. The annual meeting of the Stockholders of the Brunswick Antimony Company will be held on Wednesday, the Tenth day of July, 1889, at the office of the Company, Barnhill's Building, Princess street, in the City of Saint John, N.B., at 10 o'clock, a.m., for the purpose of electing officers for the ensuing year, and transacting such other business as may legally come before it. James W. Townsend, Secretary."

Saint John Evening Gazette - Jan. 5, 1889 and S.J. Daily Sun - Jan. 7, 1889 The Prince William Antimony mines are running again. Mr. Rapsey, who managed the mines all the time they have been in operation during the past several years, has purchased them from the company, and is now running them on his own account."

S.J. Daily Sun - Jul. 12, 1889 At the annual meeting of the New Brunswick Antimony Company, held at the office of Weldon & McLean, the following directors were elected Thos. Saunders, Haverhill; J.W. Townsend, Jonas Frankle, Francis H. Pearl, and Boyd D. Jones, all of Boston, and C.W. Weldon of St. John."

URN: 0007 / Names: Lake George Antimony;

St. Croix Courier - Feb. 21, 1889 and Fredericton Capital - Feb. 23, 1889 The New Brunswick antimony mines have been again closed down. It will be remembered that they were shut down a short time ago by the company and started by Mr. Ramsay. He has found it impossible to make them pay, owing to the duty, and will sell out the machinery. The permanent closing of the mines will be severely felt by the people at Lake George."

Fredericton Capital - Mar. 9, 1889 and Weekly Record - Fri. Mar. 15, 1889 It is probable that operations at the Antimony Mines at Prince William will be again resumed, as the production from its rival in California is diminishing."

Moncton Daily Transcript - Feb. 19, 1889 The Antimony mines at Lake George, York Co., have been again closed down. The manager found it impossible to make them pay, owing to the duty, and will sell out the machinery."

Saint John Evening Gazette - Feb. 18, 1889 The Antimony mines at Lake George, York Co., have again shut down."

S.J. Globe - Feb. 16, 1889 Antimony Mines Closed. - Special to Globe. - Fredericton, Feb. 16. - The New Brunswick antimony mines have again been closed down. It will be remembered that they were shut down a short time ago by the company and starting again by Mr. Ramsay. He has found it impossible to make them pay, owing to the duty, and will sell out the machinery. The permanent closing of the mines will be severely felt by the people at Lake George."

Saint John Evening Gazette - Jan. 18, 1889 The Antimony mines at Lake George, Charlotte Co., have passed into the hands of Mr. Rapsey who will work them on his own account."

Daily Telegraph - Feb. 19, 1889 and Weekly Record - Fri. Feb. 22, 1889 Mr. Rapsey, who has been running the Lake George Antimony mines for the company, has been ordered to close out all the stock, including engine, boiler, and mining tools. It appears that the ore can be brought from California and placed on the Boston market at $40 per ton, while the mines at Lake George could not place it for near that sum. It will be a great loss to the place, says the Gleaner, as many of the people were dependent on the work."

Fredericton Daily Gleaner - Jan. 23, 1891 Antimony Mines. - The mines at Lake George, although containing vast stores of this mineral, are lying idle. Nothing is being done, and the shafts are completely full of water. Mr. Austin is taking care of the buildings and general property. The business which at one time promised to be a benefit to that district and the province generally is dead, with no hope among the people of its resurrection."

Daily Telegraph - Nov. 16, 1891 Notice. A special meeting of the stockholders of The Brunswick Antimony Company will be held at the office of the company, Barnhill's building, Princess street, St. John, N.B. on Thursday, the tenth day of December, A.D. 1891, at eleven o'clock in the forenoon, for the purpose of considering the following votes:- Voted, That the President and Treasurer of the Company be and they are hereby authorized to execute and deliver in behalf of the Company to Boyd B. Jones and Francis H. Pearl, who have been appointed trustees under a certain indenture made July 1, 1885, between The Brunswick Antimony Company of the first part, and Thomas Sanders and James W. Townsend of the second part, a conveyance of all the lands and other property now owned by The Brunswick Antimony Company - said lands and property to be held by said trustees, their successors and assigns, for the uses and purposes declared in said indenture. Voted, That the President and Treasurer be and they are hereby authorized to execute and deliver in behalf of the company to any purchaser of any property which may be conveyed by the trustees under a certain indenture made between The Brunswick Antimony Company of the first part and Thomas Sanders and James W. Townsend of the second part and dated July 1, 1885, a full release of the Company's right, title and interest in the property so conveyed, - and further that the President and Treasurer be and they are hereby authorized to join in behalf of the Company in any leases or agreements for conveyance which may be made by said trustees, their successors or assigns. This meeting is called at the request of three members of the Board of Directors of The Brunswick Antimony Company. John J. Marsh, Jas. W. Townsend, President Secretary."

Moncton Daily Transcript - Jan. 10, 1891 The Halifax Critic says: - S. Crandall of Moncton is the principal owner of the antimony mine in New Brunswick."

URN: 0007 / Names: Lake George Antimony;

S.J. Daily Sun - Jun. 23, 1894 Sale of the Antimony Mines at Lake George. -Fredericton, June 22. - The New Brunswick antimony mines, situated at Lake George, in this county, were sold at public auction today under a decretal order of the supreme court in equity at the suit of Boyd. E. Jones and Thomas Sanders, of Haverhill, and Francis H. Pearl, of Bradford, Mass., trustees for the bondholders under a mortgage given by the mining company. The trustees were present and bid the property in for $6000. They have no intention of operating the mines, and will sell as soon as they can find a purchaser."0

St. Croix Courier - Jun. 28, 1894 The New Brunswick antimony property at Lake George was sold at public auction last week, to some American gentlemen under a mortgage of $6,000."

Gazette - Jun. 23, 1894At St. George. - The New Brunswick antimony mines, situated on Lake George, in York county, were sold at public auction yesterday under a decretal order of the supreme court inquiry at the suit of Boyd R. Jones and Thomas Saunders of Haverhill, and Francis H. Pearl, of Bradford, Mass; trustees for the bondholders under a mortgage given by the mining company. The trustees were present and bid the property in for $6000. They have no intention of operating the mines, and will sell as soon as they can find a purchaser."

Carleton Sentinel - Jan. 17, 1895 The New Brunswick Antimony Co., whose works at Prince William have been idle for some time past, is now endeavoring to get its affairs again into working order."

Carleton Sentinel - Jun. 19, 1895 The Brunswick Antimony works at Lake George, York Co., were destroyed by fire on Tuesday last. Operations at these works had only been resumed for a short time after having been shut down for some two

Daily Sun - Apr. 4, 1898 Harvey. - About three tons of antimony from the Lake George antimony mines, the first output for a number of years, was hauled here some time ago. It will be held here until good wheeling allows some more to be hauled, when a car load will be shipped."

N.B. Reporter - Mar. 30, 1898 The Lake George Antimony mines near Harvey, York county, made the first shipment of antimony Wednesday, two tons for Boston."

Daily Telegraph - Jul. 5, 1898 Harvey Station, July 4. - The managers of the Lake George Antimony Mines were here Friday examining the ground on Wilson's hill where deposits of manganese have been found, pieces of this mineral have been from time to time picked up in two or three places on the hill, and there are indications that it exists there in larger quantities. Antimony in small quantities has also been found on the hill. Samples of the manganese have been sent away for expert

St. Croix Courier - Oct. 3, 1901 30 Years Ago. - The Antimony Mining Company of Charlotte county has commenced operations in their mine at Lake George with good prospects of success."

St. Croix Courier - Oct. 2, 1902 30 Years Ago. - The Lake George antimony mine is to be worked by a company with a capital of $200,000. The present stockholders are Jed Frye of New York, Francis Hibbard, John J. May of Boston, A.H. Gillmor, jr., Tobias Gillmor, K.P. Gillmor and Eldorado Gillmor."

S.J. Star - Aug. 15, 1902 The Lake George Mines. - (Fredericton Gleaner). - Two American gentlemen, who are practical miners,
arrived at Prince William Station Tuesday and drove to Lake George. Their intention was to visit and inspect the Lake George antimony mines with a view of their being again operated."

URN: 0007 / Names: Lake George Antimony;

St. Andrews Beacon - May 7, 1908 Developing Antimony. - St. George Men Interested in New Movement. - Mr. Frank Hibbard, of St. George, is at Lake George at present looking after the antimony business in which Mr. Russell of Buffalo and others are interested. Fredericton advices say that the Canadian Antimony Co., Ltd., incorporated last year with a capital of $250,000, is planning within the next few months to start up an extensive development of the antimony mines at Lake George, York county, which they recently bought from the old New Brunswick Antimony Company which some years ago operated them. It is the intention of the company to install a ten drill air compressor and a concentrator to concentrate low grade ore. The company does not intend operating a smelter. The machinery will likely cost $3,000 and when everything is under way it is expected that 100 men will be employed. A result of the movement will be a big boom at Lake George. At the mines there are two veins over one mile in length and ten shafts have already been sunk, the deepest being 300 feet. It is estimated by the mine manager that there are 50,000 tons of ore in sight without further development work at present. There are from 800 to 1,000 tons of ore on the dumps. The ore assays as high as 8 per cent antimony, and a firm in England have already offered to take the entire output of the mines. The mines were in operation for one month mainly for testing the shafts and the result was gratifying to those interested, it is said."

Granite Town Greetings - Apr. 7, 1909 At Lake George, York county, yesterday, the first antimony smelter in America was started. There is an unlimited market for the finished product at $1.50 a ton. A force of 65 men will be employed at the Lake George works. One third of these will be technical men from outside, but for the balance the company will utilize native labor. A haul of nine miles, to Harvey Station, will be necessary in the shipment of the output. It is hoped, however, that the Valley Railroad will make the shipping end of the business much easier of accomplishment. The future of the mine looks exceedingly bright. Mr. A.S. Baker, who came here from London, England, to exploit, the mine, and Mr. C.M. Crowe, were at the Dufferin last evening. They return to Lake George today. - St. John Star."

Kings County Record - Jul. 16, 1915 Negotiations are now pending for the opening up again of the Antimony Mines at Lake George, in York County. The prices of Antimony have soared high and the metal that was commanding some little time ago eight cents per lb., is in great demand at 38 cents. The Antimony mines at Rawdon in Hants County, in which a number of Sussex investors were formerly interested is now being worked again on a large scale, and the miners are simply coining money from the same."

St. Croix Courier - Feb. 17, 1916 Upper Magaguadavic. - About forty men are at work in the Canadian antimony mines at Lake George, upwards of fifty tons of ore having been shipped from Harvey to Montreal and Philadelphia."

St. Croix Courier - Dec. 3, 1925 Upper Magaguadavic. - The antimony mines at Lake George have resumed operation after having been idle for some years."

Kings County Record - Dec. 9, 1927 Ship Antimony Ore From N.B. To Great Britain. - The first commercial shipment of antimony ore from New Brunswick to Great Britain went forward by C.P.S.S. Montclare, from Saint John on December 6. The shipment consists of 25 tons and is of an experimental nature. It goes consigned to Lavino & Co., a New York concern, with London offices, who are acting as sales representatives for the Canadian International Corporation of Montreal, who have had the antimony mines at Lake George, York County, under option and who are now preparing for extensive developments of the property. Brigadier General Chas. A. Smart, C.M.G., of Westmount, is this week closing the options on the Lake George mines which the Canadian International Corporation have had for some time while the proving work has been soaring during the past few weeks and General Smart admitted to officials of the provincial department of Lands and Mines on his most recent visit to Fredericton that the Canadian International Corporation have been literally deluged with offers to buy the ore produced at Lake George at figures which allowed a substantial mining profit. One New York concern wanted to buy 200 tons a month, a German concern were also bidders and one company of would be buyers is as far away as San Francisco. One significant fact in connection with the enquiries and offers was a proposal to pay a premium over and above the price paid for antimony ore from China where the highest class ore has heretofore come. The shipments of ore will be carried on only temporarily, Gen. Smart said, because the policy of the Canadian International Corporation will be to proceed with its plans for the installation of an electrical reduction plant at the mines and there produce the antimony metal."

URN: 0007 / Names: Lake George Antimony;

Telegraph Journal - Sep. 14, 1929 ADVERTISEMENT: Financial Post Becomes Bullish, Lake George Mines Ltd. - Last March the senior financial journal of Canada referred to the six square miles of Antimony in the workings of Lake George Mines Ltd. 25 miles above Fredericton, near Harvey; - substantially as follows:- 'The proven presence of rich paying ores is but one factor. You must consider this operation as an out and out speculation until it gets into production.' August 16, the same Financial Post finds the speculative situation changed with production at hand. The article is reprinted as follows under its feature headlines of 'N.B. Mine Canada's Only Producer of Antimony' - New Brunswick will join the ranks of the metal producing provinces of Canada when the Lake George Mine is brought into production this month. The first antimony to be produced in Canada for many years will come from this property, and incidentally it will mark a revival of metal mining in New Brunswick. Although there are several copper and iron mines in the province, none of these have been in operation for some years, and the Lake George Mine marks the revival in mining that has come in New Brunswick in common with the other mineral areas of Canada. It is planned to ship several cars of high grade antimony from the mine immediately. In the meantime the company reports cross-cutting in the North drift at the 200 ft. level is in progress, and about 30 feet from the main shaft the main ore body has been exposed. This is a continuation of the high grade ore struck on the 50 ft level. The vein is reported to have maintained the same width, with assays, running as high as 60 per cent antimony. Test pitting, stripping and tunnelling is being carried on extensively, and of eleven veins exposed, five have proven to be ore-bearing. It is estimated that there are at least 6,000 tons of high grade ore in sight. The tale of progress is not half told. Only now and then has a word of the wealth being drawn out of this immense Antimony treasure reached public print. The mine operates entirely under New Brunswick ownership and management, with a large crew of miners quietly tapping its rich veins and piling up reserves for further shipment. The price of stock in Lake George Mines Ltd. Goes gradually up as mining results pass from promise into performance. Today it is 50c a share. Sept. 16 it becomes 75c. With the offering curtailed from original issue. You can't make money after it is too late. With its other holdings, on which official reports of highly impressive developments will be divulged in a few weeks, Lake George Mines Ltd is more than a good buy. Maritime Financial Underwriters, Ltd. 103 Prince William Street, Saint John. Fill in, tear off and send. -- Maritime Financial Underwriters Ltd. 103 Prince William Street, Saint John Gentlemen: Please detail latest information on Lake George Mines Ltd. - My name ... My address ...

Feb. 1990 - Copied from: St. Croix Courier - Feb. 25, 2000 Ten Years Ago. - Lake George Mine. - Apocan takes over Lake George. - Jobs will soon be created for at least 25 people from the Lake George area when APOCAN finished negotiations to buy Durham Mines. 'We're in the process of buying the mine site now,' Apocan vice-president Bert Bourgoin says. 'We're pretty well in the final stages of negotiations.' Dominion Explorers Inc., the present owners of the antimony mine located near Harvey Station, closed the mine in December, 1989."

Names: Lake George Antimony; Quaco Manganese; Dorchester Copper; Woodstock Fe; Markhamville Manganese; Gold Mine Gully; Salt Springs Salt; Albert Mines;

S.J. Daily Sun - Oct. 22, 1880 Interest in Mining. - The increased interest which is being taken in mining matters in the Maritime Provinces is rather remarkable in its way. Some very important gold discoveries have undoubtedly been made in Nova Scotia, and in fact there is scarcely a County in that Province in which gold has not been found. The greatest practical development of recent date is probably in Halifax and Yarmouth Counties, where a good deal of mining property has changed hands and some new works are being profitably prosecuted. The oil lands of Cape Breton are now attracting the attention of capitalists, and, as already pointed out in the Sun, immense tracts of land around Lake Ainslie have been secured by Boston and Halifax capitalists, besides what has been taken up by that giant oil monopoly of this continent, the Standard Oil Company. A very large amount of machinery and labor will presently be at work in the development of these oil properties. In our own Province, there have beensome important investments by Boston capitalists in antimony mines at Prince William, York County. Mr. Hibbard, it is reported, has sold the mine in which he is interested for $200,000 cash and $50,000 stock in the new Company and a large force is at work on the property. The Lake George antimony mine is also a hopeful speculation and it is anticipated that the present managers will make a large amount of money out of it, especially as silver has been discovered in the ore. On the Tobique, gold has been discovered in sufficient quantities to warrant an expenditure for pushing forward a thorough exploration.The Woodstock iron mine, as our readers are aware, has changed hands, and large expenditures will be made in developing the property. The Queen Manganese company are not hesitating in incurring large expenditures for the development of their valuable property at Markhamville, while a manganese property in Hopewell has been bought by a local company, and efforts are being made in Boston to organize a company to take hold of the manganese mine at St. Martins. Copper has been discovered back of Dorchester, and the lands are duly bonded, and some Sussex parties have secured a copper mine at Point Wolfe. Kings County is turning out strong in the line of mineral discovery. At Wanamake's, Parish of Upham, galena, which is said to bear both silver and gold in paying quantities has been found. The extent of the vein requires to be still further tested. The Salt Springs of Campbell Settlement have come into notice and changed hands, and a Mr. Bockus, for Boston parties, is putting up the necessary machinery for salt making, and it is expected that operations of some magnitude will be carried on here. Kaolin has just been found at Hamilton's Lake, Dutch Valley, the bottom of the lake being composed of this valuable clay, which is used in making porcelain. At or near Dutch Valley, too, according to a well authenticated statement, indications of oil have been found. Dr. Goodfellow, of Sussex, has found a mineral which appears to resemble bismuth more closely than anything else, but just where it is found has not been made public. Graphite is known to exist in the Parish of Upham. It is to be hoped that through the present extraordinary revival of interest in our mineral resources some practical good may be accomplished. That the Maritime Provinces abound in valuable minerals can not be gainsaid. The trouble heretofore has been the absence of capital to fully test the extent of these resources. In the West and elsewhere it frequently happens that millions of dollars are expended in explorations and actual working before any tangible, paying result is reached. Here there are no millions to be expended in this way - nor even hundreds of thousands, and scarcely tens of thousands. Unless practical miners and geologists are entirely wrong, this very Province of New Brunswick contains all the conditions of a country in which the precious metals, as well as the ordinary minerals, should be found. Possibly the present active enquiry may stimulate to such persistent, thorough survey and exploration of our Province as may lead up to discoveries the benefits of which may be felt by our entire population."

URN: 0007 / 0030 / HILL / S6 / Names: Lake George Antimony; Teahan Mine; Grey Brook Gypsum; Kent County Coal;

S.J. Globe - May 16, 1887 and Daily Times - May 18, 1887 and N.B. Reporter - May 28, 1887 The New Brunswick Mines. - The New Brunswick correspondent of the Halifax Critic writes: Since my last, nothing new has arisen in miningmatters, except the formation of a new development company in the northern part of the province, at or near Weldford Station on the I.C. Railway, to prospect and explore for coal. The presence of coal has been suspected for some time, as small seams and outcrops have been found from time to time in the vicinity. Opinions differ in the matter. Those professing to know considerable about it that there will not be any quantity or depth of seam found. Be that as it may, the intention is to make an exploration, and a company has been formed with a capital of $75,000 to prosecute work. It is said the Albert Manufacturing Co. atHillsboro are gradually increasing their business, and making occasional purchases of plaster properties in the vicinity of their works. The calcined plaster of this company has a good reputation, and they are meeting with large sales in the Upper Provinces.The work at Mineral Vale, Albert Co., is progressing slowly, and some changes have been made in the mining staff. There is also talk of putting in some new machinery, but of what nature I have not as yet ascertained. The location of this mine, eight miles from railway communication, is somewhat against it on the score of transportation facilities, but time will doubtless remedy this drawback soon, as there is some idea of extending the Havelock, Elgin and Petitcodiac railway branch to Bay Shore, in which case the desired facilities will be afforded. There are rumors of some fresh capital beingplaced in the Antimony mines at Prince William, in York county but nothing definite is known. These antimony properties in York county seem to have been dragged through an endless chain of legal difficulties, and companies have succeeded companies, and stock boomed and then sold for non-payment of calls, &c., till one can hardly form any definite conclusion over the matter. The manganese boom seems to be quiet, though work"

URN: 0007 / 0275 / 2027 / Names: Lake George Antimony; Woodstock Fe; Bull Moose Hill Iron;

Daily Telegraph - Jan. 5, 1881 Natural History Society. - The Lake George Antimony Mines. - Mr. Edward Jack delivered an address, last evening, on the Antimony of New Brunswick, William Jack, Esq., in the chair. There was a full attendance. Mr. Jack, in his address, described the color and properties of the metal, stating that it was found in several places in York, on both sides of the river, at Bull Moose Hill, in Kings, and, in small particles, in the iron ore of Carleton county, and the pig made therefrom. It was only at Lake George, in York, in this province, that it was found in large quantities. Mr. Jack described the mineralogy of the region in which antimony, in the form of sulphide was found. It was three miles from the mines to the place where the granite belt crossed the province. As the authorities stated that most of the mineral wealth of England was found near the granite belt in that country, he suggested that the New Brunswick granite belt should be examined at the points in which it crosses York, Northumberland, and Gloucester, in which last named county it struck the Bay of Chaleur north of Bathurst. The mineralogical examination should be made at those points in the river beds at which the rocks are exposed. Coming back to the Lake George mines, he gave a particular account of the different properties, as more than once described in our columns, quoting records of still later surveys and explorations, showing the thoroughly rich character of the mines. For size, persistence in length, and quantity and quality of the ore, Mr. Jack stated that They exceed, by far, any other metalliferous veins which he had ever seen in New Brunswick. He said mining was now carried on scientifically, and would bring profit to the owners and confer benefit on the surrounding country. Before concluding he enumerated the many uses now made of antimony. The address, which want of space prevents us from giving more at length today, was highly commended and formed the subject of a pleasant interchange of sentiment at its close."

URN: 0007 / 0276 / EXPL / GEOL / Names: Lake George Antimony; West Beach; Exploration - General; Geology - General;

Headquarters - Oct. 15, 1862 and Philanthropist - Oct. 16, 1862 and N.B. Reporter - Oct. 10, 1862 and Morning Freeman - Oct. 14, 1862 and St. Andrews Standard - Oct. 22, 1862 University of New Brunswick, October 9th, 1862. - Sir, - Believing that you will agree with me in thinking that the accompanying remarks, drawn up by Professor Bailey, on the present state of our knowledge of the Mineral Resources of our Province, will prove generally interesting to the public, I take the liberty of asking you to give them a place in the columns of your widely circulated journal. I am, Sir, yours truly, J. Brydon Jack. The Editor of ""The Philanthropist"", -- As the subject is at the present time absorbing a large proportion of public attention, and as a very general interest seems to be manifested in almost all parts of the Province, in searching for and developing our metallic wealth, I have thought that a brief list of the ores already known and their localities, together with a few simple directions for the discrimination of future specimens, might possibly prove interesting to those engaged in such pursuits, and perhaps to the public generally. I have therefore prepared and given below a short list of the principal ores known to exist in this Province, with a few observations appended upon their quantity, quality and facility of working, so far as has been hitherto ascertained. My authority for the greater part of the facts mentioned below, are the labors of the late Dr. Robb, the metallurgical collection of the University, and statements, published or otherwise, of the late M.H. Perley, Esq., Dr. Gesner, and other gentlemen in various parts of the Province:-Name of Metal Name of Ore Locality Iron Red Hematite Woodstock "" "" King's County "" "" Queen's County "" "" Bathurst"" "" Richibucto Micaceous Ore Specular iron Morrison's Red Hematite West Beach Specular Iron Black River "" "" Campo Bello Iron Pyrites Cubic pyrites "" "" Micaceous iron Vicinity of Pyrites Saint John Red Hematite Restigouche "" "" Dorchester Iron Pyrites Botsford, Westmorland Bog Iron ore Rush Hill, Queens county "" "" "" Sunbury "" "" "" Campo Bello "" "" "" Charlotte Blue Phosphate Madawaska Manganese Manganite Tattagouche River "" Dalhousie Gray oxide Woodstock Wad. black oxide Quaco Wad. black oxide Dorchester Wad. black oxide Fredericton Wad. black oxide Westmorland Wad. black oxide Queensbury, York Wad. black oxide Shepody and Quaco Lead Galena Campo Bello Galena Norton, King's Galena Tobique Galena Restigouche Galena McLeod's, Magaguadavic Galena Long Island, Digdeguash Galena Emerson's Little Falls Galena Woodstock Galena L'Etang, Charlotte Anglesite Campo Bello Copper Native St. David's, Charlotte Copper pyrites St. Stephen "" "" } Green carbonate } Bathurst Green carbonate Tattagouche River Green carbonate Simpson's Island Charlotte Chalcopyrite Bull's Creek Erubescite Magaguadavic, Salmon River, Albert, St. Stephen Copper Pyrites Campo Bello Zinc Blende Lubec 10 "" Nerepis "" Restigouche Antimony Stibnite Pr. Wm. York "" Vicinity of Fredericton Molybdenum Molybdenite Nepisiguit These are by no means all the localities in which the above named metals occur, especially as regards the Sulphurets of Iron and Copper. These are very generally diffused ores, and occur in almost all parts of the Province. Only the purer and more extensive deposits are above given. It is impossible, however, from small cabinet specimens to judge accurately in regard to the quantity or quality of an ore, average specimens being necessary to decide this point. The above list may therefore contain many which from their peculiar position or other causes may be in reality worthless, while some really valuable ores may be omitted. This source of error it was impossible to avoid. It will be seen from an inspection of the table that some two or three localities contain good ores of several of the metals. Among these Woodstock, Campo Bello Island and the vicinity of Bathurst on the Tattagouche River, are the most prominent. Campo Bello Island, especially, is rich in iron, lead and copper, while native (i.e. pure) copper occurs at St. David's, Charlotte, and zinc blende, at Lubec, Maine. Gold having also been discovered near Calais, by Mr. Goodale, this section of the Province may be regarded as one of the most promising for future exploration. Moreover no position could be more advantageous for transportation than these Southern Shores and Islands of the Bay of Fundy. It is to be hoped that the immense resources here stored away for use may soon be made a source of revenue and profit. In regard to the ores of iron, I may say generally, that the best ores for the purposes of smelting are the specular ores and red hematite (the first easily recognized by its steel-like, metallic lustre, and bright reflecting surfaces, resembling mirrors, the 2nd by its dull red earthy or rusty character) while the Sulphurets (generally called pyrites, from the fact that they strike fire like steel) are seldom used except when existing in large quantities and of great purity. Slate, however, impregnated with decomposing pyrites is valuable as the chief sources of the manufacture of Copperas or Green Vitriol. It may be of great value at some future day, but exists elsewhere in so great quantities as to be at present worthless. The same is partly true of Copper Pyrites, which closely resembles the above, but which is of a deeper yellow color, and unlike the former will yield to the point of a knife. These two ores, Iron and Copper 11 pyrites, together with an entirely valueless mineral, called Mica are those most frequently mistaken for metallic gold, and are hence frequently called fool's gold. The three may always be easily distinguished by the following means:- 1. Gold can always be cut in slices like lead with a common pen knife, is unchanged by the hottest fire, and is beaten out without breaking by the blow of a hammer. 2. Iron pyrites is of a much lighter color than Gold, cannot be cut, is very brittle, when heated gives off strong fumes of sulphur, and flies into atoms by the blow of a hammer. 3. Copper pyrites looks more like Brass than the preceding, yields to the point of a knife, but crumbles instead of cutting into slices like Gold, and also gives off strong fumes of Sulphur when heated. The two latter are frequently intimately combined, and the resulting mineral is then called chalcopyrite. Mica is wholly unlike any metal, that it has always been a matter of surprise that any one should mistake the two. As, however, the mistake is of frequent occurrence, I may say that Mica may be easily recognised by the fact of its splitting readily by the point of a knife into thin laminae or leaves. I may here state, in regard to Gold, that I am unaware of any authentic specimens having been as yet discovered in the Province, notwithstanding the numerous reports circulating to that effect. The report which was current in several of the papers last winter that specimens had been sent to the university, and found to contain the precious metal, was entirely without foundation, no such specimens having even been seen at the University during the past twelve months. It is highly probable, however, that such discoveries may yet be made. Manganese, of good quality, occurs in various parts of the Province, and resembles the ores of iron in many respects. The means of distinguishing the two, however, although simple, are not generally available to the public at large. This metal is used in the manufacture of glass, both for producing and removing colors. It is also extensively used for glazing and bleaching. The ore of lead (galena) is easily recognizable by its lead-grey color and sharp angles, easily breaking into cubical blocks. It melts readily when heated, and generally contains a small percentage of silver varying in amount in different localities. Antimony has been found in the two localitiesmentioned in the list. The statement now circulating in the papers to the effect that this is the only locality of Antimony known in North America is incorrect, it having been found (though sparingly) in Maine, New Hampshire and Maryland. Moreover, the discovery is not one of recent date, a specimen of the ore examined by Dr. Robb, and marked with his handwriting, having been in the museum of the University since before my arrival in the Province. Whether he was the discoverer or not, or whether the locality is the same as that recently announced, I do not know, he having apparently been in some doubt himself in regard to the same. This ore resembles the preceding but has a darker lustre. It may be recognized by boiling a little of the ore in strong ley (caustic potash) and after solution adding a little common Muriatic acid. If Antimony is present a dark red powder will appear, in the liquid. The metal is used in the manufacture of Type, Britannia Ware, Tartar Emetic and various medicines. Zinc blende occurs in the Province, but of no great purity. It is transparent and wax-like, with a brilliant surface. Molybdenum is a rare metal, of no importance in the arts. I have reason to think that the metal Bismuth also occurs in great purity in the Province, but as there is some doubt regarding the only specimen yet shown to me, I omit it from the list. It is used for the manufacture of type metal, plumber's solder, fusible metal, &c. In conclusion, I would say that it is highly desirable that authentic and representative specimens of the valuable ores and minerals of the province would be collected and preserved for future reference. Such a collection of minerals, ores, and fossils, representing their various localities, would be of inestimable value in the preparation of future agricultural and geological reports, or in the conducting of future geological surveys. As a numerous collection has already been made with this object, by my lamented predecessor, in the museum of the university, and as this collection is not only valuable for reference, but also directly for the purposes of instruction in the institution, it is to be hoped that those interested in the collection of such objects, will favor us with authentic and average samples of the different deposits, as they may from time to time be discovered. Such specimens, whether of ores, minerals, or fossils would be most thankfully received and duly acknowledged by the university. I would especially ask those visiting Campobello, Grand Manan, the North Shore of the Province, the coal mines of Albert and Grand Lake, and other interesting localities, to obtain and preserve any specimens they may meet, or forward them to the university. Any reasonable expense incurred in such transportation will be cheerfully repaid. The locality where the specimen is found should always be mentioned. To the farmers generally, throughout the Province, and indeed to all living in the country districts, I would say, that they may render service of great value, to the future interests of the province, by 13 he simple preservation of whatever objects of curiosity may chance to meet their notice, even though they may be unable of themselves to decide upon their value. Such collections cannot fail to be of interest to those who make them, while the assistance they may render to scientific investigators cannot be overestimated. Wherever geological surveys have been conducted, such private collections

Daily Telegraph - Jun. 15, 1881 Economic Minerals of New Brunswick. - Although New Brunswick is inferior to Nova Scotia in minerals, it still is entitled to consideration in that respect, and it is not improbable that at some not distant day we shall see some new developments in connection with the mineral wealth of this Province. A few words now, (in answer to several correspondents) in regard to the useful minerals of New Brunswick which have been so far discovered. The coal areas of the Province are very extensive, and although the seams are thin, not more than 22 inches, and only worked at Grand Lake and one or twoother places, it is quite possible that they may have eventually be worked much more extensively. It is estimated the Newcastle coal basin alone contains upwards of 100,000,000 of tons, most of which could probably beobtained. When St. John becomes a great manufacturing city this coal will no doubt form an important factor in its prosperity. The Albertite has had a great history, but present appearances are unfavorable to that mining interest. There are several seams of anthracite in theDevonian strata at Point Lepreaux and also at Musquash. It has, however, not yet been determined whether these seams can be worked with profit, owing to the large amount of ash left after combustion. Copper ores have been found in many places inCharlotte, in Albert and elsewhere, but, so far, have not been worked with profit. Baryta, used for making, or rather for adulterating white lead, has been found at Frye's Island, Charlotte Co., where also galena and silver have been found. Minute quantities of gold have been found from time to time in several localities, but nothing has beendone in the way of mining. Argentiferous galena has been found in several localities. At Wannemake's, on Hammond River, the galena has been found to yield a fair proportion of silver. In 1878, on the west side ofMusquash harbor, yellow sulphuret of copper and galena were found in veins of white quartz, to the amount of $14 per ton, as was shown by actual assay. The hardness of the rock and the smallness of the vein are, however, against its profitable working. Considerable quantities of silver have been found in the same locality. Bituminous shales are found extensively inAlbert, Kings and Westmorland, capable of yielding from 65 to 90 gallons of crude oil to the ton, but they are of little value so long as petroleum is so abundant. Bog iron ores, believed to be of commercial value, have been found at Burton, in Sunbury, and also at Maryland in York. Large deposits of iron ore of very superiorquality are found at Jacksontown and other parts of Carleton County. Some of these samples have yielded as much as 48 per cent of iron. There seems to be no doubt that these mines will eventually be worked with profit. Black sand containing magnetic iron ore has been found at St. Martins, in the vicinity of St. John, and elsewhere. Antimony is found in great quantities in PrinceWilliam, York. These mines are worked with profit and the quality of antimony is excellent. It is largely used in making Babbit metal. Manganese is another profitable New Brunswick mineral. It is found at Markhamville, Kings County; in the County of St. John, on the South West Miramichi, and elsewhere. In addition to these minerals, there are manyothers more or less widely distributed. Clay fit for bricks and pottery is abundant. Granite in various colours is widely distributed in Charlotte and Queens, and red granite is largely exported to the United States and Upper Provinces. Graphite, or black lead, is foundnear St. John, and also in Queens county. Grindstones and freestones of the best quality abound, especially about the head of the Bay of Fundy. Gypsum is also abundant inAlbert and Westmorland. It also occurs in Kings and St. John Counties and on the Tobique. Kaolin fit for the manufacture of pottery is found in the granite districts of Charlotte. Limestone is abundant and is found of the best quality about St. John.Iron pyrites is found on the St. John and Miramichi. Saltsprings exist at Sussex and in the parish of Upham. There are other minerals of less value which might be named,but these we have mentioned are sufficient to show that the mineral wealth of the Province is by no means inconsiderable. A survey made with a view to practical economic results, rather than a mere scientific survey, might prove

Daily Telegraph - Oct. 7, 1880 Exhibition. - ... Minerals. - Our Ores Viewed in Their Geological and Economic Relations. - The mineralogical exhibits, though not large, are very complete. This is a branch of our industries which ought to rank next in importance to agriculture, but in our Province, at least, it has not been developed to the extent it has in the sister Province of Nova Scotia. The collection of ores and minerals products belonging to the Mechanics' Institute is the largest and is one of the first objects seen on entering the Exhibition Building bythe main entrance. Albert County is well represented inthis collection by several fine specimens of Albertite, brown shale, on which the Albertite occurs, and gypsum or plaster of Paris from Hillsboro. Various samples of this mineral are seen, as well as the calcined plaster in several stages as prepared by the Albert Manufacturing Co. The useful minerals are of great variety, namely ores of iron, lead, antimony, copper, manganese, zinc, etc., the specimens of copper and iron ores being in greatest quantity. On the upper shelves of this collection aresome fine specimens of antimony from the Hibbard mine at Prince William, and of anthracite from Lepreaux. This last, although not found in great quantity and belonging to an earlier geological age than that in which coal usually occurs, is nevertheless a valuable product. The shale in which it is found is also represented, showing that it bears resemblance to that in which albertiteoccurs. Specimens of argentiferous galena from St. Martins, received from Mr. Wanamake, are also exhibited. Behind the last named collection, to the left, stands that of the New Brunswick Natural History Society, exhibited in geological sequence. Commencing with the Laurentian and Huronian formations, which lie at the foot of the series, we find in the Huronian, barytes, or heavy spar from chance Harbour, N.S., chlorite and hornblende from Kings County and Grand Manan. Next in the scale is the Silurian, in which a large number of minerals are found. We have in this series mica from St Stephen, ironand copper pyrites from various places, galena from Campobello, native copper and zinc blende from the sameplace, and argentiferous galena from Le Tete, Charlotte County. In the lower carboniferous formation, which is likewise one of our most productive in useful minerals, we have calcite in various forms from Miramichi and the North Shore, alabaster from Hillsboro, barytes from Markhamville, agate chalcedony, cornelian, etc., from Washedemoak Lake, and pyrolusite (manganese) and manganite (a kindred mineral) from Kings County.The coal measures are represented by bituminous coal from Grand Lake, copper from Bathurst, etc. The Triassic series are shown by only a few zeolites (stilbite), and heulandite from Grand Manan. The recent formations are represented by selenite, or sulphate of lime in turreted crystals, from Sussex, iron sand from Petitcodiac, wad manganese from Woodstock, and bog iron from Richibucto and St. Stephen. In the same case Mr. G.F. Matthew exhibits a collection of useful minerals, namely, granularanthracite from Lepreaux, bituminous coal from Newcastle,Queen County, polished shale (resembling cannel coal) from Caledonia, Albert Co., Albertite, or Albert coal, from Hillsboro, and peat (burnt) from Lawlor's Lake. Mr. W.F. Best, chemist, has likewise exhibited a neat little collection of useful minerals, such as bituminous coal, Albertite, lime, red granite, iron ores, antimony, pottery clay, copper, lead, manganese, graphite and marble. Mr. Alfred Markham exhibits fine specimens of manganese ores, braunite and manganite from his mine at Markhamville.The Revenue Silver Mining company have a case with specimens of zinc blende, which contains small quantities of gold, about 13-100 oz. Troy weight per ton, and also of silver and lead ores. These are from Letete, Charlotte county. Several specimens of silver-lead ore from Yarmouth, N.S. are also exhibited. A block of Iceland spar from Belledune, Gloucester County, a rather remarkable mineral, is also shown. The Spring Hill Mining Company exhibits splendid specimens of coal of different varieties."

Headquarters - Sep. 17, 1862 and Philanthropist - Sep. 18, 1862 Valuable Discoveries. - Scarcely a week rolls round in which we do not hear of the discovery in one part of the Province or another of valuable ores. Until the recent gold discoveries in Nova Scotia, few persons could be induced to spend any considerable amount of time in search of the precious metals. Since that time, however, the aspect of affairs has changed. Numbers of the people, fully aware that the geological formations of New Brunswick were similar to those of the sister province, and that if rich deposits of precious metals were to be found in certain localities there, equally rich deposits were to be found in similar localities here, have been diligent and persevering in their researches. At one time we hear of the discovery of rich gold deposits, at another we learn that valuable copper ore in abundance has been found; at one time intelligence is received that valuable coal deposits have been discovered, at another we hear of the discovery of black lead mines. And so the work goes bravely on; and the discoveries increase as time progresses. The News of Monday contains an account of avaluable coal discovery on the property of Alex. Light,Esq., at Sussex. Men were set to work to ascertain the probable depth and breadth of the formation. The largest seam was found to be fifteen inches broad on the surface. Upwards of a cart load of the coal was thrown out, and, when tested, proved to be equal to the best English Orrel. It is of a polished jet black and resembles the Anthracite. The News says the belief at present is, that the supply is inexhaustible, but in order to ascertain with certainty the exact richness of the deposit, Mr. Light intends sinking a shaft to the depth of one hundred feet. Then follows another Copper Ore discovery, but this time in the Parish of Alma, in Albert county, and distant about one and a half miles from a safe harbour to which there is a good and regular descent from the works. The specimen forwarded to this office appears to be exceedingly rich. A mining lease and all the necessary privileges have been obtained from the owners of the soil by a Company incorporated under the name of the ""Williams Mining Company"". Explorations have been made of such character as to warrant the Company in believing the prospects to be very favorable. The vein has been uncovered to the length of one hundred yards on the course east and west, varying in width from six to eight feet; it is found to be stained throughout, and contains rich deposits of grey Copper Ore, some of which has been dressed and shipped to England, and some to the United States; the former producing 28 7/8 per cent., value £20 7s. 0d. sterling per ton; the latter producing 30 per cent., value $122.40 per ton. A large block of the ore from this mine, weighing 300 lbs. can be seen by the curious in such matters at the office of Wm. Davidson, Esq., Princess street. The capital of the Company is set down at $120,000, in 6000 shares of $20 each. We understand that a portion of the stock is yet open to purchasers. Next in the order of discoveries is that of avaluable mine of Antimony at Lake George, in Lower Prince William, York County, by Mr. John Hennebery of Indiantown. A Boston Chemist pronounces the specimen which he has examined a superior article. It appears that this is the only Antimony mine in America. - Courier."

S.J. Daily Sun - Jan. 19, 1888 New Brunswick as a Mining Country. - New Brunswick has never much parade of its mineral wealth, but notwithstanding, the province derives substantial advantage from these possessions. The economic minerals now mined or quarried in the province include coal, gypsum, granite, manganese, lime, grindstones and building stone, antimony, besides some less important substances. None of these minerals is yet worked to any extent compared with the possibilities. The province has no department of mines and no official with authority to collect returns as they have in Nova Scotia. The nearest approach to official statistics are to be found in a report for the year 1886, prepared by Eugene Coste, the mining engineer of the Canadian geological survey. This valuable work is published by Dawson Bros., by authority of parliament. Mr. Coste has been at pains to collect returns from all provinces of their mineral produce and export. The author is not able to tell us much about the coal product of this province owing to the desultory character of mining in New Brunswick. We, or course, know that a considerable quantity is mined at Grand Lake for local consumption in the river districts, and that this coal is used on the New Brunswick railway. It is also sold at St. John. Grand Lake district will next year be put in communication by rail with the outside world, and in a short time will be connected with Montreal, and the coal consuming regions of the west. Then we shall know whether New Brunswick coal fields are rich as has been supposed. The province once exported $100,000 worth of albertite in a year. The census of 1881 credits the Grand Lake district with producing 6,221 tons. We imported in 1886 from Nova Scotia 197,028 tons which at the value given to other Nova Scotia exports would be worth at the place of shipment $375,600. We also imported from other countries 34,845 tons of anthracite, valued at $111,260, and 8,992 tons of bituminous, at a cost of $17,535. It will be seen that New Brunswick has a fine home market. The antimony produced in Canada, comes mostlyfrom Nova Scotia. In 1886, the export of this province was 20 tons valued at $800. It was produced at Lake George, York County. The Rawdon mine in Hants county, Nova Scotia, turned out over $30,000 worth. Of graphite Canada exported $3,586 worth in 1886, all from New Brunswick. The quantity of gypsum produced in Canada has not been ascertained. The exports of crude plaster are givenas 442,833 tons for the Dominion, and 23,498 for this province. The value of the New Brunswick product, nearly all of which goes from Albert county, is $10,559. The quarries on the Tobique river have great possibilities, but are not yet strong competitors with those of Albert county. The total product of the manganese mines in Canada in 1886 is said to have been 4,789 tons, worth$11,499. Of this New Brunswick furnished 4,545 tons, valued at $22,054. The customs statement of export gives a larger value, the foregoing being the estimated worth at the mine. The geological survey people claim to have pretty full returns of granite production in Canada. This gives the total quantity in the rough at 6,062 tons, worth $63,309. New Brunswick is credited with 2,552 tons, valued at $34,509. It is perhaps not very easy to fix the value of the rough stone, but the value of the red granite, as turned out of the polishing works, was in 1886, four times the amount given. Mr. Coste admits his returns of other building stones to be incomplete. He has heard from producers of $??? Of value and it appears that this represents from three to four fifths of total output. Three returns from New Brunswick give 2,728 tons, worth $24,970. His return of the produce of lime quarries as also admittedly incomplete. The total amount heard fromat the statistical office was valued at $283,756. New Brunswick's share being $58,120. New Brunswick is the only province which produces lime for export. Mr. Coste returns includes brick, concerning which he has fourteen reports from New Brunswick disclosing a product worth $30,908. Four quarries in Gloucester County report an output of grindstones to the value of $22, 495. From above returns it would appear that New Brunswick stands well, both in respect to variety and quality of mineral resources. Our coal supply is only beginning to be available. The red granite industry hasbeen doubling its product every three or four years. Lime quarries have been for the past four years doubling their operations every year. The plaster export of 1886 was 50 per cent larger than in the preceding year, and fifteen per cent in excess of any previous year. The construction of the Tobique railway to Plaster Rock will bring a new field into operation. New investments were made last year in manganese properties, and it is probable that the work now in operation will be extended. The exports in 1886 were only exceeded in value by that of 1885 and that of 1880, while that year's sales were probably in excess of any previous year. The total value of mineral export from New Brunswick to foreign countries in 1886 calendar year is given by the customs returns at $101,349. The actual amount of sales outside the province were, as we take it, something like three times that sum."

URN: 0007 / 0755 / Names: Lake George Antimony; Annidale Mine;

Kings County Record - Jan. 20, 1928 New Brunswick Copper Ore Being Shipped To Europe. - The first export shipment of New Brunswick copper ore to go to Europe will leave the port of Saint John the middle of January for Antwerp to be smelted in Belgium. The shipment is to be made by the syndicate ofthe Canadian International Corporation of Montreal, who through

Brigadier General Charles A. Smart, C.M.G., recently obtained an option of the copper mines at Annidale, Kings County, formerly owned and operated for a short time by two brothers who came from California and died on the property while operations were being gotten under way. This test shipment consists of handcobbed ore and is being made through the syndicate's associates in New York. Samples of the ore from Annidale recently showed 12.79 per cent. pure copper and an almost negligible percentage of injurious impurities, and General Smart and his associates are confident that the Annidale copper deposit, which is a pre-Cambrian formation, will average between 9 and 10 per cent. copper - a larger percentage than that of the famous Noranda mine. They also assert ample evidence has already been found by mineralogists that the copper exists in sufficient quantities to make profitable operation of the property on an extensive scale possible. General Smart, who arrived in Fredericton fromMontreal with engineers and other experts from New York for an inspection of the antimony mines at Lake George, also taken over by the Canadian International Corporation interests, reported that surveying work was now going on at Annidale and that the actual development operations will soon be started there. A contract will probably soon be let for the sinking of shafts and a power plant, compressor and other equipment will be installed within a short time so that by early spring operations on a fairly extensive scale will be under way. Regarding the development of the antimony mines at Lake George, General Smart said that portable machinery was being added to the equipment there until the deeds for the property were turned over by the former owners to his syndicate and as soon as that was done a new power plant would be installed, a concentrating mill would follow and later a smelter would be established. General Smart said the importance of the antimony development in New Brunswick was now attracting world attention as it became realized that the deposits in this province were the richest found elsewhere than the famous Chinese antimony mines."

S.J. Daily Sun - Aug. 3, 1882 Burnthill ...... The region in the vicinity is unquestionably rich in mineral wealth, but I do not think that a development of the mineral resources would ever prove a paying investment. I have noticed a number of veins of auriferous quartz, from two to six inches in width, well defined on the surface, and these veins I take to be a continuation of the Nova Scotia gold fields, and which extend up into our own gold region of northern New Hampshire. Antimony, copper and iron exist in various parts of New Brunswick in large quantities, but what other minerals are to be found besides gold in this particular spot, with the exception of molebdinum, which is visible in almost every cranny in the rock, and that has no commercial value, I am unable to tell......."

URN: 0007 / C1 / Names: Lake George Antimony; Tobique/ Giberson Gold;

N.B. Reporter - Sep. 12, 1862 Rumors are current that gold has been discovered on the Tobique River, and we learn that a vein of antimony has been found in the Parish of Prince William, which promises to be highly productive. There are parties now at work on the premises."

URN: 0007 / EXPL / Names: Lake George Antimony; Exploration - General;

Morning Journal - Oct. 21, 1867 Our Mineral Wealth. - A learned correspondent who has made valuable contributions to the Geology of New Brunswick writes: I have read with interest the article in the Morning Journal on the gold discoveries made by Mr. Shea. It has for some been believed, and the fact was pointed out in our Report, that the rocks of the central portion of the Province were very similar in character to those of the auriferous district in Nova Scotia, both being near or at the base of the Silurian series, and corresponding with the Chaudiere gold district of Canada, and probably with those which yield that metal in Virginia and North Carolina. I do not doubt that the drift gold found by so many observers in our central counties will be traced to the adjacent rocks (in which indeed it has been found at one or two places), but its discovery in the present wilderness condition of that part of the country will I suspect, be the result of accident, as careful and systematic search is almost out of the question. None but those who have tried it, can appreciate the difficulties of prospecting in unbroken forests.I am glad that the Prince William mines are showing signs of being actively and successfully worked. I visited them about three weeks ago expecting to find them at work with the actual smelting operations, but was disappointed, the furnace not having been completed, and the difficulty of procuring needed appliances having greatly delayed their efforts. This was at Hibbard's shaft, but both at this and at Hutchinson's every thing was active, men busily employed, some in building houses or furnaces, others in sorting ore, and others again in removing water from the pits. This is a very serious difficulty at Hibbard's mine, which is in low swampy ground, and they will need an engine before their works can be successfully prosecuted. This, I understand, they intend to procure. Of the silver-bearing capacity of the antimony at certain points I have no doubt, although I have not analyzed any samples myself. I have always believed that other metals than antimony would be found, and I still think that not silver only but perhaps cobalt, nickel and tin may yet present themselves."

Daily Telegraph - Oct. 10, 1864 Exhibition. - ... Minerals. For the best collection of New Brunswick Minerals the first prize has been awarded to Professor Bailey whose cabinet is much admired by all, the specimens being so classified, arranged and labelled that even the unscientific observer may understand them. The Professor in his late tour through the counties of King's, Queen's and Albert, has added a large number of new specimens to his collection, and his Cabinet embraces specimens from almost every locality in the Province. I noticed Iron ores from Carleton, St. John, Charlotte, Victoria, Queen's and Gloucester; and lead ore from nine different localities. There are specimens of gold, too, but of course no discoveries have yet been made in sufficient 2 quantities to be of any service. Amongst the collection are some very fine Fossils; also curious Bone and shell beads. Indian relics - found with the skull of an infant wrapped in bark in an excavation on the Wapskehegan. To attempt a mere enumeration of the different Mineral specimens would be a hopeless task, and indeed it is a matter of surprise to persons less enthusiastic than the Professor, that during his comparatively short residence in the Province he has made so perfect a collection of its native minerals. Professor Bailey has taken the first prize also for useful minerals of New Brunswick. The second premium for New Brunswick Minerals has been awarded to Mr. G.F. Matthew, whose collection is highly creditable. Mr. Matthews has taken a prize also for Combustible minerals of N.B., the only collection exhibited. Professor Hind for his collection of the useful minerals of New Brunswick has been awarded a second prize. His collection is highly interesting, being arranged to exhibit the relation of each mineral to the mother rock, or rock in which it is found. This gentleman has lately made an exploration of the interesting Valley of the Tobique, and exhibits a map to illustrate the Minerals of the carboniferous area in that district, showing the relative position, extent and thickness of the Gypsum series, the Limestone series and the Sandstone or siliceous series. Among the minerals exhibited from this important basin are Ochres, Firestones, Moulding Sand, Sandstones for Grindstones, Mill-stone Grits, Limestones, Gypsum and Polishing Powder. Four sections are represented across the metalliferous belt of rocks extending from Bay Chaleurs to the Province line bordering on Maine. The rocks exhibited include the Red Slates of Woodstock with their associated Iron Ores and limestones,the Red Slates of the Nepisiguit and of the S.W. Miramichi, near Campbell, with Associated Iron Ores. The purple slates of the Nepisiguit and Tattigouche, with their Manganese deposits. The copper bearing diorites of the Tobique, Campbell River, and Nepisiguit. The copperbearing rocks of the St. John, the Antimony of Prince William, with their talcose slates. Among the rock specimens from these sections are observed black slates, fine grained green copper bearing slates; Diorites, red and green porphyries; Siliceous porphyries, and green and red Siliceous conglomerates for decorative purposes, and suitable for the manufacture of chimney pieces, ornamental tables, vases, &c. Gold from drift clays and sands from several localities were also shown, from the Serpentine, the Little S.W. Miramichi, the Nepisiguit, from Campbell River, and from tributaries of the Tobique, together with auriferous black sand from two other localities. Some specimens of folded and contorted rocks were also shown, 3 illustrating the manner in which the rocks of the ""Quebec Group"" or metalliferous belt have been folded by pressure. The specimens illustrating the Useful Minerals of New Brunswick, included the Limestones, Gypsum, and Sandstones series; with materials for constructive and ornamental purposes."

URN: 0007 / GEOL / Names: Lake George Antimony; Geology - General;

Colonial Farmer. - Mar. 13, 1865 Professor Hind delivered a very interesting lecture on Tuesday evening last, upon ""Ice, and its effects during past ages."" The lecturer stated that his subject was suggested by the season, surrounded as we now are by ice and snow, and invited his audience to accompany him to Greenland, while he directed attention to the ice-cap which covered a large portion of it. This ice-cap he represented as being in some places 200, and in others 1600 feet in thickness, filling up all the valleys and over-topping and covering the mountains. He referred to the vast amount of ice covering Melville Bay, and explained the cause; said some idea could be formed of the height of the ice-cliffs from the fact that the fishing lines used by the natives were at least 1500 feet long. That the ice rivers which flowed beneath the ice-caps were, in some instances 400 feet below the surface of the cap. The ice-bergs, he represented as being portions of these ice-caps, which while apparently at rest, were always moving forward, and breaking off they come in contact with open water, floated off and formed the fields of ice, generally denominated ice-bergs. The Lecturer said that the ice-cap which covered a portion of Greenland was its preservation; that at all seasons clear water could be found flowing there, abounding with life, while birds in countless numbers resorted to these places in search of the food brought down by the glacier rivers. Large glacier Lakes were also to be found in the interior of that country, from which the ice rivers had their origin, and the inland beaches and terraces which had so long puzzled the Geologists of Scotland and other countries, were now clearly understood and easily accounted for. The lecturer then proceeded to explain the promises upon which correct conclusions have been arrived at. The foreign rocks found in Greenland, termed boulders, he described, as being portions of rocks torn from mountain heights projecting through the glaciers, and carried forward by the ice-cap or rivers. That these rocks extended over a vast portion of this Continent, and abounded in New Brunswick. He denominated the table land of the Peninsula of Labrador, as the Land of Boulders. This country he represented as a scene of perfect wretchedness and sterility. The boulders there were the remains of vast glaciers, the rocks were rounded and polished, and in other respects clearly indicated ice action. He said that when on the Blue Mountain in the Tobique range, 1650 feet high, he had also discovered rocks which had undergone a similar operation. He illustrated his theory by referring to the rocks in the immediate vicinity of this city, to the formation at the Antimony mines in Prince William, and to the embrasure at the Oromocto Lakes, which also terminated the coal fields of this Province. He further stated that the gold which has been discovered in Canada, and New Brunswick, in the form of nuggets and in some cases as an almost impalpable powder, had been ground out of the rocks by the action of ice, and that the result of experience and observation, left not a doubt, but that at one time a large portion of North America was covered with similar ice-caps as those to be found now in Greenland. The lecturer in the course of his remarks also referred to the large extent of prairie land lying between the Saskatchewan and the Rocky Mountains. We cannot follow him further, those who were present enjoyed a rich treat, and our only regret is that, although there was a large attendance, the house was not better filled than it was. It is to be hoped that Professor Hind will favor this City with more information on this interesting subject."

URN: 0007 / GEOL / Names: Lake George Antimony; Geology - General;

Daily Telegraph - Oct. 10, 1867 Exhibition. - The Mineral Department. - Now that our forest trees, hither to the staple article of export from our Province, are rapidly being laid low by the brawny arms of our sturdy lumbermen, it is assuring to know that the prospects of New Brunswick as a mining country are not to be surpassed by those of any other part of the new Dominion. The display in this department, though consisting entirely of private contributions, (none of the large and beautiful collections of minerals of the Mechanic's Institute and Natural History Society being on Exhibition) is very extensive, and reflects great credit upon those who must have labored assiduously to lay before the public such a varied and complete exemplification of the mineral products of New Brunswick. The two tables on the western side of the rink allotted to this department, seem to fairly groan under the glittering but heavy burdens laid upon them. The most complete and the finest collection of provincial minerals of every description and kind, consisting of six collections, embracing minerals useful, ornamental, combustible, pigments, clays and sands, and dressed ores, from the mines now or lately worked, that has ever appeared at any previous Exhibition is here displayed by Messrs. G. and R. Matthew, occupying one large table next the promenade platform. The minerals of New Brunswick are here represented by a large collection arranged in butternut cases. This collection is a complete one of its kind, showing nearly all the useful minerals of known 9 occurrence, consisting of ores of the different metals, marbles, limestones, gypsums, building-stones, mineral paints, and all kinds of rocky substance which find a use in the arts and manufactures, the whole numbering about 150 specimens, collected in all parts of the province. Among these is a specimen of silver-bearing antimony from York Co. A small collection of useful minerals, numbering 30 specimens, found in York and Carleton counties, isalso exhibited by Mr. Shea, who has lately spent a considerable portion of his time in prospecting on the tributaries of the Saint John. Among these are some fine specimens of gold, washed from the sands of the Serpentine and Beckaguimic rivers. Combustible minerals find their place on Mr. Matthew's table, and until we saw his collection we were not aware that we were so well provided with fossil fuel. A magnificent specimen of albertite, in the centre, from the celebrated Albert mines, is supported on all sides by specimens of other coals including albertite from the East Albert Mines in Hillsborough, a lately discovered deposit of that valuable mineral, a dozen or more specimens of oil shale from various parts of Albert and Westmorland counties, samples of oil and paraffine extracted from the albertite by the Albertine Oil Company, and Petroleum or native rock oil, from an oil well on the Memramcook river, anthracite from St. John county, and bituminous coal from Grand Lake, Richibucto, Sussex Vale, &c. In this department Mr. Scoullar also exhibits a large box of very fine looking coal taken from new mines at the Grand Lake. Mineral paints, clays and sands. - A small collection of mineral pigments, of blue, green, red and yellow colors, and a large collection of clays and sands are exhibited by Mr. Matthew. Mr. Davidson also exhibits a neat little collection of clays and sands. Ores of metals. - Of these there are a greater number of exhibitors than in any other branch of the mineral kingdom. A very handsome specimen of copper glance taken from the Ellet River Mine containing about 60 per cent of copper, and handsomely mounted in a glass case, is exhibited by Mr. Fellows. Some very large and showy specimens of copper ore from the Letete mine in Charlotte county are shown by Mr. Janion, who is connected with the mine. These contain twenty per cent of copper, and the ore bearing part of the vein is from nine to fourteen inches wide. One of the cases of ores of metals is that displayed by Mr. Markham, the superintendent of the International Manganese mine. The specimens he exhibits are all taken from the mine in Hammond and contain numerous nests of very brilliant crystals of the ore, on which the sunlight reflected from every glittering point, produces a very fine effect. In this department is a splendid set of ores collected by Mr. Matthew. These include specimens of antimony ore from Cushing's and Hutchinson's lands in York Co., and from a newly discovered lode near Belleisle Bay. Manganese ore from Sussex, lead, zinc, and iron ores from various parts of King's Co., and copper ores from Bathurst and Point Wolf on the Bay of Fundy. Cards attached to these give the chief particulars in regard to the mine whence the specimen is taken. Building stone and plaster find but one exhibitor in the person of Mr. Stevens, who sends a block of brown freestone and a box of gypsum from Albert County. A small jar of Salt manufactured from the newly discovered Salt Springs in Cumberland County, N.S., owned by Mr. Allison, is on exhibition. Altogether the display in the Mineral Kingdom is a very good one; and from the collections of Mr. Matthew especially, which are scientifically arranged and labelled, may be derived much valuable information

URN: 0007 / GEOL / Names: Lake George Antimony; Geology - General;

Colonial Farmer. - Jun. 5, 1871 Geological Report. - Continued.II. Slate Band South of the Main Granitic Area. 12 The second district into which, for convenience of description, I have divided the region explored by me, is that lying between the northern boundary of the Carboniferous area and the so-called central granitic band; extending in length from Magaguadavic Lake to the Southwest Miramichi, and in breadth varying from nine and a half miles on the St. John River to seventeen on the Miramichi; these measurements being taken in straight lines at right angles to the strike. The rocks of this district consist or argillaceous and micaceous clay slates, with interposed bands of hard fine-grained, crystalline quartzose, micaceous and feldspathic rocks resembling sandstone. These rocks, which doubtless consist of altered sediments, are generally of a light bluish-grey color, but sometimes greenish and brown from the presence of iron in various states of oxydation. They are frequently traversed by small lenticular veins and strings of quartz, generally interlaminated, but often cutting the rocks in all directions. Occasionally they are more or less calcareous, and chiefly so at and near their junction with the newer rocks. These schistose and compact rocks, which alternate in irregular bands of various but generally no great thickness, seem to be only varieties of the same or a similar mineral aggregate, but of different structure. At one point, as I shall presently explain, I have found fossils apparently belonging to these rocks; but, as the stratigraphical relations of these fossils are still very obscure, it is extremely difficult to discover the geological age, original conditions of stratification, thickness, or the succession of the component parts of the present series. I have observed in the same band of quartzite, (by which, for want of a better name, I shall in the meantime designate the compact bands) no less than four distinct planes of cleavage, or more strictly cleavage, lamination and jointing, along each of which the rock seems almost equally liable to split. Throughout the whole extent of these rocks they exhibit a series of sharp plications and occasional violent contortions, which greatly increase the difficulty of unravelling their structure. It is, however, probable that the planes of division between the compact and schistose bands are to be regarded as marking the original lines of identification. From numerous observations, many of which are recorded on the larger map, the prevailing dip, when not affected by local contortions, is NW 60 deg. - 80 deg.; this seems in accordance also with the general structure of the country viewed comprehensively, and with the direction of the fossiliferous band at the only locality where I have observed it. Where the plications of the strata are so numerous and so sharp, the dip so steep and almost uniformly in one direction (indicating overturns) the bands of different characters so numerous, as this, and so much alike, and the exposures so few and 13 interrupted, it would be impossible, in the present state of our knowledge, to construct an accurate section, or to give even an approximate estimate of the thickness of the formation. On the right side of the river St. John, the section of the country now under consideration is for the most part as elevated and uncleared marshy flat, with no natural exposures of rock except on the ridge running from the Magaguadavic settlement to the antimony mines, and on the banks and in the immediate vicinity of the main river, where numerous minor ridges and valleysoccur, running in the direction of the strike. Beyond what has been already stated in treating of the junction of the Carboniferous series, and the preceeding general remarks upon the metamorphic rocks, there is nothing specially worthy of note on this side of the main river, with the exception of the antimony mines in Prince William parish, and the carboniferous outlier in the same parish and in that of Dumfries. Of the former I propose to give some account under the head of the economic minerals of this part of the province; and shall only remark here that the rocks of the locality are of the same general character as I have already described, except that they are unusually full of quartz veins, some of which contain also calcareous spar, and that they are talcose in their aspect. The outlying patch of supposed Carboniferous rocks, about twenty four miles from Fredericton, on the river road to Woodstock, and near to the antimony mines, is of a rudely elliptical form, the major axis being parallel with the river; it is of considerable extent, covering about fourteen and a half square miles, being five and three quarter miles long by three and a quarter wide. It is chiefly situated on the right bank of the river, but a small portion extends to the opposite side. It seems to occupy a shallow trough or depression excavated in the older rocks, partly in the granitic and partly in the slate belt; the rocks of the outlier covering the junction of those underlyings. The newer rocks are nearly uniform in character and composition throughout, and consist of coarse grey grits and conglomerates combined in the same beds, and abounding in cast of calamites and carbonized impression of various obscure vegetable forms. These are apparently identical with those already described as occupying a very large area in the great Carboniferous field above the unfossiliferous red rocks; no traces of which are to be found in this outlier, which rises on the right bank to an average height of 420 feet above the river, shelving with a tolerable uniform slope towards its banks. (To be Continued)"

Royal Gazette - Apr. 12, 1882 Passed April 6th:An Act to increase the Capital Stock and to amend an Act to ratify and confirm the incorporation of the Brunswick Antimony Company. An Act to amend an Act intituled An Act to incorporatethe Beliveau Albertite and Oil Company. An Act to amend an Act intituled An Act to incorporate the Albert Mining Company, and to provide for winding up the affairs of said Company."

URN: 0007 / L3 / LEGI / Names: Lake George Antimony; Beliveau Albertite and Oil / Gas; Legislation, etc.;

Daily Tribune - Mar. 9, 1875 The Legislative Council bill, to enable Lake George Antimony Company to hold Stockholders' and Directors' meetings elsewhere than in Fredericton, was committed, Mr. Phillips in the chair. Agreed to. ...... Fredericton, March 9 After routine Hon. McQueen committed the Belleveau,Albertite and Oil Company Bill, Humphrey in the chair. The Bill is almost a transcript of the Bay of Fundy Red Granite Company Act, and the mover explained that should it pass a company will be formed for the purpose of boring for albertite and oil at Belleveau Village. He dwelt on the benefits which would flow from the establishment of the necessary works of the company, and asked for the passage of the bill. Hon. Mr. Crawford said that as there was a section in the bill exempting the property of the company from local taxation, except that for schools, he would move its postponement for three months unless it was struck out. Hon. Mr. Willis and Mr. Davidson argued against the principle of exemption from taxes for the same reasons as those advanced by them against Crawford's Manufacturer's Exemption Bill. Hon. Mr. McQueen said he felt with the gentlemen interested in the passage of the bill that the proposed Company would be the means of enriching the District and County in which it was established, and this claim for exemption was, therefore, a valid one. If, however, the House desired, he would consent to the striking out of the exempting section. Mr. Davidson thought progress should be reported in order that the measure might be closely scanned and its provisions more thoroughly understood. This was opposed vigorously by McQueen, seconded by Smith, and when the exempting section was reached McQueen argued in its favor, and was opposed by Dow, Smith, Smith, Pickard and others, all of whom, however, were in favor of the bill. The section was struck out and the bill agreed to."

S.J. Daily News - Jun. 19, 1867 Act passed to ... Ratify and confirm the incorporation of the New Brunswick Antimony Co."

Royal Gazette - Sep. 25, 1872 Government Notice. Under Act 25th Victoria, Chapter 28. These are to certify, that Jed Frye, of the City of NewYork, State of New York, U.S.A., Francis Hibbard, of Saint George, in the County of Charlotte, Province of New Brunswick, John J. May, of the City of Boston, State of Massachusetts, U.S.A., A.H. Gillmor, jr., Tobias Gillmor, Kinsman P. Gillmor, and Eldorado Gillmor, of SaintGeorge, in the County of Charlotte aforesaid, have this day filed in my office a Memorandum of Association, for the incorporation of a Company to be styled ""The Lake George Antimony Company"" for the purpose of mining for, and working of Antimony, and other Ores and Metals, with a capital of two hundred thousand dollars, ($200,000), to be divided into two thousand shares of one hundred dollars each; and stating that the office or principal place of business of the said Company will be established at Fredericton, in the County of York, and Province of New Brunswick. Dated at Fredericton this 19th day of Sept., A.D. 1872 Jno. Jab. Fraser, Prov. Sec'y."

Daily Tribune - Mar. 18, 1874 Legislature. - ... In reply to Mr. Gough the Secretary said part of the mining appropriation of last year went to pay back claims, and only about $1000 were spent on the borer account. The present grant of $2000 is for the diamond borer alone. Mr. Hibbard referring to the mining policy of the Government, thought $2,000 too small a grant for this year. The Government was justified in purchasing a diamond drill, and it should pay half the whole mining expenses of the Province. Lumbermen can count on every tree on an acre, while minerals are an uncertainty. As the Government takes part of the profit of working mines, they should be partners in paying the expenses. The Lake George Antimony Co. paid twelve or fifteen thousand dollars before they could reduce their ore, and now any man can come and look at their works and do the same for twelve hundred. That Company is now making their ore an article of commerce, and, as a matter of justice, royalty should be withdrawn. Members may say what they like in reference to his following the Government because of the mining grants, but he was prepared to answer any questions on that head. The Lake George Company has spent $52,000, and is to spend $12,000 more this season, and yet operations of this class are alone of all our industries taxed by the government. He thought the Lake George Company should have a grant this year, the same as last. The borer will enable the Province to develope mining much better and cheaper than through any other means. ... and the mining grant were passed."

Royal Gazette - Jun. 16, 1875 CAP LXIV. An Act to Authorize the Lake George Antimony Company to hold Stockholders' and Directors' Meetings elsewhere than in Fredericton. Sec. Sec. 1. Meetings authorized 2. Not to change place of to be held at places business. Other than Fredericton. Passed 10th April, 1875 Whereas the Lake George Antimony Company has been duly incorporated under the Act of the General Assembly, twenty fifth Victoria, Chapter twenty eight, intituled An Act relating to Corporations, and by the Memorandum of Association filed in the Office of the Provincial Secretary, it is stated that the office or principal place of business is to be established at Fredericton, in"

S.J. Daily News - May. 4, 1863 and Eastport Sentenil - May 6, 1863 and Philanthropist - May 14, 1863 Copper Mines. - The St. Andrews Standard learns from a gentleman at Letete that the English company who have taken the copper mines in that locality have a number of men at work under Mr. J.W. Kay, their engineer, and that they are raising large quantities of the ore which has long been known to exist there. That it will be a profitable enterprise no one doubts, as the veins are pure and

St. Andrews Standard - Apr. 29, 1863 We learn from a gentleman at Letete that the English Company who have taken the Copper mines in that locality, have a number of men at work under Mr. J.W. Kay, their engineer, and that they are raising large quantities of the ore, which has been known to exist there. That it will be a profitable enterprise no one doubts, as the veins are pure and abundant. The men work with a will, as they are paid punctually every month, through Messrs. Chipman & Bolton, of St. Stephen, who are the agents. That the parishes of St. George and Pennfield contain valuable minerals is confirmed by geologists many years ago, all that is required to develop the great natural resources of the district, is capital

Daily Telegraph - May 14, 1863 Copper Ore. - We have in our office a piece of ore from the Copper mines at Letete, Charlotte county, now being worked by an English Company under the direction of a competent Engineer. We should judge from the specimen before us that the quality of the copper is excellent, and the enterprise will doubtless prove remunerative, as it is represented that the ore is very abundant in the locality referred to."

St. Croix Courier - Feb. 18, 1869 We understand the copper mines at Letite, Charlotte County, owned by Messrs. John and Thomas Johnson, are either sold, or are about to be sold, to a Halifax Company. The specimens of ore from these mines shown by Mr. Janion at the last Provincial Exhibition, which some of our readers will remember received honorable mention on that occasion, were sent to the South Kensington Museum, where they will serve in some measure to direct the attention of the English public to the mineral wealth of this province."

S.J. Daily News - Feb. 22, 1869 COPPER MINES. - We understand the copper mines at Letite, Charlotte County, owned by Messrs. John and Thomas Johnson, are either sold, or are about to be sold, to a Halifax Company."

St. Andrews Standard - Feb. 26, 1878 Accident at the Back Bay Copper Mine.- We learn that an accident recently occurred at this mine from thawing dynamite; for lack of materials at the mine. There was no water tight can to place in the vessel of hot water. While the thawing process was being conducted, the cartridges exploded doing considerable damage to the building, and also to the men. The company should deal with their manager, who was guilty of endangering the lives of the workmen through carelessness. We deem it our duty to call their attention to the accident on account of which we had from one of the men injured, he said he did not receive the printed instructions for using the explosive, until after the unfortunate occurrence."

S.J. Daily Sun - Jan. 5, 1881 The Boston Copper Mining Company is a newly chartered corporation, organized in this city with a capital of $50,000, for the development of property in Charlotte County, Province of New Brunswick. - Boston Traveller, 3rd."

URN: 0019 / Names: Wheal Louisiana Copper;

St. Croix Courier - Jan. 20, 1881 The L'Etite Copper Mines.- We are glad to learn that an active movement has begun which is to result in the systematic working of the large and valuable property situated on L'Etite peninsula in this county, and known as the Johnston Mine. The suspension of work just when the mine had been brought to good producing condition was a misfortune; but it was only a question of time when some one should avail themselves of the opportunity offered for a first-class investment at a low cost. The mine is open to a depth of one hundred and thirty feet on the main shaft, with two other shafts of less depth, all in rich ore, the vein at the depth of one hundred feet being fourteen feet in width. The report of Prof. Bailey on Charlotte County repeatedly calls attention to the existence of rich copper ores on this peninsula and the practical value of these deposits has been continuously proved by the results of the mining there carried on. Prof. Bailey's reference to the mine adjoining the Johnston has an especial interest from the fact that the lodes which have been worked with such profit in this mine have all been traced directly into the Johnston property. The company which is about to resume work on this mine is organized under the laws of the Commonwealth of Massachusetts by Boston business men, and is known as the Boston Copper Mining Company. Its capital has been placed at the extremely moderate sum of $50,000, which is ample to put the property on a dividend paying basis, since everything is in readiness to resume the work at the mine which has been so well done in the past. At the same time, when dividends are begun, the stockholders will find a decided advantage in having so small a capitalization on which to divide them. The situation of this property for purposes of shipment of ore could not be bettered, as vessels can load at a wharf on the company's own property and without any additional expense in handling the cargo. Moreover, the water facilities of Passamaquoddy Bay and the fact that the mine is but fifteen miles from Eastport and but nine miles from St. Andrews, with the Grand Southern Railroad just completed within a few miles of the property, renders access easy at all times and insures prompt and steady obtaining of supplies. On the whole, it is hardly possible that a property should come into possession of a company under more favorable auspices, and we look to see the Boston Copper Mining Company take its place among the dividend paying corporations of the country, and when once there, no one need fear but the dividends can be made both permanent and large."

St. Andrews Beacon - Jan. 12, 1899 and St. Croix Courier - Jan. 19, 1899 It is reported that the McLean silver mine at Letete will be worked by a strong English Company. Representatives of the company visited the mine last week."

St. Andrews Beacon - Mar. 20, 1902 H.H. McLean, manager of the Johnson Copper Mine, Letete, reports that under the personal superintendence of Thaddeus Dick, an experienced miner, work is progressing very favorably at the mine. Their shaft is now 116 feet deep and drifting has commenced, with every indication of striking high grade ore. Mr. McLean says there are hundreds of tons of low grade ore in sight, but they are desirous of proving the existence of high grade metal, when operations on a large scale will commence."

S.J. Star - May 3, 1902 Another Gold Mining Co. - Certificate of incorporation was filed with the secretary of state at Augusta last week for the Letete Gold and Copper Mining Co., organized at Eastport for the purpose of dealing in and operating mines and mining property, with $500,000 capital stock, of which none is paid in. The officers are: President, Charles E. Capen of Eastport; treasurer, Herbert H. McLean of Letete, N.B."

Daily Sun - Mar. 24, 1902 Copper at LeTete. - The Sun's St. George correspondent writes under Saturday's date, that the shaft of the Johnston copper mine at LeTete is now down 116 feet and that drifting has commenced with favorable indications of striking high grade ore. H.H. McLean, the manager, says there is lots of lower grade stuff in sight, but under Supt. Thaddeus Dick's direction they are after the deposits of high grade metal."

S.J. Star - Mar. 24, 1902 The shaft of the Johnson copper mine at Letete is now down 116 feet. Low grade ore is plentiful, and the shaft will be sunk deeper."

St. Andrews Beacon - Mar. 4, 1904 The Letete copper mines, under the supervision of H.H. McLean, are running night and day. A depth of 200 feet has been reached; the ore is turning out well."

Evening Times - Nov. 29, 1904 Active work is going on at Letete Copper Mines near St. George. H.H. McLean is in charge and is pushing the work along. A large body of ore is in sight and good returns are expected."

St. Andrews Beacon - Mar. 9, 1905 Mr. H.H. McLean, of Letete, was in town on Monday. He reports good results from the Letete mine. A dozen or more men have been working all winter. They are down 226 feet with a drift of 135 feet. The quality of the ore is excellent and they have great hopes of striking it in sufficient quantity to pay."

URN: 0019 / Names: Wheal Louisiana Copper;

St. Andrews Beacon - Aug. 30, 1906 Copper Mining at Letete. - Splendid Quality of Ore Being Turned Out. - Manager Herbert McLean, of the Letete copper mining company, with Mrs. McLean and other members of his family, was at Kennedy's Hotel on Saturday. To the Beacon he said that splendid progress was being made at the mine. A shaft 300 ft. deep has been sunk and a fine quality of ore is being turned out. The crews work twenty four hours daily, being arranged in shifts of three. This number is all that can work in the shaft at once. When they begin 'drifting' more men will be put on. The water pours in very fast, but with four pumps working continuously they manage to keep the mine free. Manager McLean speaks very hopefully of the

St. Andrews Beacon - May 3, 1906Work at Letete copper mine consists now mostly of prospecting in the neighborhood."

St. Andrews Beacon - Feb. 8, 1906 A fine quality of ore is being taken from the Letite copper mine just now. Manager McLean is pushing development."

St. Croix Courier - Feb. 14, 1907 Copper at Letite (Beacon). - Some splendid ore has been taken from the Letete copper mine which is being developed under the direction of Mr. H. McLean. At a depth of 400 feet the true fissure has been found embedded in porphyritic rock. The mine has been under development for many years. It is not known what further action the present owners contemplate. They feel now, however, that the success of the mine is assured."

St. Andrews Beacon - Oct. 17, 1907 Letete Copper Prospects. - Continue Bright, Says Manager McLean. - Manager McLean, of the Letete copper mines, was in St. Andrews on Tuesday. Asked by a reporter as to the condition of affairs at the mine he said they were 'fine'. The Company are greatly pleased with the appearance of the ore that has been turned out. Two car loads of it have been sent away for experimental purposes, but this method is too costly. If the ore continues to improve a smelter will likely be erected alongside the mine. Mr. McLean says a new air compressor will be put in, as well as other machinery, and the shaft will be excavated a depth of 600 feet."

Granite Town Greetings - Apr. 1, 1908 The L'Etete Copper Mine is not shut down as reported. Some of the men left the employ of the Company over a question of wages. The plant and machinery of this mine is of the latest design, and as soon as men are secured the work will be pushed with all possible speed."

Granite Town Greetings. - May 13, 1908 Chas. R. Starr, manager of the Letete, N.B. Gold and Copper Mining Co., was in Eastport last week, on business in connection with the above named company. Mining experts have reported that the owners of the Letete mine are in possession of a very valuable property, and the prospecting done within the past year by the company is said to have substantially bourne out the opinion. - Eastport Sentenil."

Granite Town Greetings. - Jul. 29, 1908 L'Etete Will Be Big Industrial Centre. - C.E. Starr of Canning, N.S., arrived in the city yesterday and is a guest at the Dufferin. Mr. Starr is interested in fruit growing in Nova Scotia and New Brunswick, and is considered excellent authority on existing conditions as well as prospects for the present year in fruit growing. Mr. Starr is also manager of copper mines covering an area of 1,280 acres located at L'Etete, near St. George, Charlotte county, which according to statements made by mining experts, is destined to become the most valuable mining property in New Brunswick. 'We have now several tons of ore mined,' he told the reporter, 'and according to certificates of analysis from state assayers in Massachusetts, the average showed by the vein was highly favorable. One assay showed 34.4 per cent. and another made by Clarence Hersey showed 34 per cent. We have not a smelter at work on the property yet, but expect to be in a condition to have one there by next year. 'The vein is about three feet wide on the surface and has gradually widened until now it is ten feet wide. The ore is 'chalcopyrite', the best quality known, and from which about seventy-five per cent of the world's supply

St. Andrews Beacon - Jul. 30, 1908 Copper Mining at Letete. - St. John Sun. - C.E. Starr, of Canning, N.S., arrived in the city yesterday and is a guest at the Dufferin. Mr. Starr is manager of copper mines covering an area of 1,280 acres at Letete, near St. George, Charlotte county, which according to statements made by mining experts, is destined to become the most valuable mining property in New Brunswick. 'We have now several thousand tons of ore mined,' he told the reporter, 'and according to certificates of analysis from state assayers in Massachusetts, the average showed by the vein was highly favorable. One assay showed 34.4 per cent and another made by Clarence Hersey showed 34 per cent. We have not a smelter at work on the property yet, but expect to be in a condition to have one there by next year. 'The vein is about three feet wide on the surface and has gradually widened until now it is ten feet wide. The ore is chalcopyrite, the best quality known, and from which about seventy five per cent of the world's supply of copper is obtained.'"

Daily Telegraph - Sep. 26, 1910 The Copper Resources of N.B. - To the Editor of The Telegraph: Sir, - In The Telegraph of the 19th inst., appears some opinions of one Dr. Wilson who, it seems, isan employee of the geological survey department at Ottawa. It also further appears that Dr. Wilson has been engaged during the summers of 1909 and the present year investigating the copper properties of Quebec, Ontario, Nova Scotia and New Brunswick with a view of publishing a tabulated report on the copper resources of the Dominion. Pending the publication of this report Dr. Wilson has been giving opinions as to the copper possibilities of New Brunswick, giving as his opinion judging from what he had seen 'that copper does not occur in New Brunswick in such quantities or richness as would make the exploitation of it a commercial success.' The chances are that Dr. Wilson has either not seen much of the copper areas of New Brunswick or has enough knowledge of such matters as to make him what would be considered a sound authority, and is giving utterance to views which are both absolutely incorrect and absurd. It would have been in much better taste had he refrained giving publicity to a statement that any one at all versed in the copper resources of this province knows to be untrue, incorrect and misleading, until his report was fully tabulated and published. The curious part of it is that this opinion should have been so freely and publicly given when it is evident that Dr. Wilson has seen evidently but a very small portion of the copper outcrops of New Brunswick. That there are areas which he has seen that may not have been rich enough to be economically valuable may be correct, but I can tell Dr. Wilson, and others can do the same, that he is utterly mistaken in his views, and should have made himself conversant with the whole resources and facts in the copper line in New Brunswick before he so glibly made a statement that is absolutely untrue. Did Dr. Wilson visit, and does he know of theLumsden copper mine in Albert county on which considerable money has been spent, and which shows a vein matter of 20 to 24 feet in width of first class commercially valuable ore, carrying from 4 to 7 per cent copper and gold and silver in combination of good value?Did Dr. Wilson visit the Vernon mine in St. John county where there is a goodly quantity of most valuable copper ore of the bornite variety running as high as 20 to 30 per cent copper, and which is undoubtedly commercially valuable?Did Dr. Wilson visit the old 'Freeze mine,' so called, in the New Ireland district of Albert county where there is undoubtedly copper ore of high grade carrying gold and silver and beyond any question commercially valuable!Did Dr. Wilson visit the ore body or vein of chalcocite or sulphite of copper carrying silver at Jordan Mountain near Sussex, where a positively certain ore vein of eight feet exists giving right on surface upwards of $25 a ton in value and which will probably average 10 per cent copper all through, with abundance of ore, and once opened up will prove commercially valuable? Did Dr. Wilson examine the splendid bed of copperore near Annidale in Kings county which for some time past has been quietly exploited and has a large body of chalcopyrite ore and shows ore that is undeniably rich, and is commercially valuable? Did Dr. Wilson examine the copper ore veins inseveral parts of charlotte county which most positively contain copper ores carrying high percentages and carrying also gold and silver freely, and which are positively commercially valuable? And so I might proceed enumerating other instances in new Brunswick, but it strikes me these are enough to prove that Dr. Wilson has been talking through the top of his hat and before again indulging in such condemnatory remarks he better zealously apply his energies to ascertaining the true facts in the premises, and not reiterate the ideas and opinions of others, with which he has evidently been stuffed. The question also comes prominently into sight here as to whether the geological survey department of Canada requires its members to pass and give utterance to decided opinions on mining possibilities, as to their value or non-value, and rather to present a full and concise report on the facts as they exist, leaving to others the onus of investigating them for commercial values and exploiting of the same. It is within the memory of the writer where a prominent member of the geological survey expressed openly the most decided opinion that the oil and gas of Westmorland and Albert counties were simply delusions and no good, that there could not be any commercial value in the shales of New Brunswick and yet today both are proving very important factors in our mineral wealth. Might it not happen equally as well that Dr. Wilson has formed premature views and opinions on the copper wealth of New Brunswick which he may in the future have to retract? It is, of course, undeniably true that mining values are frequently overrated, but it does not follow that every mining location is unworthy of exploitation, and as one who believes, not only in its copper but in iron, manganese, antimony, gypsum, lead and silver, baryta, etc., which are slowly but surely coming into prominence, I most emphatically object to men such as Dr. Wilson making statements that are calculated to create timidity and distrust among our own people and prevent capital being induced to look carefully into and develop mineral wealth. Trusting you may find space for the foregoing, I am,

Did Dr. Wilson examine the copper ore veins in several parts of Charlotte county which most positively contain copper ores carrying high percentages and carrying also gold and silver freely, and which are positively commercially valuable? And so I might proceed enumerating other instances in New Brunswick, but it strikes me these are enough to prove that Dr. Wilson has been talking through the top of his hat and before again indulging in such condemnatory remarks he better zealously apply his energies to ascertaining the true facts in the premises, and not reiterate the ideas and opinions of others, with which he has evidently been stuffed. The question also comes prominently into sight here as to whether the geological survey department of Canada requires its members to pass and give utterance to decided opinions on mining possibilities, as to their value or non-value, and rather to present a full and concise report on the facts as they exist, leaving to others the onus of investigating them for commercial values and exploiting of the same. It is within the memory of the writer where a prominent member of the geological survey expressed openly the most decided opinion that the oil and gas of Westmorland and Albert counties were simply delusions and no good, that there could not be any commercial value in the shales of New Brunswick and yet today both are proving very important factors in our mineral wealth. Might it not happen equally as well that Dr. Wilson has formed premature views and opinions on the copper wealth of New Brunswick which he may in the future have to retract? It is, of course, undeniably true that mining values are frequently overrated, but it does not follow that every mining location is unworthy of exploitation, and as one who believes, not only in its copper but in iron, manganese, antimony, gypsum, lead and silver, baryta, etc., which are slowly but surely coming into prominence, I most emphatically object to men such as Dr. Wilson making statements that are calculated to create timidity and distrust among our own people and prevent capital being induced to look carefully into and develop mineral wealth. Trusting you may find space for the foregoing, I am,

S.J. Daily News - Jun. 1, 1870 The copper mines at Le'Tete, and elsewhere throughout the County, are being worked with good results."

URN: 0019 / 0311 / 0691 / E2 / X1 / J8 / GEOL / Names: Wheal Louisiana Copper; Letete Mine; Markhamville Manganese; Oil and Gas - Kings Co.; Grand Lake Coal; Albert Mines; Geology - General;

Morning Freeman - Oct. 10, 1867 and N.B. Reporter - Oct. 11, 1867 Exhibition. - Minerals. -The show of minerals is not large. One of the most interesting articles exhibited is a box of coal taken from a vein 2 1/2 feet thick, lately opened on what is known as the Cokely farm, by the Grand Lake Mining Company, for which Mr. Scoullar is agent. This coal is remarkable for the intense heat it emits, and its great durability. For the house or the workshop it has no superior we believe. The specimen is clear and bright, entirely clear from all earthy matter or other extraneous substance, and the pieces are of a large size. We were glad to learn that the vein is improving in size as the work progresses. Of course, Albertite makes its appearance, and 8the oils distilled from that singular mineral. the company who have been boring for oil on the Memramcook send a small specimen of some Petroleum they have found, and some lumps apparently of the same substance consolidated. There are specimens of copper ore from various quarters, and of many other ores of sandstone, of sand, &c., &c., and in the Car Shed are specimens of gold bearing quarters, found in the Province, and some small particles of gold. Mr. Matthew's collection of minerals, which seems to be growing more extensive every day, is so large, and the specimens are so numerous, that it would occupy more than one column of our paper merely to give the names of them all. It proves conclusively that New Brunswick possess an immense variety of minerals, whatever may be the value of the deposits. Unfortunately few mines have yet been found to pay for working them. There is a copper ore by J.J. Fellows, manganeseby A. Markham, and a quantity of gold bearing quartz from Victoria county, by W. S. Shea, attracted considerable notice. There is also copper ore by E. Withers, while Mr. Janion shows some fine specimens of the same minerals from L'Etete mines."

URN: 0019 / 0597 / Names: Wheal Louisiana Copper; Simpson Island;

St. Andrews Beacon - Nov. 27, 1902 Charlotte Co. Copper. - There are two coppermines being worked in the lower section of Charlotte County, and with promising results in both cases. Mr. J. Stevenson Lord, who is looking after the interests of the company working the Simpson island mine, says they are making good progress in their drift towards the vein. The outlook is very favorable. At Letite, where Mr. Herbert McLean is superintending mining operations, the quality of the ore that is being turned out is splendid. The last assay made yielded 34 per cent of copper and a small percentage of silver and gold. The mines give employment to a considerable number of men."

St. Andrews Beacon - Feb. 20, 1908 Letete Copper Mine. - A Smelter Proposed. - General manager Starr and attorney Newcomb, of the Letete Copper Mining company, visited Letete last week for the purpose of considering the advisability of establishing smelting works at the mine. There are about 5000 tons of ore on the ground, containing a sufficient percentage of copper to pay the cost of smelting, provided a smelter were established in the vicinity. There would not be enough in it to justify the shipping of the ore to Long Island, N.Y., where the nearest smelter is to be found. The establishment of a smelter at Letete, besides assisting the Letete mining company, would also be of assistance in the Simpson Island mine. The local government might well interest itself in the establishment of the proposed works, seeing that it would prove such an

St. Croix Courier - Aug. 17, 1893 A New Industry. - Which May Add to the Prosperity of Already Prosperous St. George. - The Sun says that Charles Taylor, of St. John, an old miner, is at presentengaged in prospecting for sulphur pyrites, about eight miles from St. George, and is quite hopeful of success. This mineral, which is used in the manufacture of sulphuric acid, was mined at that place some sixteen years ago, but the mines were abandoned, not because they were unproductive, but for want of means. Mr. Taylor has six or eight men employed pumping out the old shafts and opening other pits on the main lead, which show up well so far. If successful, this industry will employ 200 men about the mines, to say nothing of those who will be employed in freighting the product. Ships of large size can be brought to lie at points 1 1/2 and 1 3/4 miles from the mines, and within a quarter of a mile from the pits there is a stream where the mineral can be stamped, washed and concentrated for the market. Mr. Taylor and his associates have secured an area two miles in length on the lead and a working license from the

URN: 0019 / 0603 / 0311 / LIME / Names: Wheal Louisiana Copper; Frye Island; Letete Mine; Lime - General;

N.B. Courier - Jul. 31, 1863 and St. Andrews Standard - Aug. 5, 1863 Mining in Charlotte County. - On Thursday last, the scattered farmers, fishermen and miners of that bleakand barren promontory known as Letete, were startled with an unexpected influx of visitors. The object of their search was the copper mine worked by Mr. Key, and a party of miners for Messrs. Johnston & Co. of England - They also visited the copper mine of Mr. Woodward, which lies adjacent to it, and close by the seashore. It has been worked for over a year, and a shaft sunk to a depth of over 100 feet. Several favorable looking specimens of copper ore have encouraged the proprietors to proceed in the outlay of a very considerable sum of money, which, it is to be hoped, may one day be repaid with interest. Several copper lodes, permeating quartz and slaty-like veins, have been discovered near this shaft, and it is intended to ""drift"" into them from the point reached, in the hope that something handsome may soon ""turn up"". The operation of sinking is carried on by blasting through the ledge, and in the present case the miners do not require to come to the surface during the moment of explosion, but can turn aside into the ""drift"" or lateral excavations. The light of a candle is used, and foul air is not felt or complained of, but the smoke occasioned by the blasting is a serious annoyance. At a short distance, on a rocky and barren eminence, is the other copper mine. Several copper lodes, of considerable length and breadth, converge near the spot where the shaft has been sunk to a depth of over 50 feet. The mining engineer is Mr. Key, a quiet Cornish man, thoroughly acquainted with mining operations. Near the shaft is a substantial workshop. This shaft is more easily descended than Mr. Woodward's - Here we saw several rich specimens of copper ore, and found on the part of Mr. Key a confident expectation of more and better. The whole province will watch the result of these mining operations with interest. It will be well for other districts to await the test now being applied 5 at such expense. - Should the operations succeed, the bleak rocks of Letete will be covered with an industrious population, who will trade with St. George and St. Andrews, and buy beef and mutton from the neighboring farmers. - Should they fail, experiments so costly will deter others from engaging in similar operations for a long time to come. A party of us also visited Frye's Island, close by, in which there is a belt of limestone, containing several veins of quartz, fluorspar, and to all appearances, both galena and barytes, two valuable ores of lead. The lodes run E.N.E., very much in the direction of the copper lodes. We have a hope that some day capital may be found to test the lodes which Mr Fry has, with much effort,

URN: 0019 / A5 / Names: Wheal Louisiana Copper; Charlotte County Mn;

St. Andrews Standard - May 20, 1863 Manganese has been discovered in this county, Edward Jack, Esq., has some fair specimens. The fact has been established long since, that this county abounds with mineral wealth; it only requires capital, energy and scientific knowledge to develop the great natural resources of Charlotte; and we believe the day is not far distant when our mines will be worked. A good business is already doing by the company who are working the copper ore at LeTang."

URN: 0019 / D7 / B8 / Names: Wheal Louisiana Copper; Kings County Coal; Dunsinane Coal;

N.B. Courier - Jan. 23, 1864 Discovery of Coal. - We have observed in our City papers notions of the discovery of Coal on the railway line, a few miles above Sussex, and we have been at some pains to ascertain the truth of these statements. It seems that about eighteen months since, a lad, who had been fishing in a small stream that crosses the railway, picked up a piece of coal; several months afterwards search was made, and it resulted in the discovery of an outcrop in the stream. The outcrop makes its appearance to the North of the Railway line, near the Dunsinane platform, 55 miles form the City, and about a mile to the westward of the steam saw mill of Mr. Alexander Shives. The seam shows itself on the lands of Alexander S. Light, Esquire, and within a hundred feet or thereabouts, of land owned by Robert Shives, Esquire. The country in the neighborhood is for many miles in extent, quite level, and forms a portion of the parish of Havelock, King's County. As far as we can learn, the coal is of fair quality; and two car loads have been sold in Sussex, and those who have burned it pronounce it a good house coal. That taken from the surface, however, from its exposure to the atmosphere, cannot afford a just criterion of its qualities. Messrs. Gilbert Murdoch, George Stewart, and others, as well as the gentlemen already named, are owners of land in close proximity to the seam. J.B. Key, Esquire, of England, Mining Engineer and Mineral Surveyor, Superintendent of the Copper Mines at Letete, near the entrance to Passamaquoddy Bay, has recently examined the district, and reported thereon. He says - ""On reaching the Station I proceeded in company with Mr. Alexander Shives to examine the spot where coal had been dug out by the side of a brook, as marked on a plan furnished me. Taking a man with us we were enabled to clear up this pit, from which I broke some good specimens of coal. Two seams were distinctly visible, separated from each other by a thin layer of shale, the uppermost seam being about 8 inches thick, and the lower one about 3 6 inches; beneath this last seam I dug out some Lignites. The seams and strata were not sufficiently laid open to enable me to come to a direct conclusion as to their precise dip and bearing; but as far as I could discover, its course will be a little North of East, and South of West, with a Southerly dip. This latter seems to be corroborated by my finding Coal cropping out in the brook about 20 feet to the Northwest of the last named pit, being led there to search for it from my observations of the dip where it was laid open. Two other pits had also been sunk in an Easterly direction from No. 1 pit, in shale, sand stone, and coal. I could not see the bottom of either of these pits, as they were filled in with rubbish, &c., from the sides. But judging from the same taken out from them, there rests no doubt on my present view being thin is by no means a guide, as they have been found in coal mines to swell from mere nothing to 65 feet in thickness; and there is every reason to suppose that similar results will be found in the development of this property."" On opening up one of the seams since Mr. Key's survey, a thickness of 30 inches was uncovered, after going into the bank of the brook only some 10 or 12 feet."

URN: 0027 / Names: Peekaboo Corner Lead-Zinc;

Weekly Observer - Jul. 23, 1850 and Morning News - Jul. 24, 1850ADVERTISEMENT: Norton Lead and Silver Mine. --The undersigned having obtained from Government a licence for a term of years of Mining upon a tract in the Parish of Norton, in King's County, comprising 640 acres, situate near the Finger-board tavern, distant only 33 miles from this City, and having ascertained beyond all doubt that a rich deposit of Galena of Lead Ore, with a considerable proportion of Silver, exists upon the said tract, they are willing to admit the Public to a participation of the benefits of the Lease upon equitable terms, and with that view and for the purpose of raising capital to carry on the work of Mining in an efficient manner. It Is Proposed to form a Joint Stock Company of 2500 Shares, of five pounds each, payable by such instalments as may be required during the progress of the work. The Stockholders to choose Directors, and appoint a competent Engineer or Superintendant. The compensation to the undersigned for monies already expended by them in explorations, mining tolls and buildings, and for their present interest in the Lease, to be fixed at œ1000, to form a charge upon the future profits of the concern, and to be paid out of such profits, before any general dividend be made among the Shareholders. As it is the well known desire of the Government and Legislature of the Province to aid by all practicable means the development of its natural resources, there can be no difficulty in obtaining a Charter, with such enlarged privileges as may be considered just and reasonable. The site of the mining ground presents peculiar advantages. It is scarcely two miles distant from water communication with this City, by means of the river Kennebecasis; the intended line of the Shediac Railway passes within one mile of it; a stream of ample power for machinery crosses it; as does also the present highway from Fredericton to the Great Westmorland Road; it is 2 covered with abundant wood for fuel, and with good building stone for constructing furnaces. These facilities will obviate many of the difficulties accident to similar undertakings, and it is confidently believed that the Stock cannot be otherwise than highly remunerative. Persons willing to take Stock will please send in their names to either of the undersigned without delay, as it is desirable to commence operations during the present favorable season. A Stock Subscription List it will also keep at the office of Charles L. Street, Esq., General Agent, St. John, N.B., where specimens of the Ore may be seen and full information afforded. Wm. Wright, John Steadman, Oliver Barberie"

S.J. Daily News - Jul. 27, 1875 Ores. - A gentleman interested in developing the natural resources of our country has given us specimens of silver ore found in Norton, Kings Co. The ore, which is contained in a soft limestone mixed with some white quartz, crops out in thick veins through the surface stone, indicating large deposits. The quantity of base metals is slight; an analysis has shown the silver to preponderate to the amount of 70 per cent."

URN: 0027 / Names: Peekaboo Corner Lead-Zinc;

Weekly Record - Fri., Dec. 20, 1901 Some developments recently made on the old Pierce farm near Norton on the old silver lead deposits, has shown up some fine looking samples of copper ore and further developments are looked for with interest."

URN: 0030 / Names: Teahan Mine;

S.J. Globe - Nov. 17, 1880 A Valuable Discovery. - We have been told of some very fine specimens of gold and silver quartz have been discovered lately on Mr. John O'Connor's farm, at New Ireland, A. Co. Some samples have recently been sent to New York, to assayers there, and they are said to have pronounced the minerals to be of excellent quality."

Daily News - Apr. 2, 1881 Albert. - Mining. - The New England Gold and Silver Mine is to be opened the 1st of May. We understand that the crusher has been purchased and that a large number of men will be employed at the works."

S.J. Daily Telegraph - Aug. 9, 1881 New Ireland Silver Mine. - Mr. Elias S. Freeze, of Penobsquis, called on us last week and left a sample of the ore taken from their mine in New Ireland. He informed us that they have cleared a lead which is 30 feet wide and 80 feet in length. The ore gives a large per centage of gold, silver, copper and lead, and is valued worth $40 per ton."

Chignecto Post - Jun. 2, 1881 The proprietors of the gold and silver mine at New Ireland have commenced work."

S.J. Daily Telegraph - Oct. 15, 1881 Dr. Goodfellow, who was home in Sussex, a few days ago, has returned to his mines in Mineral Vale, Alma, Albert County. The doctor is greatly elated at the prospects before him. Professional experts from New York, who have made Mineral Vale a visit, report the mine as very valuable. The doctor has for a time discontinued his business here and is pursuing with great diligence his works at the Vale."

S.J. Globe - Aug. 15, 1881 Dr. Goodfellow, of Sussex, had on exhibition at his office this morning some fine specimens of Stephanite or Polybasite - silver ore yielding about 70 per cent. - taken from the large lead lately discovered in Alma, Albert

S.J. Daily Telegraph - Aug. 30, 1881 Mining. - Dr. Goodfellow, who is bearing what is considered a very valuable mineral find on his property in Albert county, returned to his home in Sussex on Saturday, bringing with him further specimens of ore. The doctor is in high spirits at his luck."

S.J. Daily Telegraph - Aug. 16, 1881 Dr. Goodfellow, who has just returned from a visit to his valuable mines in Albert County, brought with him some choice specimens of ore. It is said the doctor has already had a very handsome offer for his find."

S.J. Daily Sun - Nov. 2, 1881 Sussex. - Mining. - Preparations are to be made for stripping the lode on the Goodfellow-Freeze mine at New Ireland. It is to be hoped that the pluck and energy with which the property has been developed will meet with ample remuneration at an early day."

S.J. Globe - Sep. 26, 1881 and Moncton Daily Times - Sep. 27, 1881 The proprietors of Mineral Vale, (Dr. Goodfellow, of Sussex, and others) have obtained from the I.C.R. authorities at Moncton a through rate of freight for the ore from their new mine in Alma, Albert County, and will begin in a few days shipping it in bulk by the car load from Elgin to the Portland (Maine) Smelting Works. Every succeeding test of the quality of the ore is more and more promising, and the vein being 30 feet wide, there is little labour required in mining a car load."

Chignecto Post - Aug. 4, 1881 Albert.- The company working the New Ireland Gold and Silver mine are more than pleased with the returns, so far. The quartz gives them $40 per ton, on gold, silver, copper and lead. Four men are kept steadily employed."

S.J. Daily Sun - Feb. 1, 1882 ADVERTISEMENT:Notice. Dr. W. Goodfellow wishes it to be distinctly understood that on and after the 2nd of February, 1882, there will be no agent or agents concerned or employed in the sale of any property he or his partners, E.S. Freeze and A.E. McLeod, are interested in. Any information concerning the properties can be had by addressing Dr. W. Goodfellow Mineral Vale, Parish Alma, Albert Co. Or, in care of M. Brown, Sussex, N.B."

URN: 0030 / Names: Teahan Mine;

Moncton Daily Times - Mar. 30, 1883 Albert Co. - Work is about to be commenced again by Dr. W. Goodfellow at the copper mine at Mineral Vale Alma. The ore averages 12 per cent. copper and contains 5 dwts. gold, 5 ozs. silver and 20 lbs. lead to the ton. The mine is now capable of an output of about 100 tons per week."

S.J. Daily Sun - Aug. 11, 1883 Sussex, Aug. 10. - Messrs. A.E. McLeod and Dr.Goodfellow, owners of the mines at Mineral Vale, Albert Co., shipped to Portland and Boston about 600 ponds of their ore, yesterday. This special shipment is being made owing to the discovery of much richer veins of ore than the lots previously assayed, and are reported as being of the best quality. Doctor Goodfellow is personally and wholly devoting his time to the fitting up of dams and other appliances for unearthing these ores which are to be shipped in large quantities to England and the United States this fall. The Dr. says this mine will pan out far beyond his expectations, and will not only be a source of remuneration to himself and Mr. McLeod, but ere

S.J. Daily Sun - Mar. 31, 1883 The Goodfellow Mine. - We are informed by those interested in the Mineral Vale, generally known as the Goodfellow Mine, situated in Alma, Albert Co., that they intend soon commencing operations. They expect to mine about 100 tons weekly, and to ship to the smelting works at Portland, Boston, or Swansea, Wales. The assays are said to give excellent results. Prof. Burwash's assay proved it to be worth over $40 per ton. One result gave 10 p.c. silver, 9 p.c. copper, 11 p.c. lead and 5 dwts. of gold from over 10 feet below surface. When we consider that this is from ore that was frost-broken and subject to the filtering of ages, it gives promise of much greater value at lower depths. The vein is pronounced by Prof. Ells a true fissure vein. It is 20 feet wide, running N.W. and S.E., with an inclination at but a slight angle from the perpendicular. Abundant water power is right at the opening and will afford every facility for concentration. The promoters have secured in all 2,500 acres, which cover nearly all the indications of the several leads."

S.J. Daily Sun - Oct. 11, 1883 Mines and Minerals. - To the Editor of the Sun:- Sir.- You will oblige by inserting this answer to the question: What is the reason you did not get a prize on your exhibit of minerals? The fact is this: The samples from the Goodfellow Mine, situated at Mineral Vale, Parish of Alma, Albert County, New Brunswick, were not placed on exhibition for competition or the desire of receiving a prize. The object was and is to establish the fact that there are valuable and workable ores in the Province of New Brunswick. I know the absurdity of placing three intelligent individuals in the ridiculous position of pronouncing which minerals should receive a prize. Ores, like potatoes, are entitled to a prize for the amount of profit they will give those who work them. Yours, GOODFELLOW"

S.J. Daily Sun - Apr. 25, 1883 Sussex, April 23. - Dr. Wm. Goodfellow, of this place, is a gentleman possessed of a keen spirit of enterprise, his chief forte being minerals. To this gentleman's perseverance the now widely known and valuable Goodfellow mines in Mineral Vale, Albert County, owe their development. Mines, which will ere long prove a source of great wealth to their owners, and of incalculable benefit to the Province of New Brunswick. It is estimated there are now 30,000 tons of this valuable ore bared, for which very handsome and remunerative prices are now being offered, the assays having disclosed its great value. These ores lie immediately below the surface of the earth, and within a short distance of the seaboard, and are soon to be connected with the Elgin Railway; they only await the miner's skill to produce the reward sought after. The greatest difficulty to be encountered is the removal of these (indeed all) ores is their immense weight. To meet this difficulty the Doctor proposes the erection of proper furnaces in some central locality (say St. John) where ores can be reduced to matte, reducing 60 tons to 3 tons which will contain all the metals of value. These furnaces are to be used not only for the Goodfellow mines, but for all the ores in the Province. To this end the Government should come down handsomely, as by the encouragement of such an industry not only would our Provincial minerals be more fully developed, but hundreds of our men would find that employment they seek in a foreign country, and our farmers would find a market for their produce. Your correspondent wishes the worthy Doctor success not only in this but any enterprize he may undertake."

Moncton Daily Transcript - Nov. 14, 1884 and S.J. Daily Telegraph - Nov. 14, 1884 Albert Co. - The gold and silver mine in New Ireland, owned by Goodfellow, McLeod & Freeze, has been silent this season, apparently without reason. This mine is rich and it is a shame that it is not being worked."

S.J. Daily Sun - Nov. 21, 1884 Sussex. - It is now said that works on the Mineral Vale mines will soon be resumed."

Weekly Transcript - Nov. 19, 1884 Albert. - The gold and silver mine in New Ireland has been silent this season, apparently without reason. This mine is rich and it is a shame that it is not being worked."

S.J. Daily Sun - Jul. 30, 1885 Sussex. - Messrs. Freeze & McLeod, are also shipping large quantities of ore from their mines in Mineral Vale in Albert County. It is rumored that Dr. Goodfellow, who did considerable to develop their mines, has sold out his interest to Messrs. Freeze & McLeod."

URN: 0030 / Names: Teahan Mine;

Moncton Daily Times - Aug. 17, 1885 The mine at New Ireland owned by Messrs. A.E. McLeod, Sussex, and E. Freeze of Penobsquis is now being developed by these gentlemen. The specimens of ore are first class and continue to improve as the shaft goes down. The ore is a combination of copper, silver and gold, and bids fair to be one of the most prominent mines in the Maritime Provinces. The owners deserve encouragement and a good return for the manager in which they have gone into the enterprise unaided by any outside capital."

S.J. Daily Sun - Dec. 7, 1885 Sussex. - It is rumored that Messrs. Freeze & McLeod, owners of the Mineral Vale mines in Albert County, have sold out one-sixth of their claim at very large figures. So well did the ore sent on to Portland, Maine, for assay turn out that a first-class smelter is to be erected on the mines. It is said that American capitalists are anxious to

S.J. Daily Sun - Sep. 26, 1885 Sussex. - A.E. McLeod and Doctor Goodfellow returned home today, having been examining the mines at Mineral Vale. They report ore of a first class quality panning out in abundance. They have a large number of men excavating and expect to make their first shipment to the United States in a few days, where they have large figures offered for all they can supply."

Daily Telegraph - Sep. 15, 1885 Gold, Silver and Copper. - A correspondent sends the following particulars of the new mine of gold, silver and copper at Mineral Vale, Albert county, which is owned by Messrs. E.S. Freeze of Cardwell and A.E. McLeod of Sussex. The mine in New Ireland, Albert county, owned by Freeze & McLeod, is on the Barrett Brook, and is within nine miles from navigation on Salmon River and eight miles from Elgin branch railway. A shaft 8x14 has been sunk to the depth of 45 feet and is well timbered up. The width of the vein is 30 feet and contains mineral from one side to the other. Apparently, in descending, the ore is increasing fast in richness. A large amount of ore is piled up round the mine which has the appearance of solid metal. The walls are of slate, and the quantity would appear to be inexhaustible. A carload for shipment, to be assayed in the United States, lies at Elgin station waiting for the completion of the bridge at the falls, St. John. Assays already made have been very satisfactory, and from appearances the mine promises fair to turn out a bonanza."

Daily Telegraph - Sep. 12, 1885 Albert Co. - All the talk is about the New Ireland mines. The company has the road nearly completed and men and miners are visiting the scene of operations nearly every day. The appearances appear good. Patrick Long is opening up another mine on his farm, about a mile from the Freeze & McLeod mine."

Moncton Daily Transcript - Jul. 9, 1885 and Weekly Transcript - Jul. 15, 1885 and Moncton Daily Times - Jul. 20, 1885 Albert Maple Leaf - Jul. 9 - The silver mine inNew Ireland is doing well. They have sunk the shaft to a depth of 20 feet and have used heavy timber which is dove-tailed. The size of the shaft is 10 x 14 feet. The ore continues to get richer the farther down

Moncton Daily Transcript - Jul. 2, 1885 and Weekly Transcript - Jul. 8, 1885 SILVER.- The Albert Maple Leaf says the silver mine at New Ireland, Albert County, is being actively worked. Messrs. Freeze and McLeod were there last Friday. They have got a right-of-way from D.C. Cleveland for a new road to Alma, over which the ore will be hauled for shipment at Alma. Already they have 50 tons ready for shipment. The shaft has been sunk 15 feet and the mine grows better. Some of the ore is very fine. Boss Landry came very near to being seriously injured on Tuesday, June 23rd, by the men failing to hoist him out of the shaft in time, after he had put in a charge of dynamite. However, he escaped uninjured."

Daily Telegraph - Nov. 6, 1885 Albert Co. - There is now a steam pumping engine in the mine at New Ireland to keep the water out. Messrs. Freeze & McLeod have shipped quite a large quantity of the ore to the United States and are well satisfied with the way it turned out."

Chignecto Post - Oct. 21, 1886 The New Ireland mines employ quite a number of hands, and the owners are confident of success. An engine and boiler were put in last spring and another boiler has recently been added. The ore yields gold, silver, and copper, and is thought to contain sufficient lead to pay for working if any means can be derived for collecting it. A quantity of ore has been smelted, and half-a-dozen barrels of the mat have been shipped to England, but no returns have yet been received. If the result is favorable several other mines will be opened."

Daily Telegraph - Jun. 7, 1886 The New Ireland silver and copper mine will be an active operation next week. The steam pump was put in last Saturday. The crusher, smelter and engine are up, but a new engine will shortly be put in. About 50 hands will be kept steadily at work. A large boarding house is being put up for George McLane, and a blacksmith shop. Altogether the mine will make a genuine hum at New Ireland."

URN: 0030 / Names: Teahan Mine;

Chignecto Post - Aug. 12, 1886 Mining operations continue brisk. Mr. Freeze is about to put in more horse power in order to enlarge his business. The ore is said to increase in richness as they go down and is computed to have a large percentage of silver. Other undeveloped mines are claimed including one of albertite on J.W. Steeve's farm."

Moncton Daily Transcript - May 13, 1886 Maple Leaf - The silver mine at New Ireland is again in working order. It is said that 50 men will be employed this summer."

Moncton Daily Transcript - Apr. 8, 1886 Albert Maple Leaf - The work at the New England(Ireland ??) silver mine promises to go ahead briskly this summer. Men are now hauling lumber from Elgin Corner to construct buildings for the mining machinery. The lumber came by mail from Penobsquis. The crusher and smelter were expected to arrive in St. John this week. If it be true that there is money in rocks it is hoped that the hills of New Ireland will prove this thoroughly and send it around."

Chignecto Post - Jan. 27, 1887 Copper Mining.- The Freeze Silver and Copper Minein the Parish of Alma, Albert Co., at present employs forty hands, and the output of ore is about thirty tons per day. The company is making regular shipments of ore to Great Britain.....?..... increases in depth."

Daily Telegraph - Jan. 24, 1887 Thirty Tons Of Ore Per Day. - Forty men are at present employed at the Freeze silver and copper mine, in the parish of Alma, Albert county, and the company is making regular shipments of ore to Great Britain, with good markets. The present output of ore is about 30 tons per day."

S.J. Daily Sun - Jul. 22, 1887 Sussex. - It is rumored that the valuable Mineral Vale mines are soon to pass into the hands of English capitalists and will be properly developed."

Daily Telegraph - May 21, 1888 Gold and Silver Mining Company Organized. - The organization of the New Brunswick Silver and Gold Mining Company was effected in this city, on Saturday, with the following Board of Directors: Edward J. Baxter, of Norton, Kings Co.; Wm. H. Love, of St. John, and F.J. Alley, Charles C. Morrison, and Arthur Foss, of Bar Harbour, Me. On the same day the directors elected Wm. H. Love, president, and Arthur M. Foss, secretary-treasurer. A representative of the Telegraph called upon Mr. Foss, at the Royal Hotel, Saturday, and obtained from him the following information concerning the company and its property. The company was organized, under the recent corporation act of the province, and its object, as stated in its charter, is the purchasing, holding and working of mineral lands and searching for minerals in New Brunswick. It is composed of live, active business men, who go into it as a business venture, intending to develop a commercial enterprise that will at the same time benefit themselves and the people of the province. The property of the company consists of something over 260 acres, situated in the parish of Waterford, in King's Co. All the property, with the exception of a few spots, is well wooded and well fitted on the surface for carrying on mining. The mineral which shows on the surface and in the excavations made is a copper ore carrying both gold and silver, with indications and traces of the lead ore of the western mining country. Explorations have shown the lead to be a continuation of the now successful Mineral Vale mine at New Ireland, in Albert Co. There are already works upon the property sufficient for present needs, and to these will be added, as occasion demands, machinery for the successful carrying on of the enterprise. This venture, the reporter was assured, is in no sense a stock speculation, no stock having as yet been put upon the market. It is understood that the incorporators are advancing the money necessary for explorations, and will use every effort to put the property in working order. It is to be hoped that they will be successful in developing this branch of industry and in getting at some of the hidden riches of New Brunswick."

Moncton Daily Times - Aug. 24, 1888 Albert Co. - The New Ireland silver and copper mines have recently been pumped out and inspected by members of the syndicate who are to buy and actively work the mines."

URN: 0030 / Names: Teahan Mine;

Daily Telegraph - Apr. 12, 1888 Our Mining Industries. - Developments of Property at Mineral Vale by the National Mining Association. - The legislature has granted a charter to the proprietors of the Mineral Vale mine, under the name of The National Mining Association of New Brunswick, capital $500,000, with power to increase to $1,000,000. As the mining industries of this province, so long neglected, are now attracting so much attention both at home and abroad, it may be of some interest to the public at large to hear something of the undeveloped wealth in our midst. Albert county has from time to time exhibited rich specimens of various metals and produced the celebrated albertite mine, which yielded so many fortunes, and there have been found silver, gold and copper there, the two former metals in large quantities, carrying considerable gold. Mineral Vale mine has been developed and worked to its present condition for a period of two years, and from the commencement has steadily increased in quality and dimension of vein, from two per cent of copper to 15 percent average; and from nothing in silver to 86 per cent of lead bearing 32 ounces of silver and four pennyweights of gold. The mine is so far developed that about half a million dollars' worth of ore is actually in sight; levels cut which now enables a sufficient force of of men to be started upon the excavation of 50 tons a day, which in due course, by driving new headings, will be increased to 100 tons, and so on. The shaft has been sunk of sufficient dimensions to admit of double working (by up and down shaft), and is now down 160 feet and is served by steam hoisting machinery. There is a steam Blake crusher and a 50 ton water jacket furnace; ample and strong buildings, workmen's houses, store, stables, smithy, and about 400 tons of ore on the dump, worth about $20,000, ready for smelting and shipment. The vein of ore traverses the property 1,800 feet, with a breadth of 30 feet. The vein has been laid bare, and the deeper they go the richer the ore becomes and the greater the extent of the lode. It is one of the most extraordinary seams of metal that has ever been discovered on this continent. The ore has a close resemblance to the celebrated Comstock lode (Colorado), and is very little behind it in quality, although that mine is down a depth of 1,500 feet, whilst the Mineral Vale shaft is only down 100 feet, and it is quite probable as they descend lower it will be even richer. Experts who have examined the property state that there is ore for 100 years at least, and after that again in fact it is hard to say what the limit is. Analysis has been made by well known assayers, including C.W. Adams, of Boston, and Rev. J. Burwash, of Sackville College. Matte has been smelted and shipped to Liverpool, there assayed and sold with most satisfactory results. According to lowest analysis 50 tons of ore a day would yield:- Silver ... 375 ozs ... $375 Gold ...2 1/2 ozs ... 45 Copper ...3,750 lbs... 450 Lead ...5 tons ...250 -- $1,120 -- The highest analysis would yield ... $2,033 This is the capacity of the mine at present, and it will yield a net profit of $20,000, but as soon as it becomes more opened up the output can be largely increased. The first shipment of metal will be made to St. John, to go forward by steamer to Liverpool, but later on it will be sent direct to its destination. Coal will be taken from the Joggins to the shore, and there coked in ovens, which will be erected for the purpose, and the coke transported in to the mine. As soon as work is vigorously prosecuted, quite a little village may be expected to rise up at the mines, which are not far from New Ireland, in the parish of Alma, and situate about one mile from the highway road leading to Salmon River. This work of development has gone on almost unknown outside of the few who have had the pluck to steadily persevere in opening up the property and nothing now remains but to reap the reward of their labours. It is stated this belt of metal extends across the parish for a considerable distance and if such is the case smelting works will probably be followed by others. The company is said to be in treaty with a foreign syndicate, who are to purchase a large interest and develop the property to its full extent. It will be necessary to build a tram or railway to the Bay of Fundy, where there is an excellent government wharf, to facilitate the large amount of traffic there must be in connexion with it, taking out the metal and pouring in supplies. Powers have been obtained by the company for this work in their charter."

S.J. Globe - Oct. 6, 1888 and Moncton Daily Times - Oct. 8, 1888 and Fredericton Capital - Oct. 18, 1888 and Moncton Daily Transcript - Oct. 8, 1888 Silver Mine Sold. - It is reported that the Freeze silver mine, at Mineral Vale, A. Co., has been sold to an English syndicate for something like $150,000."

Moncton Daily Times - Oct. 12, 1888 Albert Co. - In the Maple Leaf of June 14 we informed our readers that the New Ireland silver mines had been bought for $100,000 and that the mines would be placed on the London mining market. It is now said that the mines have been re-sold to a syndicate for $150,000. Let us hope that the mines will now be worked, as they are

Weekly Record - Fri., Sept. 7, 1888 There is a rumour that the Freeze Mine has been sold for $75,000 and that the Company will commence operations at once. This rumour is believed to be fact, as the President of the Company is the authority."

Moncton Daily Transcript - Apr. 13, 1888 A new company, called the Gold and Silver Mining Co., intend opening up a new mine at New Ireland, Albert Co., about 1 mile from the old mine that has already proved valuable property. The New Ireland ore is very rich in gold, silver and copper."

S.J. Daily Sun - Sep. 11, 1888 The Sussex Record says it is rumored that the Freeze mine has been sold to a company for $75,000 and that work will begin at once."

Weekly Record - Fri., Jan. 27, 1888 Stock of the Mineral Vale Mining Company took a great rise last week owing to the very excellent report made by a skilful and practical geologist. Mr. A.E. McLeod, the principal proprietor, is so elated with his prospects that he has invited a lot of our leading men to visit these now famous works. No doubt a good time will be spent."

URN: 0030 / Names: Teahan Mine;

Moncton Daily Transcript - Aug. 17, 1888 and Weekly Record - Fri., Aug. 17, 1888 and Daily Telegraph - Aug. 24, 1888 The Mineral Vale Mines situated in Alma, Albert Co., have lately been pumped out and inspected. It is rumored that a syndicate is about to purchase, and that active mining operations will commence at once. The mine is very conveniently situated for the shipment of its ore, being only a few miles from the Elgin railway, and four miles from a deep water terminus."

Moncton Daily Transcript - Jun. 14, 1888 and Moncton Daily Times - Jun. 15, 1888 and S.J. Daily Sun - Jun. 19, 1888 A stock company has been formed and incorporated with a view to placing the Mineral Vale mines in New Ireland on the London mining market. The mines were sold for $100,000, and the new company has a capital of $500,000. - Maple Leaf."

Weekly Record - Fri., Nov. 30, 1888 (quoting the Halifax Critic) It is reported some negotiations had taken place for the sale of the Freeze mine at New Ireland, in Albert County, but so far nothing definite has been made known."

Moncton Daily Transcript - Jun. 2, 1888 The Mineral Vale Property at New Ireland, Albert Co., has been duly incorporated with a view to placing the same on the London Mining market. Parties having strong connections there are working up the matter, and it is thought a good sale will be effected."

Daily Times - Mar. 31, 1888 and Daily Telegraph - Apr. 3, 1888 Gold and Silver in Albert County. - A number of gentlemen are applying for a charter of incorporation as the Gold and Silver Mining Company, for the purpose of mining gold, silver and copper on a very promising claim which they have secured in Elgin, Albert county, about eight miles from Elgin Corner. Another Company, called the National Mining Association, principally Americans, have been operating in the same district, about one mile from the first named property, and have on the ground a smither, crusher, two engines, and other machinery and plant. They have sunk a shaft to the depth of 160 feet, and the results are said to be most satisfactory, quantity and quality being beyond the most sanguine expectations. As to quality it is said the tests show that the ore is almost equal to that of the Comstock lode (Colorado). The first named company, composed chiefly, we believe, of New Brunswickers is now sinking a shaft and purpose to operate the mine vigorously as soon as necessary preliminaries can be arranged."

S.J. Daily Sun - Sep. 10, 1889 Sussex. - It is said that the Mineral Vale works have at last found a purchaser, though at a great loss to the parties selling. Work is to be begun on them at once, which will cause a large outlay of capital as well as give employment to numbers of men."

Weekly Record - Fri., Aug. 30, 1889 A rumor is gaining ground to the effect that the valuable mines in Mineral Vale, Albert Co., are soon to change owners, and works of an extensive character begun. We trust that this rumor is correct, as experts have pronounced the ore in these mines to be in unlimited quantities and very valuable."

S.J. Daily Sun - Dec. 21, 1889 Sussex. - Hopes of starting work again in the Mineral Vale mine in A.C. are again spoken of."

S.J. Globe - Oct. 9, 1890 Death of a Mining Engineer. - John Browne, a wellknown mining engineer, died this morning at the Belmont House of congestion of the lungs and weak heart. He was a native of England, but has lived in Nova Scotia for some time. He was known throughout the provinces as one of the most expert mining engineers. At the time of his death he was negotiating with some parties in Baltimore for the purchase of the Goodfellow mine in Kings County. The deceased spent considerable time pushing forward the mining industries of New Brunswick."

S.J. Daily Sun - May 2, 1893 Hillsboro. - A gold mine in New Ireland was sold yesterday at auction in front of the post office. Sheriff Woodworth was auctioneer. It realized one hundred dollars. R. LeB. Tweedie and Dr. Silas Alward attended, the former as referee in equity, the latter as plaintiff's solicitor."

Moncton Daily Transcript - May 3, 1893 and Moncton Daily Times - May 3, 1893 and Chignecto Post - May 4, 1893 A Silver Mine. - Sheriff Woodworth, of Albert County, on Friday sold by auction a large interest in a mining property in Albert county. The mine, known as the Mineral Vale Property, is said to contain quantities of silver as well as considerable gold. At one time a lot of money was spent on the mine, with, it is reported, good results, but the capital gave out and the mine was abandoned. The sale on Friday was of two-sixth parts of the entire property, being the interest of Silas M. Freeze. It was mortgaged to Messrs. Turnbull & Co. and the sale was made under a decretal order of the Supreme Court. Mr. R.LeB. Tweedie was present as referee in equity and Dr. Silas Alward to represent the plaintiffs. The property only brought $100. - St. John Globe."

URN: 0030 / Names: Teahan Mine;

Moncton Daily Transcript - Jun. 3, 1895 Elgin. - M.C. O'Brien has shipped five hundred of the Freeze Ore to New York on the strength of a telegram from Mr. Sellock who quite recently visited these mines and took with him a small portion of its mineral for assay. The general impression is that the mine will in course of time be operated."

S.J. Daily Sun - May 11, 1895 There is some probability of the old Freeze gold mine situated at New Ireland, Albert County, being opened up. A number of New York gentlemen have been prospecting of late, and seem to think there is something in it, notwithstanding the fact that several thousands of dollars have been expended there in vain."

S.J. Daily Sun - May 8, 1895 and Moncton Daily Times - May 9, 1895 Albert Co. - Elgin, May 6. - Mr. Van Meter of Moncton and Mr. Sellick of New York were in the village May 1st on a prospecting tour. They spent one day in the mining works known as the Freeze mine in New Ireland. A large part of the machinery used when the mine was in operation is yet in condition to be utilized, should a company decide to open the works again. The gentlemen named have taken specimens of the mineral bearing quartz to have them assayed in New York."

Kings County News - June 20, 1895 Elgin. - Mr. Pharez O'Brien has been negotiating with a New York mining Co. about opening the Freeze mine in New Ireland. Mr. Selwick, a representative of the company, was here this week. He appears well pleased with the ore and is talking of shipping 400 tons to New York. It is unnecessary to add that it creates quite an excitement."

Weekly Record - Fri., May 10, 1895 Prospects are that the old Freeze mine in New Ireland, which has been deserted for some years, will soon be re-opened. Interested parties from Moncton andNew York have been doing some prospecting around the old shaft and profess a willingness to make another venture. Several thousands of dollars have been sunk there in the past with only a big hole in the earth and a lot of badly rusted machinery to show for it. We admire their pluck, and hope something may yet be done in a way of making it a paying property."

Weekly Record - Fri., Jul. 12, 1901 New Ireland. - Hon. A.T. Dunn, surveyor general, accompanied by Mr. Loggie, of the Crown Land Office, at Fredericton, and Mr. S.H. White, of Sussex, spent Tuesday and Wednesday of last week in the New Ireland District of Albert county. The surveyor general having a number of claims to investigate in connection with applications for land under the labour act and for the securing of mining licenses for land in that part of the province, decided to visit the place in person and become acquainted with the condition of affairs. ... After spending the night at O'Connor's, the Surveyor General spent the following forenoon in cruising the woods, examining the land and interviewing persons interested in securing land or mining privileges."

Weekly Record - Fri., Apr. 24, 1903 Various rumours have been in the air that the old Mineral Vale or Freeze Mine near New Ireland was to be opened up again. We trust that the rumours may prove correct. Perhaps with the extension of the E. & H. Ry. to the shore which is talked of, it may come into line a little later on."

Kings County Record - Nov. 19, 1915 Rich Copper Find in Albert County. - Vein of Ore Measuring Four feet Across Located for which Experts have been looking for 18 years - Rich in Grey Copper and Galena. - Very encouraging reports have been received lately from Albert County concerning the prospects for copper near the old Freeze mine in New Ireland, Albert County, on the boundary lines of Kings county. During the past summer, the New Ireland Copper Co. spent some $1,000 or so, trying to locate a supposed copper vein which was thought to run east and west from the Freeze mine that was in operation some forty years ago. The company after months of prospecting failed to locate the vein and work was abandoned. One member of the company, however, it is said, still had faith that the vein really existed, and this fall, Benj. Fales, of Hopewell Hill, a miner away back in the days of the Albert mines, was employed to continue the search. The old timer took a couple of men and after spending only two days, returned one day last week with the information that he had been successful in locating a vein of ore, measuring four feet across, for which, it is said experts had been looking, for eighteen years. The vein was stripped for four or five rods on the strike of the vein and it is claimed to be rich in grey copper and galena. Mr. Fales brought out a bag full of ore to show the members of the company and the latter are much elated over the find. When the Freeze mine was first opened a considerable amount of money was spent in operating it and for machinery and it at the time was considered a bonanza, but the ore did not pan out and the promoters sunk a large sum of money. Several times since then different parties have tried their luck but without success. If the recent find of copper turns out nearly as well as is anticipated New Ireland will experience a boom such as was never dreamed of by residents of that locality."

URN: 0030 / 0001 / Names: Teahan Mine; New Horton Copper;

Moncton Daily Times - Jun. 2, 1882 The Maple Leaf says:- We have lately received several specimens of copper ore, said to have been found in New Ireland. - One copper mine at New Horton has already been started, and we hear that another one at the same place will be open in a few days. There is every appearance of there being a genuine mining hum in Albert County

S.J. Daily Sun - Nov. 14, 1881 Mining in Albert County. - (Maple Leaf) -Mr. Francis Doherty has handed us a fine specimen of silver and galena ore taken from a twelve foot lead foundon the property of Lawrence Durning, New Ireland, last week. The lead is about a mile due west of the New Ireland mine owned by Dr. Goodfellow. The manganese mine on Mr. Newcombe's farm isbeing steadily worked. One of the leads has been lost, but by sinking deeper two other leads have been struck that are being profitably worked. W.C. Pipes, Esq., was put in charge by the Hopewell Manganese Co., and keeps two or three men at work. A sample of copper ore was left at this office,the first of this week, by Mr. Chipman Reid, which was taken from his farm, at New Horton, Harvey. The mine on this property was worked by Messrs. Harris & Allan, of St. John, twenty years ago. At that time the firm feared to expend a large amount of money in sinking a shaft, and were also carrying on a successful foundry business which they could not neglect. It would be a good idea for some mining expert to visit Mr. Reid's

URN: 0030 / 0007 / 0755 / Names: Teahan Mine; Lake George Antimony; Annidale Mine;

Evening Times Globe - Mar. 12, 1928 Predicts Big Expansion in New Brunswick. - Brig.- General Smart Sees Prosperity in Minerals of Province. -In the very near future New Brunswick will lead all the other provinces in the Dominion in mineral production and I can already see ahead for this province the dawn of the greatest span of prosperity it has ever witnessed through the active working, mining and production of her many valuable mineral deposits of which it abounds and made more valuable because world-wide markets are clamoring for these minerals, due to a shortage not only in production but in quality,' was a statement made by Brigadier-General Charles A. Smart, CMG, of Westmount, Montreal, president of the Antimony Smelting and Refining Company, Limited, of Lake George, York County, who arrived in the city over the weekend from Fredericton. General Smart in an interview with the EveningTimes-Globe said the Canadian International Corporation,Ltd., of which he is the president, is prepared to invest millions of dollars in New Brunswick mineral fields. Already they have incorporated the Antimony Smelting and Refining Company with a capital stock of $2,000,000 and in addition to this have mining rights on extensive copper deposits at Scotch Settlement, in the vicinity of Norton, and at New Ireland, Albert County, where active mining operations will commence as soon as the weather permits. General Smart added that a shipload of 80 tons of copper ore, taken from the Scotch Settlement mines, was at the present time on the Atlantic bound for Hamburg, Germany, for tests from smelting. The Canadian International Corporation will not stop here as regards New Brunswick mineral mining, as they have also the working rights on several other properties showing various minerals of high commercial value and are awaiting preliminary examinations before making added investments,' he said. Charter Taken Out. - Speaking of the antimony mines at Lake George, General Smart said that he had arrived in Fredericton on Friday night, from Montreal, for the purpose of taking out a charter in the name of the new company, calling for capital stock of $2,000,000. Consulting engineers are now working out details for a power plant and hope to make an actual start on development of the property in the early summer in blocking out the mineral for manufacturing which will immediately be followed by a plant operating under the most modern methods. The manufactured product will be marketed in the United States and in Europe. That going to the United States will be shipped by car, while the export destined to England and the Continent will be brought by the Valley Railroad to Saint John and shipped through this port, which General Smart claimed should be a big boom to Saint John and province generally. The Canadian International Corporation, Ltd., has a very strong board of directors associated with Brig.- General Smart, comprising: J.H. Sherrard, also chairman of Simmons Limited, Montreal; J.E. Dalrymple, of Montreal, formerly vice president of the CNR; David Champoux, of Quebec City, wholesale lumber merchant, well known throughout New Brunswick; T.R. Davidson, formerly vice president of the Thomas Davidson Manufacturing Company, Ltd., Montreal; Albert J. Bolton, capitalist, of Toronto; J.M. Labonte, president of Pariseau Bros., Ltd., Montreal; and S.A. Richardson, of Richardson & Co., Montreal. To these men it is hoped to add some directors from the Maritime Provinces to the board. General Smart will leave this evening for Fredericton en route to Quebec City to attend the meeting of the Quebec Legislature, being representation from Westmount, which honor he has held for the last sixteen years."

URN: 0030 / 0663 / Names: Teahan Mine; Mild Brook;

Moncton Daily Times - Aug. 26, 1899 Point Wolfe Mine. - The chances are, unless all signs fail, that work of development in the copper mines at Pt. Wolfe and New Ireland in Albert county, will soon be developed and their values ascertained. One of our citizens who is somewhat interested in mining development informs us that a bond on the Mineral Vale mine has been given to capable capitalists of New York through the medium of some Halifax brokers, and it is said work will soon be commenced. - Record."

Daily Times - Feb. 6, 1889 New Brunswick Mining Items. - (Correspondence Halifax Critic). - Operations are being conducted quietly on the Gold and Silver Mining Co.'s property at Waterford, and the prospects are encouraging. A meeting of the stockholders, and others interested, is to take place either in St. John or Sussex on the 10th of Feb. next. Work of development on the Glebe manganese property, Sussex, is going on steadily. The ore from this property is of a very high grade, and arrangements are being made for a shipment of the ore shortly. Nothing further has been heard of late to the silver find on the Clinch farm at Musquash. Recent reports speak of a new and valuable property of a man named Balcom at

URN: 0030 / 0690 / E7 / Names: Teahan Mine; Glebe Manganese; Mineral Paint - General;

Daily Times - Mar. 28, 1887 New Brunswick Mining Items. - A correspondent of the Halifax Critic writes to that paper: I have been roaming considerably of late, with not much chance for corresponding. Mining matters in New Brunswick are not very brisk at present. Owners of manganese properties and other metal hope for a satisfactory boom a little later on.The developments at what is known as The Glebe manganese deposit in Dutch Valley District are still satisfactory. The owners are very much encouraged indeed. A Mr. F.J. Alley, of Bar Harbor, Maine, is the principal promoter of this mine, and the development operations have been done under the superintendency of Mr. W.N. Goold, who has had extensive mining experience in this province as well as across the line.The work at Mineral Vale, in Albert County, is progressing satisfactorily, and some English capitalists are to come out from London or Liverpool and look over the property. Messrs. Breeze and Robinson, of St. John, N.B., are largely interested in the matter. At the village of Albert, (formerly known as Hopewell Corner), mining operations have been for sometime in progress, under direction of a Mr. Sargent, of Boston. It is understood machinery will shortly be placed, if not already done, and that owners anticipate good results. It is said that quite a remunerative amountof gold is had from the ore which is being extracted. The manganese property at Petitcodiac, I am told, is showing up very fairly. The manager, Mr. Brown, was very ill some little time ago, but, I presume, is gaining ground again. There seems to be an impression that this will develop into a good paying property. In Hillsboro, or near there, operations are being conducted under the direction of Mr. Pendegrast of Truro. It is said to be some kind of a mineral paint -umber, ochre, or something of that kind. Not knowing correct particulars I will not endeavour to be too positive on the matter. I do not know that I can take up more of your valuable space at present, and can only express the wish that your Nova Scotian correspondents would be more confiding, and let the mining world know what is going on in their different localities. I regret there has been no concerted action by mining laws of Nova Scotia. Perhaps the present session may develop something new."

Daily Times - Jul. 18, 1887 New Brunswick Mining Matters. - (Correspondent Halifax Critic). - Mr. G. Crandall, of Moncton, in company with some Philadelphia gentlemen, is actively engaged in opening upan antimony mine at Belleisle, in Queens county. The samples they have been getting lately are very fine, and ore that your correspondent saw recently is equal to anything of the kind seen from Rawdon or the Prince William Mines in York Co., N.B. The results so far are very encouraging, and it is to be hoped they will continue.The manganese mine on White's Mountain is showing up in magnificent style. It is confidently said this is the best deposit of the kind in Canada. There is probably $2,000 worth of ore on the dumps, and good judges say $10,000 worth in sight. This is known as the Stockton mine, but unfortunately it is at present in the Equity Court of this Province, owing to some claim made by outside parties. How it will terminate is unknown as yet. It is to be hoped it will soon be arranged one way or the other. A new lease or bond has been taken of on adjoining property by a citizen of Sussex, which, it isthought by many, will prove almost as good a deposit as the one just written of. A good interest in this property can be had by party possessing capital to help open it up properly, and make necessary payment on bond to ensure retention of property. Your correspondent has had given him a quantity of what evidently appears to be a graphite, or plumbago. The sample seems exceedingly fine, and is evidently the decomposed portion of vein or deposit. The parties having it in hand say there are large deposits of it, if it is worth handling, and as they are reliable, probably it is correct. A sample of it has been forwarded to competent authority for test, and the result is anxiously waited for. The manganese mine at Petitcodiac is idle at present, and it is understood that efforts are being made to form a joint stock company.Work in the big copper, lead, and silver belt at New Ireland, Albert Co., is being pushed forward, and owners have recently had an English expert examining same with, it is said, most satisfactory encouragement. Boston parties interested in the developments atCrooked Creek, Albert Co., have been examining the ground, and it is said are highly pleased with the appearance of matters. It is understood that a good equipment of latest and most improved machinery will shortly be erected."

Moncton Daily Transcript - Oct. 12, 1887 Albert. - It is reported that the Freeze gold mine at New Ireland has been sold to English capitalists for the handsome sum of œ60,000. The parties purchasing are said to have had similar mines in Wales, that have given out, and it is proposed to work the New Ireland mine instead. It is to be hoped that such is the case, and if so Mr. Freeze is to be congratulated, not only on his good luck, but for his pluck and perseverance in developing our hidden mineral wealth. Large and richdeposits of manganese in the Parish of Hillsboro, are said to have been located, and definite results are to be looked for from that direction before long."

Chignecto Post - Apr. 14, 1881 Mining and quarrying will be prosecuted with increased vigor during the coming summer. Preparations are being made to work the rich vein of manganese discovered last summer at Hopewell Hill; operations ingold and silver mining will be commenced at New Ireland; and copper mining will be actively prosecuted at Alma.Coal mining will also receive some attention in the latter parish. The Albert Manufacturing Company, under the energetic management of Mr. J.T. Tompkins, will, of course, do its usual extensive work in the plasterbusiness, and Mr. McHenry's lime (which is an unusually good article) will probably find a more extensive market.In the freestone quarries, unusual activity prevails. The Bay of Fundy Company are giving employment to a large number of men and expect to do a good business. A short distance from them are the quarries of Messrs. Stevens, while not far from them are those on the lands of F.W. Watson, and for the working of which the International Company has just been organized by Boston capitalists. All these quarries will be busy hives this summer, and on Grindstone Island a large boarding house, for the accommodation of the quarrymen, is about to be

URN: 0030 / 0901 / 0126 / Names: Teahan Mine; Elmtree; Nigadoo;

Moncton Daily Times - Jan. 7, 1882 Silver in Gloucester. - Silver mining seems sureto be added to the industries of New Brunswick at anearly day. The Mineral Vale mine in Albert County has been developed sufficiently to show its richness, and now Gloucester comes to the front. The Nigadoo ore has been shown by the assays to be rich, but the vein is chiefly filled with shale, with only small pockets of ore, so far as it has been explored. The Gloucester Mining Company's property is in the immediate vicinity, and its owners have been awaiting the Nigadoo's explorations. If the Nigadoo is rich the Gloucester is also rich, because it is on the extension of the same vein. But the new find, on Elm Tree Brook, has been proved to be very valuable. The vein is twelve feet thick, and is full of ore. It is broken up by a thin streak of other matter, with seven feet of ore on one side and five feet on the other. Two or three of the proprietors visited it the other day, and returned with about a half a ton of ore, which they pried off the outcrop during their brief visit. Part of this was sent to New York, to the United States Government Assayer, and found to contain $100 in silver to the ton. Some other specimens that were sent contained $180 in silver and $70 in lead to the ton, a total valuation of $250 per ton. When it is remembered that the ore lies in a vein twelve feet thick, and crops out on the surface, so that it may be worked without any preliminary expenditure whatsoever, the profit to be made working this mine may be understood. The ore can, in fact, be mined more cheaply than coal, and it is worth, at the very lowest assay, $100 per ton. The probabilities, however, are that the surface is by no means the richest portion of the mine, and that the fortunate possessors of the Elm Tree Brook property have a veritable Big Bonanza. They assert, most positively, and invite investigation, that the outcrop is twelve feet thick, and is composed throughout of precisely such ore as that which they broke off and sent to New York. If this is so, and the gentlemen have no motive for misrepresentation, there's millions in this deposit of silver and lead. The proprietors are R.R. Call, Newcastle; Saml. Adams, Leadville; John J. Adams, New York; W.A. Hickman, Wm. Muirhead, Jr., and John Sadler, Chatham, and John and Robert Ellis, Bathurst. The two latter are land surveyors, and are the real discoverers of the mine. The finding of it leaked out, and Mr. Call and his associates paid $3,400 for the privilege of locating a claim. But this, we learn, is not the only rich deposit of silver that has been discovered in Gloucester, as two or three other equally rich outcrops of the precious metal have been found. Recent explorations of the headwaters of the Miramichi have also been made for mineral wealth, and it is rumored that satisfactory indications have been discovered."

Daily Telegraph - Mar. 16, 1888 and Moncton Daily Transcript - Mar. 17, 1888 OUR MINERAL RESOURCES.- Promising Mineral Indications in Various Portions of New Brunswick.- Albert county, at present, seems to be the centre of attraction for minerals, and some fine veins of silver and copper have been found. The silver ore contains sufficient gold alone to pay the expense of taking out the rock. Manganese is also being struck in various localities, and claims are being taken out. The New Brunswick Gold and Silver Mining Company is asking incorporation at Fredericton in the interests largely of American capitalists, who are already at work sinking a shaft. Another company, the National Mining Association, is also seeking legislation at the moment. This mine has a shaft sunk 170 feet, and claims to have found a large fissure vein of silver and copper, with some gold. They propose to smelt at once. They state that the district is a second Comstock lode, and the easy access to supplies, handy fuel, and port of shipping, enhances the value over mines in the Rocky Mountains. If these mines prove of the value the owners believe, the mining industries of this province will take a boom ere long. Albert county has always been known to be rich in minerals, and it is to be hoped that the efforts of these companies may be crowned with success. Foreign capitalists who have had experts on the spots making thorough explorations and investigations for some time past, must be convinced of the richness of the mines when they undertake to invest their own means in developing the properties. We constantly hear of new avenues of business, and perhaps our own people may find that there are in their very midst minerals not to be surpassed by any part of the world, and only waiting for the lucky finder to remunerate him fully for his trouble and labor - at any rate the Americans think so."

S.J. Daily Sun - Jul. 29, 1886 Mining in Elgin. - A correspondent writes: The mining fever in the parish of Elgin, Albert Co., is daily increasing. The Freeze mine is developing new wealth as the work extends. Messrs. Steeves Bros. & Godard are prospecting on a lead said to be rich in copper and silver. Jacob W. Steeves, while blasting out lime rock onhis farm for use in the Freeze mine came upon a pocket of pure Albertite coal. He has since made further excavations in the rock and has discovered several small veins of coal running through the lime rock. The general features of the locality are said to correspond to those at the Albert mines, where so much valuable mineral was obtained. Mr. Steeves has about a quart of nuggets of coal, which he has blasted from one of the rocks. It is to be hoped that the necessary capital will be available to develop this and other undoubted genuine mines in this parish."

Carleton County Sentinel - Aug 30, 1862 A specimen of copper ore, in its pulverized state, is lying at the office of Messrs. Lunt & Pickup, St. John, which is said to yield twenty five per cent of superior copper. It was obtained from Grand Manan, where it is found on the sea shore."

S.J. Daily Telegraph - Jun. 2, 1874 Mining in Grand Manan. - We learn that mining operations are about to be commenced in Grand Manan by an English firm. We presume that copper is the mineral which is to be developed."

St. Croix Courier - Dec. 27, 1956 To Stake 'As Many Claims As Possible'. - Mainland Syndicate Said To Be Interested In Island's Base Metals. - By Keith Ingersoll. - Grand Manan. - Considerable attention is being given to the potential base metals wealth of this island. Nineteen claims have been staked to this time and probably double that number will be laid out by year's end. The project is being carried out by a mainland syndicate. S.S. Tobias of Toronto, representing a mining group, said to have interests at both Bathurst and Woodstock, is directing the operation. He recently visited the island and was quoted as saying 'if everything goes well, and as we hope for, the economy of Grand Manan will be changed greatly in six month's time.' The 'if' apparently hinges on an analysis of samples found by the prospecting party which first operated here during the month of October. An assay is still in progress on ore samples taken at that time. The important fact is that the group is already encouraged enough to return to stake as 'many claims as possible' before the end of the year. The present work is being carried out by H. Griffin, a prospector of Stanley and Fredericton. Assisting him is Harry MacDonald of North Head and a crew of six. Probably depending on the analysis, diamond drilling to determine depths and extent of the ore bodies would be started in February or early in the new year. The claim stakes here bear the name of L. Bell. Many of these were seen during the recent hunting season, their positions ranging from Dark Harbor south along the high ridge or 'backbone' of the island. This whole western section is of volcanic origin, said to be approximately half the age of the eastern side of Grand Manan. Its structure has interested geologists, both amateur and professional, for many years on the point that the ancient eruption may have brought strange and valuable minerals close to the surface. It is understood that the present interest has developed as a result of an aerial survey made of the island during the past summer. Maps being used are of very recent date. News of the 'gold rush' has set up a chain of suppositions and may also be the cause of a rush by local 'prospectors.'"

St. Croix Courier - Mar. 28, 1957 Diamond Drill Crew Arrives At Island. - Search For Metals at Grand Manan. - Party Plans Camp. - Grand Manan. - The search for base metals got underway in earnest here over the weekend. Following up a claim staking project last fall, promoters have returned with drilling equipment and are now at work sinking a diamond drill into the island's ancient foundations. S.S. Tobias, a mining development manager, is personally heading his operation here. Interests in Bathurst, Woodstock and Toronto and other areas have been, for the moment, left in other hands while he investigates the possibilities at Grand Manan. While here, he is making his home at Shore Crest Lodge, North Head. Sub-Surface Surveys Ltd., an Oromocto concern, has been engaged to do the drilling. Two men arrived Friday with a light truck and various pieces of equipment for the contract work. They moved Saturday to the first drilling site which will be set up between Seal Cove and the back of the island, possibly near the Sloop Cove location of an old copper mine opened and operated in 1872. Vernon Bagley, a young but veteran woodsman with experience in many allied fields, is the local representative in the party advising on locations, guiding and providing other necessary help. Several others have been hired and it is understood that the key personnel will live in a camp which has been established in the backwoods. Drilling will probably continue for six weeks to two months or until all possibilities have been exhausted. It is said that the backers are convinced of the presence of valuable and extensive ore bodies. There is, therefore, more or less excitement and speculation over the present stage of the work, the result of which could mean a dramatic change in the economy of the island."

St. Croix Courier - Apr. 17, 1958 New Development in Base Metals? - A.B. Baldwin, a Bathurst mining engineer, was an overnight visitor at the island last week. During his brief stay he had a conference with local men who have been employed in ..?.. prospecting and drilling activity here. Nothing was available as to the reason for the visit, but it was ..?.. there was a possibility of developments in base metals."

S.J. Daily Sun - Jan. 9, 1889 Silver Mining at Musquash.- Messrs. Treadwell, who were mentioned in yesterday's Sun as being interested in mines in California and Alaska, visited Musquash yesterday and decided to take an interest in the silver mine on the property of C.F. Clinch. A shaft of about 100 feet will be sunk in the near future."

S.J. Daily Sun - Jan. 8, 1889 Lucky St. Andrews Boys. - Jas. Treadwell and his brother Nathan Treadwell registered at the Victoria Hotel yesterday afternoon. These gentlemen are St. Andrews boys, but they have been away from their native place four years. The first named has a half interest in one of the richest quicksilver mines in California, and his brother is the assayer of the celebrated Treadwell gold mine in Alaska, of which another brother owns a large part. They have been visiting their father at St. Andrews and came to St. John with F.A. Stevenson. Today they will drive to Musquash and have a look at the vein of silver and lead discovered on the property of C.F. Clinch."

S.J. Globe - Jan. 4, 1889 and Moncton Daily Transcript - Jan. 5, 1889 A vein of silver has been found on the property of Mr. Charles Clinch, at Musquash, St. John Co. The ore is said to be very rich. Excavations are being made to ascertain the extent of the deposit."

URN: 0033 / 0425 / EXPL / Names: Scott Falls; Millstream Iron; Exploration - General;

Weekly Record - Fri. Jan. 11, 1889 For some months past our provincial papers have been filled with mining items concerning the new developments that are constantly going on in Nova Scotia and New Brunswick, and of the sales of mining properties in various quarters. Evidently there must be some foundation for these facts, and it goes to show that we in the Maritime Provinces, possess the hidden wealth that means in thefuture unbounded wealth if the same only be taken up and developed in a bona fide and legitimate manner. It is too true that amid all the bona fide and honest attempts at development that takes place in the opening up of our mineral deposits, that much is done, and has been done in the past, to bring reproach and discredit on our mineral resources, to cause a wide spread feeling of distrust to prevail. This is what is known as snide or wild-cat mining. Of all such ventures it is well to beware. Again another stumbling block is apparent at times, as many of the well meant efforts that are made to open up our mineral properties. Joint-stock companies are organized, and a glowing and over sanguine prospectus is issued. Stock is subscribed, and when matters are in good train for work, either the promoter or some relative of some stockholder or some particular friend who is in want of something to do is put in charge of the work of development and expenditure of funds, who probably knows as much about mining as a cat knows about running a sewing machine, and the result is, a failure and nothing to show for the funds expended, as a writer lately put it, but 'an eloquent hole in the ground'. To those who go into such matters honestly, carefully, and legitimately if they can have the patience and perseverance necessary the result will in the end be satisfactory. Another feature which serves to retard the progress of this branch of business is the extortionate value placed upon the deposits by the owners of the same. A few men perhaps will band together, take up a prospect, expend perhaps not over $500 to open up the same and make a good showing. Capitalists come along willing and prepared after a careful examination to purchase and work the same; provided reasonable figures are asked. They are promptly frightened off by an unreasonable demand for $20,000, $30,000 or $50,000, for what has in reality cost them perhaps not over $500 to $1,000. The sooner our people get rid of this idea the better for all concerned. Meantime, extraordinary activity is being displayed in mining matters in both Nova Scotia and New Brunswick. The gold mines of Nova

Scotia attracting particular attention. Many bona fide sales of mining rights are being made; and others are now on the tapis. In Cumberland County reports are in circulation of two large and important coal discoveries that bid fair to be of importance in the near future. In Halifax County, near Musquadoboit, reports of a new find of silver ore of large and apparently valuable proportions, is reported.At Musquash, below St. John, a find of rich silver ore is reported on the property of Charles F. Clinch, Esq. InGloucester County, N.B., a large bed of magnetic iron ore and copper of valuable proportions is reported, and so on from day to day new finds are being discovered which only require the careful, honest, and judicious expenditure of capital to place them in the ranks of paying properties. The gold mines of Nova Scotia are, when in actual operation, making large and remunerative returns, and many new outfits of machinery are now being put up in various parts of that province on new discoveries, and even in districts that were formerly worked and to all intents and purposes abandoned. We therefore feel that with the vast mineral wealth of coal, iron, gold, silver, copper, manganese, antimony, plaster and limestone in Nova Scotia and New Brunswick that a bright and prosperous future is in store for the owners of these properties if they will but handle them in a careful, judicious and business like manner, avoiding the many professional 'snide and wildcat' speculators with which the provinces has been in the past infested."

URN: 0033 / M4 / Names: Scott Falls; Mushquash Peat;

S.J. Globe - Jul. 11, 1889 A Visit to Golden Gulch. - Gold, Silver, Anthracite Coal, Specular Iron and Moss Litter. - Musquash is only a few miles from St. John, and yet how few of our people have any idea of the treasures that are hidden in the earth at that quaint village, awaiting only the push and pluck of some venturesome persons to make our country a busy hive of industry. Having heard of the vast mineral deposits of that locality, and having an hour or so to spare, with a couple of friends, a visit was paid to Musquash. The first object of interest is the large ice houses on the banks of Spruce Lake. The houses are full, and the owners expect to make a big thing on ice when the weather gets warmer in the United States, and the demand for cool drinks becomes brisker. The nextobject of commercial importance is the barrens. The number of people who year after year trod the plains gathering the large and juicy blueberry and disposing of them at five cents a quart, had not the faintest notice of the ingredients of the bog, or that it would ever be worth $15 a ton. But such seems to be the fact, or at least I was so informed. When the proper machinery is put in position, someone will make money, and moss litter will have an upward tendency with a good marginal profit. Moss litter, no doubt, is good enough, but after all it is nowhere compared with gold and silver mines. These are the things to put mettle in a man, and when one awakes in the morning and looks out of the gable end window over his own gold field, he feels as if he was somebody. Lunch had been taken, when an invitation was accepted to visit the gold and silver mines. Of course nothing else was talked of but gold and silver - how could there be? When one is going to see the genuine article. Our guide was an enthusiast, and each alone was scanned minutely. After leaving the main road, we made a circuit via a cow path to the gulch. Everything was as quiet as it could be, except the mosquitoes; not the sign of a faro bank, nor a bunco steerer; not even a miner with a red shirt was visible - no gambling dens, and even our enthusiast wore a boiled shirt. These matters might make a difference to some, but the hope that a nugget might be found banished all those minor affairs. The gulch was at last reached. It is probably sixty or seventy feet long and about forty feet wide, with nearly perpendicular cliffs at either side. As we stood at the entrance our enthusiast said, Isn't it something wonderful, and each nodded his assent. At our feet was the white silver bearing quartz, and above us in the side of the cliff was the gold quartz. Quite an excavation had been made at the bottom of the gulch, but the recent rains left considerable water in the cutting. A lot of quartz had also been taken from the face of the cliff. A crude ladder was mounted, and the veins of the precious inspected. Small pieces of quartz were chipped off and saved; also pieces of silver quartz were gathered up. No nugget was found, however, but any quantity of quartz. There was no crusher around, and in consequence we had to take home the gold and silver in the rock. This is a good way to keep those metals at home. Speaking of the mine, we were told that a ton of gold quartz produced metal to the value of $21.39, and the silver quartz, $32.00. An expert offered to come from New York and make a thorough examination if $500 for expenses were guaranteed, but the owners, for certain reasons, thought it best to expend that amount in getting out specimens to send to Boston to be assayed. Operations will be commenced again this week. The owner, we were informed, was offered $60,000 for the mine last year, but he refused to sell under $75,000. Of course we all believed that the mines were the real thing, and when shown specimens and asked if we ever saw the like before? we answered readily in the negative. Whatever doubts we had about the gold producing qualities of Musquash, they were quickly dispelled, when an old man said in answer to a question: Nova Scotia produces gold, and why not New Brunswick? This settled the matter, for it seemed to us, if Nova Scotia can produce gold, New Brunswick can do the same. Argument here was out of place. With reluctance we left Golden Gulch. Our stay being of short duration, we were forced to forego the pleasure of visiting the coal and specular iron mines, but we were surfeited with specimens. There is no doubt of the mines being genuine, and Musquash has a great future before it - so say some of its more enthusiastic inhabitants. Musquash has vast resources in her marsh lands, and it would seem to one who had not caught the gold fever that if more of the land was dyked and properly attended, the returns would make a good show even against a gold mine."

Colonial Farmer - May 27, 1872 ...Champlain... Speaks of an iron mine at Cape Spencer, which is marked on his map - Cap de Mines."

URN: 0036 / Names: Goshen Copper;

Kings County Record - May 14, 1926 Copper Ore in Kings and Albert Counties. -Mineral Located in Two Square Mile Area at Upper Goshen. First Assays Made Reach $15.00 a Ton. - Mining Engineer from Montreal Will Make Further Investigation. - The discovery of comparatively high grade copper has been made three miles from Elgin, in the upper Goshen district in Albert County, and adjoining part of Kings County. Preliminary examination of the deposit has already covered an area of about two square miles and the border line of the deposit has not yet been reached, according to those who have been making the investigations. Assays made at Ottawa indicate the ore value as high as $15 per ton. Edward Smith, of Anagance, who has had considerable experience in mining of other ores is in charge of the search and with him is associated Harry O'Connor, of Upper Goshen. Messrs. Smith and O'Connor state that a valley about 150 feet deep runs through the property examined and the ore has been found both on the heights and in the bed of the valley. The story of the discovery of the ore deposit sounds quite romantic. It appears that some three years ago when the spring tides ran high a freshet carried away part of the highway at Upper Goshen, opposite the farm of Bunyan Graves. To fill in the washout the roadmasters hauled some stone from the farm of Hazen Hayward. In the summer of 1925, it is stated, Harry Foster, of Salisbury, while fishing the upper reaches of the Kennebecasis, paused for luncheon at the spot where the fill had been made. Foster happened to pick up a piece of rock to examine it, his curiosity having been excited by an unusual color to the rock. He was in the act of breaking the rock when Graves happened along and in reply to the latter's query Foster stated that he held in his hand some valuable copper ore. Graves' interest was aroused; he took out a license to search and during the course of the next few months he made personal investigations and sent samples of the ore to the government assay office. The latest developments in the situation is the expected arrival of several mining engineers of a well known mining company in Montreal. They will be on the ground before the month is out and will make a thorough prospect of the property. So far the ore has been found on the farms of Jerry Layden, Harding Graves, Milford Hayward, Warren Purtle and John Higgins."

Kings County Record - Feb. 11, 1927 Elgin. - In 1925 a valuable copper deposit was discovered a few miles away on lands near Goshen Corner. When this property is developed, which is expected in the near future, it will greatly increase the importance and population of this area."

URN: 0036 / Names: Goshen Copper;

Evening Times Globe - Apr. 2, 1928 Albert County Copper Mine Boring Soon. - A long distance telephone call Saturday brought the announcement that boring was to begin at once at the copper mine on the property of J.B. Grey, Goshen, Albert County. An option has been taken on the property by the Consolidated Mining and Smelting Company, of Trail, B.C., and should the drill tests prove the property as rich as it is believed to be development will proceed at once. This mine was discovered about three years ago. It is located about three and one half miles from Elgin Corner and runs for a distance of about two miles on the properties of J.B. Grey and M. Hayward. Samples of the ore have been assayed from time to time, it is stated, and show returns ranging from $8 to $27 a ton."

Kings County Record - Apr. 6, 1928 Mining Development at Goshen. - An option has been taken on the property of J.B. Grey, Goshen, Albert Co., by the Consolidated Mining and Smelting Co., of Trail, B.C., and should the drill tests prove the property rich as it is believed to be, development will proceed at once. This mine was discovered three years ago. It is located about three and one half miles from Elgin Corner and runs for a distance of two miles on the properties of J.B. Grey and M. Hayward. Samples of the ore have been assayed from time to time, and show returns ranging from $8 to $27 a ton."

Kings County Record - May 17, 1951 25 Years Ago (May 14). - The discovery of comparatively high grade copper ore has been made three miles from Elgin, in the Upper Goshen district of Albert County, and the adjoining part of Kings County. Preliminary examination of the deposit has already covered an area of about two square miles, and the border line of the deposit has not been reached yet."

St. Croix Courier - Apr. 29, 1880 Fine specimens of copper ore have been found at Red Head, near Saint George. Now for another mining company."

St. Croix Courier - Apr. 26, 1917 The copper mine at Red Head, Charlotte county, formerly operated by James McLean, of Letete, has been re-opened by a New York syndicate. A quantity of ore has been taken out and shipped to the United States

URN: 0038 / GEOL / Names: Red Head Harbor; Geology - General;

St. Andrews Beacon - Aug. 31, 1905 Geology of Charlotte County. - (By Dr. R.W.Ells). - The first part of the season of 1904 was spent in completing the study of the geology of certain parts of Charlotte county, New Brunswick, the survey of which owing to lack of time, was left unfinished last season. This work included the examination of the rocks of the shore of the Bay of Fundy, between Beaver Harbor and Point Lepreau, where, at different places, through the agency of intrusives, the ordinary sedimentary rocks of Silurian and Devonian age had become altered to the condition of schists of pre-Cambrian aspect. Surveys necessary to connect the work of last season with the shore roads were also completed, but there yet remains the survey of the railway between St. Stephen and St. John, of which no plans are available, in order that the map of the county may be properly compiled. On the island of Grand Manan, the western side, and in fact the greater portion of the island, is composed of trappean rocks or diabase, similar to those which form the North Mountain range of Nova Scotia. No trace of the Triassic red sandstone was observed. The rocks of the southeastern portion comprise large masses or eruptives, similar in character to those already described as occurring on Campobello and Deer Islands to the north west, which are intrusive through slates and conglomerates of Upper Silurian age, with small areas of limestone, the whole resembling what was found on Letang peninsula, south of the village of St. George on the mainland. The slates are greenish and gray with purple beds, and the action of the intrusives on these is quite marked. In places they have become schistose. The actual contact of the traps or diabase was seen at only one point on the shore north of Seal Cove, on the south side of Red Head. Here, the extremity of the point is occupied by reddish and greenish grey slate, and at a distance of 300 paces west from the point, there is a sharp contact between the reddish slates which dip N 60 degrees, with a band, at the base, of about two feet, which is crushed and holds pebbles of altered slates and trap. The first part of the igneous rocks consists at the contact of about fifty feet of conglomerate composed of augite pebbles in a dirty green augitic paste, beyond which the trap is columnar for some distance along the shore in the direction of Seal Cove. The trap pebbles are of all sizes from that of a walnut to masses of a foot or more across. Seventy paces west of the contact with the slates, a band of similar conglomerate, about six feet wide, extends up the face of the columnar trap, filling an apparent line of fracture in the latter, after the manner of a later dike. As to the other eruptives of the island, associated with the Silurian rocks, possibly the best exposure of these is seen at the north east pint known as Fish Head, on the north side of Cameron Cove, which lies just to the north of Flaggs Cove. They form the whole shore between the light house and Whale Cove, and consist of greenish diabase, reddish feldspathic rocks and imperfect syenites. Their contact with the slates is well seen on the north side of Cameron Cove, and is here clearly intrusive. The slates are not only altered along the junction of the two series, but portions of the slates are caught up in the intrusive mass. Just where the outer light house point joins the main mass, there is an intrusive dike of the trap similar to that of the west shore, with a breadth of about fifty feet, cutting across the diabase of Fish Head in an almost east course. These rocks have been described in such detail in the Report by Prof. Bailey, 1870-71, that minute descriptions here are unnecessary. They are similar to the eruptives found on the Letite peninsula and on Campobello and Deer islands, and their action on the Silurian strata is similar. These strata have sometimes assumed a schistose structure near the contacts, with the formation of quartz veins and strings of dolomite, while certain of the associated limestones are nearly crystalline. Probably the best exposures of these exposures of these Silurian rocks on the island are to be seen around Flaggs and Cameron coves, and on the shore about half a mile south of the former place. At these places the slates are associated with intrusives, generally greenish diabase, distinct from the trap rocks of the islands, which cut the other intrusives and are of a later date. As displayed on the shore below Flagg's cove, the sedimentaries consist of large ledges of purple conglomerate and sandy shales, with black slates and green schists. The conglomerates contain pebbles of dark felsite, quartz and purple slates, are cut by quartz veins and sometimes assume a schistose structure. They resemble similar rocks seen at Back Bay on the main land where they contain Silurian fossils, and apparently overlie the greenish grey slates of Flaggs cove. The contact of the conglomerates with the slates is often irregular, the former showing local development and with tongues of purple shale extending into the conglomerate mass. The black slates in association are like similar slates seen in Cameron cove south of Fish Head, and, like them, are highly altered either by the agency of the green intrusives or in part by the trap rocks which touch the shore near this place. While from their peculiar character they were at one time supposed to possibly represent Pre-cambrian rocks their manifest resemblance to the altered Silurian slates of the mainland in Charlotte county and the islands to the north and west, in which Silurian fossils have been found, renders it very probable that those rocks of Grand Manan, like those of Letang and Letite may also be classed as altered Silurian. Along the shore, the green eruptives are seen at frequent intervals to the east limits of the outcrops of Red Head where the trap of the island extends to the southeast shore. Where these slates are seen in small outcrops they are invariably altered, but preserve a general similarity of aspect. On several of the islands off this part of the coast, notably Long Island, the Ducks and Nantucket the greater part is occupied by intrusives, frequently diabase. In certain places, however, as on Big Duck Island, a greenish, or sometimes purple ..?.. Porphyry is found. Banked by greenish and occasionally purple tinted schistose slates of the usual type. The bulk of the older rocks, therefore, of this part of the island, as contrasted with the traps, may be classed as eruptive, with small areas of altered Silurian sediments. In this respect Grand Manan corresponds closely with Deer Island and Campobello. On the mainland the rocks of Beaver Harbor and of the coast east to Lepreau were also examined. In this area several points of structure were noted concerning which some doubt existed last year. On the road from St. George to Beaver Harbor after passing over the series of slates which extend from Letite to the Pennfield ridge and which are of Silurian age, the reddish and purple weathering felsites are met with in a brook about two miles south of Beaver harbor. These extend to the village, forming hills. The felsites invade grayish, greenish and purple slates of the Mascarene series on the north side of the village with bands of conglomerate of a dark reddish tint. These rocks are schistose and overlie a thick series of generally black slates which form the headland south of the village, and which hold plant stems and are apparently of Devonian age. They are cut by masses of feldspathic granite and green diabase which have altered the beds along the contact. The eruptive rocks extend thence to the lighthouse point. Similar rocks are seen on the east side of the harbor. It is probable that the Devonian rocks of this place have a somewhat local development and rest upon the Silurian of the Letite series. Going east from Pennfield ridge to Crow Harbor, after passing the gravel deposits which form the large plain along the ridge road, masses of green diabase occur for a distance of a mile along the road to the shore. These are succeeded southward by gneissic diorite, and these again by felsites and gneissic granite with schists, often mixed with a basic granite. Along the shore of Crow Harbor the rocks are schists of an older type, as also at Red Head cove. They are gneissic, sometimes talcose, and are associated with diorite and basic granite which are intrusive. On the east side of Red Head Cove there is a copper mine which was opened in 1878-79, and reopened about five years ago, a considerable amount of development work being done. The ore occurs in the schists at the contact with the intrusives and consists for the most part of iron pyrites in irregular gashy deposits. Only a small quantity of copper is visible. These rocks, from Crow's Harbor east to Barnaby Head, appear to belong, as indicated on the map, to the pre-Cambrian series. They are continuous from this place to the vicinity of Lepreau, though in places overlaid by red beds of the

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Sep. 8, 1881 A sample of ore from the mine at Union was sent to Prof. F.F. Bartlett, Portland, Me., to be assayed for copper. He reports that the sample contains nothing but a small quantity of nickel."

Fredericton Daily Gleaner - Sep. 20, 1890 The Pyrites Mine at St. Stephen. - The pyrites mine on the Hall farm at St. Stephen is showing up better from day to day. Mr. Carroll has been satisfied all along that the ore is very valuable, and W.F. Best, the St. John analytical chemist in his report says: With regard to the composition of the ore, it is sulphuret of iron (iron pyrites), with a considerable percentage of nickel, and some gold, silver and copper. The average value of the ore as determined by the analysis of twelve samples of the material taken from near the surface is $21.00 per ton."

St. Croix Courier - Dec. 4, 1890Is It a New Brunswick Sudbury? - The large deposit of iron pyrites near St. Stephen, recently referred to in the Telegraph, has been further tested by local and American chemists with the result that the per centage of nickel has considerable increased. A New York chemist finds 2 per cent. of nickel in a sample of ore taken four feet below the surface. A subsequent analysis of ore from the same opening, seven feet below the surface, shows nearly 2 1/2 per cent of nickel. It may be remarked that the discovery of nickel at Sudbury, Ontario, has recently created intense excitement throughout the world. The Sudbury ore is an iron ore, containing sulphur and nickel. The ore is roasted to burn off the sulphur and is then ready for shipment. The St. Stephen ore is iron ore, containing sulphur and nickel, the latter is not so large in proportion as is found at Sudbury, but still sufficient, in view of its location on the seaboard, to give prospects of being very valuable. Nickel is coming into very extensive use for increasing the strength of steel used in armour plating ironclad war vessels, the preparation being about 3 1/2 per cent. The effect of the admixture of nickel with the steel in armor is to prevent fracture. A projectile passing through an armor of nickel-steel merely makes a round hole without materially cracking the plate outside of the point perforated. Such being the facts it seems a matter of great interest that an iron ore is found in our own province, and at a point most convenient for shipment, which contains nearly the percentage of nickel required for such an important use. It is the rule that the richness of ore increases with the depth from surface, and there is good reason to believe that this may be found true at St. Stephen. The samples so far taken at different depths show an increase of nickel in descent. At the session of the provincial legislature in 1889, a law was enacted authorizing the governor in council, on being duly satisfied there were good prospects of valuable minerals being discovered, to make an appropriation for the purpose of sinking shafts, or boring, to test the value of metal or mineral deposits at any point where indications of them might be found. It would appear from our information that the St. Stephen mine is of sufficient promise to justify a moderate expenditure thereupon under the act above referred to. A realiy good find of nickel in any part of the province would be a matter of provincial importance. - Telegraph."

Chignecto Post - Sep. 11, 1890 An assay has been made of the silver mine at St.Stephen, N.B. and the value of the ore placed at $20.00 per ton. They are prospects of a good lead in the vicinity."

St. Croix Courier - Sep. 14, 1890 Mining.- Further Developments in Regard to the Mineral Wealth of St. Stephen.- The pyrites mine promises now to be more valuable than the most sanguine of the prospectors had supposed. Latest advices place the value of the best specimens at about $20 per ton at the mine. If even half this can be realized it will probably pay to work it. Mr. Carroll is said to have refused $30,000 for his lease."

St. Croix Courier - Sep. 14, 1890 Mr. W. F. Todd has, during the week, opened up a bed of mineral lying a quarter of a mile north-west of Mr. Carroll's mine, on land belonging to Mr. Parker Hanson and Mr. John Rodgers, of which he has held a lease for some time past. The lode runs northeast and southwest, parallel with that on the Hall farm. It is about seventy feet in width and, from surface indications, about one thousand feet in length. Though resembling the Carroll ore in color and lustre, that of Mr. Todd's workings are not the same in weight and hardness, and apparently is of an entirely different nature. It is believed to contain little, if any, iron, but to be rich in lead, silver and nickel and the decision of a mineralogist is awaited with interest. The bed of ore is so situated as to be free from any trouble with water in the pit, and, so far, it is very easy to work. If it should prove to be of value, Mr. Todd will go on with the work of mining, as soon as the necessary preparations can be made."

Daily Telegraph - Sep. 19, 1890 Pyrites. - Since Mr. W.F. Best's encouraging report on the Carroll pyrites mine at Hall's farm, Mr. Carroll has made a fifth cut, 350 feet south of cut two, mentioned in Mr. Best's letter, and found a continuation of the bed described. This would indicate a much larger deposit than was at first supposed."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

Chignecto Post - Sep. 11, 1890 The mining fever has struck St. Stephen. Numerous rich deposits have been found and several experts are on the grounds prospecting. Several good leads of silver have been found."

S.J. Daily Sun - Aug. 23, 1890 Mineral Wealth in Charlotte. - The Hall's Farm Pyrites Deposit is a Very Extensive One. - A few weeks ago an attempt was made to discover the extent of the pyrites deposit on the Hall farm, two miles back from St. Stephen. The property is owned by J.A. Carroll, Thos. Gregory and W.F. Best. A shaft was sunk down four feet and struck a solid bed of ore. About 500 feet distant another shaft was sunk, and at a depth of five feet the bed was struck again. To make assurance doubly sure another shaft has just been sunk about half way between these two and at a depth of about seven feet the bed of ore was found. The shafts are about six feet wide by ten in length and the whole floor was found to consist of solid ore without any mixture of impurities. One shaft was sunk down into the ore and a blast taken, and one of the results was a solid fragment of ore about as large as a barrel. W.F. Best showed a Sun man a fragment of the ore yesterday. It weighed about five or six pounds and was very heavy when its size was considered. A sample of the ore weighing 41 pounds was also received by Mr. Best yesterday. The ore is what is called iron pyrites, and contains also traces of copper and nickel. The pyrites is a sulphate of iron and is used in the preparation of sulphuric acid. One specimen that Mr. Best analyzed contained 4 p.c. of copper, and if there should be found much ore with this proportion it would pay to work it for the copper alone. Mr. Best is confident that the ore is valuable, and is now assured that the deposit is extensive. Just over the deposit is found what miners call gozzen, and which they say is an indication of a productive deposit. Just between this and the bed of ore is a space, like a cave, two or three inches in depth. Mr. Best will immediately proceed with a complete analysis of the ore, after which the future of the enterprise will be determined."

Chignecto Post - Sep. 11, 1890 The mining fever has struck St. Stephen. Numerous rich deposits have been found and several experts are on the grounds prospecting. Several good leads of silver have been found."

St. Croix Courier - Oct. 2, 1890 The Carroll pyrites mine was inspected last week by a special agent of New York men, who think of purchasing. It is understood that his report will be highly favorable."

St. Andrews Beacon - Oct. 9, 1890 It is likely, says an up-river exchange, that the Carroll pyrites mine at St. Stephen will be purchased by a New York Company."

Moncton Daily Transcript - Oct. 27, 1890 and Evening Gazette - Nov. 1, 1890 Excavators at the Todd and Boardman pyrites mine have disclosed a level bed of ore 124 feet wide, with a well defined wall, thus showing that it is not a mere surface deposit, but a vein probably of immense depth, and containing as Mr. Boardman expresses it, more tons of ore than there ever were thousands of lumber on this river."

Daily Telegraph - Sep. 19, 1890 Pyrites. - Since Mr. W.F. Best's encouraging report on the Carroll pyrites mine at Hall's farm, Mr. Carroll has made a fifth cut, 350 feet south of cut two, mentioned in Mr. Best's letter, and found a continuation of the bed described. This would indicate a much larger deposit than was at first supposed."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

Daily Telegraph - Aug. 23, 1890 Iron Pyrites. - A large and apparently valuable deposit of iron pyrites has been recently discovered about two miles back of the town of St. Stephen, on the land of Ebenezer Hall. It is quite ready of access by an easy grade to the railway or the wharves. The mine is under lease to Mr. J.A. Carroll of St. Stephen, and is being developed under the direction of Mr. W.F. Best, of this city. Three openings have been made in a line running northeast and southwest at distances 250 feet apart; all show a solid mass of ore at the bottom of the openings. A sample from the last opening made, weighing 40 lbs., is now at the Shore Line depot, Water street. A specimen shown at this office appears like solid metal without any admixture of quartz or other impurity. Immense quantities of iron pyrites are used in the manufacture of sulphuric acid. Though not intrinsically of the greatest value yet the very large consumption of this ore and the comparative rarity of large deposits of it make it valuable. The principal deposit in Canada so far discovered is at Brockville, Ont. It is proposed to make further explorations of the St. Stephen mine, and then place it on the market."

N.B. Reporter - Jul. 30, 1890 A valuable discovery of copper and iron is reported on the farm of Mr. E. Hall, Charlotte

St. Croix Courier - Jul. 31, 1890 Mr. W.F. Best, chemist, of St. John, was in town on Tuesday inspecting the deposit of pyrites which has been discovered on the farm of Mr. E. Hall and a portion of which is now under lease to Mr. J. Carroll. Mr. Best expressed himself as well pleased with his inspection and pronounced the ore very valuable, if it can be found in sufficient quantities to warrant the establishment of works to develop it. Mr. Carroll informs a Courier reporter that there is a very large deposit of ore, and he is satisfied that, if it all proves as good as the specimen examined, he has made a good find. Mr. Best will return in a few days for a further examination of the deposit and, if his present impressions are confirmed, a company will be at once organized to work the mine."

S.J. Daily Sun - Aug. 23, 1890 Mineral Wealth in Charlotte. - The Hall's Farm Pyrites Deposit is a Very Extensive One. - A few weeks ago an attempt was made to discover the extent of the pyrites deposit on the Hall farm, two miles back from St. Stephen. St. Croix Courier - Sep. 14, 1890 Mining.- Further Developments in Regard to the Mineral Wealth of St. Stephen.- The pyrites mine promises now to be more valuable than the most sanguine of the prospectors had supposed. Latest advices place the value of the best specimens at about $20 per ton at the mine. If even half this can be realized it will probably pay to work it. Mr. Carroll is said to have refused $30,000 for his lease."

St. Croix Courier - Aug. 28, 1890 Iron Pyrites.- A Deposit Which Promises to be of Considerable Importance to St. Stephen.- The pyrites beds which Mr. J.A. Carroll is opening up near St. Stephen, and of which mention has been made before, are proving to be richer and more extensive than was at first supposed. A reporter for the Courier was among the many who visited the spot within the past week. A walk or drive of two miles, over a pleasant country road, leads to Maple Grove farm, the property of Mr. E. Hall, beautifully situated on the southerly slope of a hill on the Basswood Ridge Road. Here, for years past, the proprietor had been content to reap rich harvests from the surface of the ground, scarcely dreaming that the rough and barren portion of his land lying next the road might be of more value than all the woods and fields beyond. About six years ago, where the soil of this place had been accidently disturbed, Mr. Hall noticed that it bore indications of iron or some other metal, and made an opening which satisfied him that it was worth further investigation. He interested at the time Messrs. G.W. Ganong and J.P. Bixby, who, finding the mineral to be iron pyrites, took a five year's lease of the premises; but, not satisfied with the character of the ore, they allowed their lease to expire without opening up the deposit. Mr Hall, however, was still convinced that the property was of value; and some two months ago he made a lease of the mining rights to Mr. J.A. Carroll, who is at present in charge. To an experienced observer the most striking features of the place are the scorched and blackened appearance of the friable surface rock, and the strong sulphurous smell arising from the openings in the earth, reminding one of the smoke of gunpowder. A ledge of hard gray stone is found just below the surface and under this is the ore. Two excavations about two hundred feet apart and ten or twelve feet in depth, made where the surface indications were most favorable, show a solid bed of ore of unknown width and thickness. A third pit, sunk at random between the two, discloses the ore again at about the same distance beneath the surface, and there is every reason to suppose it is continuous; while another outcrop on unleased land further up the hill seems to leave little doubt that the quantity of the ore is practically inexhaustible. As to quality, something remains yet to be learned. The analysis is said to make it a cupreous iron pyrites, with a good percentage of copper and traces of silver, nickel, cobalt and gold. It thus somewhat resembles the product of the famous Spanish mines, considered by far the most valuable variety known. The prospectors hope that the copper may yet be met with in paying quantities. The ore, when freshly broken, is of a brilliant yellow-grey color, is very hard and very heavy. It its form proves to be adapted to the latest methods of extracting sulphuric acid, Mr. Carroll has a fortune within his grasp."

Daily Gleaner - Sep. 5, 1890 A Valuable Deposit. - The pyrites mine at St. Stephen promises now to be more valuable than the most sanguine of the prospectors had supposed. Latest devices place the value of the best specimens at about $20 per ton at the mine. If even half this can be realized it will probably pay to work it. Mr. Carroll is said to have refused $30,000 for his

Daily Telegraph - Sep. 6, 1890 St. Stephen. - Mr. W.F. Best, analyst, of St. John, was in town yesterday, and with Messrs Gregory and Carroll visited the mine of the latter. This is the fourth time Mr. Best has visited it. He is more than pleased and says that the ore is worth $20 a ton at least. A fine specimen was brought in yesterday afternoon and may be seen at the store of Mr. Thos. Gregory. Large crowds visit the mine daily. Mr. Todd is also prospecting on adjoining lands, and thinks he has struck ore as rich as any in that vicinity."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

Moncton Daily Transcript - Aug. 23, 1890 The deposit of iron pyrites near St. Stephen, has been prospected and has turned out well. An assay shows 4 per cent. copper which is a paying quality if sufficient of the ore is located. The iron appears to be of good quality."

St. Croix Courier - Dec. 4, 1890Is It a New Brunswick Sudbury? - The large deposit of iron pyrites near St. Stephen, recently referred to in the Telegraph, has been further tested by local and American chemists with the result that the per centage of nickel has considerable increased. A New York chemist finds 2 per cent. of nickel in a sample of ore taken four feet below the surface. A subsequent analysis of ore from the same opening, seven feet below the surface, shows nearly 2 1/2 per cent of nickel. It may be remarked that the discovery of nickel at Sudbury, Ontario, has recently created intense excitement throughout the world. The Sudbury ore is an iron ore, containing sulphur and nickel. The ore is roasted to burn off the sulphur and is then ready for shipment. The St. Stephen ore is iron ore, containing sulphur and nickel, the latter is not so large in proportion as is found at Sudbury, but still sufficient, in view of its location on the seaboard, to give prospects of being very valuable. Nickel is coming into very extensive use for increasing the strength of steel used in armour plating ironclad war vessels, the preparation being about 3 1/2 per cent. The effect of the admixture of nickel with the steel in armor is to prevent fracture. A projectile passing through an armor of nickel-steel merely makes a round hole without materially cracking the plate outside of the point perforated. Such being the facts it seems a matter of great interest that an iron ore is found in our own province, and at a point most convenient for shipment, which contains nearly the percentage of nickel required for such an important use. It is the rule that the richness of ore increases with the depth from surface, and there is good reason to believe that this may be found true at St. Stephen. The samples so far taken at different depths show an increase of nickel in descent. At the session of the provincial legislature in 1889, a law was enacted authorizing the governor in council, on being duly satisfied there were good prospects of valuable minerals being discovered, to make an appropriation for the purpose of sinking shafts, or boring, to test the value of metal or mineral deposits at any point where indications of them might be found. It would appear from our information that the St. Stephen mine is of sufficient promise to justify a moderate expenditure thereupon under the act above referred to. A really good find of nickel in any part of the province would be a matter of provincial importance. - Telegraph."

Chignecto Post - Sep. 11, 1890 An assay has been made of the silver mine at St.Stephen, N.B. and the value of the ore placed at $20.00 per ton. They are prospects of a good lead in the vicinity."

Fredericton Daily Gleaner - Jun. 19, 1891 That Nickel Mine. - Mr. Hall Visits Mr. Blair and Mr. Tweedie and is Told That It Will Be All Right. - Mr. Hall of St. Stephen nickel mine owner saw Mr. Blair, and got little if any satisfaction. He says he tried honey on him and several dashes of vinegar without much result. He likewise approached Mr. Tweedie on the same subject, but like his chief he was noncommittal. Mr. Hall told Mr. Blair that he had been warned to do his talking to Mr. Blair through a lawyer, but did not wish to begin so. Mr. Blair told him that there was no need of a lawyer that it would be all right. Mr. Hall is determined that it will be all right in any case and is taking the necessary steps to secure his rights. He says that the mineral is under his house and other buildings, as well as the road to his dwellings, and that should these be mined under, he would not get enough from the lease to pay for one tenth the damage done. He claims as his right the mining license as he applied for it in time, if not exactly according to law. He did not follow out the license act of last session but thinks that whoever framed it must have measured his property or they could not have made such a fit. Mr. Mitchell arrived in town this morning in a hurry."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

Weekly Record - Fri. Jun. 20, 1891 Mining Quarrel. - Over Some Nickel-Plated Property in Charlotte County. - (from our own correspondent). - Fredericton, June 20. - Mr. Ebenezer Hall of Heathland district, in the parish of St. Stephen, has been in town for three or four days and is by no means a pleased man. His business here is with the crown land department in connection with a certain mining lease lately issued to William Todd under the provisions of the act relating to mines and minerals passed at the last session of the legislature. It is on Mr. Hall's farm that the nickel mines lately discovered have the richest deposit. Mr. Hall woke up the other day to find strangers in possession of his lands, staking it off, and on inquiry was informed that Wm. Todd of St. Stephen had obtained from the local government a lease of a five mile block in which his farm was wholly included. The owner was naturally annoyed and came up to Fredericton to find out the whys and the wherefores of the matter for himself. In an interview with the Sun correspondent Mr. Hall said: Last year I had some of the mineral on my farm opened up and went to the trouble and expense to bring Mr. Best down from St. John to analyze the deposit. He did so, and the results of the analysis proved very encouraging. These facts were well known round about there and, I think, I was telling Mr. Todd all about it last summer. The mineral is quite rich on my place, and I believe the earth round my dooryard is worth not less than $20 a ton. Last spring I heard the government had a law about minerals before the house and I asked Mr. Mitchell, the provincial secretary, who is also a member for our county, about it. He said something about leases and royalty to me and I then told him I did not want anyone getting to get a lease on my farm, and that if it should be necessary for me to have a lease to keep others out, for him to make the application for me and let me know at once about it. He promised to do so, and I went away satisfied. I went river driving, for I lumber some, and when I returned home in May I learned that the law had passed and soon after was told that William Todd had secured a mining leases of my farm with other lands near it from the government. I made it my business to go to straight to see Mr. Mitchell and found him in his law office at St. Stephen. When I asked him about it, he told me that he thought Mr. Todd had applied for and obtained a lease of mining rights, including my place. I asked him why he had not done as I had requested him to do and as he had promised me he would. He said he had forgotten all about it. I was not satisfied and came here to find out all I could about the matter, and about all the satisfaction I got from the surveyor general, who told me if Todd attempted to tear down my buildings the government would stop him. It is a queer law that will give to a stranger leases of lands for mining where the mineral had been discovered before the law was even thought of, and when these mines were partly opened and the ore tested. I don't believe that Mr. Mitchell forgot what I told him, but you know, Mr. Todd and his friends are wealthy men and have a large political influence in our country. To say that Mr. Hall is annoyed at the way he considers that he has been treated, does not half express his feelings. He has retained G.F. Gregory as counsel, who is now looking into the matter for him. Mr. Gregory, on being asked about the matter, admitted that he had seen Mr. Hall, but refused any further information about the case."

S.J. Daily Sun - Sep. 30, 1891 St. Stephen. - A stranger has been in town for some days inspecting the nickel mines and it is currently reported that on behalf of an English company he has bonded the McLean and Todd mine for eight months for $50,000, and the occupied land of Eben Hall for a similar period for $15,000. Rumors concerning the mines have been so varied and plentiful within a few months that not much interest is taken in them."

St. Andrews Beacon - Oct. 1, 1891 The prospects of the St. Stephen mines improveand the proprietors have ordered new machinery. This is why operations to a large extent have been temporarily suspended - Calais Times."

S.J. Daily Sun - Nov. 2, 1891 St. Stephen. - The Expiration of Nickel MineLicenses. - St. Stephen, Oct. 30. - People are now awaiting anxiously the twelfth of November, upon which date the leases held by foreign companies of the nickel mines in this locality expire. If the mines are at all valuable there will probably be important developments at that date."

St. Croix Courier - Sep. 24, 1891 Latest reports are to the effect that St. Stephen nickel ore is better than the Sudbury ore, and that we are on the eve of a mining boom."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

S.J. Globe - Jun. 20, 1891 Fredericton, June 19. - The St. Stephen nickel and copper mines matter is exciting much attention here. Some interesting information was obtained at the Crown Land Office today by Mr. Hall's counsel, indicating strong grounds indeed for the belief - generally entertained - that the new mining act was part of a scheme to deprive Mr. Hall of his right in the valuable mineral beds on his farm."

Fredericton Daily Gleaner - Jun. 22, 1891Silver Mine At Beaufort. - A rich lead of silver ore has been found near Beaufort, Carleton Co. The matter is being kept very quiet, but prospecting with good results is going on. Will this meet the fate of the

St. Andrews Beacon - Jun. 18, 1891 St. Stephen. - On Saturday morning, Mr. J.A.Carroll met with a serious accident at his mine. He had gone down into the shaft to show the men where to drill; just as he reached the ladder to ascend, the platform, on which the men were standing to strike the drill, gave way and struck a pile of ore at the other side of the shaft. When the ore fell it caught Mr. Carroll's leg and pinned it against the wall; being unable to stand he fell backwards and broke his leg at the knee. His knee having being injured before makes the accident still more dangerous. Just after the catastrophe Mr. Bonnell, representative of a New York syndicate, arrived to negotiate for the mine."

S.J. Globe - Jun. 27, 1891The Mineral Beds at St. Stephen. - Mr. Edward Jack's Views. - Fredericton, June 26. - Mr. Edward Jack has returned from St. Stephen with some interesting information regarding the much discussed mineral beds in that locality which he gave your correspondent this evening. The deposit, which is of sulphide of iron carrying nickel, is situated something more than a mile from the town of St. Stephen, on a branch of the Dennis Stream, which empties into the St. Croix a little below St. Stephen. It occurs in the form of beds, probably parallel with the stratification of the rocks, the course of which there is a little to the east of northeast. The presence of the mineral is indicated on the surface in numerous places by red iron oxide - the result of its decomposition through the effects of the air and moisture. Mr. Jack inspected the bed on what he called the Todd place. (Your correspondent could not learn from him whether Mr. Todd owned the property or not, but Mr Jack said he had the mining rights in the land.) It is not far distant from Eben Hall's farm. There is an immense mass of mineral here. There was nothing like it in New Brunswick, Mr. Jack said. Mr. Jack was not on Eben Hall's place. The bed there he was informed, was some six or seven feet wide. A piece from the bottom of the shaft, which was shown him by a gentleman in St. Stephen, indicated a considerable percentage of copper. He was also shown an analysis, made by Sharples, of Boston, of a piece of the iron sulphide - he did not know whether it was from the Hall farm or the Todd place mentioned - which showed nearly two per cent of nickel. The average of the famous Sudbury mines from Barlow's report is given as being between 2.25 and 2.50 per cent. Mr. Jack explained that there were two sulphides of iron, one of which would roast, yielding sulphurous acid; the other would not. Unfortunately the St. Stephen deposit is of the latter kind, and the sulphur is consequently lost. Nickel, however, usually occurs in the kind that cannot be used for making sulphuric acid, and the deposit is generally thought to be of great value. The Pilley's Island pyrite mine in Newfoundland, lately sold by Murchie & McNichol, of Calais, to an English syndicate, parts with its sulphur so readily that the cinder or residue is sold as iron ore for $3 per ton after the sulphur, which amounts to upwards of 50 per cent, has been extracted. The two St. Stephen mines - the Todd mine mentioned, and the Carroll mine, the latter on Eben Hall's farm - Mr. Jack says, have been bonded to different parties, who are now testing their value. A few weeks time will prove what this is. Should they turn out to be of value, the value will be very great, owing to the vast quantity of mineral which occurs in them. From the indications of copper scattered through this great deposit, Mr. Jack said, it was not at all unlikely but that this metal may be discovered in large quantities. It was his opinion that this metalliferous band of rocks extended for a long distance, and that many other discoveries of mineral would be made in it. In fact he heard that another discovery had been made at a point quite a long distance from the Carroll or Todd places referred to. On the Todd property he said there were thousands of tons of the mineral in sight. With regard to the selling price, Mr. Jack thought that common iron pyrite sold in New York for about $6 per ton. It must therefore be found in great bodies, and well situated as far as mining and transportation are concerned, to be of any value. But all these conditions exist in the case of the St. Stephen mines. Mr. McLaren, of Letete, is superintending prospecting and mining operations for Mr. Todd."

St. Andrews Beacon - Jun. 18, 1891 St. Stephen. - On Saturday morning, Mr. J.A.Carroll met with a serious accident at his mine. He had gone down into the shaft to show the men where to drill; just as he reached the ladder to ascend, the platform, on which the men were standing to strike the drill, gave way and struck a pile of ore at the other side of the shaft. When the ore fell it caught Mr. Carroll's leg and pinned it against the wall; being unable to stand he fell backwards and broke his leg at the knee. His knee having being injured before makes the accident still more dangerous. Just after the catastrophe Mr. Bonnell, representative of a New York syndicate, arrived to negotiate for the mine."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

S.J. Globe - Jun. 16, 1891 Fredericton, June 16. - Eben Hall, St. Stephen, who recently discovered a valuable nickel mine on his farm, is here after a mining license."

Daily Telegraph - May 27, 1891 St. Stephen's Mining Boom. - Indications That The Deposit Is Much Richer Than At First Supposed. - [Special to the Telegraph] - St. Stephen, May 26 - Mr. Carroll is much pleased with the prospects of his mine, as the following extract of a letter from Mr. W.F. Best will show he has cause to be: I have completed the analysis of the samples. The following are the results:- Ore received May 9th show nickel, 2.65; copper, 5.72. Sample marked No. 1 shows nickel, 2.41; copper, 7.12. No. 2 nickel, 2.67; copper, 6.30. No. 3 nickel, 2.35; copper, 4.80. The above samples were all taken about 15 feet from the surface. Mr. Best said: A well known mining engineer informs me that we should not look for the richest ore in less than 100 feet, and it is his opinion that this ore will run more to copper, and perhaps other of the heavy metals. He thinks there is every reason to be encouraged by the developments up to this date. If the ore increases in value in the same ratio by the time Mr. Carroll has reached 25 feet, the samples will show richer than Sudbury. An Englishman who came out to visit the Sudbury mines, heard of the St. Stephen mine, came to see it and spent two days here. He was of the opinion there was a heavy deposit of ore in the Carroll mine. Mr. A.W. Orris, of New York, was also here viewing the mine. The land all around Mr. Carroll's mine is taken up by mining leases, and altogether the prospects for a mining boom in this vicinity are very encouraging."

Fredericton Daily Gleaner - Jun. 16, 1891 and S.J. Daily Sun - Jun. 18, 1891 That Nickel Mine. - The Owner of the Property Visits Mr. Blair. - He Claims That He Is Being Cheated of His Rights. - And Will Fight The Case To The Last Extremity. - Mr. E. Hall of St. Stephen is in the city today investigating the intracacies of the mining laws. He is the owner of the celebrated nickel mines at St. Stephen and tells the following peculiar state of affairs. Some time since he believed that there was a good mine on his farm and sank a shaft in what he called the beanfield where two fine leads of the metal were found. Jerry A. Carroll came to him and asked for a lease of the land for the purpose of prospecting. Carroll sent some of the mineral to Mr. Best, of St. John, who pronounced it worth $21 to the ton of ore. This set the ball rolling. The next thing that happened was that Carroll sold the mine to a New York firm. Mr. Hall says that the lease is not lawful as it was not signed by his wife and he thinks that he is being unfairly dealt with. He says that there are acres and acres of the mineral and he does not know what price to put on the property, and that the statement that he had refused $300,000 for it is a falsehood. All the land in question is now held, he says, by William Todd. He has a license covering five square miles, taking in the Hall property. Mr. Hall says he asked the Hon. Mr. Mitchell about procuring a mining license and he told him that he had forgotten all about it. He believes that Mr. Mitchell has a share in the mining license. He says he has not received a cent from Carroll for the lease, and that he does not own a foot of land. He is interviewing Mr. Blair this afternoon and says that he will sift the matter to the bottom. The lease was made out forever and he did not know that the lease, when he signed it, was for more than a simple right to prospect, or covered any extended period of time. He is prepared to fight the case, and appearances are that the nickel mine will be a mine of trouble to all concerned."

S.J. Globe - Jun. 20, 1891 Fredericton, June 19. - The St. Stephen nickel and copper mines matter is exciting much attention here. Some interesting information was obtained at the Crown Land Office today by Mr. Hall's counsel, indicating strong grounds indeed for the belief - generally entertained - that the new mining act was part of a scheme to deprive Mr. Hall of his right in the valuable mineral beds on his farm."

S.J. Daily Sun - Sep. 12, 1891 St. Stephen. - The Nickel Mines. - The nickel mines on Basswood Ridge Road are still spoken of occasionally and it is said Mr. Carroll has received a further order for samples from English parties. Surveyor General Tweedie is to be in town soon to hear both sides of the story from parties interested in the mining and prospecting licenses for which applications have been made."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

S.J. Globe - Jun. 27, 1891The Mineral Beds at St. Stephen. - Mr. Edward Jack's Views. - Fredericton, June 26. - Mr. Edward Jack has returned from St. Stephen with some interesting information regarding the much discussed mineral beds in that locality which he gave your correspondent this evening. The deposit, which is of sulphide of iron carrying nickel, is situated something more than a mile from the town of St. Stephen, on a branch of the Dennis Stream, which empties into the St. Croix a little below St. Stephen. But all these conditions exist in the case of the St. Stephen mines. Mr. McLaren, of Letete, is superintending prospecting and mining operations for Mr. Todd."

Fredericton Gleaner - Jun. 26, 1891 That Nickel Mine. - Messrs. Blair and Tweedie's Reception of Mr. Hall. - Mr. Hall Tries Honey and Vinegar in Defence of Right. - Assisted By Counsel He Demands a License. - (St. Croix Courier) - Since Mr. Hall's return from Fredericton, he has been interviewed by a Courier reporter, to whom he told a story, of which what follows is the substance:- On arriving on Fredericton Mr. Hall proceeded to the government buildings and had an interview with the attorney-general. He told the attorney-general that his business was to enquire by what right a mining license has been given to Mr. Todd, covering his farm in the parish of St. Stephen. He supplemented his remark by informing Mr. Blair that he was a man of very little education, having attended school for only six weeks of his life, half of which time was devoted to fighting the other boys of the school, and that he thus was not, from an educational point of view, equipped for a discussion with men of the standing of the leader of the government. He suggested that if his rights were denied he might find it necessary to employ a lawyer, but Mr. Blair interrupted him with a statement that a man who could talk as well as Mr. Hall did not require any assistance from the legal profession, and suggested that they proceed to the Crown Land office to talk the matter over with the Surveyor General. Here they found Mr. Tweedie, and Mr. Hall told his story to him. He had been the proprietor of the farm in question for very many years; he had cultivated it and improved it; he had planted and raised ornamental trees, the value of which to him was more than it could be to anyone else; he had known of the existence of valuable mineral on it for a long time and had even gone so far as to begin mining operations before any mining law was passed. He claimed he had rights in the mineral which could not be taken away by any law passed by the provincial government, and unless he were granted the first right to mine on his own premises he intended to make it warm for all persons, whether in authority or not, who were in the conspiracy to freeze him out. The surveyor-general informed Mr. Hall that he was a little previous in his demands, that, in his opinion, neither the government nor Mr. Todd had any desire to pull down his house or take away from him anything that was lawfully his, and he suggested that Mr. Hall should wait a while and watch developments, at the same time courteously enquiring if he intended to go home that night. Mr. Hall replied that he had used up all his honey and, as it appeared that it would be necessary to use a little vinegar, he didn't intend to go home until he had consulted a lawyer as to his rights. Taking leave of the gentlemen in the Crown Land office, Mr. Hall then went to the office of Mr. G.F. Gregory and told him his story, learning that he had arrived just in time to save himself from the avarice of those who were banded against him. Accordingly, Mr. Gregory and Mr. Hall returned to the Crown Land office and Mr. Gregory stated Mr. Hall's case, tendering $50.00 and demanding a mining license to cover the property in dispute. The Surveyor General took the money and stated that, if it were possible, the license would be granted and, if not, the money would be returned. Since his return Mr. Hall has expressed himself as satisfied that he will get the first right from the government to mine on his own property. If not, he has behind him relatives in New York who are worth millions and who will fight his fight to the finish. An expectant public will wait further developments with feverish interest and anxiety."

Eastport Sentinel - Jul. 15, 1891 New York parties will commence operations on the Carroll nickel mine next week, and will place a large force of men on the ground at the start. - [Times"

Eastport Sentinel - Jul. 15, 1891 New York parties will commence operations on the Carroll nickel mine next week, and will place a large force of men on the ground at the start. - [Times"

Fredericton Daily Gleaner - Aug. 5, 1891That Nickel Mine. - The Ball Opens - Who Will Appear in the First Dance? - The Telegraph contains the following about the celebrated nickel mine at St. Stephen about which so much was said some time since. The Carroll-Best nickel mine near St. Stephen will be inspected in about a week by some members of the American syndicate to whom it has been bonded. Upon the result of this examination the final sale of the property will in some measure depend. The syndicate has made a deposit with the owners of the mine, which will be forfeited in case they decide not to buy the property by the end of November. The deposit made is about large enough to cover the expenses of development to date. The chief owner, Mr. Carroll, has been ill for some time, but is recovering. Of late it was found that what was thought to be the wall of the mines really concealed a further deposit, which makes the property even more valuable than before. Borings extended over a space 600 feet long and more than 100 feet wide, have in every case resulted in the finding of good ore. Already a depth of some 20 feet has been reached, but this is as yet but a scratch on the surface of the ground. Should additional examinations warrant it a depth of 100 feet will no doubt be attained in time. The heavier metals increase with the depth. Copper, iron, a little zinc and gold and silver in small quantities occur. The gold and silver would be worth about $3 a ton, and although ore of that value is successfully worked in Germany, it would probably not pay here as labor is dearer and the progress in mining not so great. The appearance of the Carroll ore is almost exactly the same as that of the celebrated Sudbury deposit. It would appear from this that the owner, Eben Hall, is not to be considered, but it is altogether likely that he will be heard from when the inspection takes place. From his own statements, if true, the lease which Mr. Hall says he signed only transferred to Carroll the right of prospecting. It appears that Carroll claims the ownership of the mine and this Hall will protest in the courts."

St. Croix Courier - Aug. 6, 1891 The Carroll-Best nickel mine near St. Stephen will be inspected in about a week by some members of the American syndicate to whom it has been bonded. Upon the result of this examination the final sale of the property will in some measure depend. The syndicate has made a deposit with the owners of the mine, which will be forfeited in case they decide not to buy the property by the end of November. The deposit made is about large enough to cover the expenses of development to date.- Tel."

St. Croix Courier - Sep. 24, 1891 Latest reports are to the effect that St. Stephen nickel ore is better than the Sudbury ore, and that we are on the eve of a mining boom."

Fredericton Daily Gleaner - Aug. 28, 1891 Mining Licenses. - Some of the local holders of mining licenses have been summoned to Fredericton to show cause why they are entitled to hold their licenses against the claims of other applicants. –

Fredericton Daily Gleaner - Jun. 16, 1891 and S.J. Daily Sun - Jun. 18, 1891 That Nickel Mine. - The Owner of the Property Visits Mr. Blair. - He Claims That He Is Being Cheated of His Rights. - And Will Fight The Case To The Last Extremity. - Mr. E. Hall of St. Stephen is in the city today investigating the intracacies of the mining laws. He is the owner of the celebrated nickel mines at St. Stephen and tells the following peculiar state of affairs. Some time since he believed that there was a good mine on his farm and sank a shaft in what he called the beanfield where two fine leads of the metal were found. Jerry A. Carroll came to him and asked for a lease of the land for the purpose of prospecting. Carroll sent some of the mineral to Mr. Best, of St. John, who pronounced it worth $21 to the ton of ore. This set the ball rolling. The next thing that happened was that Carroll sold the mine to a New York firm. Mr. Hall says that the lease is not lawful as it was not signed by his wife and he thinks that he is being unfairly dealt with. He says that there are acres and acres of the mineral and he does not know what price to put on the property, and that the statement that he had refused $300,000 for it is a falsehood. All the land in question is now held, he says, by William Todd. He has a license covering five square miles, taking in the Hall property. Mr. Hall says he asked the Hon. Mr. Mitchell about procuring a mining license and he told him that he had forgotten all about it. He believes that Mr. Mitchell has a share in the mining license. He says he has not received a cent from Carroll for the lease, and that he does not own a foot of land. He is interviewing Mr. Blair this afternoon and says that he will sift the matter to the bottom. The lease was made out forever and he did not know that the lease, when he signed it, was for more than a simple right to prospect, or covered any extended period of time. He is prepared to fight the case, and appearances are that the nickel mine will be a mine of trouble to all concerned."

St. Croix Courier - Jun. 25, 1891The Nickel Mine. - The History of Mr. Hall's Movements in the Efforts to Establish His Rights. - Mr. E. Hall has been receiving considerable attention of late in connection with the lately developed nickel mine on his farm. Scarcely a provincial paper has been received at the Courier office within the past few days that has not had some reference to Mr. Hall and his farm and the mineral on it. This is due to the fact that Mr. Hall has been in Fredericton recently, interviewing the Attorney General and other dignitaries up there as to their object in passing the mining law of last session, and why they had seen fit to allow his property to be covered by the licenses with which it has been blanketed. The Courier is in possession of the result of the interview, but, before satisfying the expectant public on this point, it desires to give an idea of Mr. Hall's position and contentions, a story that is best related by the Fredericton correspondent of the St. John Globe as follows, in last Thursday's issue of that paper:- The visit to the city this week of Mr. E. Hall, owner of the celebrated Heathland farm near St. Stephen, in which the nickel and copper mines were discovered last summer, promises a sequel of more than ordinary interest, in which it is generally believed will be found the secret of the new provincial mining act passed at the last session of the legislature. Mr. Hall spent a considerable part of the day about the crown land office, his presence causing marked uneasiness to the head of the department, who has been in town since yesterday. Mr. Hall's grievance will be better understood by a recital of the facts in connection with the case, as related by himself to your correspondent. The farm in which the mines are situated is about two miles from St. Stephen, and comprises about one hundred acres of land. On the 1st of July last year, while Mr. Hall was working his horse in that part of the farm which he calls the beanfield (?), one of the animal's legs broke through the surface and went down almost its entire length - caused, as Mr. Hall immediately saw, by the insubstantial condition, through the effect of gases, of part of a long bed of mineral lying about eighteen inches from the top. The sight of a piece of broken mineral at once aroused the farmer's interest, and in examination of it afterwards by himself and some relatives induced him to send it to St. John to Mr. Best for testing. Mr. Best reported it rich in copper and nickel and went over some days after and inspected the premises. He found a stratum of the mineral of large size, the richest part being in about the middle of the farm. Mr. Hall afterwards leased to Mr. J.A. Carroll between 15 and 20 acres in the upper end of the farm, upon condition that the lessee pay $500 if he found mineral of workable value on it, and a further sum of $500 when he should begin to work it. Silver and gold in small quantity, but of a very rich quality, were afterwards found on higher land near the house. Specimens of this Mr. Hall's nephew, Chas. Libbey, took to New York, where it was estimated the quartz was worth $140 per ton. The word soon went round among speculators and several big offers have been made to Mr. Hall. Mr. Carroll, it is stated has received $20,000 for his interest in the 20 acres mentioned. Now comes in the most interesting part of the case. Some time after the discovery, Mr. Hall says early last fall, the latter spoke to Hon. Mr. Mitchell, provincial secretary, about procuring mining licence - that would be under the old act. The secretary, some months afterwards, Mr. Hall having been absent in a lumber operation in the meantime, when asked about the matter, stated that he had forgotten all about it; and, before anything more was heard respecting it, the new mineral act had been passed through the house and declared law, by which it is provided that any person, on making the necessary application, may be granted a prospecting license authorizing him to search upon any five square miles of land he pleases to apply for, whether crown lands or lands owned by private persons. This done, there is further provision for the granting of mining leases on any portion of the land thus selected on which minerals may be found, which gives the lessees power to enter upon the land, tear up the earth, erect buildings, tear down buildings, etc., if necessary, upon compensation - to be agreed upon by arbitrators appointed for the purpose, if it is impossible for the lessee to agree thereon with the owner of the land - being made. The next discovery is that Mr. W.F. Todd had applied to the Crown Land department in the manner prescribed, and been granted, on paying the fee of $20, a license to prospect on five square miles of land, covering Mr. Hall's farm, and that the latter's rights to the land are subject to this license. Mr. Todd has not yet entered upon the land, and never will if law can prevent him. The case was given tonight to a leading lawyer of the city, and will, no doubt, be thoroughly sifted. Mr. Hall declares that certain members of the government are interested with Mr. Todd, and believes the new mining act was made for their benefit in the matter. It will be remembered that Mr. Hanington, in opening the discussion on the bill in the legislature last winter, spoke of its suspicious appearance, and expressed the opinion that there was something underlying it. Mr. Hall is a man of considerable property, and has wealthy relatives, who, it is understood, are to interest themselves in the matter. Since Mr. Hall's return from Fredericton, he has been interviewed by a Courier reporter, to whom he told a story, of which what follows is the substance:- On arriving on Fredericton Mr. Hall proceeded to the government buildings and had an interview with the attorney-general. He told the attorney-general that his business was to enquire by what right a mining license has been given to Mr. Todd, covering his farm in the parish of St. Stephen. He supplemented his remark by informing Mr. Blair that he was a man of very little education, having attended school for only six weeks of his life, half of which time was devoted to fighting the other boys of the school, and that he thus was not, from an educational point of view, equipped for a discussion with men of the standing of the leader of the government. He suggested that if his rights were denied he might find it necessary to employ a lawyer, but Mr. Blair interrupted him with a statement that a man who could talk as well as Mr. Hall did not require any assistance from the legal profession, and suggested that they proceed to the Crown Land office to talk the matter over with the Surveyor General. Here they found Mr. Tweedie, and Mr. Hall told his story to him. He had been the proprietor of the farm in question for very many years; he had cultivated it and improved it; he had planted and raised ornamental trees, the value of which to him was more than it could be to anyone else; he had known of the existence of valuable mineral on it for a long time and had even gone so far as to begin mining operations before any mining law was passed. He claimed he had rights in the mineral which could not be taken away by any law passed by the provincial government, and unless he were granted the first right to mine on his own premises he intended to make it warm for all persons, whether in authority or not, who were in the conspiracy to freeze him out. The surveyor-general informed Mr. Hall that he was a little previous in his demands, that, in his opinion, neither the government nor Mr. Todd had any desire to pull down his house or take away from him anything that was lawfully his, and he suggested that Mr. Hall should wait a while and watch developments, at the same time courteously enquiring if he intended to go home that night. Mr. Hall replied that he had used up all his honey and, as it appeared that it would be necessary to use a little vinegar, he didn't intend to go home until he had consulted a lawyer as to his rights. Taking leave of the gentlemen in the Crown Land office, Mr. Hall then went to the office of Mr. G.F. Gregory and told him his story, learning that he had arrived just in time to save himself from the avarice of those who were banded against him. Accordingly, Mr. Gregory and Mr. Hall returned to the Crown Land office and Mr. Gregory stated Mr. Hall's case, tendering $50.00 and demanding a mining license to cover the property in dispute. The Surveyor General took the money and stated that, if it were possible, the license would be granted and, if not, the money would be returned. Since his return Mr. Hall has expressed himself as satisfied that he will get the first right from the government to mine on his own property. If not, he has behind him relatives in New York who are worth millions and who will fight his fight to the finish. An expectant public will wait further developments with feverish interest and

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Oct. 8, 1891St. Stephen Nickel. - Notwithstanding the lull in mining operations here recently, the prospects are that the nickel deposits near the town will prove of great value. In a recent article the St. John Gazette says:- The latest analysis made by the most competent chemists in Canada give to the great deposit of pyrrhotine at St. Stephen an importance of the highest character, and it now seems as if our border city may at some future day become more than a rival of Sudbury as a nickel producing centre. One analysis, which we have seen and which was made under the auspices of the Dominion authorities, shows in this ore within a fraction of 2 per cent of nickel while the same authority pronounces the St. Stephen pyrrhotite as being similar to and undiscernible from the Sudbury ore. We are also assured by Mr. E. Jack, who has recently visited these St. Stephen deposits, that to all appearances the quantity of ore is inexhaustible. Mr. Jack also says that he was shown years ago by the late Mr. Curran, deputy surveyor of the county ofCharlotte, a piece of this ore, which, Mr. Curran informed him, had been taken from rock at the bottom of a well in the vicinity of Milltown, St. Stephen. For a long time, land surveyors had noticed a deviation of the magnetic needle in the vicinity of St. Stephen, while the cause remained unknown. It is now, however, evident that this is due to the presence of the ore of which we have been speaking, which has more or less action on the compass."

S.J. Globe - Oct. 14, 1891 That Mining Affair. - Fredericton, Oct. 11 - The Fredericton Herald, organ of the provincial government, which has been very much exercised over the Eben Hall affair since the publication of the facts in connection with the case, and has been so industriously endeavoring to remove from the public mind the conviction that other interests than those of the public were prompting some of the members of the government in their movements respecting the matter, returns to the subject again, and, with a great blowing of trumpets and in disregard surely of the existence of any intelligence in the public, points to Mr. Hall's success in the proceedings which he was compelled to take to save his property, as a denial of the very thing defeated by those proceedings - an argument which ought surely to accomplish its purpose. The Herald, which has itself been convinced by this argument of the untruthfulness of whatever has been said in relation to the case, imputing anything other than honesty and uprightness to those who figured in the affair, calls upon the Globe, which published from its Fredericton correspondent a statement of the facts as related by Mr. Hall himself and were verified in many particulars by information obtained at the Crown Land Office. No opinion whatever was expressed. The impressions which the Herald in endeavoring so zealously to eradicate were drawn by the public themselves from the simple statement of facts, which is all the Globe or its correspondent was responsible for. The Herald, however, has probably good reason to complain, for it was, no doubt, the publication of the facts and of Mr. Hall's intentions which brought about so early a settlement of the matter in Mr. Hall's favor and prevented the deal which Mr. Hall declared was in contemplation from being accomplished."

St. Andrews Beacon - Jun. 25, 1891 The St. Stephen nickel mine will probably be brought into court, unless the demand of Mr. Eben Hall, on whose lands a rich vein exists, are complied with in some way. It seems to be an unjust law that permits a stranger to enter into possession of a property without leave or license from the owner, or without his knowledge."

Fredericton Daily Gleaner - Jun. 22, 1891Silver Mine At Beaufort. - A rich lead of silver ore has been found near Beaufort, Carleton Co. The matter is being kept very quiet, but prospecting with good results is going on. Will this meet the fate of the

Fredericton Daily Gleaner - Aug. 28, 1891 Mining Licenses. - Some of the local holders of mining licenses have been summoned to Fredericton to show cause why they are entitled to hold their licenses against the claims of other applicants. -

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Apr. 16, 1891 Canadian Nickel. - Will the St. Stephen Deposit Prove a Valuable Addition? - Mr. J.A. Carroll will begin at once to sink a shaft and determine the value of his mine of nickel and copper on the Hall estate, the analyses of the ore at the depth of four feet having given promise of a profitable percentage of metal. Writing of the commercial value of nickel, Mr. Peter Imrie, says:- It has become practically necessary to every nation by reason of the fact that in the race for empire and for riches the possessor of that mineral is going to have an overwhelming advantage. As soon as ship builder or engineer begins to use it, all others will be compelled to do so on pain of extinction. Almost coincidentally with the discovery of our unlimited supplies of nickel, a new use for the metal was also discovered, which cannot fail to lead very shortly to its being used in hundreds of thousands of tons annually. In the near future, in short, every article that has hitherto been made of iron or steel, and many that have been constructed of wood and stone will be made of a certain compound of steel and nickel, which combines together the lightness of wood and the strength of steel, with the incorrodibility and durability of stone. Even if nickel were to cost $2,000 per ton it would pay to use it for a vast number of purposes, while at $1,000 a ton, there is probably none of the purposes above indicated for which it will not come into use, by reason of its being peculiarly profitable to use it at that price. At $1,000 a ton it will add immeasurably to the comfort and wealth of mankind, and reduce to an immense extent the amount of labor necessary to the production of ships, railroads, houses and other heavy necessaries of life. Canada's supply of nickel is practically inexhaustible. At the now famous deposit in Sudbury, Ontario, there is 650,000,000 tons of ore in sight. Beckoning at only three per cent. of pure nickel - a very low estimate - Mr. Imrie goes on to show that at $1,000 per ton the proceeds of these mines would yield two hundred thousand millions of dollars, a sum in excess of the total value of the entire territory of the United States, including all that stands thereon. There is nothing in the whole world to be compared to it. The St. Stephen ore resembles that of Sudbury, and Mr. Carroll has already found it to yield 2 1/2 per cent of nickel, with every reason to hope that the yield will be richer when a greater depth is reached."

Daily Telegraph - Jan. 13, 1891St. Stephen Nickel. - Mr. W.F. Best recently received from the Sudbury mines, Ontario, specimens of the nickel ore now attracting much world-wide notice, and which is rapidly making the fortune of the lucky owners. He has left a specimen at The Telegraph editorial rooms and a like specimen from the Carroll mine at St. Stephen, recently referred to in these columns. There is certainly a very strong resemblance in the general appearance of the two ores and a non-expert might readily pronounce in favor of the St. Stephen product, as it is apparently the heavier of the two. Mr. Best has shown the Telegraph a letter from the department of mines at Ottawa in which the Sudbury ore is stated to contain from 3 to 5 per cent of nickel. The St. Stephen ore is not so rich in nickel as this so far as it has been prospected, but Mr. Best says that at 17 feet from the surface it is found to yield 2« per cent, and, as is usually the case, the ore increases in richness with the depth. The Telegraph gladly records the efforts being made to discover and develop the mineral wealth of the province, which there is reason to believe may yet turn out to be very great. A good nickel mine would be a genuine bonanza, and Mr. Best has great hope that the St. Stephen discovery will prove very valuable. Specimens of the Sudbury and St. Stephen ores can be seen at the Telegraph editorial rooms."

St. Croix Courier - Apr. 16, 1891 Canadian Nickel. - Will the St. Stephen Deposit Prove a Valuable Addition? - Mr. J.A. Carroll will begin at once to sink a shaft and determine the value of his mine of nickel and copper on the Hall estate, the analyses of the ore at the depth of four feet having given promise of a profitable percentage of metal. Writing of the commercial value of nickel, Mr. Peter Imrie, says:- It has become practically necessary to every nation by reason of the fact that in the race for empire and for riches the possessor of that mineral is going to have an overwhelming advantage. As soon as ship builder or engineer begins to use it, all others will be compelled to do so on pain of extinction. Almost coincidentally with the discovery of our unlimited supplies of nickel, a new use for the metal was also discovered, which cannot fail to lead very shortly to its being used in hundreds of thousands of tons annually. In the near future, in short, every article that has hitherto been made of iron or steel, and many that have been constructed of wood and stone will be made of a certain compound of steel and nickel, which combines together the lightness of wood and the strength of steel, with the incorrodibility and durability of stone. Even if nickel were to cost $2,000 per ton it would pay to use it for a vast number of purposes, while at $1,000 a ton, there is probably none of the purposes above indicated for which it will not come into use, by reason of its being peculiarly profitable to use it at that price. There is nothing in the whole world to be compared to it. The St. Stephen ore resembles that of Sudbury, and Mr. Carroll has already found it to yield 2 1/2 per cent of nickel, with every reason to hope that the yield will be richer when a greater depth is reached."

Moncton Daily Times - Jun. 8, 1891 A Valuable Mine. - The Fredericton Gleaner says: It is currently reported that farmer Carroll, of St. Stephen has had an offer of $320,000 for his farm from an American company for the valuable nickel mine it contains. He has refused and says he has enough to live on at present and will wait to see how affairs will turn out."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Andrews Beacon - May 28, 1891 St. Stephen has a prospective boom in the Carrollmine, which promises to be the Sudbury mine of New Brunswick. It is situated on the Basswood Ridge road, about one and a quarter miles from town. In determining the extent of the ore bed a shaft No. 1 was sunk on it. From it a trench, twenty six feet long was dug across the bed without finding either wall; from shaft No. 2, which is 250 feet south of No. 1, a like trench was dug with the same result; between shafts No. 1 and No. 2 a third shaft was sunk and a fourth 350 feet south of No. 2. In shaft No. 1 the first assays were made from specimens taken five or six feet from the surface and gave .89 of nickel, .70 of copper, with traces of silver and gold and nearly 50 per cent of sulphur. The shaft was sunk sixteen feet and the following assays were made by a St. John, Philadelphia and the Massachusetts state assayers from specimens taken at various depths:- nickel, .8825; copper, 2.34; nickel, .98; copper, 1.48; nickel, 2.00; copper, 2.50; nickel, 2.25; copper, 3.15. In shaft No. 2 the first assay was made from ore taken five feet from the surface and gave .89 of nickel with traces of silver and gold and 47 per cent. of sulphur. When the shaft had reached a depth of twenty feet, from four samples taken from various parts of it, the following results were obtained:- No. 1, nickel, 2.65; copper 5.12; No. 2, nickel 2.41; copper, 7.12; No. 3, 2.67; copper 6.30; No. 3, nickel, 2.35; copper, 4.80. In both shafts the assays show an increase from less than one per cent of nickel to over two per cent; the maximum being 2.67 per cent. Now, when it is considered that the Sudbury only assays from two to five per cent of nickel at a depth of 600 feet, and this gives an average of 2.52 of nickel and 5.98 of copper at a depth of twenty feet, St. Stephen may fairly be considered to have a mine, which, if it does not far outpass the Sudbury, will form at least a formidable rival."

Daily Telegraph - May 12, 1891The St. Stephen Nickel Mines. - Samples of ore from the Carroll mine at St. Stephen have just been examined by Mr. W.F. Best and show 2.56 of nickel and 5.72 of copper. These samples were obtained within 20 feet of the surface and the owners are quite hopeful that the quality of the ore may continue to improve as the depth of the shaft is increased. In appearance the ore is identical with the Sudbury nickel ore. It is reported that a property adjoining the Carroll mine has been bonded to an American company."

St. Croix Courier - May 14, 1891 Mineral Wealth. - The New York Engineering and Mining Journal says 'the price for nickel in small quantities is regulated by the general position of the European market, and is also dependent upon the stocks in New York. At present stocks are very light here, and the metal is selling in small lots at from 64 1/2 c. to 70 c. With the increasing demand for nickel during the past two years for the manufacture of cartridges by European governments, German silver, nickel plating, and the manufacture of ferro-nickel, although the last has not yet assumed great proportions, the consumption of nickel has undoubtedly increased considerably, and the supply is said by importers to be unequal to the demand in this country.' If the nickel deposits near St. Stephen turn out as some people expect they will, we may look forward to a big boom in town before very long. The Courier would not, however, advise very much speculation on the possibilities just at present."

St. Andrews Beacon - Aug. 4, 1892 St. Stephen.- Foreign capitalists are beginning to take an active interest in the nickel mines. An English specialist is expected here to examine the property. A diamond drill may be set to work and the core from various depths, analyzed."

S.J. Daily Sun - May 12, 1892 St. Stephen. - Mr. James, of the Windsor Hotel, who bonded the nickel mines last week, has a crew of men at work sinking the present shaft deeper."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Apr. 14, 1892About Nickel. - Although matters in mining circles in St. Stephen have been somewhat quiet through the winter, those interested have not lost faith in the value of the nickel deposits here and hope for a boom during the coming summer. In Ontario there are prospects of a lively season in the mines. Rumors are current there not only of new companies being formed, but of a great American and British trust having been organized for the purpose of buying up all available nickel properties at good prices, and of a powerful French syndicate having been made up for the acquisition of nickel lands in Algoma and the further object of carrying on mining, smelting and refining operations. It is said regarding the latter enterprise that a French admiral, who is a member of the syndicate, was sent over there last fall to make the preliminary investigations, and that his report has been most favorable. The result of his report is that the syndicate has decided to establish large refining works on the north shore of Georgian Bay, where nickel steel will be manufactured on a large scale. The profits obtained by the companies already engaged in the preparation of the matte are said to be enormous and, although the mines are now being worked night and day, the output is insufficient to supply the demand. With such an outlook for Sudbury surely St. Stephen's minerals will not remain undeveloped, the facilities for shipping here being much superior to those at Sudbury. The percentage of nickel in the St. Stephen ore is said to be very little, if at all, below that of the Sudbury material and, if such be the case, it is just possible that we may be on the eve of a period of prosperity that will eclipse anything that has yet been experienced thus far in the history of the town."

St. Croix Courier - Apr. 21, 1892 and S.J. Globe - Apr. 21, 1892 An offer to bond one of the mining properties near town for $20,000 was made on Saturday and was refused. The owner is holding out for $30,000, with a guarantee that work will be begun within six weeks and that operations will not be suspended until a depth agreed on shall be reached."

St. Andrews Beacon - Jun. 16, 1892 There are whispers of some important developments in the nickel business, and hopes are revived that St. Stephen will become a mining centre before long."

May 1892 - Copied from: St. Croix Courier - May 8, 1952 60 Years Ago. - Work at the Carroll mine was resumed Monday, under the direction of A.C. Jones of the Windsor, who represents a syndicate which has bonded a number of the mining

St. Andrews Beacon - Jun. 16, 1892 There are whispers of some important developments in the nickel business, and hopes are revived that St. Stephen will become a mining centre before long."

S.J. Daily Sun - May 20, 1892 St. Stephen. - C.C. Whitlock has sent some samples of nickel and copper ore, found on a farm in Dufferin, to London, England, to parties making enquiries."

St. Andrews Beacon - Aug. 4, 1892 St. Stephen.- Foreign capitalists are beginning to take an active interest in the nickel mines. An English specialist is expected here to examine the property. A diamond drill may be set to work and the core from various depths, analyzed."

St. Croix Courier - Nov. 17, 1892 The St. Stephen Nickel Mines. - It would appear that the time has arrived, or is very near, when some united effort should be made to turn the valuable nickel deposits in the vicinity of St. Stephen to some practical use. For nearly two years now there have been prospecting and consultation with experts and bonding of pieces of property and assays - with license blankets all over the country. And, although there have been spasmodic displays of individual enterprise toward developing the properties, there has been no concerted effort and the wealth that is unquestionably at our doors lies unmarketed and unmarketable. Definite propositions to put in plants and begin actual mining have been made by several parties, but one condition has been attached to every offer and that is that sufficient land be placed under control of those undertaking the work to warrant a fair return for the capital necessary to be invested. No one person has control of sufficient land to do this and the only way it can be accomplished is by a general surrender, under proper restrictions, of all the land held. If a reasonable consideration for the surrender can be obtained, so much the better, but, if no consideration can be secured, then it would be of greater advantage to the individuals interested and to the community if the surrender were made with no conditions save one requiring the operation of the mines and a minimum output each season. St. Stephen nickel ore, though of low grade, has undoubtedly a marketable value, and it may be mined profitably; but to do this capital and experience are required. Neither of these essentials is at present available, and the only way they can be secured is along the lines suggested. It is certain that, as things now are, no good will come to anyone; in the event of a proper and systematic mining operation, every individual in the community would be benefited."

S.J. Daily Sun - May 20, 1892 St. Stephen. - C.C. Whitlock has sent some samples of nickel and copper ore, found on a farm in Dufferin, to London, England, to parties making enquiries."

Weekly Record - Fri. Apr. 8, 1892 NICKEL In recent years the production of nickel has been one of the most important features in mining, and formerly it was very much sought after metal owing to its freedom from oxidizing and rust and was used in alloy with other metals for the manufacture of philosophical instruments, etc. By the alloy of a certain percentage in the manufacture of steel it gives it great ductability to the same and keeps it from rusting so freely as under ordinary conditions, hence is being largely used in the manufacture of armor plates for war vessels; the United States navy using at the present time large quantities of it which has given ore bodies containing it in good proportions considerable commercial value. Formerly the most productive bodies of this ore were found in Saxony and Germany. A few years ago, however, an immense body of what is commonly known as magnetic iron pyrites was found in Sudbury district in Ontario, and an examination and test was found to contain from 2 per cent to 3.69 per cent of nickel associated with copper ranging from 1.99 per cent to 6.24 per cent per ton. Capitalists succeeded in securing a number of these properties and the result is one of the most valuable, productive and remunerative districts in Canada has been opened up, entailing the expenditure of millions of capital, the erection of smelting works, and the giving employment at remunerative wages to thousands of laborers, miners, chemists and managers of works. We refer more particularly to these facts for the reason that we believe the same conditions of affairs to a very great extent exist in our own province of New Brunswick. Almost two miles or less from the shipping wharves in St. Stephen great bodies of this magnetic iron pyrites or pyrrhotite exist, and simply await the expenditure of capital to make them we believe of the utmost importance to the province and the owners of the same. There seems to be some hitch, however, in the development of these properties, but what causes the same is not yet known unless it is the exhorbitant values put upon the properties by the owners, which keeps the capitalists away, and in addition the heavy royalties imposed by the new mining act of the province. We glean, however, from fairly authentic information that this ore though not worked to any great extent or depth has shown all the conditions of the Sudbury ore, and tests have given from 1.92 per cent to 1.98 per cent of nickel with fair percentage of copper, and also some percentage of silver and gold as well. Should even this percentage hold good we see no tangible reason why these mines should not be made to pay. As by way of comparison a mine known as the Murray mine in the Sudbury district owned by some English capitalists has been worked and made to yield satisfactory results on an average of 1.5 per cent of nickel and 0.75 per cent of copper. We therefore feel that if the owners of these properties have the true interests of the province at heart they will not frighten capitalists away by asking fancy or extravagant prices, and the government will do its part by changing the absurd and somewhat oppressive mining law of the province as to royalties and other unnecessary conditions. These things being done we may look in the near future for a boom in the production of nickel and copper in the St. Stephen district that will be of immense benefit to all concerned."

S.J. Daily Sun - May 12, 1892 St. Stephen. - Mr. James, of the Windsor Hotel, who bonded the nickel mines last week, has a crew of men at work sinking the present shaft deeper."

S.J. Daily Sun - May 2, 1892 St. Stephen. - ... It is now probable that something will be done to develop the mineral at Nickel Hill. A.C. Jones of Windsor has bonded the mines for foreign capitalists at $20,000, the option to run sixty days and including renewal privileges. In a few weeks the company will have men at work sinking a shaft to determine the vital question of whether the mineral is workable or not."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Apr. 21, 1892 and S.J. Globe - Apr. 21, 1892 An offer to bond one of the mining properties near town for $20,000 was made on Saturday and was refused. The owner is holding out for $30,000, with a guarantee that work will be begun
within six weeks and that operations will not be suspended until a depth agreed on shall be reached."

Daily Sun - Mar. 29, 1892 Nickel in Canada. - In the Sudbury district nickel and copper are closely associated. Sometimes the copper is in larger proportion than the nickel, but it is probable that in most cases the nickel predominates. These metals occur as sulphide of copper and nickeliferous pyrrhotite, or, in other words, magnetic iron pyrites. In the above mentioned district they are always associated with greenstones and their commonest situation is at the contact of these with other rocks, especially granite or gneiss. The existence of nickel in the sulphides of the greenstones was first ascertained by the late Dr. T.S. Hunt in 1856. In the Sudbury district pyrrhotite is said to be more generally diffused and more abundant than in any other known region of Canada. The larger ore bodies all resemble each other here. Their general outline appears to be lenticular. In each case the ore mass consists of an agglomerated mixture of the pyrrhotite and copper sulphide along with pieces of the country or adjoining rock. The included fragments of the latter are both rounded and angular, varying in size from that of pebbles to large boulders, but the average is a few inches in diameter. Immense blocks or horses also occur in the midst of the ore. When the pyrrhotite is the more abundant ore, the patches of copper sulphide may be said to be incorporated in it, and vice versa, but the two are so intimately connected that it is impossible to separate them by mechanical means. The copper sulphide of the larger patches isgenerally pure, but the pyrrhotite is almost always mixed with a considerable percentage of stony matter. The greenstone wall rocks of the ore deposits, as well as the included fragments of the same material, are generally much impregnated with these sulphides in the form of kernels from the size of peas to that of hazel nuts, besides irregular strings and patches. A fresh surface of the rock will in one case show the two sulphides in separate spots thickly, intermingled while another section may show the spots to consist entirely of one or the other. At the Vermilion mine the new mineral Sperrylite (arsenide of platinum with a little tin) was found by washing. On the 18th of March 1891, the secretary of the Canadian Copper company wrote: The output of our mines for last year averaged as follows: Copper Nickel Copper Cliff Mine... 6.24 per cent 3.69 per cent. Evans ... 2.84 per cent 3.62 per cent. Stobie ... 1.99 per cent 2.00 per cent. Average of all ... 4.32 per cent 3.52 per cent. George Attwood, manager of the Dominion Mineral company, on the same date wrote that the kies or metallics of the Blezard mine averaged 4 per cent of nickel accompanied by about 2 per cent of copper. F.R.W. Daw, manager for Messrs. H.H. Vivian & Co., writing on the 29th March, 1891, said: The average per centage of the ore smelted here (Murray mine) is as follows: Nickel 1.5 per cent; copper 0.75 per cent. G.C. Hoffman, chemist to the geological survey, in 1880 assayed four samples of pyrrhotite from the Sudbury district and found from 1.95 to 3.10 per cent of nickel, the average we are indebted to Dr. Bell's report on the Sudbury mining district, printed in 1891. Nickel in New Brunswick. - At the distance of about a mile and a half from the wharf at St. Stephen, great bodies of pyrrhotite occur in the greenstones, much in the same manner as is the case at Sudbury; in fact the ores are indistinguishable from those of that district. At the time of my visit (last summer) to one of these deposits owned by Mr. Todd, I saw an immense exposure, more than 100 feet in length, of magnetic pyrites or pyrrhotine. There was but little copper in it. Its breadth had not been determined when I was there, nor has it been yet, but there is every evidence to lead one to conclude that the pyrrhotine deposits here are of enormous size and extent; in fact, one is also led to believe that these are not only extensive in the direction of the strike of the rocks, but that there is a large extent of metalliferous country here at right angles to the strike. It is much to be regretted that no sufficient explorations and surveys have been made here, so as to show the situation and extent of these probably enormous deposits. This should have been done long ago, and no correct opinion can be given of their probable value until explorations and surveys have been completed and plans thereof prepared. I noticed but little copper in the Todd exposure, while in the Carroll shaft there seemed to be much of it in the pyrrhotite. An analysis by an English expert gave of nickel 1.98 per cent. This was made from six specimens taken from along the 100 feet exposure of which I have spoken. Another analysis made by a well known specialist in nickel gave 1.92 per cent, while the Institute of Technology in Boston gave exactly the same result, 1.92. It is to be hoped that more attention will be given this subject and that whenever it can be done the services of Dr. Bailey may be secured by the various mine owners, to ascertain as nearly as possible the extent and association of these remarkable deposits, which are not only close to the sea but in immediate proximity to the United States,

May 1892 - Copied from: St. Croix Courier - May 8, 1952 60 Years Ago. - Work at the Carroll mine was resumed Monday, under the direction of A.C. Jones of the Windsor, who represents a syndicate which has bonded a number of the mining

Moncton Transcript - Mar. 28, 1893 The discovery of valuable nickel deposits in Charlotte County is responsible for a bill by the Provincial Secretary empowering any county council at a special meeting to exempt from municipal taxation for not more than twenty years a plant, improvements, etc. in connection with such mines."

St. Andrews Beacon - Jul. 13, 1893 A skilled mining man is to be sent out from London, Eng., in about a month's time to make a preliminary investigation into the extent of the nickel bearing deposit at St. Stephen, as well as to the quantity of mineral there. His investigation will be made with a view of working the mines, if found profitable."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Mar. 2, 1893 The Nickel Mines. - Our citizens generally will approve the action of the town council in offering exemption from taxation to any company that will open up the nickel mines. Chiefly through the efforts of Mr. W.F. Todd, an English syndicate is interested in the matter; and there is every reason to believe that they will invest a large amount of capital here. The ore is of low grade, yielding about 1 1/2 per cent., so that it will only pay to work it in large quantities, and by the most improved methods. It is very desirable, therefore, that a company controlling a large amount of capital should be induced to come here and undertake the work. By the terms of their agreement, it is understood, the English syndicate will agree to put up three smelting furnaces and run them to the extent of 300 tons of ore a day each; and it is probable that, when once established, they will consume twice that amount of ore. It is also expected that refining works will be erected at or near the mines. This, with the raising and smelting of the ore, will furnish employment to a large number of men. The parish of St. Stephen will no doubt grant an exemption for a term of years, to encourage the work; and the provincial government grant exemption from royalty. Necessary legislation for the transfer of mining licences will be obtained as soon as the assembly meets; and we hope that in two or three weeks time all negotiations will be completed and the opening of the mines at an early date assured."

S.J. Daily Sun - Mar. 2, 1893 St. Stephen. - An English Syndicate to Develop Nickel Areas. - Town council.......The following letter that foreshadows very much for the town of St. Stephen was read: St.Stephen, Feb. 27 To Mayor and Town Council, Town of St. Stephen: Gentlemen - I am now negotiating with an English syndicate with a view to induce them to operate the nickel mines in the vicinity of this town. Should I succeed in my negotiations it would result in the expenditure in the immediate future of a very large amount of capital in the immediate vicinity of the town, and probably within the town, and employment would be given to a great number of men. As a result, the interest of the town would receive a most decided impetus. It is very important that every inducement should be held out to capitalists to invest their money in this operation. The ore is a low grade ore, and men hesitate to advance their money in the enterprise. I would suggest respectfully that you would want to consider the advisability of exempting the property of such a syndicate within the town, from taxation, for a period of fifteen or twenty years for an extra inducement. Such action on your part would materially strengthen the chances of bringing in capital and giving us great business activity. I am, gentlemen, Your obedient servant, W.F. Todd. A motion was unanimously passed to exempt the property of such a syndicate, employed in the development and transportation of ores, from taxes for town purposes for fifteen years. Council then adjourned."

S.J. Daily Sun - Mar. 4, 1893 The Nickel Mines. - (St. Croix Courier). - Our citizens will approve the action of the town council in offering exemption from taxation to any company that will open up the nickel mines. Chiefly through the efforts of W.F. Todd an English Syndicate is interested in the matter, and there is every reason to believe that they will invest a large amount of capital here. The ore is of low grade, yielding about 1 1/2 per cent, so that it will only pay to work it in large quantities, and by the most improved methods. St. Croix Courier - Sep. ??, 1893 The discovery of Canada's wealth in nickel says the Toronto Globe, comes at a time when commercial and economic conditions are changing. Discoveries in metallurgy are showing new uses to which nickel may be profitably applied. This will cause an increased demand for the metal in many places, and if the holders of the deposits are energetic, and willing to accept reasonable profits, they will have the opportunity of supplying it."

St. Croix Courier - Jul. 13, 1893 and Evening Gazette - Jul. 14, 1893St. Stephen Nickel Mines. - A skilled mining engineer is to be sent out from London, Eng., in about a month's time to make a preliminary investigation into the extent of the nickel bearing deposit here. His investigation will be made with a view of working the mines, if found profitable. It is to open up the deposit for his inspection that workmen were employed on the nickel property. - Courier"

St. Andrews Beacon - Jul. 13, 1893 A skilled mining man is to be sent out from London, Eng., in about a month's time to make a preliminary investigation into the extent of the nickel bearing deposit at St. Stephen, as well as to the quantity of mineral there. His investigation will be made with a view of working the mines, if found profitable."

S.J. Daily Sun - Nov. 11, 1895 Charlotte Co. - St. Stephen, Nov. 7. - The nickel mines are again in evidence. An expert named J.H. Kelley, belonging to Boston, spent two years here camping on the mine. He dug down a few feet in several places and sent many lots of samples away. Most of his time was spent around the hotels, apparently only keeping a watchful eye on the mines. He has been away for a year now, but a few days ago another gentleman came to town with letters of introduction from Mr. Kelley. He has arranged for leases of all the property and has had men at work getting more specimens. He talks of putting diamond drills in and employing many men this winter, and has looked out a chance to run a railroad down a natural valley to tide water. Those most deeply interested in the mines think that they are soon to be developed in earnest."

St. Andrews Beacon - Nov. 7, 1895 The nickel mining boom has been again revived in St. Stephen by the appearance of representatives of a Boston syndicate, who have been buying up mining claims. It is reported that they have secured the Todd and Boardman properties and that they are removing ore from the Carroll mine. It will be a grand thing for St. Stephen if these mines are developed."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Jun. 6, 1895 Nickel. - An article by F.L. Sperry, of Cleveland, Ohio, which lately appeared in the transactions of the American Institute of Mining Engineers, mentions that the Gap mine in Lancaster county had been, for the last quarter of a century the only property in the United States furnishing nickel in paying quantities. Its yearly output was about 300,000 pounds of metallic nickel, or nearly half the amount used annually in the United States. Foreign nickel was obtained from New Caledonia. Over production of nickel was cautiously guarded against and all surplus metal was held by the Rothschilds, who, assumed the bonded indebtedness of the Societe de Nickel. The opening of the Ontario mines changed matters, and nickel from the Sudbury district can be delivered in New York within four days and in European markets within two weeks, as against two months consumed in transporting South Pacific ores. Prices have been broken and European trade journals comment favorably on the breaking of the nickel trust, which has been effected by the Canadian metal. The total production of the world from 1840 to 1860 was about 100 to 200 tons of metallic nickel yearly; from 1860 to 1870, about 1,500 tons yearly; in 1890, 2,000 tons, and for 1894, probably about 5,000 tons. The metal sold for $2.25 per pound in 1860; in 1873 to 1875, for $6 to $7. From that period its price has gradually declined, being 65 cents per pound in 1892 and less than 40 cents at the present time. Nickel will alloy with most of the metals in common use, adding hardness, toughness and ductility to them. It is commonly alloyed with copper and tin in making German silver. Nickel steel is used for armour plate, gun forgings and marine shafting, as well as for many other purposes where great hardness, toughness and malleability are demanded. The

Lancaster Gap mine yielded nickel from pyrrhotite, the same mineral as is found in such masses near St. Stephen. There was also a large deposit at Anthony's Nose on the Hudson. This was employed by the chemical works on the Hudson for a while as an ore of sulphur. As waste wood for roasting is so very convenient, it may be that the St. Stephen deposit might be utilized for the purpose of acid making, although as is well known this is not nearly so valuable an ore of sulphur as pyrite. The St. Stephen ore beds have not been studied sufficiently in relation to their mineralogical composition and geological associations so as to determine whether they may be classed among the profitable or unprofitable deposits of nickel ores. A general analogy has been supposed to exist among all the lenticular deposits of pyrrhotite in crystalline rocks, and that, while only a few of them prove valuable for mining, there are others which will pay to work, either from their richness in nickel, or, possibly, when situated so near the sea and suitable fuel as those of St. Stephen are, as an ore of sulphur to be used more especially in the reduction of phosphate rock, which can be cheaply brought to Calais from Georgia or Florida. We have the fish waste of the Bay of Fundy as a source of nitrogen, while German salts can be made to furnish the potash needed. The nickel and copper left in the cinder might then be extracted as by-products, while some use might possibly be found for the residuary iron oxide. The subject is one which is well worthy of the attention of the mineralogist, chemist and manufacturer. Before anything should be attempted, a careful survey of the beds ought to be made (preferably under the direction of the department of mines at Fredericton) so as to determine their extent, as well as their distance from the wharves at St. Stephen and from the mills where waste wood could be had for fuel, and an accurate plan of the same made. The country rock in their vicinity should be well studied and its character determined, as well by chemical analysis, as by microscopic investigation, since it is not unlikely that this might to a certain extent be the means of enabling one to judge whether the St. Stephen deposit might be classed among those likely to pay for working or not. Edward Jack."

Nov. 1895 - Copied from: St. Croix Courier - Nov. 10, 1955 60 Years Ago. - The strangers who were here prospecting the nickel mines have departed, taking with them a quantity of ore. They are expected to return at an early date to begin active

St. Andrews Beacon - Dec. 5, 1895 Interest in the St. Stephen nickel mines is again excited. St. Croix Courier - Jun. 6, 1895 Nickel. - An article by F.L. Sperry, of Cleveland, Ohio, which lately appeared in the transactions of the American Institute of Mining Engineers, mentions that the Gap mine in Lancaster county had been, for the last quarter of a century the only property in the United States furnishing nickel in paying quantities. Its yearly output was about 300,000 pounds of metallic nickel, or nearly half the amount used annually in the United States. Foreign nickel was obtained from New Caledonia. Over production of nickel was cautiously guarded against and all surplus metal was held by the Rothschilds, who, assumed the bonded indebtedness of the Societe de Nickel. The opening of the Ontario mines changed matters, and nickel from the Sudbury district can be delivered in New York within four days and in European markets within two weeks, as against two months consumed in transporting South Pacific ores. Prices have been broken and European trade journals comment favorably on the breaking of the nickel trust, which has been effected by the Canadian metal. The total production of the world from 1840 to 1860 was about 100 to 200 tons of metallic nickel yearly; from 1860 to 1870, about 1,500 tons yearly; in 1890, 2,000 tons, and for 1894, probably about 5,000 tons. The metal sold for $2.25 per pound in 1860; in 1873 to 1875, for $6 to $7. From that period its price has gradually declined, being 65 cents per pound in 1892 and less than 40 cents at the present time. Nickel will alloy with most of the metals in common use, adding hardness, toughness and ductility to them. It is commonly alloyed with copper and tin in making German silver. Nickel steel is used for armour plate, gun forgings and marine shafting, as well as for many other purposes where great hardness, toughness and malleability are demanded. The

Lancaster Gap mine yielded nickel from pyrrhotite, the same mineral as is found in such masses near St. Stephen. There was also a large deposit at Anthony's Nose on the Hudson. This was employed by the chemical works on the Hudson for a while as an ore of sulphur. As waste wood for roasting is so very convenient, it may be that the St. Stephen deposit might be utilized for the purpose of acid making, although as is well known this is not nearly so valuable an ore of sulphur as pyrite. The St. Stephen ore beds have not been studied sufficiently in relation to their mineralogical composition and geological associations so as to determine whether they may be classed among the profitable or unprofitable deposits of nickel ores. A general analogy has been supposed to exist among all the lenticular deposits of pyrrhotite in crystalline rocks, and that, while only a few of them prove valuable for mining, there are others which will pay to work, either from their richness in nickel, or, possibly, when situated so near the sea and suitable fuel as those of St. Stephen are, as an ore of sulphur to be used more especially in the reduction of phosphate rock, which can be cheaply brought to Calais from Georgia or Florida. We have the fish waste of the Bay of Fundy as a source of nitrogen, while German salts can be made to furnish the potash needed. The nickel and copper left in the cinder might then be extracted as by-products, while some use might possibly be found for the residuary iron oxide. The subject is one which is well worthy of the attention of the mineralogist, chemist and manufacturer. Before anything should be attempted, a careful survey of the beds ought to be made (preferably under the direction of the department of mines at Fredericton) so as to determine their extent, as well as their distance from the wharves at St. Stephen and from the mills where waste wood could be had for fuel, and an accurate plan of the same made. The country rock in their vicinity should be well studied and its character determined, as well by chemical analysis, as by microscopic investigation, since it is not unlikely that this might to a certain extent be the means of enabling one to judge whether the St. Stephen deposit might be classed among those likely to pay for working or not. Edward Jack."

St. Andrews Beacon - Dec. 5, 1895 Interest in the St. Stephen nickel mines is again excited. Experts representing capitalists

have been on the ground within a few days and have confidence to lease several mineral properties. It is said the Todd, Hall, Boardman and Carroll leads will all be worked next year.- Globe."

S.J. Daily Sun - Nov. 11, 1895 Charlotte Co. - St. Stephen, Nov. 7. - The nickel mines are again in evidence. An expert named J.H. Kelley, belonging to Boston, spent two years here camping on the mine. He dug down a few feet in several places and sent many lots of samples away. Most of his time was spent around the hotels, apparently only keeping a watchful eye on the mines. He has been away for a year now, but a few days ago another gentleman came to town with letters of introduction from Mr. Kelley. He has arranged for leases of all the property and has had men at work getting more specimens. He talks of putting diamond drills in and employing many men this winter, and has looked out a chance to run a railroad down a natural valley to tide water. Those most deeply interested in the mines think that they are soon to be developed in earnest."

St. Andrews Beacon - Dec. 5, 1895 Interest in the St. Stephen nickel mines is again excited. Experts representing capitalists have been on the ground within a few days and have confidence to lease several mineral properties. It is said the Todd, Hall, Boardman and Carroll leads will all be worked next year.- Globe."

Nov. 1895 - Copied from: St. Croix Courier - Nov. 10, 1955 60 Years Ago. - The strangers who were here prospecting the nickel mines have departed, taking with them a quantity of ore. They are expected to return at an early date to begin active

St. Andrews Beacon - Nov. 7, 1895 The nickel mining boom has been again revived in St. Stephen by the appearance of representatives of a Boston syndicate, who have been buying up mining claims. It is reported that they have secured the Todd and Boardman properties and that they are removing ore from the Carroll mine. It will be a grand thing for St. Stephen if these mines are developed."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Nov. 12, 1896 The Nickel Mines. - There has been a great boom of late in the Canadian nickel mining industry. Three locations in the vicinity of Sudbury have been sold within a week or ten days for $350,000, and several other mines have changed hands at good figures. It is said that new methods of treating the ore have been discovered which will increase the profits of the mine owners. The St. Stephen nickel mines are still here, but not much has been said recently concerning their operation. The belief holds in many quarters that they can be operated to advantage, but no one has yet come forward with pluck and capital sufficient to make a thorough test. This is a pity, more particularly when the fact is considered that there is a good supply of unemployed capital on the St. Croix."

N.B. Reporter - May 6, 1896 The Charlotte County nickel deposits are to be explored. A diamond borer will begin operations at once and go to a depth of six hundred feet. Mr. Leckie has secured the right to explore for a year, and arrangements are completed for the Offert nickel company of New Jersey to operate the mines if advisable."

S.J. Daily Sun - May 4, 1896 The nickel deposits here are now to be explored. A diamond borer will begin operations at once and go to a depth of six hundred feet. Mr. Leckie of Londonderry iron mines has secured the right to operate for a year, and arrangements are completed for the Offert nickel company of New Jersey to operate the mines if the borings establish the existence of satisfactory mineral."

St. Croix Courier - Nov. 12, 1896 The Nickel Mines. - There has been a great boom of late in the Canadian nickel mining industry. Three locations in the vicinity of Sudbury have been sold within a week or ten days for $350,000, and several other mines have changed hands at good figures. Feb. 1896 - Copied from: St. Croix Courier - Feb. 9, 1956 60 Years Ago. - And now we are told that a New York syndicate of unlimited means have become bidders for our nickel mines."

St. Croix Courier - Jul. 29, 1897 What has become of the diamond drill that the council was to obtain for use at the nickel

Daily Telegraph - Nov. 4, 1898 Nickel Mines Leased. The Todd, Hall and Carroll nickel mining properties at St. Stephen have been leased to a strong syndicate, who will at once examine the mines thoroughly, and without doubt determine if minerals can be found in paying quantities. These mines would have been opened some time ago but the different parties were unable to secure all the properties required. Now that this has been accomplished a mining boom will soon be in full blast in that town and will, of course, be a great help to the business man, as well as the laboring class, on the St. Croix. The owners of the property have confidence that the parties leasing from them will find nickel, gold and copper in paying quantities and it is hoped that these predictions may be verified."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

S.J. Globe - Sep. 24, 1898 St. Stephen, Sept. 23. - Mr. H. E. Hall has received an order from Boston for a sample shipment of pyrrhotite from the St. Stephen mines of sufficient quantity to make a practical test of its value. Dr. Bailey, who is now on a tour of Charlotte County has recently been looking over these mines with a view of ascertaining the true character of the ore."

Nov. 1898 - Copied from: St. Croix Courier - Nov. 29, 1928 30 Years Ago. - The last Royal Gazette contains notice of application for licenses to search for minerals by John D. Chipman, M.P.P., and G.W. Ganong, M.P. The territory is located between the Basswood and Old Ridge Roads."

S.J. Globe - Nov. 5, 1898 and Daily Sun - Nov. 7, 1898 The Nickel Mines. - St. Stephen and Calais Looking for a Boom from the Operations. - [Bangor Commercial]. -The report that the nickel mining land situated about two miles northward from St. Stephen has been leased to G.H. Harrison, a capitalist from London, England, is good news for this section. Although the mining land is under the English crown, Calais rejoices, for the two neighborly cities facing each other from opposite sides of the St. Croix, are closely bound to each other by ties of relationship and business. Whatever affects Calais is reflected in St. Stephen and vice versa. Both are prosperous and busy cities and the line of national demarkation is blotted out in the striving towards success. It is many years ago since nickel was first discovered north of St. Stephen. The area where nickel is evident covers about three square miles and gives promise of great development. The St. Stephen nickel mines may become an important factor in the business of this busy down east section. Frank Todd said to a Commercial man Wednesday evening: I am part owner in this land, but you understand that the mineral of metal beneath the surface belongs to the Crown and the same mining laws prevail here as in the Klondyke. Mr. Harrison leases the land conditionally for a term of years simply to experiment, to determine whether or not there is enough nickel under the surface to pay for the expense of mining. He will, I understand, sink pits and get assays in order to definitely determine the percentage of nickel. On those proposed tests depends the fate of the mines. There seems to be plenty of nickel there, but perhaps it has never been properly worked. If the test should prove satisfactory I presume that there will be busy times up there, and that labor will be given employment. I hope so. We cannot have too many industries down this way. Mr. Harrison was out to the mining land Wednesday making a superficial examination. It is not believed that much will be done this year but to sink a pit or two, and get assays. If the assays should prove satisfactory there will be a great boom in St. Stephen next spring."

Daily Telegraph - Nov. 4, 1898 Nickel Mines Leased. The Todd, Hall and Carroll nickel mining properties at St. Stephen have been leased to a strong syndicate, who will at once examine the mines thoroughly, and without doubt determine if minerals can be found in paying quantities. These mines would have been opened some time ago but the different parties were unable to secure all the properties required. Now that this has been accomplished a mining boom will soon be in full blast in that town and will, of course, be a great help to the business man, as well as the laboring class, on the St. Croix. The owners of the property have confidence that the parties leasing from them will find nickel, gold and copper in paying quantities and it is hoped that these predictions may be verified."

N.B. Reporter - Dec. 14, 1898 and Kings County News - Dec. 15, 1898 The new pits at the St. Stephen nickel mines show a large surface of ore and the reports of the latest assays are so favorable that there seems little doubt of the mines being worked by the company of capitalists now in control. The percentage of sulphur is exceedingly high, exceeding, it is said, that needed to make the ore workable for its sulphur alone, and the absence of arsenic is a masked feature in its favor."

St. Andrews Beacon - Nov. 10, 1898 Nickel Mines Leased. - The Todd, Hall and Carroll nickel mining properties at St. Stephen have been leased to a strong syndicate, who will at once examine the mines thoroughly, and without doubt will determine if minerals can be found in paying quantities. These mines would have been opened long ago but the different parties were unable to secure all the properties required. Now that this has been accomplished a mining boom will soon be in full blast in that town, and will, of course, be a great help to the business men, as well as the laboring class, on the St. Croix. The owners of the property have confidence that the parties leasing from them will find nickel, gold and copper in paying quantities and it is hoped that these predictions may be verified. - Tel."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Nov. 10, 1898 Nickel at St. Stephen. - [St. John Gazette]. - The nickel mines at St. Stephen have been leased to an English syndicate with almost unlimited capital, whose representative, Mr. G.H. Harrison, was in the city a few days ago. Whether the mineral was present at these mines in sufficient quantity to justify a large expenditure of money in their development has always been a question, but it is presumed that question has been settled to the satisfaction of Mr. Harrison's associates, else operations on the large scale contemplated would not receive serious consideration. Pits are to be sunk at once and if the results are not disappointing reduction mills will be built on the nickel bearing area, which covers about three square miles, and a large force of laborers will be employed. Nickel in Canada, so far as is known, exists in any considerable quantity only at Sudbury, Ontario, and St. Stephen. The Gazette is not aware of any mines that are being developed in the United States. It is abundant in Saxony, Westphalia, Hungary and Sweden, and is used exclusively for plating other minerals and in manufactures of various kinds. It is probable that the market in Canada and the United States would absorb the bulk of the output of the mines at St. Stephen if the company should not prefer to send it abroad. Now that

Charlotte county is about to have these mines developed, the Gazette would like to see some capitalists take hold of some of her extensive bogs and convert them into cranberry meadows. For growing cranberries some of these long neglected bogs would be hardly less profitable than a nickel or a gold mine."

N.B. Reporter - Dec. 14, 1898 and Kings County News - Dec. 15, 1898 The new pits at the St. Stephen nickel mines show a large surface of ore and the reports of the latest assays are so favorable that there seems little doubt of the mines being worked by the company of capitalists now in control. Mr. Harrison was out to the mining land Wednesday making a superficial examination. It is not believed that much will be done this year but to sink a pit or two, and get assays. If the assays should prove satisfactory there will be a great boom in St. Stephen next spring."

St. Andrews Beacon - Jun. 8, 1899 The latest news from those who have in hand the development of the St. Stephen nickel beds (says the Courier) is not as encouraging as that formerly received. The assays made of the ore sent to England indicate that the ore would not pay for working, but the promoters think that it may improve as the shaft descends. They have asked for an extension of their options for this purpose."

Semi-Weekly Telegraph - Jun. 24, 1899Mr. Owen Jones, of London, England, arrived in town yesterday, and is a guest at the home of Mrs. Z. Chipman. Mr. Jones is here in the interest of the English syndicate, who have an option in the nickel mines near this town. Mr. Jones wants a further extension on their lease or option, and if secured we understand the company will spend $10,000 at once to develop the mine. Of course there will be no hesitation in the owners granting a further extension, as the time has been so short since the company received the samples for assay during the past winter."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Feb. 16, 1899 The Nickel Mines. - Mr. John D. Chipman, the St. Stephen representative of the English company now in control of the nickel deposits, learns that the shipments of ore have proved satisfactory, and that estimates are being made of the cost of a two hundred foot shaft, with a view of beginning the work in the spring. Mr. Harrison, the agent of the English company, bought out the Todd interest in the mines last fall, so that his company now controls the whole area. He and Mr. Owen Jones, Mr. Chipman's brother-in-law, will be here in May to superintend the work of sinking the new shaft and arrange for further operations. Mr. W.C.H. Grimmer is the company's solicitor in St. Stephen. Mr. Chipman is himself one of the largest investors in this enterprise for the development of the St. Stephen mines and owns one-third of the stock. We congratulate the people of St. Stephen upon the fact that the nickel mines are now in the hands of the right persons, and that there will be no further delay in opening them up."

St. Andrews Beacon - Jun. 8, 1899 The latest news from those who have in hand the development of the St. Stephen nickel beds (says the Courier) is not as encouraging as that formerly received. The assays made of the ore sent to England indicate that the ore would not pay for working, but the promoters think that it may improve as the shaft descends. They have asked for an extension of their options for this purpose."

N.B. Reporter - Feb. 22, 1899 The Nickel Mine. - The residents of Charlotte County have long been proud of their extensive granite quarries, and lately have been hopeful of grand results from the nickel deposits discovered there. And now The Courier says Mr. John D. Chipman learns that the shipments of ore have proved satisfactory, and that estimates are being made of the cost of a two hundred feet shaft, with a view of beginning the work in the spring. Mr. Harrison, the agent of the English company, bought the Todd interest in the mines last fall, so that his company now controls the whole area. He and Owen

Jones, Mr. Chipman's brother-in-law, will be here in May to superintend the work of sinking the new shaft and arrange for further operations. W.C.H. Grimmer is the company's solicitor in St. Stephen. Mr. Chipman is himself one of the largest investors in this enterprise for the development of the St. Stephen mines, and owns one third of the stock."

St. Croix Courier - Jun. 29, 1899 Negotiations are about concluded for an extension of the lease of the nickel mines to the English syndicate and it is now confidently expected that men will at once commence to sink a shaft, eight by twelve feet, to a depth of three hundred feet. Scientific men in England are satisfied that the metal will improve at that depth and are willing to invest money to prove their theory."

St. Croix Courier - Feb. 16, 1899 The Nickel Mines. - Mr. John D. Gazette - Nov. 24, 1899 Some of the best ore yet obtained has been taken from the nickel mine this week. A night crew will be put on at once so that work will go on continuously. - St. Stephen Courier."

St. Croix Courier - Nov. 9, 1899 Eben Hall. - Prof. Wilson of Oak Bay, the Phrenology Expert, States the Result of an Examination of the Cut Recently Published in the Courier. - This picture indicates the motive and vital temperament. The distance from the ear to top head is great, showing firmness, self reliance, and reliability. Once his mind is made up, he feels that he cannot yield. Caution is large; this would prevent him from rushing head long into visionary schemes. He is a solid reasoner. He has mirthfulness. Veneration is large. He would stick to the old established ways and would have reverence for worship. He believes in work. In his younger days he was only happy when swinging an axe, or holding the plow. Force, energy and executive power are his leading points of character."

St. Croix Courier - Nov. 9, 1899 The shaft in the nickel mine is now down fifty-five feet. Work has been impeded lately by water which has rushed in at the rate of one hundred and thirty barrels per day. A steam pump has been put in position this week and work will progress more rapidly."

St. Croix Courier - Oct. 19, 1899 More About the Nickel Mines. - The haste with which a newspaper article is necessarily prepared often leads to omissions, the effect of which is sometimes to create the wrong impression as to existing facts. Thus in the valuable article on St. Stephen's nickel mines, published in last week's Courier, this fact, coupled with the limited space at the disposal of the writer, did not permit as full a reference to matters connected with the development of the mines as was desired. Those familiar with the history of the mines know that as far back as in 1893 W.F. Todd secured licenses which covered the larger portion of the territory now recognized as the centre of the ore deposit. He immediately conveyed his rights in the leases to Messrs. Owen Jones and Geo. H. Harrison for the period of a year, but allowed these gentlemen to continue in control of them until 1896. Under the contract to Messrs. Jones & Harrison it was understood that the work of developing the deposits would be proceeded with, but difficulties which they could not overcome prevented this, and in 1896 Mr. Frank Todd, who in the meantime had secured control of the leases, induced Mr. Leckie, a prominent mining man of Nova Scotia, to take hold and undertake to exploit the mines. Mr. Leckie went so far as to get a diamond drill to the Shore Line station, but it was never taken to the mines and was afterwards removed from St. Stephen. In 1898, the rights controlled by Mr. Todd were again transferred to Messrs. Jones and Harrison, with the result that the work of development is now progressing. The Messrs. Todd have always been anxious to have the mines developed and, in the different attempts made to this end, have urged the prosecution of the work, demanding a very slight return at any time for the trouble and expense incurred by them in the different negotiations that have been carried on from time to time and in continuing the leases."

St. Andrews Beacon - Oct. 19, 1899 Sheriff Stuart, of St. Andrews, was on town on Monday. While his visit here was a busy one, he took time to visit the nickel mines in the afternoon, and was much impressed with the work done, and the quantity of the ore being obtained."

Moncton Daily Times - Sep. 23, 1899 Vein of Gold. - A vein of gold has been struck at the St. Stephen nickel mines. It is said to be two inches wide and of very rich quality."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

Moncton Daily Times - Sep. 23, 1899 Vein of Gold. - A vein of gold has been struck at the St. Stephen nickel mines. It is said to be two inches wide and of very rich quality."

N.B. Reporter - Sep. 20, 1899 The ore at the St. Stephen nickel mines is developing well. A large blast was discharged on Monday and the ore now coming out is very rich."

Semi-Weekly Telegraph - Jun. 24, 1899Mr. Owen Jones, of London, England, arrived in town yesterday, and is a guest at the home of Mrs. Z. Chipman. Mr. Jones wants a further extension on their lease or option, and if secured we understand the company will spend $10,000 at once to develop the mine. Of course there will be no hesitation in the owners granting a further extension, as the time has been so short since the company received the samples for assay during the past winter."

St. Andrews Beacon - May 4, 1899 Canada's Nickel Mines. - Mr. R.G. Leckie, managing director of the Orford Copper Company, has a long letter in the Toronto Globe, in which he replies to those who have been urging on the government the necessity of placing an export duty on nickel ore and matte. He points out that Canada does not possess a monopoly of nickel, - that there is plenty of it in New Caledonia and in Norway, and, moreover, that the market is limited. He declares an export duty would ruin the Canadian industry. Owing to the scarcity of bituminous coal in the neighborhood of Sudbury, refining, he says, would be much more costly there than in the United States, unless special considerations were given. We quote a few of his remarks in which he refers to the nickel deposits in this County. - In Norway great deposits of nickel-bearing pyrrhotite have been opened, but they are low grade. Prof. Voght, an eminent authority, states that metal assaying 98 to 99.50 nickel can be produced in Norway at 40.2 c per kg., equal to 18 1/2 c per pound. Some richer deposits have been opened, running from 3 to 6 per cent. nickel and have been secured by a New York gentleman. I am asked to examine some other properties there next month, with a view to purchasing them and supplying the American markets. Mr. Rothwell reports a discovery of ore in British Columbia assaying 7 per cent. nickel and another one near Binbowrie, South Australia, assaying 19 and 26 per cent. Extensive masses of pyrrhotite, carrying nickel and copper, are found near St. Stephen, N.B., and are being exploited. According to Mr. Thos. MacFarlane, F.R.C.S., the ore carries nearly 3 per cent. Cu and Ni, which is equal in value to any of the mines in this district. Mr. McFarlane is an accomplished metallurgist and has had many years' experience in Norway in charge of nickel and cobalt mines and works. Should the St. Stephen nickel be found in sufficient quantities to justify its being mined, Mr. Leckie's objection to Canadian refining would not apply, as the necessary coal could be obtained here very cheaply."

St. Andrews Beacon - Oct. 19, 1899 Sheriff Stuart, of St. Andrews, was on town on Monday. While his visit here was a busy one, he took time to visit the nickel mines in the afternoon, and was much impressed with the work done, and the quantity of the ore being obtained."

St. Andrews Beacon - Jul. 6, 1899 St. Stephen Nickel Mines.- Negotiations are about concluded for an extension of the lease of the nickel mines to the English syndicate, and it is now confidently expected that men will at once commence to sink a shaft, eight by twelve feet, to a depth of three hundred feet. Scientific men in England are satisfied that the metal will improve at that depth and are willing to invest money to prove their theory. - Courier"

St. Croix Courier - Jul. 13, 1899 St. Stephen people are not so eager for nickel smelting works to be established in their vicinity, now that they have learned that the sulphurous odors there from will destroy vegetation for several miles around."

N.B. Reporter - Sep. 20, 1899 The ore at the St. Stephen nickel mines is developing well. A large blast was discharged on Monday and the ore now coming out is very rich."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Andrews Beacon - Jul. 13, 1899 Developing Nickel. - It is an assumed fact now that the deposits of ore on the Basswood Ridge Road owned by Messrs. Todd, Hall and Carroll will be developed and to a sufficient extent to enable the parties who control the properties to determine just what quantity of ore there is and the value of it. A perpendicular shaft is to be sunk to a depth of two hundred feet. Mr. Stephen Chamber, of Calais, will have charge of the work, which is to commence next week on the Carroll property. Mr. Carroll will act as the overseer in the interest of our own English parties, who are developing the

St. Andrews Beacon - Sep. 7, 1899 Prof. McFarlane, government assayer at Ottawa, was in town last week. He had a block of ore weighing about a ton sent from the mines here to the assay office at Ottawa. He thought the prospects for mining in the vicinity were very favorable."

St. Andrews Beacon - May 4, 1899 Canada's Nickel Mines. - Mr. R.G. Leckie, managing director of the Orford Copper Company, has a long letter in the Toronto Globe, in which he replies to those who have been urging on the government the necessity of placing an export duty on nickel ore and matte. He points out that Canada does not possess a monopoly of nickel, - that there is plenty of it in New Caledonia and in Norway, and, moreover, that the market is limited. He declares an export duty would ruin the Canadian industry. Owing to the scarcity of bituminous coal in the neighborhood of Sudbury, refining, he says, would be much more costly there than in the United States, unless special considerations were given. We quote a few of his remarks in which he refers to the nickel deposits in this County. - In Norway great deposits of nickel-bearing pyrrhotite have been opened, but they are low grade. Prof. Voght, an eminent authority, states that metal assaying 98 to 99.50 nickel can be produced in Norway at 40.2 c per kg., equal to 18 1/2 c per pound. Some richer deposits have been opened, running from 3 to 6 per cent. nickel and have been secured by a New York gentleman. I am asked to examine some other properties there next month, with a view to purchasing them and supplying the American markets. Should the St. Stephen nickel be found in sufficient quantities to justify its being mined, Mr. Leckie's objection to Canadian refining would not apply, as the necessary coal could be obtained here very cheaply."

St. Croix Courier - Aug. 3, 1899 Work at the nickel mine is progressing favorably, eight men being now employed. A blacksmith shop has been erected and a circular building, thirty-two feet in diameter, erected to shelter the horse used in hoisting. The mouth of the pit has been timbered and prepared for the work of sinking the shaft which will commence next week. Fourteen men will then be at work and will constitute the permanent crew. Ore will be shipped when the shaft is down thirty feet and regularly each fortnight after that."

N.B. Reporter - Aug. 23, 1899 Work at the nickel mines is progressing favorably and the results are surprising everyone. Though the shaft is down only about thirty feet, great blocks of solid metal are being taken out. There is practically no rock, the blocks being composed of almost solid nickel, cobalt, sulphur, gold and iron. At the present stage of development the future of the nickel mines looks very promising. - St. Croix Courier"

St. Croix Courier - Jun. 29, 1899 Negotiations are about concluded for an extension of the lease of the nickel mines to the English syndicate and it is now confidently expected that men will at once commence to sink a shaft, eight by twelve feet, to a depth of three hundred feet. Scientific men in England are satisfied that the metal will improve at that depth and are willing to invest money to prove their theory."

St. Croix Courier - Oct. 19, 1899 More About the Nickel Mines. - The haste with which a newspaper article is necessarily prepared often leads to omissions, the effect of which is sometimes to create the wrong impression as to existing facts. Thus in the valuable article on St. Stephen's nickel mines, published in last week's Courier, this fact, coupled with the limited space at the disposal of the writer, did not permit as full a reference to matters connected with the development of the mines as was desired. Those familiar with the history of the mines know that as far back as in 1893 W.F. Todd secured licenses which covered the larger portion of the territory now recognized as the centre of the ore deposit. He immediately conveyed his rights in the leases to Messrs. Owen Jones and Geo. H. Harrison for the period of a year, but allowed these gentlemen to continue in control of them until 1896. Under the contract to Messrs. Jones & Harrison it was understood that the work of developing the deposits would be proceeded with, but difficulties which they could not overcome prevented this, and in 1896 Mr. Frank Todd, who in the meantime had secured control of the leases, induced Mr. Leckie, a prominent mining man of Nova Scotia, to take hold and undertake to exploit the mines. Mr. Leckie went so far as to get a diamond drill to the Shore Line station, but it was never taken to the mines and was afterwards removed from St. Stephen. In 1898, the rights controlled by Mr. Todd were again transferred to Messrs. Jones and Harrison, with the result that the work of development is now progressing. The Messrs. Todd have always been anxious to have the mines developed and, in the different attempts made to this end, have urged the prosecution of the work, demanding a very slight return at any time for the trouble and expense incurred by them in the different negotiations that have been carried on from time to time and in continuing the leases."

St. Andrews Beacon - May 10, 1900 The Nickel Industry. - Mr. J.D. Chipman, who is interested in the St. Stephen nickel mines, says that the English capitalists, who began the development of the mine, will confer with Mr. Grimmer, who is now in England, before they decide upon future action. It is expected that work will be resumed with a crew of expert miners."

S.J. Daily Sun - Jun. 29, 1900 St. Stephen. - June 27. - The last shipment of nickel ore from the Hall mine went astray after reaching Liverpool and has not yet been assayed. Further proceedings are suspended until the assay is made. The bonders announce that they are determined to continue the shaft, but just when work will be resumed and under what conditions cannot be ascertained at present. The lease expires in a few months."

St. Andrews Beacon - May 10, 1900 The Nickel Industry. - Mr. J.D. Chipman, who is interested in the St. Stephen nickel mines, says that the English capitalists, who began the development of the mine, will confer with Mr. Grimmer, who is now in England, before they decide upon future action. It is expected that work will be resumed with a crew of expert miners."

St. Croix Courier - Jul. 25, 1901 The English company, represented by Major Chipman and W.C.H. Grimmer, has secured a renewal of the lease of the nickel mine from J.A. Carroll and the diamond drill will commence operations today."

St. Andrews Beacon - Feb. 28, 1901 St. Stephen Nickel. - The last issue of the Labour Gazette has an article on 'The Copper and Nickel Industries of Canada,' in which the following quotation from a speech lately delivered at the annual meeting of the Canadian Mining Institute, by Major Leckie, is reproduced:- 'The province of New Brunswick is likely to be a producer of nickel, unless the threatened fall in the price of nickel should follow from over production. Near St. Stephen, large masses of pyrrhotite exist, which appear to be more extensive and continuous than those in Nipissing and Algoma, the average in places running fully 3 per cent copper and nickel. Their location is admirable, being within half a mile of the railway and less than a mile from tidewater. Cheap labor, cheap fuel and ample water power, all favor economical mining and treatment of ore.' The Gazette does not seem to be aware of the factthat New Brunswick has a very promising copper industry in the mine which is now being developed in the parish of West Isles in this County."

May 1901 - Copied from: St. Croix Courier - May 18, 196160 Years Ago. - The local managers of the nickel mine have received instruction from England to procure a diamond drill and sink a shaft to a depth of five hundred feet. Negotiations are being underway to procure the use of the government's diamond drill."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

S.J. Star - Jul. 13, 1901 That Nickel Mine. - A Calais letter says: 'The government diamond drill arrived at St. Stephen on Thursday and operations at the nickel mine over there will be resumed at once. The promoters of the mine are confident that the venture will prove a paying one, and the result of the test will be awaited with interest. There are numerous mineral deposits along the shores of the St. Croix, and the success of the St. Stephen mine will doubtless be the means of starting operations all along the line. English capitalists are behind the venture now being carried on, and a most thorough and careful test will be made to determine whether or not the ore exists in sufficient quantity to warrant the establishment of a smelter."

St. Croix Courier - Jul. 18, 1901 The government diamond drill has arrived for use at the nickel mine, but operations are delayed for a few days pending the settlement of controversies that have arisen concerning the leases."

St. Croix Courier - Jul. 25, 1901 The English company, represented by Major Chipman and W.C.H. Grimmer, has secured a renewal of the lease of the nickel mine from J.A. Carroll and the diamond drill will commence operations today."

St. Andrews Beacon - Aug. 29, 1901 The government diamond drill which is at work on one of the nickel deposits near St. Stephen, has got down 90 feet. The engineer says that the material he is cutting through is the hardest he has ever struck."

St. Croix Courier - Aug. 22, 1901 The work of the diamond drill at the nickel mine is progressing favorably, a depth of over one hundred feet having been reached. The first shipment of ore to England was made on Tuesday. So far the core brought up has been mostly of rock without any large quantity of mineral."

St. Andrews Beacon - Aug. 29, 1901 The government diamond drill which is at work on one of the nickel deposits near St. Stephen, has got down 90 feet. The engineer says that the material he is cutting through is the hardest he has ever struck."

St. Croix Courier - Jul. 18, 1901 The government diamond drill has arrived for use at the nickel mine, but operations are delayed for a few days pending the settlement of controversies that have arisen concerning the leases."

Weekly Record - Fri., Jan. 17, 1902 Work at the nickel mine St. Stephen has been temporarily suspended, awaiting the arrival of a further supply of diamonds from the government for their drill."

Kings County Record - May 30, 1902 English capitalists interested in the St. Stephen nickel deposits have asked the government to escheat the mining rights to those who are taking no steps to develop the property, and so open the areas to them. The tests already made have convinced them that the ore is worth further investigation, if they can control the rights. If satisfied, they propose to expend about a million dollars in a nickel working plant at or near the mines."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Andrews Beacon - Jun. 5, 1902 St. Stephen Nickel. - Reports Vary As to the Value of the Minerals Discovered. - English capitalists interested in the St. Stephen nickel deposits are reported to have asked the government to escheat the mining rights of those who are taking no steps to develop the property and so open up the areas to them. Tests already made have convinced them that the ore is worth further investigation, if they can control the rights. If satisfied, they propose to expend about a million dollars in a nickel working plant at or near the mines. - Calais Paper. From the summary report of the Geological Survey Department for 1901 the following is taken, bearing upon this matter:- The Government drill has been in operation in connection with the nickel deposits near St. Stephen, but without satisfactory results as yet. The extreme hardness of the rock, a crystalline diorite with disseminated pyrrhotite, makes progress extremely slow and expensive, while no important increase in the percentage of nickel has yet been found to warrant the outlay."

St. Croix Courier - Sep. 18, 1902 The Nickel Hearing. - Surveyor General Dunn was in town on Tuesday and, during the afternoon and evening, conducted a hearing into the application of Jones and Harrison, of London, England, for an escheat of the nickel mining leases held by Frank Todd and J.A. Carroll. The evidence of J.A. Carroll was taken and much time devoted to legal arguments. Mr. Carroll was represented by M. Macmonagle, K.C., and Jones and Harrison by W.C.H. Grimmer, K.C. Mr. Todd did not attend. A.T. Loggie and Miss Gertrude McDonald, stenographer, accompanied Hon. Mr. Dunn."

Weekly Record - Fri., Jan. 17, 1902 Work at the nickel mine St. Stephen has been temporarily suspended, awaiting the arrival of a further supply of diamonds from the government for their drill."

St. Andrews Beacon - Nov. 12, 1903 It is reported that the mining properties on the Basswood Ridge Road recently under lease from the government to Mr. Frank Todd are to be worked in the spring by the English syndicate, who formerly worked the Carroll property. Mr. Todd's lease having expired and the English people having offered to give a bond that they would expend $1500 within six months after receiving lease, the government have decided to grant them the lease. It is hoped that the operations will warrant further large expenditures and a general working of the mine."

St. Andrews Beacon - Jun. 25, 1903 Dr. R.W. Ells, of the Dominion Geological Survey, will spend some weeks in investigating the mineral wealth of Charlotte county, beginning with the nickel deposits at St. Stephen. He will then proceed to Letite to inspect the copper mines in that neighborhood."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Apr. 9, 1903 The Government's Mining Policy. - W.C.H. Grimmer, M.P.P., Ventilates the Government's Transactions Which Have Tied Up Charlotte County's Nickel Mines. - In his speech in the debate on the address Tuesday afternoon in the legislature, Mr. Grimmer, who was received with applause on rising to address the house for the first time, said he had listened with a great deal of pleasure to the speeches of the several honorable gentlemen who had preceded him, and he had heard congratulations offered for the efforts that had been made, but he was sorry not to be able to congratulate the honorable surveyor general on the address he had just delivered, as he had expected to hear much more aggressive remarks and a much better reply to the speech of the honorable member from Northumberland, who had stated many facts that evidently had rested uneasily upon the bosom of the hon. gentlemen opposite. ... speech from the throne did not point out in what manner the mineral policy of the government was developing the vast resources of the province. Why is it that so many mining areas within the province are now held under lease without a pretense at compliance by the lessee with the provisions of the mining act? In Charlotte county he had experience with the mineral policy of the government, especially in respect to an area of five square miles, which was held by one man, and had been practically so held near St. Stephen under lease since 1893, with little or no work having been done thereon, and the only compliance made with the mining act was the payment of the annual amount to the government necessary to hold the leases. Mr. Pugsley - Will the hon. gentleman name the holder of the leases. Mr. Grimmer - The gentleman who holds the areas is Mr. Frank Todd. Hon. Mr. Pugsley - Is it not a fact that those areas are under the control of clients of my hon. friend? Mr. Grimmer - We have not had control of the areas for more than two, or rather nearly three years, but at one time we did have an option from Mr. Todd for the purpose of developing the same in consideration of royalties to be paid Mr. Todd if the mineral proved of commercial value. The sum of nearly $7,000 had been spent by himself and a friend for two English gentlemen whom they represented in developing the property, but the expense of sinking the shaft, which was put down 77 feet 10x14 feet wide and fully timbered, was so great with the means at hand that the work had to be discontinued. Then we had obtained the government drill and taken it to Charlotte county under the understanding that the options would be renewed when the work was resumed. It was represented that the drill would bore from 7 to 20 feet per day of 10 hours, but for days with a pressure of 3,000 lbs. it would bore only 14 inches. It was impossible to make the necessary development within the time limit of the options, and when that time had elapsed the parties refused to renew, and particularly was this the case with Mr. Carroll, who demanded a payment of $500 for a three months renewal, with a further payment of $500 at the end of the three months. It was impossible to comply with the demands under the circumstances, and the surveyor general was appealed to by memorial in which all the facts were set out. Two hearings were had, a judgement was given in which the surveyor general stated that the facts alleged in the memorial had been proved by the petitioners with entire satisfaction, but because of work done by the petitioners on an adjoining property which practically develop the Todd areas, he thought that Mr. Todd had a right to assume that the property was being developed in compliance with the terms of the mining act, and he (the surveyor general) would allow him, Mr. Todd, nine months from the date of the judgement, within which to begin and carry on effective operations on the property to his satisfaction. Against this Mr. Todd's own statement that he did not intend to spend his money in developing the property, but would try and induce foreign capital to come in and develop it, from which he would reap all the benefit without any trouble or expense. Hon. Mr. Pugsley - Is it not the case that during the period referred to, your clients held under lease an option which prevented Mt. Todd from entering the property for development? Mr. Grimmer - Only for a small portion of the time, and fully two years had elapsed after the expiration of the option before the memorial was files, and not a blow had been struck by Mr. Todd on the areas, and the option from Mr. Todd had expired long before the government drill had gone on the Carroll property. Hon. Mr. Pugsley - What could the government do about that? Compel Mr. Todd to work his areas in compliance with the terms of his lease, which require him to work effectively and maintain and support working shafts, pits, drifts, etc.; to make returns to the government; to employ certain numbers of men and otherwise to carry on general and effective mining work to the property whereby a revenue would accrue to the crown. But Mr. Todd, who merely pays the annual fee necessary to hold the leases, refuses an option to those who have spent so much money, and says he will bring in foreign capital to develop the mines and give him the benefit. This matter is of great importance in Charlotte and is a subject of lively interest to our citizens, and that they have reason to be interested you may learn when I tell you that on the second hearing of the investigation I put in evidence a solemn declaration of Mr. Harrison, one of the English gentlemen whom I represented, in which he stated that when he first came to this province to try and obtain an option of the area he was authorized and prepared, if he could obtain the same upon a satisfactory basis, to expend in developing the property the sum of œ50.000 and that if upon such development ore of commercial value ever found, he was further authorized to expend œ350,000 in erecting works and such other erections as were necessary to carry on large and effective mining operations, which would certainly result in lasting benefit not only to Charlotte county, but would be of great benefit to the entire province and that it would attract the eyes of capitalists and mining prospectors to the mineral deposits of the province now undeveloped and lead to general exploration of all kinds of mineral deposits. In respect to this Carroll lease on which the shaft was sunk. I wish to state that this lease is one of the twenty five years leases for which the lessee paid the government ten dollars and has never since paid one cent more, nor is he liable for any further amount, and for this lease and his interest therein he has asked us to pay him the sum of $5,000, which might be considered a pretty fair speculation from his standpoint, and if obtained be a fair recompense for all the time, expense and worry he has had over the proposition. I do not make these remarks to find fault with the government, but to call in fair criticism their attention to the manner in which, in this case, the mining act is enforced, in order that a change may be made whereby the great mineral resources of our grand old province may be worked and developed. I fully believe we have in New Brunswick a vast share of mineral wealth which only needs work to bring it out and therefrom a vast source of revenue would be opened up to the government, which would place them beyond all cause for worry over financial matters, and the government would in this way, as I believe they are anxious for the general good, welfare and advancement of our province which all its true and loyal sons should at all times be ready to put forth."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Aug. 22, 1929 Rushing Work at the Mines. - Work at the new mines is being rushed these days. Both drills are hard at it and there is a possibility that more drills may be brought here. Owing to the drought, the drilling crews are having difficulty in locating sufficient water. A small stream which they had tapped nearby, was not supplying sufficient water and one of Haley's trucks was procured to haul an additional supply from the nearest hydrant in town. More pipe has been purchased, however, and connection will be made with a larger stream about three quarters of a mile distant."

St. Croix Courier - Oct. 10, 1929 Nickel-Copper Sought here Years Ago. - ...... [Reprint of article in Courier of Oct. 12 and 19th, 1899.]"

St. Croix Courier - Apr. 25, 1929 Mining Men Here. - Representatives of the company holding the local mining leases have been in town twice recently and it is believed that some real development in these properties will commence at an early date."

St. Croix Courier - Jun. 27, 1929 Electrical Survey of Mining Leases Now Under Way. - Affairs in connection with the local mining development are proceeding slowly but surely. A new company, with a Mr. Lowe as their local representative, have become interested and have a crew of men making a so called electrical survey of the ground. Of course they are not handing out any information concerning their findings, but it is understood that one or more diamond drills are to be brought here at once and this looks very encouraging. Recently, through the good offices of A.R. MacKenzie, M.L.A., an appropriation of $200 was secured from the Public Works Dept. to repair the road into the mine and the work is now under way. Developments such as this are always slow moving affairs but there is good reason to believe that a fair grade of mineral in large quantities is here and sooner or later work on a large scale will be undertaken."

St. Croix Courier - Aug. 22, 1929 Rushing Work at the Mines. - Work at the new mines is being rushed these days. Both drills are hard at it and there is a possibility that more drills may be brought here. Owing to the drought, the drilling crews are having difficulty in locating sufficient water. A small stream which they had tapped nearby, was not supplying sufficient water and one of Haley's trucks was procured to haul an additional supply from the nearest hydrant in town. More pipe has been purchased, however, and connection will be made with a larger stream about three quarters of a mile distant."

St. Croix Courier - Aug. 13, 1953 More Drilling in Prospect On Mining Claims. - New Brunswick's mining boom is sparking renewed interest in ore bodies which have long been known to exist near St. Stephen. Representatives of a company known as Strategic Metals have been active during the past several days checking up the reports of previous explorations in the vicinity of Heathland and Basswood Ridge, and it is possible a drill may be brought in to carry out further investigations. The most extensive explorations of the prospects was conducted some seven years ago by International Nickel, which operated a drill at various locations. The cores reportedly showed ore of satisfactory grade, but the quantity evidently was too small to warrant development. The representatives of Strategic Metals, using new instruments, have been going over the ground again and are reportedly optimistic that their findings justify more drilling."

URN: 0039 / 0043 / Names: Rogers Farm - St. Stephen; Hall-Carroll - St. Stephen;

St. Croix Courier - Sep. 24, 1959 Company goes Ahead. - 20 Miners To Probe Underground Ores In Search For Nickel. - An official of St. Stephen Nickel Mines Ltd. said Monday that about 20 experienced miners will be brought to the site in ? weeks to continue geological exploration underground. Perched near the tall headframe on the property, Karl Thomsom of ..?.. a consulting engineer with the firm, said it would take 'all ..?.. time to get the hoist and compressor ready for the underground operation.' He said the company had purchased two pieces of equipment but they had not arrived yet. Cost of the hoist and compressor, major ..?.. in the head frame's role, is approximately $50,000. When this installation is completed a regular mining operation will tunnel a shaft to about the 300- foot ..?.. Here the company will continue exploration work to back up surface drilling results of what it ..?.. 'proven ore deposits.' Right now construction workers are putting the finishing touches on the 70-foot wooden head frame. ../.. miners' changing quarters, ..?.. in a nearby building, still has some 'inside work' to be completed, Mr. Thomson said. The head frame, collared down by a protective rectangular cement casing to the 22-foot level, resembles a grain elevator. Erect Building. - It houses a set of pulleys which govern the movement of a three-department section of buckets or cages drawing up ore or personnel from the depths below. The head frame, when completed, will contain two ore bins from which contents will roll into waiting trucks. Workmen are now constructing a fairly large building which will house the hoist and compressor. The mine is located roughly about four miles from St. Stephen in Basswood Ridge, centred approximately on the old Rogers farm and linked with the Hall-Carroll deposits, about 2600 feet to the southeast and across the other side of the highway."

St. Croix Courier - Jul. 30, 1959 60 Years Ago. - Work at the nickel mine is progressing favorably, eight men being now employed. A blacksmith shop has been erected, and a circular building, 32 feet in diameter erected to shelter the horse used in hoisting. Ore will be shipped when the shaft is down thirty feet."

St. Croix Courier - Jul. 23, 1959 Mining Shaft Is Being Sunk Within Basswood Ridge Area. - After Drill 25,000 feet Indicates 1,000,000 Ton Ore In One Zone Alone. - St. Stephen Nickel Mines Ltd. are sinking a shaft to develop ore underground in Basswood Ridge area, about four miles from St. Stephen. The first load of timber for the operation arrived yesterday and today with the head frame plus hoisting equipment slated to arrive soon. Work on the sinking of the mine shaft is already underway, according to officials. H.I. Bergmann, consulting engineer of the company, in an official press conference with the Courier, said the directors of the company had authorized sinking of the shaft with the site picked and a headframe purchased, presently being dismantled and should be on the property during the week. Immediate objective is to sink the shaft 300 feet and develop the ore on two levels. Occurrence of the ore in lenses is such, said Mr. Bergmann, it is expected underground development will outline a much greater tonnage than that indicated by surface diamond drilling. A contract has been arranged for the shaft and work is in progress. It is expected the shaft will be sunk to a 30 feet depth and the headframe erected in about a month. The company strongly suggested to contractors local men be employed where possible - and such is being carried out, said Mr. Bergmann. Three diamond drills are now in operation, and have been for some time, dispersed throughout the property. A local shovel, tractor and trucks should be employed in the operation. Excellent progress has been made in the diamond drilling program being carried out on the property of St. Stephen Nickel Mines at St. Stephen, said the mining engineer. Three diamond drills have been operating continuously and the object of one million tons of nickel-copper appears to have been reached. The next stage is the development of the ore underground. A total of over 25,000 feet of diamond drilling has been carried out on the property since 1957. Indicated ore on the Roger's zone alone is approaching 1,000,000 tons while the Hall-Carroll zone contains an additional 250,000 tons. Average grade of this ore is approximately $18.00 per ton at present metal prices. Over-all operating costs should be less than $10.00 per ton which leaves an excellent margin of profit. In addition to the above, there are another 10 major geophysical anomalies on the property which have every indication of becoming important ore zones. most of these have not been explored but 'C' zone, which has been partially developed. has shown the highest grade ore yet encountered on the property. A hole in this zone intersected 18 feet with a gross value of $55.00 per ton. Results of the geophysical surveys were so encouraging that an additional 80 claims, comprising approximately 3,200 acres, were acquired immediately west of the original property. A geophysical survey has just been completed on this area and several potential zones have been indicated. Further property acquisitions have recently been made to add to already large acreage. Plans are being made to have metallurgical tests carried out on representative ore samples using a new smelting process. This process has already been tested successfully on other nickel-copper ores and, if successful on the St. Stephen ore, it would allow a completely integrated operation at the property from crude ore to the final recovery of nickel, copper and cobalt and any other by-products. Such an operation would probably mean that large tonnages of lower grade material that are not now classed as ore would become economical. The property is strategically located for a low cost mining operation. Highway, railroad and tidewater shipping facilities are available. There is an ample supply of power available and an excellent source of labour. These, combined with the excellent results obtained in the exploration program, show the property to have better than average mine potential. The annual meeting of the company is being held in Saint John in the morning this coming Saturday and it is expected the meeting will be well attended as a great many shareholders from the U.S. have announced their intention of attending. A visit to the property is planned in the afternoon for all those wishing to examine the ore zones and the work in progress."

St. Croix Courier - Apr. 16, 1959 On Town Outskirts. - Nickel Company Active Explorations, Findings. - St. Stephen Nickel Mines Ltd., are stepping up their Spring and Summer operations on the mine site outside of St. Stephen and aim to hit 1,000,000 tons of proven nickel and copper reserves this Fall. The company has added two more ..?.. crews and soon hope to have ..?.. 15 or 16 drillers on the ..?.., consulting engineer H.J. Bergmann told the Courier last night. Once proven tonnage is realized ..?.. necessary geological tests, the company will drive a shaft underground next Fall to establish the actual tonnage and see if a full underground operation will ..?.. Company assay tests have uncovered ..?.. 500,000 tons of proven ..?.. officials of the company in..?.. small part of the five ..?.. bodies gave been actually ..?.. ..?.. Mr. Bergmann said preliminary tests have discovered deposits on the western ..?.. property, generally located on the properties of Carson ..?.. and adjacent owners in Basswood Ridge about three miles from St. Stephen. This portion of the site will ..?.. studied this Spring and Summer. Company officials said recently if the first phase of underground exploration is carried out - and they were certain it will be - it should provide employment locally as there would be construction involved, plus indirect and secondary benefits of local purchases by the firm. The big need for area employees will result after the initial underground drilling and testing has been completed and company executives agree to go into full scale production. A crushing mill would be built, requiring a labor force in the high hundreds. The miners would be brought from the outside. At present metal prices - in this case involving nickel, copper and cobalt and requiring 1.50 percent nickel-copper grade - values of the ore averaged around $18 to $20 per ton. Company accountants estimate expenses to extract the ore and crush it hover from $8 to $10. Governing factors are the size of the mill and shafts required. It is hoped ultimate production would reach 1,000 tons daily."

St. Croix Courier - Sep. 24, 1959 Company goes Ahead. - 20 Miners To Probe Underground Ores In Search For Nickel. - An official of St. Stephen Nickel Mines Ltd. said Monday that about 20 experienced miners will be brought to the site in ? weeks to continue geological exploration underground. Perched near the tall headframe on the property, Karl Thomsom of ..?.. a consulting engineer with the firm, said it would take 'all ..?.. time to get the hoist and compressor ready for the underground operation.' He said the company had purchased two pieces of equipment but they had not arrived yet. Cost of the hoist and compressor, major ..?.. in the head frame's role, is approximately $50,000. When this installation is completed a regular mining operation will tunnel a shaft to about the 300- foot ..?.. Here the company will continue exploration work to back up surface drilling results of what it ..?.. 'proven ore deposits.' Right now construction workers are putting the finishing touches on the 70-foot wooden head frame. ../.. miners' changing quarters, ..?.. in a nearby building, still has some 'inside work' to be completed, Mr. Thomson said. The head frame, collared down by a protective rectangular cement casing to the 22-foot level, resembles a grain elevator. Erect Building. - It houses a set of pulleys which govern the movement of a three-department section of buckets or cages drawing up ore or personnel from the depths below. The head frame, when completed, will contain two ore bins from which contents will roll into waiting trucks. Workmen are now constructing a fairly large building which will house the hoist and compressor. The mine is located roughly about four miles from St. Stephen in Basswood Ridge, centred approximately on the old Rogers farm and linked with the Hall-Carroll deposits, about 2600 feet to the southeast and across the other side of the highway."

St. Croix Courier - Dec. 15, 1960 Endorsement. - Mr. David Dickson's recent report on the fraudulent promotion of St. Stephen Nickel Mine stock should come as a surprise to no one in this area. Evidence introduced at the investigation in Saint John some months ago left little doubt as to the outcome of the inquiry conducted under the Security Frauds Prevention Act. The worth of the mine at Heathland was, it would seem, appropriately assessed by Stratmat Ltd. and the International Nickel Company some years back. It would be reasonable to assume that if no less an authority than INCO - which has enormous capital at its disposal - deemed the project unprofitable, any further ventures in this direction by private investors would be doomed to failure from the outset. Mr. Dickson's report reveals, however, that St. Stephen Nickel Mines Ltd., was incorporated in July 1957 and took over the mining claims from Stratmat Ltd. Canam Investments, headed by the elusive Mr. Kenneth H. Gregory, of Montreal, was incorporated six months later, in January 1958, and proceeded to finance the mine by selling stock. St. Stephen Nickel Mines Ltd. did receive 'about' $658,000 for mining operations at Heathland. Mr. Gregory pocketed upwards of one million dollars, possibly as much as a million and a quarter. According to Mr. Dickson's report, both St. Stephen Nickel Mines Ltd. and Canam Investments were 'organized' by Mr. Gregory. In total, some $4,000,000 worth of stock was sold, with about two and a quarter million being spent on advertising and promotion. Of vital concern to the future of the province is that a recurrence of such frauds be prevented, that legal steps be taken to bring unscrupulous stock promoters to justice, that an enormous mishandling of public trust be rectified. The Fredericton Daily Gleaner has called for the appointment of a Royal Commission 'to examine the facts, call evidence on oath, and submit its report.' It has suggested too that political accusations contained in The Dickson Report be 'sifted, weighed and proved or disproved.' In short, the Gleaner would have every fact brought to light in proper perspective, leaving no room for purely political debasement of members of Hugh John Flemming's government. The charge that the former government of New Brunswick 'was perfectly happy to permit wide-scale fraudulent operations to continue, in fact to the point of becoming encouraged, as long as some political benefit was derived from a 'show' of industrial expansion' was a grave one. It is not necessarily borne out by the facts of the Dickson report. The Courier then lends its whole-hearted support to the Gleaner's entirely sensible recommendation that a Royal Commission be appointed to set the record straight once and for all."

St. Croix Courier - Aug. 18, 1960 Heathland Mine Boarded Up, Local Industry Disappears. - No Money To Continue. Operations Abandoned. Nickel to Stay Buried. - The St. Stephen Nickel Mine at Heathland has been abandoned. The last two employees of the ill-fated venture hung up their tin helmets today and began the search for new jobs. They left behind a three-quarter of a million dollar hole in the ground out of which, just one short year ago, they hoped to mine a fortune. The gaunt elevator tower stands like the skeleton of an ancient lizard, another local monument of disappointment. The shut-down was caused by lack of funds. Sources of capital were abruptly eliminated recently when government agencies on both sides of the border brought fraud charges against Canam Investments, financial underwriters of the mine. The firm voluntarily turned over its securities license to the authorities, pending the outcome of the investigation. Bank deposits of company money were frozen. Unable to locate substitute capital, mine manager K.D. Thomson was forced to board it up. The investigation into Canam affairs continues. 'We can't sell bonds. We can't take money out of the bank. What the devil could I do, but shut down?' Mr. Thomson asked the Courier. He thought it unlikely the mine would ever be reopened. 'I'll stay around and settle the business,' he added, 'then find a new job.' Mr. Thomson who is employed by St. Stephen Nickel Mines Ltd., owner of the mine, is a professional mining engineer. Ore is There. - 'There is some pretty good ore down there alright,' he told The Courier, 'but it takes a lot of money to dig it out.' He said the mine extended 250 feet below the surface and included 2,000 feet of lateral work on two levels. Removal of underground equipment and boarding of the few out buildings at the site got underway quietly the first of this week. By Tuesday night, three of the caretaker crew of five men had been laid off. The last man to leave, doughty master mechanic Harry Ewart who has seen mines fold before, packed up his tools today. 'It's an old story to me,' he said wryly. 'I've worked mines all over the country. Some make it. Some don't.' He too felt there was good ore at the Heathland mine, but noted the absence of nearby processing facilities. 'It could have been a good little mine,' Mr. Ewart added. The last two local men to be laid off were Lester Losier, Milltown, N.B. and Ervin Sharp of St. Stephen. 'Perhaps there will be some jobs going at the new Flakeboard plant,' they speculated."

St. Croix Courier - Jun. 30, 1960 Nickel Mine View Will Be Scanned. - Future of the St. Stephen Nickel Mines Ltd. venture at Heathland will be discussed Saturday afternoon in St. Andrews at the company's annual stockholders meeting. This was made known this week by officials of the company in St. Stephen. Assessment of the firm's position to date is expected to be made at the St. Andrews session as it completes about 2000 feet of cleared rock in drifting and exploration work in the mine. Tunnelling laterally from the 300 feet main shaft at the 150 and 250 feet levels, crews have been working on this phase of the underground operation for the past five or six months. Seeping water, frequently in deluge form, has been a major obstacle in the path of miners, often slowing progress to a snail's pace. Costs are running at an estimated cost of about $15,000 a week, company officials gauge. Paul Corbin, company president, will lead the executive slate to St. Andrews Saturday afternoon at the shareholders meeting, to be held in the Algonquin Hotel."

St. Croix Courier - Apr. 28, 1960 Good Future For Nickel Ore Seen. - The demand for nickel, which rose sharply in 1959, is expected to continue high this year, Dr. John F. Thompson, Chairman of the Board of the International Nickel Company of Canada Limited told shareholders at the annual meeting in Toronto. He said that while the company's ..?.. deliveries in March tapered ..?.. slightly from the extraordinarily high levels of the first two ..?.., the company's rate of delivery for the quarter was greater than its production. Thompson declared that the continuing high demand 'can be more than satisfied by the industry's ..?.. productive facilities and ..?.. available nickel supplies.' ..?.. that the new Manitoba ..?.. will come into production in ..?.. other nickel producers are increasing their capacities and ..?.. developing their operations ..?.. an even higher production..?.. ..?.. current expansion in nickel ..?.. spurred on by marketing and ..?.. activities, should continue, Thompson said. 'These efforts provide a foundation for absorbing the new nickel supplies and ..?.. well for the progress of the ..?..

St. Croix Courier - Feb. ????, 1960 Miners Finish Shaft Digging. - Crews digging the 300-foot shaft at the Heathland site of St. Stephen Nickel Mines Ltd. finished the job Wednesday afternoon, a company spokesman revealed. A small dynamite blast Wednesday morning sent the last required clinging rock loose from its moorings and allowed final mopping up operations to start. It is believed there will be a short layover before diggers start drifting - tunnelling off at various levels and in different directions from the shaft itself."

St. Croix Courier - Jan. 14, 1960 Water Slows Job. - Mine Shaft at 245 Feet. - Crews digging the 300-foot shaft at the Heathland site of St. Stephen Nickel Mines Limited are expected to finish the job in about 10 days, a company spokesman said Wednesday. Resident geologist Bet Bourgoin said at the same time that the force of about 20 miners are now down to the 245-foot level. The company had originally hoped to finish the initial tunnelling job by the end of last month, but seeping water and then large scale water leaks in underground seams slowed progress to a walk at times. Miners started the shaft operations about Nov. 10 and had hoped to clip along at approximately 10 feet a day. Mr. Bourgoin said there will be a short layover of about four or five days before diggers start drifting - tunnelling off at various levels and in different directions from the shaft itself. At the end of the shaft job, he said, two cutting stations at the 150-foot and 250-foot levels also will have been completed, allowing sufficient elbow room for men and machines starting the drifting operations. Completion of the shaft will also give company executives the opportunity for added geological exploration of the entombed deposits of ore to back up the

Kings County Record - Jan. 4, 1929 Interest in Mining in New Brunswick. - Hon. Charles D. Richards Interestingly Reviews Progress in Mining in New Brunswick During 1928 and Refers to Outlook for 1929. - Mineral Production During 1928 approximately $2,000,000. - Probably at no time in the history of New Brunswick has there been such widespread interest in her minerals as has been shown throughout the year which is now closing. This interest comes not only from the people of the province but in a marked degree from competent mining people beyond her borders. The result has been an intelligent investigation of prospects in several localities from which it is hoped actual development may be the outcome. While mineralization has appeared to be more prevalent in the older rocks of the southern counties of Albert, St. John, Charlotte, Kings, and Queens where copper and zinc in several places have been found, yet zinc and lead also appear near Woodstock in the west, and in Gloucester on the North Shore. The work of investigation consisting of diamond drilling, sinking of shafts, trenching and the examination of various deposits by mining engineers, was carried on until the stress of winter weather compelled stoppage until next spring. Consolidated Smelters have just completed aseries of boreholes in the copper deposits of New Ireland in Albert County and the Bunker Hill Extension areenergetically carrying on trenching in similar deposits at Goshen on the Kings-Albert border. This is in preparation for diamond drilling as showings of copper are located. Interesting prospects in zinc and copper have also been examined at Quiddy River and Goose Creek in St. John county near the Bay of Fundy shore, of copper on Adams Island and Simpson Island off the coast of Charlotte County and of copper at Scotch Settlement in Kings County north of Norton. In this work both of the great trans Canada railways have shown their interest by having experts examine various properties with a view towards development. The Canadian Pacific directed their attentions more particularly to possible developments along their own line near St. Stephen and Woodstock. The Canadian National, in addition to numerous examinations made at various places by their mineralogist, had their Mr. Cyril T. Young, Director of Development head a party of prospectors in a trip to the northern interior of the province during the late summer. This is a territory which has heretofore received practically no attention and may very well contain something of interest. The report of the results of the trip has not been published. In these days of excitement over nickel it isinteresting to note that the pyrrhotite deposits of St. Stephen which are known to be nickeliferous are being investigated through a group composed largely of members of the St. Stephen Board of Trade. An experienced mining man was brought in and under his direction a survey was made of the region with the idea of locating ore occurrences in preparation as to the presence of nickel and while not of high grade from surface assays, there are possibilities of a large body and of better values at lower levels. It is intended to continue the work of proving this property.Work at the antimony mines at Lake George has been consistently carried on during the summer in the way of deepening the Taylor shaft for the purpose of exposing the ore body and it is probable that the work will be continued so far as weather conditions will permit throughout the coming winter. At least two antimony developments are expected to become permanent and substantial. It will be seen from the foregoing that mining in its relation to the metallics of New Brunswick has through the past season been confined to an investigation of a number of known deposits and to prospecting, all of which is a necessary preliminary to the more serious work of actual development. While a good deal of attention has been directed towards the development of our metal resources the fact must not be overlooked that our staple nonmetallics of coal, gypsum, natural gas and oil have quietly carried on with larger output both in coal and gypsum than was had in the preceding year. New Brunswick is fortunate in possessing gypsum deposits probably unexcelled in the Dominion and with facilities for turning out high grade manufactured products, so that as demand for these increases with their increased use in the building trades there should be a good future for this industry. Both the coal and gypsum operators however are capable of supplying much larger demands. The value of mineral production in New Brunswick during 1928 has been

St. Croix Courier - Apr. 5, 1956 Buchanan in Legislature: - Reviews Mining, Forest Conditions in Province. - Fredericton. - Lands and Mines Minister Norman Buchanan of St. Stephen reviewed mining ..... making specific mention to Charlotte county ...... Interesting. - The minister said nickel in 'the St. Stephen area' and copper on the 'south coast' of the province were still of interest to mining companies. He did not elaborate. '... Speaking of mining, sir, it is like a story I read the other day of a pink and blue surprise party held in one of the homes and after the lady opened all the parcels she said: 'I will tell you of another surprise, I am not expecting.' That is the way it is in New Brunswick. Nobody was expecting any discoveries would be made here. I didn't mean to be rude, sir. 'We might wonder why these mineral finds were delayed. To put it simply, it was because of the terrific overburden, excepting the Brunswick property which will be mined in the open pit method. 'The great difficulty was that the old methods of prospecting wouldn't apply. Prior to the discoveries in New Brunswick, geophysics was somewhat like water witching. They have proved themselves, they have shown their worth and discovered for us that which is going to be something of great importance. 'In geophysics we simply mean the magnetometer and electromagnetometer air and ground surveys. A magnetometer is a survey which measures the variation in the earth's magnetic forces. By these variations and the measures of the variations, different forces indicate different types of minerals. The electromagnetometer measures the phase difference between the current in the primary field and induced current. The measure of these phase differences then indicates to the prospector that there is a certain mineral there but the amount of it has still to be ascertained. Several Methods. - 'There are other things that contribute - geochemistry, which is the analysis of water and soil which indicate the proximity of minerals. 'There is geobotany which is the analysis of leaves and roots which indicates the proximity of minerals. Discovery depends on all of these things being taken together and studied with the use of maps and the study of geological structure, sir, and a high degree of application and perhaps some luck, because many anomalies are graphitic. 'This must be followed up by drilling to indicate the quantity of the quality. As Mr. Glendenning said, delimited as to attitude and grade of ore all done in logical sequence. This, then is followed by a study of the treatment and disposition of these ores which includes research of processing and separation. 'There has been some suggestion that we should be concerned because so much time has elapsed. When we think of other mining operations of this magnitude we understand that seven to ten years is not long to work out these problems. I do not think we should be disturbed. We should be mindful that the first orebodies were discovered in 1953 and their problems are much more complex. Apart from the known minerals we have also, inthe Moncton area, oil. Mr. Elwell from Boston indicated to me they were having some measure of success. The oil shale has been staked and worked on for some considerable time and we hope the young men working on this will come up with something worthwhile. Nickel Here? - 'Several parties have expressedinterest in our salt deposits.'The gypsum plant in Albert county has added new equipment and it would seem they have stabilized themselves.'The cement plant at Havelock is working full capacity and on last report had a full year's order ahead.'The nickel in the St. Stephen area and the copper in the southern coast still suggest interest tomany of the mining people.'The manganese in the Woodstock area at the moment is being treated in a pilot plant in the Niagara peninsula.'Just recently someone brought me a sample of asbestos and I trust it will prove successful. All this is indeed stimulating to our province. ...."

St. Croix Courier - Aug. 3, 1893 and S.J. Daily Sun - Aug. 11, 1893 Mining Notes.- Items of Interest to Those Who Hope for a Development of Our Mineral Resources.- The copper Mine at L'Etete, known as the Olivermine, has been sold at a good figure to a Montreal syndicate, who will begin work there at once. This mine was first opened years ago by the Cunard company, of Halifax, but was abandoned. The new owners are confident that it is one of the best deposits in the country, and it is said that, by a new electrical process, they hope to take out gold enough to pay for working, while the copper and other products will represent their profits. They have already made arrangements for pumping out the mine and commencing further work on the lode. It is said that the West Isles mining company,which will hold its first meeting here on Tuesday next, will begin work immediately on Simpson's Island. There is renewed interest in the copper deposits on Mr. A.J. Seeley's property at St. George. The lode extends for nearly a mile, three of four feet in width, and specimens have assayed thirty-two per cent. There is also in one place a lode of silver ore about ten feet in width. The latest find at the St. Stephen nickel minesindicates richer ore, with

St. Croix Courier - May 16, 1929 Mining Prospects in Charlotte Co. - C.P.R. Assisting in Work and St. Stephen Nickel-Copper Deposits Mentioned. - Fredericton. - The importance of the fieldwork carried out in the province of New Brunswick in recent years by the development branch of the Canadian Pacific Railway is shown in a report of the Hon. J.A. Murray, superintendent of immigration and industry, to the provincial minister of Agriculture. This steady, ceaseless and unobtrusive effort is doing much to bring to light and into industrial use the mineral and other resources of the province. While it is admitted that the railway company, in undertaking spade work of this kind on an extensive scale, aims to create traffic along its lines, it at the same time performs a yeoman service for the province and the Dominion. A perusal of the following precis of the activities performed by this branch of the Canadian Pacific Railway, appearing in the provincial government report referred to, gives some idea of the many contracts made and the large amount of preliminary work done, the benefits from which are already being felt through activities initiated: Nickeliferous iron deposits near St. Stephen;other mineral showings in the same vicinity; copper inthe Scotch Settlement area; copper near Woodstock; lead-zinc near Woodstock; antimony near Lake George; numerous reported mineral showings in the Tobique district. Many visits have been made to these different showings and a large number of samples have been taken by us and sent to development branch headquarters at Montreal for inspection and analysis. Nickel Copper Ore Found. - Associated with our activities is the discovery of a new vein of low grade nickel copper ore near St. Stephen. This is apparently an extension of the known occurrences of that district and its discovery is a result of the efforts of some enterprising citizens of St. Stephen. This scheme of forming groups for prospecting different areas was included in our early recommendations and we refer to it with interest believing it should be given every encouragement as the most logical way of developing the mineral resources of a country in its early stages of investigation. Although so far this season's prospecting does not appear to have disclosed any important body of metalliferous mineral of commercial value, it should not be concluded that no such deposits exist, as the exploration for minerals is a slow process requiring much patience coupled with courage as well as judgment. - (Financial Times)."

St. Croix Courier - Mar. 23, 1894...This report also contains a valuable paper on 'The Present Status of the Mining Industries of New Brunswick, by Prof. Bailey, of the Geological Survey of Canada. Referring to deposits of granite suitable for ornamental purposes, Prof. Bailey says: The rock for the latter purpose is almost exclusively obtained from the vicinity of St. George in Charlotte County, where no less than four companies are engaged in fitting and bringing it to market. These with their output for the year 1892 are as follows:- Milne, Coutts & Co., 400 tons averaging $80 per ton ... $32,000 Tayte, Meating & Co., 300 tons averaging $80 per ton ... 24,000 Epps, Dodds & Co., 300 tons averaging $80 per ton ... 24,000 Taylor Bros., 300 tons averaging $80 per ton ... 24,000 -- $104,000 This is exactly the same as the output of the previous year. In addition to the above Messrs. Burpee & Co., who up to 1891 had their polishing works at Carleton, near St. John, but who have since removed to Calais, Maine, for the saving of the duty imposed in the States on manufactured rock, and who own quarries at St. George, removed from the latter about 300 or 400 tons in 1892 and probably 200 or 300 tons in the present year. The figures given in the above tables represent the amounts and value after the stone is quarried, dressed and polished, all the firms excepting the Burpees being fully equipped for doing all the work upon the spot. It will thus appear that, as the case of the lime industry at St. John, the value of the product comes almost solely from the labor put upon it. It hence becomes the means of directly distributing large sums in the payment of wages, amounting, it is said, in the aggregate, to about $5000 per month. The granite in the rough state, when quarried, costs about $12, generally, though for getting out large blocks it costs more per ton. The power required for the machinery of the polishing works is cheaply obtained from the falls of the Magaguadavic river, and all the conditions are most favorable for the development of the industry. In quality, as pointed out by the writer as early as 1872, the rock will compare favorably with the best red granite of Scotland. Quite recently, Sheriff Stuart and others are opening up a quarry of black granite in Bocabec, Charlotte County, between St. George and St. Andrews. It takes a fine polish and it is thought, can be readily marketed. There are also varieties of rock, such as felsites and porpyries, occurring in Charlotte county which, when polished, are often of great beauty, but nothing has as yet been done towards their utilization. Prof. Bailey has the following to say, also,concerning nickel in Charlotte: The occurrence of nickel in the rocks about St. Stephen has been known ever since the year 1872, when it was recognized by Dr. Sterry Hunt as associated with chromium in specimens collected and submitted to him for analysis by the writer and Mr. G.F. Matthew. Its presence, however, attracted little interest until the discovery of the nickel-bearing pyrophyllites of Sudbury, Ontario, and their value in certain processes of iron manufacture called attention to the similar deposits of Charlotte county and led to the discovery of nickel in the latter. Following upon this rediscovery it has been hoped that the St. Stephen deposits would at least approximate in value to those of Sudbury, but through delays arising from contested claims and other causes, but little has as yet been done to test their actual capacity. It is probable that this will be done during the coming summer. In the meantime it may be of interest to quote here the estimate of the ore as given by Mr. C.C. Hoffman, chemist of the Geological Survey. A partial analysis gave Nickel ... 1.72 per cent Cobalt ... 0.16 Copper ... 0.34 or, calculated upon material free from all gangue:- Nickel ... 1.82 per cent Cobalt ... 0.17 Copper ... 0.33 Similar ore was also analyzed from L'Etete, Charlotte county, and both are described as closely resembling much of the ore found in the Sudbury district. Specimens of the St. Stephen ore analyzed by other parties, gave results in some instances as high as 2.6 per cent of nickel. The quantity of ore, both at St. Stephen and L'Etete, appears to be large and the facilities for mining and shipment are good. Edward Jack contributed to the report aninteresting article on moss litter, which he says is tobe found in several places in New Brunswick, such as at Musquash and along the shores of the Gulf of St. Lawrence. Nine licenses to search, covering forty two miles, one prospecting licence, and three leases covering three square miles of nickel property, were issued to Charlotte county parties during the year; while one mining licence, covering ten square miles, has been renewed."

St. Croix Courier - Nov. 4, 1884 and Daily Telegraph - Nov. 21, 1884 New Brunswick at the New Orleans Exposition.- It was expected that the collection of geological specimens from New Brunswick, in course of preparation by Mr. W.F. Ganong for the New Orleans Exposition, would be ready for shipment the latter part of last week, but a delay of a few days was occasioned by the non arrival of some promised specimens. The collection is now nearly completed and will be shipped in a day or two. As classified, it is a good representation of the economic minerals of New Brunswick. To Mr. Ganong, great credit is due for the labor and time he has expended in preparing the exhibit, as well as to his father, Mr. J.H. Ganong, who will meet the charges of shipment and other expenses incurred. Without their disinterested offering of labor, time and money, the Province would have been entirely unrepresented at what promises to be the greatest display of the kind on this continent during the century. As it is, New Brunswick will make a creditable exhibit in one department, and many, who are entirely ignorant of the Province, will thereby be rendered familiar with its name and one feature of its resources. We append a list of the contents of the cabinet to be forwarded by Mr. Ganong:- New Brunswick at the New Orleans Exposition.- ... Ornamental and Building Stones, &c. Granite:- Dark red, three specimens, polished, dressed and rough; Light red, one specimen, polished; Salmon, one specimen, polished and rough; Gray(Spoon Island), two specimens, polished, dressed and rough - all from the works of Milne, Coutts & Co., St. George. Light reddish grey, one specimen, from the works of H.D. Wallace & Co., St. George. Freestones:- Four specimens, squared and dressed for building; two specimens, dressed for grindstones - all from the quarries of Jos. Read & Co., Clifton, Gloucester County. Whetstone:- Fine-grained, one specimen from Grand Manan, the property of Capt. Pettes. Siliceous Earth:- Two specimens, pure; two specimens with oxide of iron; from Black's Harbor, Charlotte County. Diatomaceous Earth.- Grand Manan. Limestone:- Two specimens, hydraulic and pure, fromFrye's Island; one specimen from South Bay, the property of John Lowry.Slate:- Two specimens, from S. Johnson, St. George. Combustible Materials.-Bituminous coal:- One specimen from Grand Lake. Anthracite coal:- One specimen from Lepreaux. Albertite coal:- Two specimens from Albert County. S.J. Daily Sun - Nov. 7, 1891 Mining Notes from New Brunswick. - (Correspondence of the Canadian Mining and Mechanical Review). - Without preamble let me say that mining in New Brunswick is comparatively of small dimensions, but there is hope for the future. The mining resources of the province have long lain dormant for want of a full and complete mining law. Last session this was remedied to a great extent, and a Mining Act passed similar in all respects to the Nova Scotia mining act - the only observable difference being in the royalty on gold, which is placed at 2 1/2 per cent., whereas in Nova Scotia it is only two per cent. Much dissatisfaction is expressed by many land owners at the new act, as by old statutes enacted some years ago, all mines on private lands were vested in the owner. The fact of it being so, however, never seems to have stimulated the mining industry in the province, hence the repeal of the same, and a general act empowering the government to issue rights of search, prospecting licenses, and leases on all lands, both private as well as crown lands. It is said the act will be, in many respects, amended during the coming winter. What is done will be fully reported to you at the time. Since the passage of the act, many persons have availed themselves of its requirements, and numerous applications for areas have been filed in the surveyor general's department, over which a number of disputes have risen already and which are being fully considered. Many persons in the province itself, are unaware of the existence of the mineral deposits of New Brunswick, but within its borders may be found most positive traces of gold, galena, copper, manganese, iron, coal (both hard and soft), gypsum, baryta, antimony, iron, pyrites, plumbago, nickel, and traces of tin and asbestos have been met with from time to time. In addition to this there is a strong indication of petroleum, natural gas, salt beds of importance, brine springs, from which the best salt in Canada can be manufactured, mineral springs in abundance, and granite and freestone quarries of the greatest value, and limestone in almost inexhaustible abundance. The famous Albertite coal of Albert County, atone time was the most extensive mining operations ever conducted in the province, from which thousands of tons of the precious Albertite was extracted, and its stockholders became very wealthy from its operation. The supply of the mineral, however, gave out; the mines were abandoned and all the costly machinery in due time removed and sold. Indications of this mineral are still to be met with in Albert, Westmorland and Kings counties, and much time and money has been spent in prospecting for it for years past. There are many who believe it will be found again in sufficiently large quantity to pay for working. In various parts of the province work of exploration is going on quietly for different minerals.In Charlotte County, at St. Stephen, much activity is being displayed in the development of an iron pyrite body which, to say the least, is attracting considerable attention from home and American capitalists. The ore, which seems to be a combination yielding copper, silver, with occasionally some gold, and a fair percentage of nickel is of a very large extent, being quite near to shipment, and in one case on what is known as the Hall farm, has shown a width of 250 feet, and can be distinctly traced for some distance. Numerous assays have shown from 1 per cent. to 2 1/2 per cent. at times of nickel, and considerable work of development has been and is now being done. A number of properties, it is said, have been bonded to American capitalists. What the final outcome may be it is hard to state, but many are confident that a body of ore, rivalling to a certain extent the famous nickel beds of Sudbury, are in this locality. One thing can be stated with accuracy, and that is that the ore from the Sudbury district and the St. Stephen ore are exact counterparts of each other so far as looks and appearances go.In Kings county, near Sussex, manganese exists. The Markhamville mines, which have been worked almost continuously for the past thirty years, are at present not showing up very well. It is said by many the ore is exhausted, while others scoff at such an idea. In other sections large bodies of manganese exist and only await the advance of the capitalists, and a market demand which, while frequently fluctuating, seems very quiet at present. This mineral also exists in good quantities in Albert county and some portions of St. John county. In Gloucester county exist splendid beds or belts of magnetic iron, and also every appearance of large andgood paying galena belts, some of which are being quietly tested, so it is stated, by American capitalists. On one of these veins or belts, assays of the ore have shown a yield of from 10 to 60 ounces of silver, and from 12 to 15 dwts. to as high as two oz. and more of gold in combination.Below St. John, for many years past, considerable money has been spent in the search for anthracite, and those interested firmly believe their efforts will be crowned with success.In York county, it is beyond doubt that valuable deposits of antimony exist. In past years mining operations were conducted there, but the matter assumed more of a stock gambling operation than that of legitimate mining, and together with reckless and extravagant modes of mining, the enterprise got a black- eye, so to speak, and that coupled with the holding out fancy and extravagant prices by the owners,

Chignecto Post - Sep. 14, 1876 Elgin Items.- Gold-bearing quartz is said to exist up the Pollett River."

URN: 0040 / LEGI / Names: Elgin (Coverdale) Gold; Legislation, etc.;

Royal Gazette - Jun. 4, 1862 Cap. LXVIII.An Act to incorporate the Elgin Gold Quartz Mining Company. Section. Section. 1. Company incorporated. 6. Capital stock liable 2. First meeting, when to be for any call. Called. 4 3. Capital stock and shares. 7. How sale shall be 4. Liability of shareholder. Made. 5. Joint stock, &c. alone 8. Act void unless 25 liable for debts. Per cent be subscribed within one year. Passed 23rd April 1862. Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That A. Edwin Botsford, James Steadman, Oliver Jones, Alexander McBean, W. Boyant Kaye, Alexander Wright, James Adams, Oliver Barberie, John Russell, Robert Dunlop, Paul R. Moore, Francis O'Reagan, and William C. Mullin, and their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Elgin Gold Quartz Mining Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of the this Province, for the purpose of mining and crushing gold bearing quartz, and for erecting the necessary works and machinery there with connected, and for carrying on such other business as may be incident thereto. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons. 3. The capital stock of the said Company shall be ten thousand dollars, divided into two thousand five hundred shares of four dollars each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of, or to carry on the operations for which the said Company is incorporated; which call or assessment may be sued for and recovered in any Court of Record within the Province. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. The capital stock held by any shareholder in the said Company at the time of making any call or assessment thereon, shall be liable to the payment thereof; and in case of non-payment of such call or assessment at the time when the same shall be made payable, the Directors are authorized to order a sale to be made of so many of the said shares as they may think necessary for the payment thereof, with interest and expenses. 7. Such sale shall be made at auction, upon not less than thirty days' notice by the President, in some newspaper published in the City of Saint John, and the stock shall be transferred by the President and Secretary to the purchaser, who shall thereupon be entitled to a new certificate thereof; and the proceeds of such sale shall be applied towards paying the amount of such call or assessment with interest, and the costs, charges and expenses of such notice, sale, and transfer, and the residue (if any) to the former owner. 8. Unless twenty five per cent of the capital stock shall be subscribed within one year from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall terminate."

Morning News - Apr. 30, 1862 Gold Quartz. - The fact that the Government introduced into the Legislature and carried without any opposition a ""Gold Bill"" to provide for anticipated discoveries of the precious metal, has led some persons to believe that perhaps there is something tangible in the reports which occasionally find currency - of gold having been found in different parts of the Province. What the precise nature of the Act is we do not know, as the members of the House appear to have thought it unnecessary this Session to forward copies of printed bills (in which the public generally take an interest) to the public journals for their information - not even in the case of important City bills which have been drawn up in Fredericton. But we suppose the Royal Gazette will contain it bye and bye. Be that as it may, we have here to notice that during a debate in the House of Assembly, specimens of gold which had been found in Albert County, were handed round among the members, and the opinion was expressed that very strong probabilities existed that important discoveries would be made in that county at an early day. Paragraphs have found their way into thenewspapers at different times respecting discoveries in other places. For instance, it was said that gold had been found at Hampton, and we ourselves have examined specimens in which gold could be detected with the naked eye. Next it was alleged that quartz raised at Chamcook and L'Etete in Charlotte County was found to bear gold; and some of this quartz was sent to a Boston chemist whose report states that there really was gold in it, but ago it was said that gold had been found on the Oromocto River, although this is probably only a repetition of a similar statement respecting that locality, which was circulated several months since - Whether there is any truth in it or not we have not heard. It is alsoconfidently stated that the precious metal has been found near Sackville. Whatever room there may be for exaggeration in the above it is nevertheless quite clear that gold has been found in the Province; and it is our opinion that if the parties who have made these discoveries - even though their labor has been very triflingly rewarded - would persevere with their searches, in the vicinity of theplaces they have taken the gold from, they may yet obtain very profitable returns. It is the belief of scientific gentlemen that gold exists in the Province; and one gentleman in the city who is well informed upon this subject, does not hesitate to say that it will yet be found in the streets of St. John! The number of places in Nova Scotia where it exists, is really remarkable, and all originating out of the Tangier discovery. When it was known that gold was found at Tangier people in other parts commenced prospecting and examining the stones and earth in their own locality. Inquiry was stimulated on all sides, and the desire to acquire wealth in the shortest possible time imparted a keenness to the eyes of ""prospectors"" which they had never before possessed. The result has been the discovery of gold in not one but twenty places - the gold being taken from quartz, as Lunenberg is the only place where it is found in washings. ""A miner"" who has spent some time and money in searching for the metal wrote his experience to the Halifax Chronicle a few days ago. He says he first went to the Lunenberg washings, and although report had exaggerated the richness of the sands, he saw enough to convince him that gold was there in paying quantities, requiring only improved appliances for separating it to make highly remunerative work. He next visited Tangier where, he says, the appearance of the quartz (to an unpractised eye, at least) indicated no great richness; and for want of proper ""crushers"" it was impossible to say whether money could be made or not. [This was before the introduction of good crushers for extracting the gold. We wish our readers to note the last paragraph particularly as we shall refer to it again.] The miner next went to Wine Harbor, Isaac's Harbor, Laidlaw's farm, and Sherbrooke. In all these places gold had just then been discovered, but there was no proper machinery for extracting it from the quartz; consequently it was impossible to tell the extent of its richness. After examining all these localities he has at last settled down at Sherbrooke, which he thinks affords the best field for the investment of capital, skill and labor. This person insists particularly upon the necessity of erecting quartz mills for extracting the gold, believing that without them the labor of the miner goes for nothing. He says that at Sherbrooke gold can be found anywhere in the ground over a pretty large area; and this being evidently the debris of the quartz, it shows that the ""leads"" must not only be rich but very numerous. Now, the point to be noticed particularly is that quartz may really contain gold, and yet the precious substance may not be visible to the eye. It would be a great mistake in a miner to throw away quartz simply because he cannot see the gold in it at once. If this plan had been adopted at Tangier and other places the mines would have been abandoned at once, and we would have heard nothing of ""nuggets"" which have occasionally turned up by the persevering men who have been at work there. It seems to us that if there be good reasons for supposing that gold exists in New Brunswick - or if (as has been the case) gold has really been found - the proper way would be to keep on searching and digging, and not give up simply because a man cannot see the gold shining out of every piece of quartz he turns up. The great fact being once established that gold does exist in a certain locality, is the main thing to look at; and after that patience and perseverance will probably have their reward in this field of industry as in every other. We have an abiding faith in the probable discovery of gold in this province; and for the following reasons. The character of the rocks in many places is similar to what it is in countries where gold has been found; the opinion of scientific men who have made the subject their study is decidedly in favor of the existence of gold in New Brunswick; then there is the fact that it has been found on the Canadian frontier on the North of us, and in all parts of Nova Scotia on the south east. But, the most powerful reason of all is that gold has already been found in two or three localities in the Province. If the same inquiry be made, the same intelligence displayed in searching for it in New Brunswick as has been done in other countries now celebrated as gold fields, the result may be the same. We say, then, to those whose turn of mind leads them in search of gold among our rocks, not to be discouraged if they do not immediately make a lucky hit. The California mines were not discovered until a few years ago. Australia - until a quarter of a century ago - was only looked upon as a place for the reception of convicts. It took a long time to find out that gold existed in Nova Scotia; and it was only yesterday (as it were) that the amazing wealth of British Columbia and New Zealand was known. Discoveries in all these countries have been sudden; but when ""the ice"" has once been broken new proofs of gold discoveries have flowed in from all sides. The same luck probably awaits us; and who knows but we may awake some morning and find ourselves the happy possessors of a country which will be able to boast of as extensive gold fields as any other?"

URN: 0041 / Names: Jordan Mountain Copper;

Kings County Record - Oct. 13, 1905 A mining engineer from Boston arrived in Sussex on Tuesday last and examined the new copper find near Jordan Mountain, and expressed himself as well pleased with the character of the ore and probable quantity of same once developed and properly opened up. The ore is beyond doubt of a high grade and on depth being reached, will be found to be of good commercial value and later on will no doubt be properly developed."

URN: 0041 / Names: Jordan Mountain Copper;

Kings County Record - Sep. 8, 1905 The discovery of a rather valuable deposit of copper ore was made some time ago in the vicinity of Sussex and steps will probably be taken to have the same developed in the near future. The vein is large, well defined and the ore is rich carbonate and chalcophile ore carrying silver. Ordinary samples from surface have given under assay a value of about $22.00 per ton, which for surface ore is surprisingly good."

Kings County Record - Jul. 24, 1908 We understand that negotiations are now in progress which may lead to an important mineral development at or near Jordan Mountain in the near future. The matter has been closely investigated for the past two years and there is every evidence that if properly put in train, Sussex may have a large industry in operation and one that will prove of great importance in the future. Steps are being quickly taken to verify all the facts, and certainly from the little we know, it is well worth development. At a later date we shall be in a position to make a full statement of the facts, and we have good reason to believe that it will be to the interest of our many readers to give it every consideration and assistance. New Brunswick is bound to come to the front as a mineral producer and Kings County, we are glad to say, has the mineral if it can only be properly and economically developed."

Weekly Record Fri., Mar. 20, 1908 The prospects are that mining capitalists may look into and develop the copper mine at Jordan Mountain the coming summer and it is hoped the rumor may prove correct as this is certainly one of the most promising proposals of the kind in the Maritime Provinces."

Kings County Record - Jul. 2, 1909 ADVERTISEMENT: The Jordan Mountain Copper Co., Ltd. Proposed Capital $1,000,000. In one million shares, $1.00 each, full paid and non- assessable. -- The preliminary promotion stock of the above company is now offered for sale to those disposed to aid in establishing a local industry near Sussex. This copper vein is from 7 to 8 feet wide and has been pronounced, by competent mining men, a true and permanent vein, and assays of the average of the ore, made by Hersey, Provincial Assayer for the Province of Quebec, gave upwards of 9% copper, carrying silver, and between $21.00 and $22.00 per ton value. Other tests have shown as high as 16% copper. Copper mines of the West have paid large dividends on ore, giving less than 5% per ton. If these mines can be made to pay, why not the Jordan Mountain Mine?

Thousands of dollars are annually being sent out of New Brunswick and Nova Scotia to points in other countries, much or nearly all of which never yield a return. Why then not have a portion of this money spent in an honest endeavor to open up some of our home mining claims in New Brunswick? One thing is certain, whatever results, the money is spent at home, among our own people, and is in circulation in New Brunswick. There can be no denial of this fact. The promotion shares are now offered in blocks of 500, 1,000 and 2,000 shares at 5c. Per share. Shares are full paid and non-assessable, the buyer being liable for nothing more than he pays for. 500 shares costs the buyer ... $ 25.00 1,000 shares costs the buyer ... $ 50.00 2,000 shares costs the buyer ... $100.00 No less than 500 shares of this promotion stock sold to any person. The shares can be had on application to undersigned address, or from agents, who have regular authority to sell the same. The company refuses right to advance price of shares when deemed desirable so to do. For further information apply to The Jordan Mountain Copper Co., Ltd. Care P.O. Box 92, Sussex, N.B."

Kings County Record - Jul. 23, 1909 Re Jordan Mountain. - The readers of the Record, who have observed the references recently made in our columns as to the Jordan Mountain Copper mine, may be interested on knowing that the vein showing there was recently examined by a Mr. MacKenzie, mining engineer of Glasgow, Scotland, who came to Sussex to meet Mr. E.A. Charters for that purpose. He pronounces the vein to be a true 'dyke' in mining terms, of positive permanence, and was decided, in his ideas, that the property should be developed, expressing an opinion that the ore would be found very much richer at depth. In company with Mr. Charters he also visited twolocalities in Albert County, examining copper interests and was decidedly impressed with what he saw. He was wonderfully impressed with this portion of New Brunswick and its scenery, which, he stated, was very much like that of many portions of Scotland. Mr. MacKenzie is connected with one of the wealthiest copper concerns of Great Britain, and may visit New Brunswick again at a later date from what he saw and information gleaned on this visit. Mr. MacKenzie left here to look into some copper preparations in Cape Breton, going from there to the British Columbia coast and later to Arizona and probably Mexico."

Kings County Record - Aug. 13, 1909 In the Jordan Mountain Copper Co., Ltd., arrangements are now being made preparatory to incorporating and organizing. The very decided and favorable opinion of Mr. G.W. MacKenzie, mining engineer of Glasgow, Scotland, who recently examined the property, has given the promoters much encouragement. The sale of blocks of stock is progressing favorably and arrangements have been made for sale of same in Halifax and Truro. It is to be hoped some of our Sussex inventors will seize the opportunity of taking a share of this stock and encourage a home local industry."

URN: 0041 / Names: Jordan Mountain Copper;

Kings County Record - Sep. 3, 1909 The Jordan Mountain Copper Mine. - We understand that the details of securing charter and other necessary documents in connection with the incorporating of the Jordan Mountain Copper Mine are now nearly complete. When perfected a strong effort will be made to enlist the aid of all in Sussex and vicinity, who may be willing to assist in developing a home industry, and already quite a few shares of the stock have been sold. Application for shares have been received from a number of sources, while requests from New York, Montreal and Toronto have been received, with a view to assist in the financing of the company, which are all receiving due consideration. The ore is there in abundance, its values are undoubted, and why should it not be developed? The strong opinion given by Mr. MacKenzie, M.E., of Glasgow, Scotland, as to the value of this mine is very good ground for establishing a belief that it will prove, in due season, remunerative. As soon as incorporation papers are complete, a vigorous canvass will be made among our Sussex people to

Kings County Record - Sep. 3, 1909 We understand the charter for the incorporation of the Jordan Mountain Copper Co. Ltd., has been granted, and later on the organization of the company will be perjected. The present issue of stock at the small price it is offered at, is selling well and the chances are the price will be advanced in the near future. Mr. Charters has gone to Montreal to meet a party from Toronto, who proposed to market quite a large block of the shares. Those in Sussex and vicinity who contemplate an investment should do so now while the share can be had at a low figure."

Kings County Record - Sep. 24, 1909 E.A. Charters returned from a trip to Montreal this week, where he met parties interested in the Jordan Mountain copper property. Mr. Charters disposed of a large block of stock and has succeeded in interesting Toronto men in the enterprise. The company have not full control of the property and are working along quietly with a view to opening up shafts and exposing the mineral in deposit."

Kings County Record - Oct. 1, 1909 (Torn page) In the Record of last week in referring to the Jordan Mountain Copper Co., a typographical error led to the statement 'that the company have not full control of the property' which is incorrect and was simply a mis- print, as the company has now not only full control of the property but has also obtained its charter of incorporation and the final ... of the company will be ... the near future. In the meantime ... sale of stock is proceeding regularly ... hoped the work of cross ... and sinking shafts will be ... this fall."

Kings County Record - Oct. 29, 1909 Dr. E. Lawrence of Toronto, editor and proprietor of the Railway News of St. Thomas Ontario was in Sussex on Saturday of last week. While here he was out examining the Jordan Mountain Copper Co. and was surprised with the same, taking with him a bunch of samples of the ore. He has agreed to place a good sized block of stock in Toronto and vicinity."

Kings County Record - Jul. 22, 1910 Re Jordan Mountain Copper Co. Ltd. -- The prospectus of the Jordan Mountain Copper Co., (Ltd.) has been revised and issued containing Mining Engineers report on property, copies may be had by applying to

P.O. Box 92, Sussex, N.B. A quantity of the promotion stock is still obtainable at exceedingly low price for a short period, after which price will be advanced. Make your application now. Those in Sussex and vicinity desirous of aiding in the establishment of a home local industry are respectfully invited to look into the merits of this project and take an interest in the same. The small price at which shares can be bought now and for short time is worthy of consideration. Encourage home industry - Assist in a good work - Don't all be clams! Jordan Mountain Copper Co. Limited, P.O. Box 92, Sussex, N.B."

Kings County Record - Jul. 22, 1910 Attention is directed to the advertisement of the Jordan Mountain Copper Company, who are offering a further allotment of stock for development purposes."

Kings County Record - Mar. 11, 1910 Jordan Mt. Copper Company. - The promotion shares which are now being afforded at extremely low prices will shortly be withdrawn from market. A canvas of Sussex and vicinity will soon be made. Those thinking of investing will do well to act promptly. Apply to P.O. Box 92, Sussex, N.B."

Kings County Record - Jan. 28, 1910 ADVERTISEMENT: The Jordan Mountain Copper Co., Ltd. Proposed Capital $1,000,000. In one million shares, $1.00 each, full paid and non- assessable. Location of Mine - Jordan Mountain, Kings County, N.B. Chief Place of Business - Sussex, N.B. -- As a quantity of the first block of promotion stock, which is offered at 5c on the dollar, is still obtainable, before an advance of price is named, those desirous of obtaining some of it should make immediate application for same. Those in Sussex and Kings County, generally, who believe in assisting in the development and building up of a home industry, should not hesitate to invest in this enterprise. The money spent in this development will be spent in Kings County, and it will be no small sum. Make your application before the price is advanced. E.A. Charters, Business

URN: 0041 / Names: Jordan Mountain Copper;

Kings County Record - Jan. 21, 1910 Readers of the Record who may have noted from time to time in its columns reference to the above company, will be pleased to know that the work of preparing for organization has been going on quietly and that on Friday p.m., the 14th of January last the same was perfected. The shareholders in person and by proxy from St. John, Moncton, Hillsboro, and Toronto, met in the office of W.D. Turner, when the regular proceedings in connection with the organization took place. The following persons were then elected, Directors, J.D. McKenna, W.B. Jonah, E.A. Charters and W.D. Turner, of Sussex, H. Folkins, of Salisbury, A.N. Charters, Moncton, and C.N. Sutherland, Toronto, Ont. At the Directors meeting which subsequently took place, J.D. McKenna was elected President; W.B. Jonah, Vice President; E.A. Charters, Secretary-Treasurer and business manager. Mr. W.N. Charters, of Moncton, was elected Trustee of the alloted development stock. The work of development is proposed to start in on so soon as the weather permits in the spring and there is good reason to believe that the important industry will be in operation in this vicinity in due season. The original parties who took this mining claim up, in conjunction with its chief promoter, have the fullest confidence that it will yield good returns and that ultimately a large and profitable copper mining industry will be in full swing in the future."

URN: 0041 / 0755 / Names: Jordan Mountain Copper; Annidale Mine;

Kings County Record - Jun. 24, 1910 Another Kings County Mine. - A late article in the Standard tells of an interview with Thos. And Edward Dick, residents of St. George, who in connection with G.W. Ganong, Esq., of St. Stephen, are the owners of and in the past have done work in opening up a valuable copper deposit in Kings County about 11 miles from Norton. They state they have discovered two veins of copper, one of which if properly developed will in time become among the richest and most productive mines in Canada. Thus another positive proof is given of the mineral wealth of Kings County but want of capital retards the development that should follow. There is no doubt whatever that the mine is a good one and the one rich in value but no one on New Brunswick takes any general interest in anything at home. They are quite willing to invest thousands and thousands of dollars in Colorado, Montana gold fields, California and occasionally in Western Canadian mining schemes, but to aid in the home development of good valuable mines not a dollar can be found.In similar manner here at Jordan Mountain is a positively good and bona fide copper mine, large sized vein, good surface values yet the promoters are finding it exceptionally difficult to secure the necessary capital to sink the first shaft some 150 feet and prove the good value that exists there. Why this should be so it is hard to say. Offerings of stocks in outside mining ventures in antimony, coal and other things were readily taken up the majority of which have never returned a dollar and perhaps never may. Yet offerings of stock at most reasonable prices in Jordan Mountain finds no assistance. We trust, however, the day is not far distant when both the copper mine near Norton and the Jordan Mountain copper mine will both be in operation and giving evidence of their values. As a mining boom is coming slowly but surely to New Brunswick and evidences of the same are far more prominent than our readers generally are aware of. Kings County is not only rich in copper, but itsmanganese, its lead and silver ores, its gypsum and baryta, its oil and gas, and its shales are bound eventually to attract and capital in the near future. We make this prediction seriously and trust to see the same literally fulfilled."

Granite Town Greetings - Oct. 28, 1910 Splendid Kings County Deposit. - Record Representative Saw Fine Deposit of Ore, Which Is Being Developed. - From time to time notices have been given in our columns and in St. John papers of a copper mine development that has been going on quietly in Kings County. We are glad to give herewith mine details of the same, so that those who may have recently seen the statement attributed to a Mr. Wilson of the Geological Survey, 'that there was no copper in New Brunswick rich enough to make it commercially valuable, I can form more correct conclusions on the same. A visit to this mine was made on Tuesday, the11th, inst., which is reached most easily, via, the Central Railway from Norton, thence to Scotch settlement, when a short walk of not over a mile will bring one to the scene of the mining operations. There the writer found Mr. Thos. Dick and brother, and two other workmen, busily engaged in sinking and cross cutting, on one of the main levels, bringing to the surface ore that would do credit to any mine in the world, heavily charged with copper of chalcopyrite variety, and giving the most positive evidence of both richness and quantity. Several other veins have been sunk upon, cross-cut and trenched, on the property evidences from all being of the most convincing nature. This location, strange to say was first discovered many years ago by Mr. Dick who visited the locality for purposes of examining another outcrop. He afterwards returned and in company with G.W. Ganong of St. Stephen, took up leases, and has at various times since then engaged on quietly developing the area. To any one who has heard that a copper mine was being developed near Scotch Settlement, and then going in to see it a revelation is certainly given them. A comfortable cabin has been erected near the post road, and for a couple of acres more or less a large amount of development work has been done, two main shafts sunk, and crosscutting and trenching in abundance, from all of which ore in goodly quantity has been thrown out. In the vicinity of the two timbered shafts, quite large bodies of high grade ore is piled up, and to any one who looks at it, and is capable of forming a judgement at all, it is simply beyond relief that any intelligent mining man, be he of the Geological Survey staff, or not, could honestly and conscientially say New Brunswick has neither rich ore or quantity, as the developments here show directly to the contrary. Mr. Dick, who is thoroughly well posted and intelligent miner, and one capable of giving proof of his knowledge having been engaged in mining of all classes in the West, in Colorado, Nevada and the Cobalt region, is fully satisfied that an immense body of good paying ore is here, only requiring capital to make the full development necessary and not only is he of the belief that the mineral wealth here is not alone, but that in other parts of New Brunswick the same conditions exist. In Charlotte county ore districts well worthy of development, and from what he has heard and seen he has no hesitation in saying that the Jordan Mountain Copper mine is a valuable deposit, and has promised to visit it before he leaves Scotch Settlement, which he proposes doing in early November. The visit to this Scotch Settlement mine was very pleasant and instructive to the writer, and the courtesy and kindness of Mr. Dick and associates will be long remembered. - Kings County Record."

Kings County Record - Aug. 12, 1916 It is rumored that New York parties who hold anoption on the Jordan Mountain copper mine visited the property one day last week. It is to be hoped that the visit may result in the opening up and development of this mineral property. It is also said that there maysoon be a resumption of work on the Jordan Mountain Manganese deposits, which are controlled by Toronto people."

URN: 0041 / E2 / Names: Jordan Mountain Copper; Oil and Gas - Kings Co.;

Kings County Record - May 28, 1909 Mineral Wealth of New Brunswick. - Editor Record, Sir, I noted with pleasure your remarks on the mineral wealth of New Brunswick and can only say that it is a good policy for the Record to adopt and especially where the interests of Kings County is concerned and it is perhaps an important point to note still further that in nearly every case where there is a mineral deposit existing in Kings County it is within easy reach of Sussex, hence Sussex in any move that is made in the future should be a central and controlling point. The question of oil and gas in the Sussex valley is undoubted, as every fact to point to such an existence is plain to be seen and as you state was pointed out by the late W.N. Goold years ago. This field, however, isowned and controlled by the successors to the New Brunswick Petroleum Co., the Maritime Oil Company who are now developing the oil field in Westmorland County at present energetically and I personally not long since interested the Company's manager and have every reason to believe some developments will be undertaken in this vicinity in the not distant future.The late reference to Jordan Mountain copper mine"

URN: 0043 / 0019 / 0039 / Names: Hall-Carroll - St. Stephen; Wheal Louisiana Copper; Rogers Farm - St. Stephen;

St. Andrews Beacon - Apr. 20, 1899 Mining Notes in Charlotte County. - In CharlotteCounty a well known undeveloped vein of magnetic iron ore, we understand, is to be developed in the spring, and contracts in connection with the same are being arranged for. The recent tests of the pyrrhotite in CharlotteCounty, near St. Stephen, in which nickel is one of the prominent features, has led to the idea that a permanent business can be established in this direction. A Mr. Morrison, of London, G.B., in connection with Messrs. Chipman and Ganong, of St. Stephen, have been securing mining rights in this locality, and it is said a shaft 200 feet deep will be put down on the Hall-Carroll claims near St. Stephen, to fully test the persistency and continuity of the veins and their mineral bearing wealth. Should the tests prove O.K. then Sudbury will certainly have a rival in New Brunswick that cannot be despised. For the present we await further developments. In Letete and at Red Head in Charlotte County,the copper and pyrites deposits there have attractedconsiderable attention owing to the efforts of one of our N.B. mining men, who is ever arduous in booming the mineral resources of New Brunswick. Two large areas there are under option to English capitalists. - Industrial Gazette."

Best, chemist of St. John, was in town Tuesday again looking over the pyrites mine on Mr. Hall's farm. He says it is one of the most valuable deposits of pyrites within his knowledge."

Daily Telegraph - Jul. 30, 1890 Valuable Deposits of Ore. - In Iron and Copper Discovered Near St. Stephen. - (Special to the Daily Telegraph). - St. Stephen, July 29. - Mr. W.F. Best, of St. John, arrived here today by the noon train. After dinner, accompanied by Messrs. Carroll and Gregory, he drove out to Mr. Hall's farm where Mr. Carroll claims to have made a rich find in copper and iron ore. It is reported on good authority that Mr. Best is much pleased with the prospect. A gentleman who, for some years, has been engaged in mining speaks of the ore as being of superior quality. The only question of the future success of this as a mining enterprise doubtless rests in the fact whether there is ore in sufficient quantity to make it a paying

St. Croix Courier - Sep. 18, 1890 and Daily Sun - Sep. 19, 1890 The Pyrites Mine.- Mr. Carroll Receives an Encouraging Letter from Chemist Best.- The pyrites mine on the Hall farm is showing up better from day to day and the hopes of Mr. Carroll are growing higher as the work of prospecting continues. The cuts made up to the present time indicate an enormous deposit of the ore and one which is practically inexhaustible. Mr. Carroll has been satisfied all along that the ore is very valuable, and the following letter he has just received from Mr. W.F. Best, analytical chemist of St. John, confirms his opinion:- J.A. Carroll, Dear Sir, In compliance with your request I send the following preliminary report on your mining property, situated near St. Stephen, on the Hall farm. Up to the present date four openings have been made and the ore reached at a depth of from four to seven feet from the surface. Number one opening is about two hundred feet from the highway road and opposite the gateway. Number two opening is two hundred and sixty feet south of number one. Number three opening is between number one and number two - about sixty feet south of number one. Number four opening is situated two hundred and fifty feet east of number one. A bed of solid ore was reached at the depth of about six feet from the surface in each case. At the present stage of the work it is not possible to determine the boundaries of the bed of ore, but it has been proved to be two hundred and sixty feet long and two hundred and fifty feet wide. It is expedient that an effort should be made to determine the permanency of the deposit and the quality of the ore some distance below surface. From present indications it would appear that excavation would reveal an almost inexhaustible quantity of ore. With regard to the composition of the ore, it is sulphuret of iron (iron pyrites), with a considerable percentage of nickel and some gold, silver and copper. The average value of the ore as determined by the analysis of twelve samples of the material taken from near the surface is $21.00 per ton. The following analyses are fairly representative of the average ore, viz:- Iron - (in one hundred) 42.00 Sulphur 47.70 Copper 3.61 Gold (per ton) 0.10 oz. Silver 1.11 oz. Nickel 94.09 oz. Iron (in one hundred) 47.00 Sulphur 47.89 Copper 2.74 Gold (per ton) 0.09 oz. Silver 1.10 oz. Nickel 86.00 oz. Since the visit of Mr. Best, Mr. Carroll has made a fifth cut three hundred and fifty feet south of cut number two, mentioned in Mr. Best's letter, and found a continuation of the bed described. This would indicate a much larger deposit than was at first supposed."

Moncton Daily Transcript - Jul. 30, 1890 Iron and Copper near St. Stephen.- St. Stephen, July 30.- Mr. W.F. Best, of St. John, arrived here yesterday. He drove out to Mr. Hall's farm where Mr. Carroll claims to have made a rich find in copper and iron ore. It is reported on good authority that Mr. Best is much pleased with the prospect. A gentleman who for some years has been engaged in mining speaks of the ore as being of superior quality. The only question of the future success of this as a mining enterprise doubtless rests in the fact whether there is ore in sufficient quantity to make it a paying investment."

St. Croix Courier - Aug. 14, 1890 and S.J. Evening Gazette - Aug. 15, 1890 and Daily Gleaner - Aug. 15, 1890 and S.J. Daily Sun - Aug. 15, 1890 W.F. Best, chemist of St. John, was in town Tuesday again looking over the pyrites mine on Mr. Hall's farm. He says it is one of the most valuable deposits of pyrites within his knowledge."

Daily Telegraph - Jul. 24, 1890 St. Stephen. - Report says that a rich find of iron ore has been made in this vicinity."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

Moncton Daily Transcript - Jul. 30, 1890 Iron and Copper near St. Stephen.- St. Stephen, July 30.- Mr. W.F. Best, of St. John, arrived here yesterday. He drove out to Mr. Hall's farm where Mr. Carroll claims to have made a rich find in copper and iron ore. It is reported on good authority that Mr. Best is much pleased with the prospect. A gentleman who for some years has been engaged in mining speaks of the ore as being of superior quality. The only question of the future success of this as a mining enterprise doubtless rests in the fact whether there is ore in sufficient quantity to make it a paying investment."

Fredericton Daily Gleaner - Aug. 23, 1890 The Pyrites Deposit. - The pyrites deposit discovered on the Hall farm about two miles from St. Stephen, promises to be a very extensive one. Mr. Best will make a complete analysis of the ore, and feels confident the enterprise will be a profitable one. It is believed the property would pay if worked for the copper on it alone."

Daily Times - Aug. 23, 1890 A Valuable Pyrites Mine. - St. John, Aug. 22. - The pyrites mines, two miles from St. Stephen, proves to be an immense bed of solid ore, some 5 feet under the surface. Shafts sunk five hundred feet apart have proved it. There are also traces of copper. Pyrites is used in the manufacture of sulphuric acids and this mine proves very valuable. The owners of the property are A.J. Carroll, Thos. Gregory and W.F. Best. Careful analysis of the ore will at once be made."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Nov. 6, 1890 Our Mines and Minerals. - Something About the Recently Developed Mines in this Vicinity, and How They were Discovered. - Here is the beginning of a long yarn, but if you will follow me through I will try to make it interesting. Away back in 1850 six men left St. Stephen on a horse and drove to Portland, Me., where they took the cars and proceeded on their long journey 'around the cape' to the gold fields of California, then recently discovered and exciting the wonder of the world. Varying success attended their search for the hidden treasure, but most of them found their way back again to the east. Five of the party have parted with all their earthly treasure and joined the silent majority, the fifth one, Mr. Alexander G. Smith, being buried from the C.P.R. train on Monday last. Mr. C.E. Boardman is the only remaining member of the party, and his experience in California seems destined to be of great and lasting benefit to Charlotte county. Becoming tired of digging where others had located gold, he started to 'prospect', or locate the mineral, and soon became such an expert that all he had to do was to enter an orchard, taste some of the fruit and he could tell at once if mineral was within a mile of him. Bush fruit was sometimes deceptive and he would have to linger over it, but a turnip field or water-melon patch told its story to him at once. To speak seriously though, several of the richest mines in California were discovered by Mr. Boardman. They include the 'Whahoo' mine, the Hawland Flats, Poverty Flats, and the celebrated Lighthouse claims, from which six men took $76,000 in thirteen weeks. Bret Harte has made some of these mines famous in his stories, and someof them have been worked continuously till this day. The east had attractions for Mr. Boardman, and he returned. The fact that Charlotte county had no great wealth of farming country convinced him that nature had made other provision for her, and evidences of rich mineral deposits were visible to his practiced eye. However, he engaged in business pursuits which occupied the most of his time until recent years, when his attention has again been attracted to the fields. Mr. W.F. Todd, who has spent and is spending more money in the development of this county than any other individual, had invested thousands of dollars in a tract of peat moss covering three hundred acres at Musquash. It was known to be very valuable, and Mr. Todd wished to procure more of it. Mr. Boardman's services were secured, and, after diligent search he located, within the county limits, five hundred and seventy five additional acres. These raised bogs, or peat moss bogs are very rare, and in fact no others are known to exist in any other country except Sweden. Since they have been located here they have been examined by professors and scientific men from many places, and are within one mile of the sea coast and the Shore Line Railway has a branch constructed right into their midst. The principal use of the moss is for bedding horses, and one bedding lasts for three or four months, as it absorbs all moisture. It is also used in the manufacture of paper. A machine that costs upwards of $8000 is now working at the bogs, and employment is given to twelve men. The moss is over forty feet deep and will yield two thousand tons to the acre. At the present time they are turning out 250 bales of 400 lbs. each per day, and the moss is worth $1100 to $1200 per ton. Geo. R. McWha & Co. are retail agents in St. Stephen. One western concern has offered to buy the machinery now in use, operate it and pay its owners a royalty of fifty cents per ton on the output. This would mean a very handsome return on the investment, but they are not disposed to sell. At the present time they have orders from Westerly, Fall River, Lexington, New York, Ottawa and other places in the United States and Canada. With an almost inexhaustible supply of such valuable material within her limits, Charlotte county cannot fail to receive great benefits from it. Ten years or more ago Mr. Boardman was convinced that ore in very large quantities existed on the farm of Mr. Eben Hall and some considerable talk was made about it. Five years later Mr. G.W. Ganong and Mr. J.P. Bixby secured a lease of the property, but just at that time everybody was discovering a mine on his land which, after the expenditure of some time and money, would prove valueless, and the lessees of Mr. Hall's property did not feel encouraged to proceed. The lease was allowed to expire and early this spring Mr. Todd and Mr. Boardman made an effort to secure it but found that Mr. J.A. Carroll had already obtained what they desired. Mr. Carroll had prospected in many lands, and was too well convinced of the value of his claim to readily dispose of it to another. Some careful prospecting soon assured Mr. Boardman that similar ore to Mr. Carroll's existed near it, and a parallel lode was located on property owned by Mr. Rogers, Mr. Parker Hanson and others. As soon as located and leases of the lands obtained, operations were pushed to learn the extent of the minerals. The lode runs from east to west and a trench has been dug across it until it is proved to be one hundred and twenty four feet wide. It is known to be two miles long, but not at all places so wide. A very perfect 'wall rock' forms a wall to the mass of the mineral, and the presence of 'lime spar' and 'carbonate' indicated, to a miner, a very perfect mine. A man who cannot tell gold from the roots of an old tree can see at a glance that there is an abundance of mineral, but of its nature and value he might be ignorant. Samples of the ore have been assayed in Ottawa, Montreal, Halifax, St. John, New York, Boston, Philadelphia, Washington, and Cambridge, and all confirm the hopes of the owners that the mine is valuable. Sulphur is the principal element, though the iron, nickel and copper are valuable, and in fact the nickel and copper will pay for working the mine. The sulphur is sought after because it is useful in the manufacture of paper, in the tanning of leather, accomplishing in one week what the process of a few years ago required months to do, in the manufacture of some spiritous liquors, in the preparation of land phosphate and largely in the refining of kerosene oil. The Standard Oil Company, the greatest corporation in the United States, now buys great quantities from the iron-pyrites mine on Newfoundland, owned by some of our citizens, and will take thousands of tons from the mines here. There can be little question as to the immense quantities present on the surface, and during the winter a shaft will be sunk through the ore to ascertain its depth, a standing offer of government assistance probably not being utilized. There are only two similar mines in the United States, one located in Connecticut and one in Vermont, but these are of low grades, containing not much over 20 per cent. of sulphur, while the samples from this mine contained from 40 to 48 per cent. A considerable quantity has already been shipped to the Standard Oil Company. One forty gallon cask will carry about 1500 pounds and the estimate is not unreasonable that there are more tons of ore than there have been shipped thousands of lumber from this river since the establishment of the first mill. And this mine of Mr. Todd's is not all that the country contains for, running along side of it and only a few yards away, is the lode of Mr. Carroll, of equal value and probably of equal quantity. These veins run across the Basswood Ridge road and hundreds of times the wagons of farmers passed over them and no one dreamed of the treasure ground by their wheels. A man invests his wealth in lumber land and a fire may make him a beggar, or he may invest in something smaller and have it stolen or killed. In these mines the stuff is there, it cannot blow away, and it can't be stolen. Once fire had to deal with it and probably when fire touches it again it will be at the time of that fervent heat when men will count earthly possessions of no value. Already the owners of these properties have received flattering offers for their claims or an interest in them, and Mr. Carroll has this week been asked by capitalists abroad to name his price. But some people know when they have a good thing and don't care to part with it. If these mines are not a success it does seem as if they will come so near it that it will scare some people. They are located within a mile of the town limits and the ore can be placed in New York at very little expense in the way of freight. This is not all the valuable minerals in Charlotte county, for Mr. Boardman is now employed by New York parties to locate other minerals which he knows to exist here and which have recently become

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

Oct. 1890 - Copied from: St. Croix Courier - Oct. 28, 192030 Years Ago. - Excavations at the Todd and Boardman pyrites mine have disclosed a level bed of solid ore 124 feet wide, with a well defined wall, thus showing that it is not a mere surface deposit, but a vein probably of immense depth and containing, as Mr. Boardman expresses it, more tons of ore than there were thousands of lumber on this river."

St. Andrews Beacon - Sep. 11, 1890 The pyrites mine, at St. Stephen, promises now tobe more valuable than the most sanguine of the prospectors had supposed. Latest advices place the value of specimens at $20 per ton at the mine. If even half of this can be realized it will probably pay to work it. Mr. Carroll is said to have refused $30,000 for his lease."

Mr. Boardman's services were secured, and, after diligent search he located, within the county limits, five hundred and seventy five additional acres. These raised bogs, or peat moss bogs are very rare, and in fact no others are known to exist in any other country except Sweden. Since they have been located here they have been examined by professors and scientific men from many places, and are within one mile of the sea coast and the Shore Line Railway has a branch constructed right into their midst. The principal use of the moss is for bedding horses, and one bedding lasts for three or four months, as it absorbs all moisture. It is also used in the manufacture of paper. A machine that costs upwards of $8000 is now working at the bogs, and employment is given to twelve men. The moss is over forty feet deep and will yield two thousand tons to the acre. At the present time they are turning out 250 bales of 400 lbs. each per day, and the moss is worth $1100 to $1200 per ton. Geo. R. McWha & Co. are retail agents in St. Stephen. One western concern has offered to buy the machinery now in use, operate it and pay its owners a royalty of fifty cents per ton on the output. This would mean a very handsome return on the investment, but they are not disposed to sell. At the present time they have orders from Westerly, Fall River, Lexington, New York, Ottawa and other places in the United States and Canada. With an almost inexhaustible supply of such valuable material within her limits, Charlotte county cannot fail to receive great benefits from it. Ten years or more ago Mr. Boardman was convinced that ore in very large quantities existed on the farm of Mr. Eben Hall and some considerable talk was made about it. Five years later Mr. G.W. Ganong and Mr. J.P. Bixby secured a lease of the property, but just at that time everybody was discovering a mine on his land which, after the expenditure of some time and money, would prove valueless, and the lessees of Mr. Hall's property did not feel encouraged to proceed. The lease was allowed to expire and early this spring Mr. Todd and Mr. Boardman made an effort to secure it but found that Mr. J.A. Carroll had already obtained what they desired. Mr. Carroll had prospected in many lands, and was too well convinced of the value of his claim to readily dispose of it to another. Some careful prospecting soon assured Mr. Boardman that similar ore to Mr. Carroll's existed near it, and a parallel lode was located on property owned by Mr. Rogers, Mr. Parker Hanson and others. As soon as located and leases of the lands obtained, operations were pushed to learn the extent of the minerals. The lode runs from east to west and a trench has been dug across it until it is proved to be one hundred and twenty four feet wide. It is known to be two miles long, but not at all places so wide. A very perfect 'wall rock' forms a wall to the mass of the mineral, and the presence of 'lime spar' and 'carbonate' indicated, to a miner, a very perfect mine. A man who cannot tell gold from the roots of an old tree can see at a glance that there is an abundance of mineral, but of its nature and value he might be ignorant. Samples of the ore have been assayed in Ottawa, Montreal, Halifax, St. John, New York, Boston, Philadelphia, Washington, and Cambridge, and all confirm the hopes of the owners that the mine is valuable. Sulphur is the principal element, though the iron, nickel and copper are valuable, and in fact the nickel and copper will pay for working the mine. The sulphur is sought after because it is useful in the manufacture of paper, in the tanning of leather, accomplishing in one week what the process of a few years ago required months to do, in the manufacture of some spiritous liquors, in the preparation of land phosphate and largely in the refining of kerosene oil. The Standard Oil Company, the greatest corporation in the United States, now buys great quantities from the iron-pyrites mine on Newfoundland, owned by some of our citizens, and will take thousands of tons from the mines here. There can be little question as to the immense quantities present on the surface, and during the winter a shaft will be sunk through the ore to ascertain its depth, a standing offer of government assistance probably not being utilized. There are only two similar mines in the United States, one located in Connecticut and one in Vermont, but these are of low grades, containing not much over 20 per cent. of sulphur, while the samples from this mine contained from 40 to 48 per cent. A considerable quantity has already been shipped to the Standard Oil Company. One forty gallon cask will carry about 1500 pounds and the estimate is not unreasonable that there are more tons of ore than there have been shipped thousands of lumber from this river since the establishment of the first mill. And this mine of Mr. Todd's is not all that the country contains for, running along side of it and only a few yards away, is the lode of Mr. Carroll, of equal value and probably of equal quantity. These veins run across the Basswood Ridge road and hundreds of times the wagons of farmers passed over them and no one dreamed of the treasure ground by their wheels. A man invests his wealth in lumber land and a fire may make him a beggar, or he may invest in something smaller and have it stolen or killed. In these mines the stuff is there, it cannot blow away, and it can't be stolen. Once fire had to deal with it and probably when fire touches it again it will be at the time of that fervent heat when men will count earthly possessions of no value. Already the owners of these properties have received flattering offers for their claims or an interest in them, and Mr. Carroll has this week been asked by capitalists abroad to name his price. But some people know when they have a good thing and don't care to part with it. If these mines are not a success it does seem as if they will come so near it that it will scare some people. They are located within a mile of the town limits and the ore can be placed in New York at very little expense in the way of freight. This is not all the valuable minerals in Charlotte county, for Mr. Boardman is now employed by New York parties to locate other minerals which he knows to exist here and which have recently become

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

Fredericton Daily Gleaner - Aug. 23, 1890 The Pyrites Deposit. - The pyrites deposit discovered on the Hall farm about two miles from St. Stephen, promises to be a very extensive one. Mr. Best will make a complete analysis of the ore, and feels confident the enterprise will be a profitable one. It is believed the property would pay if worked for the copper on it alone."

St. Andrews Beacon - Sep. 11, 1890 The pyrites mine, at St. Stephen, promises now tobe more valuable than the most sanguine of the prospectors had supposed. Latest advices place the value of specimens at $20 per ton at the mine. If even half of this can be realized it will probably pay to work it. Mr. Carroll is said to have refused $30,000 for his lease."

St. Croix Courier - Sep. 24, 1891 Operations at the mines have largely ceased for the present. In conversation with a COURIER reporter the other day, Mr. McLean, the manager for the company now in charge of the Todd and Boardman mine, said it was not probable that anything further would be done until improved rapid machinery could be obtained. The machinery lately in use is slow working and expensive and must be replaced by something better before operations can be made at a cost that will warrant the company in carrying them on."

Fredericton Daily Gleaner - June. 20, 1891 and Moncton Daily Times - Jun. 23, 1891 The Blair Government and the Nickel Mines. - Some facts Which Have a Suspicious Appearance: Mr. Mitchell's Connection With the Case. - (St. John Globe, June 18th). - The visit to the city this week of Eben Hall, ownerof the celebrated Heathland farm near St. Stephen, in which the nickel and copper mines were discovered last summer, promises a sequel of more than ordinary interest, in which it is generally believed will be found the secret of the new provincial mining act passed at the last session of the legislature. Mr. Hall spent a considerable part of the day about the crown land office, his presence causing marked uneasiness to the head of the department, who has been in town since yesterday. Mr. Hall's grievance will be better understood by a recital of the facts in connection with the case, as related by himself to your correspondent. The farm in which the mines are situated is about two miles from St. Stephen, and comprises about one hundred acres of land. On the 1st of July last year, while Mr. Hall was working his horse in that part of the farm which he calls the beanfield (?), one of the animal's legs broke through the surface and went down almost its entire length - caused, as Mr. Hall immediately saw, by the insubstantial condition, through the effect of gases, of part of a long bed of mineral lying about eighteen inches from the top. The sight of a piece of broken mineral at once aroused the farmer's interest, and in examination of it afterwards by himself and some relatives induced him to send it to St. John to Mr. Best for testing. Mr. Best reported it rich in copper and nickel and went over some days after and inspected the premises. He found a stratum of the mineral of large size, the richest part being in about the middle of the farm. Mr. Hall afterwards leased Mr.Jerry A. Carroll between 15 and 20 acres in the upper end of the farm, upon condition that the lessee pay $500 if he found mineral of workable value on it, and a further sum of $500 when he should begin to work it. Silver and gold in small quantity, but of a very rich quality, were afterwards found on higher land near the house. Specimens of this Mr. Hall's nephew, Chas. Libbey, took to New York, where it was estimated the quartz was worth $140 per ton. The word soon went round among speculators and several big offers have been made to Mr. Hall. Mr. Carroll, it is stated has received $20,000 for his interest in the 20 acres mentioned. Now comes in the most interesting part of the case. Some time after the discovery, Mr. Hall says early last fall, the latter spoke to Hon. Mr. Mitchell, provincial secretary, about procuring a mining licence - that would be under the old act. The secretary, some months afterwards, Mr. Hall having been absent in a lumber operation in the meantime, when asked about the matter, stated that he had forgotten all about it; and, before anything more was heard respecting it, the new mineral act had been passed through the house and declared law, by which it is provided that any person, on making the necessary application, may be granted a prospecting license authorizing him to search upon any five square miles of land he pleases to apply for, whether crown lands or lands owned by private persons. This done, there is further provision for the granting of mining leases on any portion of the land thus selected on which minerals may be found, which gives the lessees power to enter upon the land, tear up the earth, erect buildings, tear down buildings, etc., if necessary, upon compensation - to be agreed upon by arbitrators appointed for the purpose, if it is impossible for the lessee to agree thereon with the owner of the land - being made. The next discovery is that Mr. W.F. Todd had applied to the Crown Land department in the manner prescribed, and been granted, on paying the fee of $20, a license to prospect on five square miles of land, covering Mr. Hall's farm, and that the latter's rights to the land are subject to this license. Mr. Todd has not yet entered upon the land, and never will if law can prevent him. The case was given tonight to a leading lawyer of the city, and will, no doubt, be thoroughly sifted. Mr. Hall declares that certain members of the government are interested with Mr. Todd, and believes the new mining act was made for their benefit in the matter. It will be remembered that Mr. Hanington, in opening the discussion on the bill in the legislature last winter, spoke of its suspicious appearance, and expressed the opinion that there was something underlying it. Mr. Hall is a man of considerable property, and has wealthy relatives, who, it is understood, are

Moncton Daily Times - Jun. 30, 1891 That Nickel Mine. - Messrs. Blair and Tweedie's Reception of Mr. Hall. That Gentleman Now Thinks He Will be Able to Secure a Mining Right on His Own Farm Over- Riding the Extraordinary Privilege Already Granted to Strangers. (St. Croix Courier). - Since Mr. Hall's return from Fredericton, he has been interviewed by a Courier reporter, to whom he told a story, of which what follows is the substance:- On arriving on Fredericton Mr. Hall proceeded to the government buildings and had an interview with the attorney-general. He told the attorney-general that his business was to enquire by what right a mining license has been given to Mr. Todd, covering his farm in the parish of St. Stephen. He supplemented his remark by informing Mr. Blair that he was a man of very little education, having attended school for only six weeks of his life, half of which time was devoted to fighting the other boys of the school, and that he thus was not, from an educational point of view, equipped for a discussion with men of the standing of the leader of the government. He suggested that if his rights were denied he might find it necessary to employ a lawyer, but Mr. Blair interrupted him with a statement that a man who could talk as well as Mr. Hall did not require any assistance from the legal profession, and suggested that they proceed to the Crown Land office to talk the matter over with the Surveyor General. Here they found Mr. Tweedie, and Mr. Hall told his story to him. He had been the proprietor of the farm in question for very many years; he had cultivated it and improved it; he had planted and raised ornamental trees, the value of which to him was more than it could be to anyone else; he had known of the existence of valuable mineral on it for a long time and had even gone so far as to begin mining operations before any mining law was passed. He claimed he had rights in the mineral which could not be taken away by any law passed by the provincial government, and unless he were granted the first right to mine on his own premises he intended to make it warm for all persons, whether in authority or not, who were in the conspiracy to freeze him out. The surveyor-general informed Mr. Hall that he was a little previous in his demands, that, in his opinion, neither the government not Mr. Todd had any desire to pull down his house or take away from him anything that was lawfully his, and he suggested that Mr. Hall should wait a while and watch developments, at the same time courteously enquiring if he intended to go home that night. Mr. Hall replied that he had used up all his honey and, as it appeared that it would be necessary to use a little vinegar, he didn't intend to go home until he had consulted a lawyer as to his rights. Taking leave of the gentlemen in the Crown Land office, Mr. Hall then went to the office of Mr. G.F. Gregory and told him his story, learning that he had arrived just in time to save himself from the avarice of those who were banded against him. Accordingly, Mr. Gregory and Mr. Hall returned to the Crown Land office and Mr. Gregory stated Mr. Hall's case, tendering $50.00 and demanding a mining license to cover the property in dispute. The Surveyor General took the money and stated that, if it were possible, the license would be granted and, if not, the money would be returned. Since his return Mr. Hall has expressed himself as satisfied that he will get the first right from the government to mine on his own property. If not, he has behind him relatives in New York who are worth millions and who will fight his fight to the finish. An expectant public will wait further developments with feverish interest and anxiety."

Fredericton Daily Gleaner - Sep. 25, 1891 At The Nickel Mines. - Surveyor General Tweedie is at the St. Stephen nickel mines today. He will have some trouble in obeying the orders of his superior officer and at the same time satisfying the claims of the mine owners."

St. Andrews Beacon - May 14, 1891 St. Stephen.- Boston parties have bonded Mr.Boardman's mine and have agreed to sink a shaft at least fifty feet. In the Carroll mine men are at work, and it will soon be determined whether the mines are very valuable or are a fizzle."

St. Croix Courier - Sep. 24, 1891 Operations at the mines have largely ceased for the present. In conversation with a COURIER reporter the other day, Mr. McLean, the manager for the company now in charge of the Todd and Boardman mine, said it was not probable that anything further would be done until improved rapid machinery could be obtained. The machinery lately in use is slow working and expensive and must be replaced by something better before operations can be made at a cost that will warrant the company in carrying them on."

Daily Telegraph - Nov. 25, 1891The St. Stephen Nickel Mine. - It is understood that the Carroll mine is likely to be bonded to a syndicate that has the option in the Todd property. Boston and Philadelphia capitalists have also requested the owners of the mine to hold the property for a few days, till arrangements can be made with them. Recent tests of the nickel ore show very encouraging results, and it is probable that work will be resumed on the shaft at an early date, with a view to thoroughly testing the per centage of nickel. A new process is being tested in the United States for the manufacture of nickel steel direct from the ore and if this process is a success, the St. Stephen ore will be most valuable for this purpose, and much more conveniently situated than the Sudbury deposits."

Fredericton Daily Gleaner - Sep. 25, 1891 At The Nickel Mines. - Surveyor General Tweedie is at the St. Stephen nickel mines today. He will have some trouble in obeying the orders of his superior officer and at the same time satisfying the claims of the mine owners."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

Daily Telegraph - May 25, 1891 Nickel and Copper Mine. - A great deal of interest is being taken in the deposit of nickel and copper which has been discovered in Charlotte county, about one and a half miles from the town of St. Stephen. A shaft has been sunk for a short distance upon the farm of Mr. Carroll, and it has been demonstrated that an enormous deposit of ore exists. Expert miners have examined the deposit and pronounced the surface showing as being exceedingly good. The full value of the deposit cannot, however, be determined upon with certainty until further exploration is made. It is generally felt that if the ore continues to improve as the shaft is sunk to a greater depth, the mines will prove a veritable bonanza. Quite a mining boom has set in at the locality, and quite a large number of applications for licenses have been filed in the crown land

Fredericton Daily Gleaner - Jun. 10, 1891 Valuable Mining Industry. - Nickel Discovery Creates a Boom at St. Stephen. - Twenty Square Miles of Land Taken Up. - One Thousand Men Will Be At Work In Six Weeks. - Special to Gleaner. - St. Stephen, June 10. The people of our thriving town are just now in high spirits. Prospects are bright for the town and for many of its citizens, and so there are many happy faces among us just now. All this is due to the fact of the discovery of valuable nickel mines in the vicinity. The discovery of the nickel deposits has been gradual. Years ago the people prospected for copper here, and found it. They had no idea that there was nickel here too until lately, when in hunting for copper it was discovered. It was, however, near the surface and in small quantities. Going down deeper, a rich bed was found. Then the excitement began. It was not until quite lately that the rich ore was found, but the time has been sufficient to create a big boom in St. Stephen. Already twenty square miles of land have been taken up and it all probably contains nickel. The price of land has gone up at a surprising rate and thousands of dollars take the place of dollars. The Messrs. Todd have five of these twenty square miles. the most astounding offers are refused. Land owners intend to work the mines at once and it is probable that within six weeks one thousand men will be employed here. Nickel is the best paying mineral in existence, even surpassing gold. It is very valuable and is easily worked. The demand is steadily increasing since its adoption for use in ship armour, in the guns, the sheathing of the ships, etc. There are but few mines in the world, the principal being at Sudbury, Ontario, and in South Africa. Where the demand is great and the supply limited, there is an abundant market and good prices. This ore, so far as obtained, rivals the ore of the Sudbury mines in the amount of nickel it contains. Another enticing feature is the fact that little expense is required to prepare the ore for market. The chief ingredients of the ore are copper and sulphur. The ore is roasted in large furnaces. A layer of ore about two feet deep is laid on the bottom of the furnace and wood placed through it for kindling. The ore burns itself on account of the sulphur within. The sulphur is burned out and the ore melted. The melting causes the different constituents of the ore to run together. The mass is cooled and shipped in that condition. The chief market is England. In the past mining has been one of New Brunswick's minor industries., but it promises in time to equal the industry as it exists in Nova Scotia, for its territory one of the finest mining countries in the world. The north has splendid mineral resources and at different places throughout the southern and central counties good paying ores have been found. What is now needed is capital to open up these mines. If the nickel mines do as well as is expected, it will be a splendid thing for New Brunswick. It will bring money and men into the province and create a healthy circulation. It is probable that the shipments would be made from St. Andrews, which would thus become quite a shipping town. Furthermore it would direct the eyes of the mineral world to the province and perhaps lead to the opening up of other mineral districts in New Brunswick."

Fredericton Daily Gleaner - Apr. 17, 1891 Nickel Mine. - St. Croix Courier: Mr. J.A. Carroll will begin at once to sink a shaft and determine the value of his mine of nickel and copper on the Hall estate, the analysis of the ore at the depth of four feet having given promise of a profitable percentage of metal. The St. Stephen ore resembles that of Sudbury and Mr. Carroll has already found it to yield 2« per cent of nickel, with every reason to hope that the yield will be richer when a greater depth is

St. Croix Courier - May 7, 1891 Mr. J. Carroll has resumed operations at the mine on the farm of Mr. E. Hall and expresses unbounded confidence in the valuable nature of his find. The mine has been visited of late by several persons from abroad, who express a very favorable opinion as to the value of the ore."

St. Croix Courier - May 14, 1891 Samples of the ore from the Carroll mine at St.Stephen have just been examined by Mr. W.F. Best and show 2.56 of nickel and 5.27 of copper. These samples were obtained within 20 feet of the surface and the owners are quite hopeful that the quality of the ore may continue to improve as the depth of the shaft is increased. In appearance the ore is identical with the Sudbury nickel ore. It is reported that a property adjoining the Carroll mine has been bonded to an American Company.- Telegraph."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - May 14, 1891 Samples of the ore from the Carroll mine at St.Stephen have just been examined by Mr. W.F. Best and show 2.56 of nickel and 5.27 of copper. These samples were obtained within 20 feet of the surface and the owners are quite hopeful that the quality of the ore may continue to improve as the depth of the shaft is increased. In appearance the ore is identical with the Sudbury nickel ore. It is reported that a property adjoining the Carroll mine has been bonded to an American Company.- Telegraph."

St. Croix Courier - May 21, 1891 A St. Stephen man who has recently visited the Sudbury nickel region says that the appearance of the ore, as well as the surrounding rock, so strongly resembles that of the St. Stephen deposits that the likeness is noticeable at once. The Sudbury ore is roasted to expel the sulphur, and the resulting material, called 'matte', is sent to Swansea, in Wales, that being one of the only two places in the world at present where the process of extracting the nickel is carried on. There are several deposits of nickel ore in the United States, none of which, according to the State assayer of Massachusetts, yield more than 2 per cent, which is not enough to pay for working. Professor Bell's report shows the Sudbury ore to yield from 1 to 5 per cent. If, as is confidently expected, our mines increase in richness with their depth, they may yet prove equal to the Ontario mines, though with much less than the highest percentage found there it might still be

St. Andrews Beacon - Oct. 22, 1891 Ever since the nickel mine has been discovered on the Hall property there have been claims and counter claims covering all the farms in the vicinity. Under the new mining law any person was, on the payment of a certain fee, entitled to a prospective claim on five square miles; after holding the claim for one year he was obliged to take out a mining license for not more than one mile square. A very obnoxious clause of the law was one that permitted a prospective miner to put in a mining claim for land unknown to the owner. Early last spring, in fact almost before the Governor's signature to the law was dry; applications were made for prospective and mining licenses. Mr. Hall's property was of course covered, and, when it was intimated to him that by paying a nominal value for damages done to his farm, he might be deprived of his homestead he naturally became very wrath and posted off hot haste for Fredericton to enter a counter claim to his own property. After considerable delay the Surveyor General decided that as the claims to Mr. Hall's property were entered before the law was on the statute books Mr. Hall's claim was perfectly valid, and on Friday last Mr. Gillespie

An expectant public will wait further developments with feverish interest and anxiety."

Jul. 1891 - Copied from: St. Croix Courier - Jul. 7, 1921 30 Years Ago. - It is said that a large number of men will be set at work on the Carroll nickel mine on Monday next. The operations will be carried on under the direction of the New York parties who have an option on the mine."

St. Andrews Beacon - Oct. 8, 1891 Nickel in New Brunswick.- (St. John Gazette) The latest analyses made by the most competent chemists in Canada give to the great deposit of pyrrhotine at St. Stephen an importance of the highest character, and it now seems as if our border city may at some future day become more than the rival of Sudbury as a nickel producing centre. One analysis, which we have seen and which was made under the auspices of the Dominion authorities, shows in this ore within a fraction of 2 per cent. of nickel, while the same authority pronounces the St. Stephen pyrrhotine as being similar to and indiscernible from the Sudbury ore. We are also assured by Mr. E. Jack, who has recently visited these St. Stephen deposits, that to all appearances the quantity of ore is inexhaustible. Mr. E. Jack also says that he was shown years ago by the late Mr. Curran, deputy surveyor for the county of Charlotte, a piece of this ore, which, Mr. Curran informed him, had been taken from rock at the bottom of a well in the vicinity of Milltown, St. Stephen. For a long time, land surveyors had noticed the deviation of the magnetic needle in the vicinity of St. Stephen, while the cause remained unknown. It is now, however, evident that this is due to the presence of ore of which we have been speaking which has more or less action on the compass."

St. Andrews Beacon - Oct. 22, 1891 Ever since the nickel mine has been discovered on the Hall property there have been claims and counter claims covering all the farms in the vicinity. Under the new mining law any person was, on the payment of a certain fee, entitled to a prospective claim on five square miles; after holding the claim for one year he was obliged to take out a mining license for not more than one mile square. St. Andrews Beacon - May 14, 1891 St. Stephen.- Boston parties have bonded Mr.Boardman's mine and have agreed to sink a shaft at least fifty feet. In the Carroll mine men are at work, and it will soon be determined whether the mines are very valuable or are a fizzle."

St. Croix Courier - Apr. 28, 1892 Mr. J.A. Carroll has bonded his mine to Mr. A.C. Jones for $20,000, the option to run sixty days with a renewal privilege. The company represented by Mr. Jones expects to begin work in three or four weeks."

S.J. Daily Sun - Aug. 6, 1892 A Summer Excursion. - .... St. Andrews ..... I am driven by Mr. Jones to the now well known and much talked of Hall-Carroll mine. By all appearances St. Stephen has within its borders a bonanza and will wake up some fine day to find itself famous as the centre of an important mining industry. True, as yet nothing definite has been done, but explorations and investigations are going on which may lead to big results in the future. Only one thing is certain - they are waiting, and will wait patiently, till somebody else's money opens up the bonanza. The ore found in this mine is similar, to all appearances, to the famous Sudbury mines ore, which has caused so much excitement in money circles in Ontario and the United States for some years past. The chief product it is supposed to contain is nickel, of which there are marked and positive evidences, but the ore is of a refractory nature, and some mode of separation has to be found to render it capable of being worked properly. That this will be done is possibly a matter of a very short time. Then when it is done and the bonanza is in full blast St. Stephanites can have their belongings nickel- plated to the full extent of their desires. Joking aside, though, it is a matter of wonder, and regret too, I may add, that with the go-ahead push that seems to be in St. Stephen that they do not combine, organize and put enough good money into the venture to prove its merits or demerits. If the indications that exist in St. Stephen in this matter were in any wide-awake mining camp in the western states, thousands of dollars would be poured into the venture to give it a fair trial anyway. Let us hope the good people of St. Stephen will take the hint and give the matter a fair trial and not wait longer for some outsider to step in and reap the harvest that may be within their grasp. From St. Stephen I go to St. George, and here"

Daily Telegraph - Aug. 1, 1892 St. Stephen Nickel. - A gentleman from England, who is interested in the development of the nickel property at St. Stephen, is at present engaged in examining the mine and vicinity. It is understood that a diamond prospecting drill will shortly be put to work, and samples of ore from various depths will be tested."

Moncton Transcript - May 19, 1892 Mr. M. Lodge has a specimen of the nickel orefrom the mine at St. Stephen, owned by Mr. A.C. Jones and himself. The nickel is of the same quality as that at Sudbury and will average from one to eighteen per cent. of ore. The average of nickel is one per cent in the famous mines. It is said the owners of this mine are negotiating with purchasers in Great Britain. Located as it is near a shipping point enhances its value."

Daily Telegraph - May 18, 1892 Nickel. - The company that lately bonded the Carroll-Best and Hall mines, at St. Stephen, have a number of men at work on three shafts. Samples of the ore have lately been sent to members of the company in England and the United States. It is evident that the company intend to thoroughly test the nature and extent of the ore deposit, which competent persons predict will be found equal to the famous Sudbury ore."

St. Croix Courier - Apr. 28, 1892 Here's the way a Toronto paper puts it:- For a nickel mining property near St. Stephen, N.B., the owner has refused $20,000. He wants $130,000 and a guarantee that operations will be begun at once."

St. Croix Courier - Apr. 28, 1892 Mr. J.A. Carroll has bonded his mine to Mr. A.C. Jones for $20,000, the option to run sixty days with a renewal privilege. The company represented by Mr. Jones expects to begin work in three or four weeks."

Evening Gazette - Feb. 3, 1892 and Moncton Daily Times - Feb. 3, 1892 The nickel property at St. Stephen, owned by Messrs. J.A. Carroll and W.F. Best, has been bonded to parties in England, who will send a mining expert over in March to report upon

S.J. Daily Sun - Apr. 6, 1892 St. Stephen. - ... The Nickel Deposits. - Ashort distance from St. Stephen there is an unlimited supply of ore in which nickel is a leading constituent. Over acres and acres of ground it has been explored, with the same result. Everywhere the same ore is found to an unknown depth. The question of its value has not yet been fully determined. Analysis shows a goodly percentage of nickel, and it is said that one mine has already been bonded to an English syndicate. If, as is confidently predicted by some, the nickel can be separated from the other minerals at a profit, the future of St. Stephen is assured. To the naked eye there seems no difference between St. Stephen and Sudbury ore, but analysis is said to show a difference in favor of the latter. Nevertheless, it is within the region of possibility that St. Stephen may yet become a great and profitable mining centre. The real work of exploration and experiment only began within the last year or two, and it is yet too soon to speak decisively."

Jun. 1893 - Copied from: St. Croix Courier - Jun. 11, 1953 60 Years Ago. - The first of the pyrrhotite deposits in the neighborhood of St. Stephen will probably be immediately opened up by New York and Boston capitalists, J.A. Carroll having bonded his property to them on that condition."

St. Croix Courier - Feb. 23, 1893 The Nickel Mines. - Negotiations for the transfer of the St. Stephen nickel mines to an English syndicate are in progress, with a good prospect of success. The syndicate demands the control of a certain fixed area, which, it is hoped, can be secured. If the transfer is made, the syndicate will proceed at once to build a railway from the mines to a deep water terminus, and will expend about a million dollars in opening up the mine. The probabilities are that the ore will be smelted and extracted on the spot."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

Jun. 1893 - Copied from: St. Croix Courier - Jun. 25, 1953 60 Years Ago. - The object of the work now being done at the nickel mines is to determine the amount of ore in that vicinity. The quality is all right and if the quantity warrants the expenditure, an English syndicate will come in and purchase."

St. Croix Courier - May 3, 1894 About the Nickel Mines. - Mr. W.F. Todd has received a letter from the English syndicate interested in the St. Stephen nickel deposits, which encourages the hope that the mines here may soon be opened up. An effort will be made by them to interest Herr Ludwig Mond, the inventor of the cheapest process yet known for extracting nickel from the ore. The agent sent out by the company last year, to inspect the St. Stephen mine and others has not yet made his final report, but it is understood that he thinks this better than the Sudbury deposit, and that its two per cent of nickel can be made to pay. Mr. W.F. Chase, representing an extensive chemical business in Cleveland and Chicago, as noted elsewhere has paid a visit to the St. Stephen mines on his way to Newfoundland. He believes that on going down for a hundred feet or more this ore would be found equal to that of the Sudbury mines. It is the sulphur and not the nickel of which his firm is in search. Sulphuric acid he says, will have to be obtained from other ore than iron pyrite, and while the percentage of sulphur is lower in the St. Stephen than in the Newfoundland ores, the value of the accompanying ore would help largely in paying the

St. Croix Courier - May 3, 1894 The Nickel Mines. - A New Opinion Concerning the Deposits in St. Stephen. - [Record]. - Last Friday the great pyrrhotite deposits in Charlotte County, close to the town of St. Stephen, were visited by a mining engineer from the United States on his way to Newfoundland. He was the representative of a large chemical manufacturing company and was in pursuit of a sulphur ore. He expresses himself very much pleased with the size and extent of these deposits as shown on the surface and thought if they could be proved to contain 2 per cent. of nickel that the ore could be exported to the United States as an ore of sulphur, he says that these ores have been prospected to a depth of only about 40 feet, which is not at all enough to determine either the extent of the deposits or their nickel contents. This ore varies from common iron pyrites in not having as much sulphur in it; it also requires more heat to drive off its sulphur contents. We have heard that some parties were talking of erecting pulp and paper mills in St. Stephen and Calais and we would suggest that this ore be made use of for obtaining the sulphurous acid needed while the cinder containing the nickel might be reduced to matt there. This gentleman thought that the diamond borer would be of little use in testing the property, but that it should be done as mentioned above, by sinking a shaft deep enough and drifting from it either way as seemed most advisable."

Nov. 1895 - Copied from: St. Croix Courier - Nov. 10, 1955 60 Years Ago. - The strangers who were here prospecting the nickel mines have departed, taking with them a quantity of ore. They are expected to return at an early date to begin active

S.J. Daily Sun - Nov. 11, 1895 Charlotte Co. - St. Stephen, Nov. 7. - The nickel mines are again in evidence. An expert named J.H. Kelley, belonging to Boston, spent two years here camping on the mine. He dug down a few feet in several places and sent many lots of samples away. Most of his time was spent around the hotels, apparently only keeping a watchful eye on the mines. He has been away for a year now, but a few days ago another gentleman came to town with letters of introduction from Mr. Kelley. He has arranged for leases of all the property and has had men at work getting more specimens. He talks of putting diamond drills in and employing many men this winter, and has looked out a chance to run a railroad down a natural valley to tide water. Those most deeply interested in the mines think that they are soon to be developed in earnest."

He will extend his visit to Upper Mills near which place a gold bearing deposit was discovered some years ago."

St. Croix Courier - Apr. 22, 1897 Quarterly Meeting ... The mayor hoped to lay before the board at its next meeting a detailed statement of the leases of nickel property near St. Stephen, which had been promised him by the attorney general. Referring to the request that the diamond drill belonging to the provincial government be sent here to test the nickel deposits, Councillor McVay said that on Tuesday last the surveyor general had received a formal application from St. Stephen, and eight or nine other applications were in ahead. The mayor thought that as the application for St. Stephen had been made through the attorney general it would receive due attention..."

Dec. 1897 - Copied from: St. Croix Courier - Dec. 26, 1957 60 Years Ago. - There is some prospect of the diamond drill being put in operation at the nickel deposit on E. Hall's Farm."

Weekly Record Fri., Jan. 21, 1898 It is understood some work of development of the pyrites and nickel mines in or near St. Stephen is likely to take place shortly and some rumor that the good diamond drill will be utilized there."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

S.J. Globe - Nov. 4, 1898 St. Stephen Nickel Mines. - Calais, Nov. 2 - G.H. Harrison, of London, England, representing a large English syndicate, arrived in St. Stephen, N.B., today, and after inspecting the nickel mine in St. Stephen parish, owned by Frank Todd, one of the wealthiest men in this section, signed a lease for a long term of years to operate the mines. Pits will be sunk at once and tests of deposits made. If tests are satisfactory, reduction mines will be built over area of nickel section, which covers three square miles, and a large force of men will be employed. These mines were worked years ago, but not by modern methods and machinery. The outlook is that a great industry will be started, as it is understood that the syndicate has millions behind it, and that it is working upon an assured basis."

St. Croix Courier - Dec. 15, 1898 Work is progressing very favourably at the nickel mine, the men now being down to a solid bed of very rich ore at a depth of fifteen feet. Experienced miners pronounce it as rich as ore can possibly be and there is every indication that the deposit is of enormous extent. Ten tons are already packed for shipment, and Mr. Chipman is awaiting further instructions from London. He has been requested to secure the services of an experienced miner who will contract to sink one or more shafts to a depth of one hundred and fifty feet. Mr. Chipman will be pleased to hear from any experienced person qualified to undertake the work."

Nov. 1898 - Copied from: St. Croix Courier - Nov. 29, 1928 30 Years Ago. - A small crew of men commenced operations on Monday at the nickel mines, orders having been received from Mr. Harrison to forward twenty tons of ore to London. The work is being done under the supervision of Capt. J.D. Chipman, M.P.P., and D.F. Maxwell, C.E."

Daily Sun - Nov. 11, 1898 St. Croix Valley. - Mining Preparations at St. Stephen. - Calais, Nov. 3. - In regard to the great mining preparations about to be made at St. Stephen, it is now known that an English syndicate has sent a man here to look over the ground. He has plans of the land, and also a general idea of the facilities and difficulties to be encountered in the conduct of such a business. He has also prepared to sink shafts and will take out some tons of ore, so that a general idea of the value of the deposit may be formed. The truth is that in many previous cases there has been fraudulency in connection with the representations of ore. Some are being exhibited which could not be equalled or even found in the last, similar to that which lies in the earth at these places. But when a ton is taken out it is pretty hard to get up a counterfeit in this regard."

S.J. Globe - Nov. 8, 1898 St. Stephen. - If the assays of the St. Stephen nickel ore come up to the expectations of the new lessees, there will be an expenditure of $1,500,000 made here in connection with the works within the next two or three years. There seems to be no doubt as to the quantity of the mineral here available. Tests will be made to ascertain the probable yield per ton, and for this purpose, if certain preliminary tests are found satisfactory, twenty tons of the ore will be raised and made ready for shipment to England."

Weekly Record Fri., Jan. 21, 1898 It is understood some work of development of the pyrites and nickel mines in or near St. Stephen is likely to take place shortly and some rumor that the good diamond drill will be utilized there."

S.J. Globe - Nov. 4, 1898 St. Stephen Nickel Mines. - Calais, Nov. 2 - G.H. URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Sep. 14, 1899 A blast of seventeen shots was discharged at the nickel mine on Monday evening and the ore dislodged is of excellent quality. The prospects continue to be very encouraging. The ore now encountered is more easily drilled than that which they have passed."

Gazette - Sep. 15, 1899 The ore at the St. Stephen nickel mines is developing well. A large blast was discharged on Monday evening and the ore now coming out is very rich."

Daily Sun - Sep. 15, 1899 St. Stephen. - The ore at the nickel mines is developing well. A large blast was discharged on Monday evening and the ore now coming out is very rich."

Gazette - Sep. 15, 1899 The ore at the St. Stephen nickel mines is developing well. A large blast was discharged on Monday evening and the ore now coming out is very rich."

St. Andrews Beacon - Aug. 3, 1899 It is reported that the manager of the nickel property at St. Stephen dismissed one of the workmen last week because he was a Liberal: No nickels for him."

St. Croix Courier - Aug. 17, 1899 and Gazette - Aug. 18, 1899 Work at the nickel mines is progressing favorably and the results are surprising everyone. Though the shaft is down only about thirty feet great blocks of solid metal are being taken out. There is practically no rock, the blocks being composed of almost solid nickel; cobalt, sulphur, gold, and iron. At the present stage of development the future of the nickel mines looks very promising."

St. Andrews Beacon - Aug. 24, 1899 St. Stephen. - Work is still being pushed forward on the mines. The ore, which has already been taken out, is giving very encouraging percentage of nickel."

St. Andrews Beacon - Aug. 3, 1899 It is reported that the manager of the nickel property at St. Stephen dismissed one of the workmen last week because he was a Liberal: No nickels for him."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Oct. 12, 1899 [with Photos of mine and Eben Hall] St. Stephen's Ore Deposits. - A Glance at the Many Efforts Made to Develop Them. - Nothing is Publicly Known of the Results of the Work Now in Progress, But It Means Business. - For many years the sturdy forms of Eben Hall and his stalwart sons worked at the clearing of the fine farm now owned and occupied by Mr. Hall on the Basswood Ridge road, two miles from the centre of St. Stephen. In some parts the soil was very fertile, while in other places only rock appeared. This rock was very different in appearance from the ordinary rock. Mr. Hall was early convinced that it contained mineral and he was not alone in his opinion. In 1886 James P. Bixby strolled over the farm one Sunday and, from surface indications, concluded that the mineral was valuable, apparently containing a considerable quantity of copper. In company with G.W. Ganong, M.P., he secured from Mr. Hall the first mining lease of this now celebrated mineral deposit. This lease was in force for five years expiring in 1891. The holders had not taken any steps to develop the mineral. Since that time leases from Mr. Hall, mining licenses from the government, sub leases and bonds, covering the property, have been written for many different men. J.A. Carroll of St. Stephen, who had been a miner in Australia, New Zealand and Queensland, secured a lease of the property from Mr. Hall at the expiration of the lease to J.P. Bixby and G.W. Ganong and he retains rights in the property to the present time. After acquiring the lease, Mr. Carroll lost no time in commencing operations. He put a shaft down nine feet and found ore that showed 1.66 per cent. of nickel, some traces of copper and silver and considerable sulphur. Mr. Carroll had entered into contract with W.F. Best, government analyst at St. John, whereby Mr. Best was to furnish assays of the ore and receive a percentage from any sale of the property which he might be able to effect. At one time parties made an offer of $30,000 for Mr. Carroll's lease conditional upon a sufficient bed of ore being shown to exist. For this purpose Mr. Carroll cut across the bed for forty feet, going down deeper than before. In the midst of the operations Mr. Carroll unfortunately met with an accident which confined him to his home for many weeks and operations were suspended. By this time people were becoming convinced that mineral of value really existed on the Hall farm and in its vicinity. The provincial government had enacted a new mining act which gave them considerable control of mineral lands and power to issue licenses that practically covered everything in sight and out of sight. These mining licenses were eagerly sought and the blankets were put on practically all the land for miles around. Just across the road from Mr. Hall's farm a rich outcropping of ore appeared on John Roger's farm and mining rights on this were secured by F.H. Todd & Sons. This played an important part in future proceedings, for it soon came to be regarded as a part of the bed in evidence on the Hall farm and no firm or syndicate was willing to explore the one until they were sure of being able to secure the other. Mr. Hall contended against many of the government licenses which were issued to cover his property, personally visiting Fredericton on at least one occasion when he made his presence very much felt. In the meantime the fame of the St. Stephen nickel mine had gone abroad and strangers commenced to arrive here to look the property over. The portly Mr. Kelley, representing Boston parties, obtained rights under Mr. Carroll and remained here a year. He dug some holes in the rock, sent samples away for assay, looked very wise and said very little. In fact he knew how to mind his own business about as well as any visitor the town ever had. He endeavored to obtain control of property adjoining that controlled by Mr. Carroll, but was unsuccessful and went his way. Roger Bonnell & Co. of New York at one time had the Carroll property bonded for $45,000, but could secure no other and gave it up. In all Mr. Carroll signed bonds with five different concerns, but surrounding property owned by Mr. Hall, the Messrs. Todd and others was always held so high that no satisfactory arrangement could be concluded. Assays of the ore continued to be made and all gave encouraging returns. About six years ago a Mr. Harrison of London, England, visited St. Stephen and was favorably impressed with the appearance of the property. He immediately began negotiations for a lease, but met the same obstacles others had encountered. He was more persistent, however, and refused to abandon his attempt. He carried on negotiations by letter until last fall, when he returned to St. Stephen. Owen Jones of London is associated with Mr. Harrison and, acting in their behalf, Captain John D. Chipman had secured leases of the Hall and Carroll properties. Mr. Harrison spent some weeks here and secured a lease of the Todd property for one year. On his return to England twenty tons of the ore was sent across for assay. The result must have been satisfactory, for Mr. Jones visited St. Stephen last summer, secured extended renewals, and has a crew of men at work under Stephen Chambers sinking a shaft. This shaft is now down about forty-five feet, and the ore apparently grows richer in copper and nickel as the work progresses. Numerous samples have been sent to England for assay, but the result is not made public. Instructions have been received to sink the shaft to a depth of three hundred feet. The work is progressing favorably. Though nothing is known of the English assays, some ore that has been sent to American assayists has shown gold to the value of three dollars to the ton, with traces of copper and strong traces of silver. Other metals were not asked for, but it is known that cobalt, iron and nickel are prevalent. Whatever may be the result of the operations now in progress it is probable they will determine the value of the deposit. If desirable ore is found in large quantities an immense investment of capital will follow and this locality will make great strides in prosperity. If this happy result is realized, much of the credit must be given to J.A. Carroll, who has persistently sought to have the value of the mines determined and has invested freely of his time and means. The accompanying cuts represent the pleasant face of Eben Hall and the present surface appearance of the mines. That of Mr. Hall is obtained through the courtesy of the Bangor Daily Whig and Courier. The other is made from a photo taken by Henry Connick. The round house shelters the horse employed to raise the ore from the pit and also contains the blacksmith's forge. The other building covers the pit so that work can be carried on in all conditions of the weather."

St. Andrews Beacon - Dec. 14, 1899 St. Stephen. - Since operations were commenced on the Hall mining property, many persons are heard daily discussing the result of the work, while many others are prospecting on their own account. A mining craze on a small scale has struck the town and vicinity. Several properties have been secured by different parties and prospecting still goes on. Nothing authentic as to the real value of the material now being taken from the Hall mine can be learned. At the same time those interested must have faith in future results as the work still goes on and many dollars are expended each week. Besides the work on this property Calais parties have spent a few dollars for his showing, a fact which shows that some one has faith in the result. In the neighboring State of Maine, the same mild craze has set in. It is reported that the property held recently by Fred Hall is to be worked, and several claims of more or less doubtful value in other sections of Washington county are being opened up by Calais parties. Although many are skeptical as to the future of the Hall mine all are hopeful that a large industry will soon be established there."

St. Croix Courier - Dec. 7, 1899 Burt Hannah of Dufferin, an experienced quarryman, was put in charge of the work at the nickel mine on Monday morning and operations are progressing rapidly. Frank Short has charge of the steam pump."

Nov. 1899 - Copied from: St. Croix Courier - Nov. 19, 1959 60 Years Ago. - Some of the best ore yet obtained has been taken from the mine this week. A night crew will be put on at once so that work will go on continuously."

St. Andrews Beacon - Oct. 5, 1899 St. Stephen Nickel. - Good Quality Ore Being Found By Miners. - Traces of Copper Among the Nickel Turned Out. - The report that a vein of gold had been struck by the St. Stephen nickel miners has been replaced by the report that it was a streak of copper, and not gold, that had been run into. Copper is not an uncommon companion of nickel, but gold is very rare under such circumstances. The following article, contributed by the St. Stephen correspondent of the Montreal Star, will give an idea as to the nickel deposit and the progress that is being made in developing it: That there is a veritable nickel mine in this vicinity there is little doubt. It has been a matter of speculation for some years, but now it is generally conceded that there is a mine from which much is expected. In 1890, Mr. J.A. Carroll, an experienced miner, who has for some years contended that there is considerable mineral wealth in Charlotte County, found what seemed to be a paying mineral deposit on the Eben Hall farm, on Heathland road, about two miles from this town. As the indications were that there was quite an extensive mineral belt extending throughout the surrounding country, Mr. Carroll at once bonded a part of the Hall farm for a period of three years and began to sink a shaft. He sent several samples of the surface ore to W.F. Best, Government assayist, at St. John. When down nine feet from the surface an assay showed 1.66 per cent. of nickel, with traces of copper and silver, and considerable sulphur. Mr. Carroll began at once to ascertain the extent of this belt of ore, and for that purpose dug crosswise for a distance of about forty feet, when he found indications of other minerals. Other shafts were sunk, and assays of several samples were made, showing an increased per cent. of nickel, gold, silver and copper, but less sulphur. When the shaft reached a depth of twenty feet the ore showed a further increased per cent. of nickel. Considerable excitement prevailed and nearly all the surrounding country was either bought or bonded at good figures. Among those who wished to obtain a lease of the mine were several capitalists. Mr. Carroll was willing to bond or sell, but the others interested were holding for high prices. Several companies succeeded in bonding the Carroll mine. Mr. Kelly, who represented a Boston company, remained in this town for nearly a year endeavoring to obtain a lease of the property adjoining the Hall farm. During his stay, he sent about twenty tons of ore to Boston and the assay showed 2.66 per cent. nickel, some silver and gold, to the amount of five dollars per ton. As he could not obtain control of the other property, he gave up the Carroll mine. The last assay showed 3.05 per cent. nickel, gold worth eight dollars per ton, as well as a small per cent. of other minerals. Nearly a year ago, Captain J.D. Chipman, assisted by W.C.H. Grimmer as solicitor, acting for two wealthy English capitalists, bonded the Carroll mine and the Hall property. Mr. G.H. Harrison, of London, who arrived here about a year ago, succeeded in securing a lease of the remaining property from Mr. Frank Todd. Mr. Jones also of London, arrived here in June last and at once made arrangements to have the quantity and quality of the ore thoroughly tested and would sink a shaft 300 feet if necessary. He engaged Mr. Stephen Chambers, an experienced miner, to erect suitable buildings and make such other arrangements as were necessary to carry on the work. Mr. Chambers and his men began work on August 24, to enlarge the Carroll shaft and are making it eight by fourteen feet in the clear and have now reached a depth of thirty five feet. Ten tons of ore are being taken out daily. Several samples, taken at different depths, have been sent to England to be assayed. One piece of ore, about two feet square, which was taken out at a depth of eighteen feet, weighed nearly two thousand pounds. They have met with very little rock and the ore seems to be improving as the mine deepens. Mr. Chambers and his men are equipped to proceed with the work during the winter, and if the assays prove satisfactory, one hundred tons per day will be taken out. Mr. McFarlane, Dominion assayist, visited the mine a few days ago and expressed himself delighted with the prospects of this becoming one of the best paying mines in the country."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Oct. 12, 1899 [with Photos of mine and Eben Hall] St. Stephen's Ore Deposits. - A Glance at the Many Efforts Made to Develop Them. - Nothing is Publicly Known of the Results of the Work Now in Progress, But It Means Business. - For many years the sturdy forms of Eben Hall and his stalwart sons worked at the clearing of the fine farm now owned and occupied by Mr. Hall on the Basswood Ridge road, two miles from the centre of St. Stephen. In some parts the soil was very fertile, while in other places only rock appeared. This rock was very different in appearance from the ordinary rock. Mr. Hall was early convinced that it contained mineral and he was not alone in his opinion. In 1886 James P. Bixby strolled over the farm one Sunday and, from surface indications, concluded that the mineral was valuable, apparently containing a considerable quantity of copper. In company with G.W. Ganong, M.P., he secured from Mr. Hall the first mining lease of this now celebrated mineral deposit. This lease was in force for five years expiring in 1891. The holders had not taken any steps to develop the mineral. Since that time leases from Mr. Hall, mining licenses from the government, sub leases and bonds, covering the property, have been written for many different men. J.A. Carroll of St. Stephen, who had been a miner in Australia, New Zealand and Queensland, secured a lease of the property from Mr. Hall at the expiration of the lease to J.P. Bixby and G.W. Ganong and he retains rights in the property to the present time. After acquiring the lease, Mr. Carroll lost no time in commencing operations. He put a shaft down nine feet and found ore that showed 1.66 per cent. of nickel, some traces of copper and silver and considerable sulphur. Mr. Carroll had entered into contract with W.F. Best, government analyst at St. John, whereby Mr. Best was to furnish assays of the ore and receive a percentage from any sale of the property which he might be able to effect. At one time parties made an offer of $30,000 for Mr. Carroll's lease conditional upon a sufficient bed of ore being shown to exist. For this purpose Mr. Carroll cut across the bed for forty feet, going down deeper than before. In the midst of the operations Mr. Carroll unfortunately met with an accident which confined him to his home for many weeks and operations were suspended. By this time people were becoming convinced that mineral of value really existed on the Hall farm and in its vicinity. The provincial government had enacted a new mining act which gave them considerable control of mineral lands and power to issue licenses that practically covered everything in sight and out of sight. These mining licenses were eagerly sought and the blankets were put on practically all the land for miles around. Just across the road from Mr. Hall's farm a rich outcropping of ore appeared on John Roger's farm and mining rights on this were secured by F.H. Todd & Sons. This played an important part in future proceedings, for it soon came to be regarded as a part of the bed in evidence on the Hall farm and no firm or syndicate was willing to explore the one until they were sure of being able to secure the other. Mr. Hall contended against many of the government licenses which were issued to cover his property, personally visiting Fredericton on at least one occasion when he made his presence very much felt. In the meantime the fame of the St. Stephen nickel mine had gone abroad and strangers commenced to arrive here to look the property over. The portly Mr. Kelley, representing

Boston parties, obtained rights under Mr. Carroll and remained here a year. He dug some holes in the rock, sent samples away for assay, looked very wise and said very little. In fact he knew how to mind his own business about as well as any visitor the town ever had. He endeavored to obtain control of property adjoining that controlled by Mr. Carroll, but was unsuccessful and went his way. Roger Bonnell & Co. of New York at one time had the Carroll property bonded for $45,000, but could secure no other and gave it up. In all Mr. Carroll signed bonds with five different concerns, but surrounding property owned by Mr. Hall, the Messrs. Todd and others was always held so high that no satisfactory arrangement could be concluded. Assays of the ore continued to be made and all gave encouraging returns. About six years ago a Mr. Harrison of London, England, visited St. Stephen and was favorably impressed with the appearance of the property. He immediately began negotiations for a lease, but met the same obstacles others had encountered. He was more persistent, however, and refused to abandon his attempt. He carried on negotiations by letter until last fall, when he returned to St. Stephen. Owen Jones of London is associated with Mr. Harrison and, acting in their behalf, Captain John D. Chipman had secured leases of the Hall and Carroll properties. Mr. Harrison spent some weeks here and secured a lease of the Todd property for one year. On his return to England twenty tons of the ore was sent across for assay. The result must have been satisfactory, for Mr. Jones visited St. Stephen last summer, secured extended renewals, and has a crew of men at work under Stephen Chambers sinking a shaft. This shaft is now down about forty-five feet, and the ore apparently grows richer in copper and nickel as the work progresses. Numerous samples have been sent to England for assay, but the result is not made public. Instructions have been received to sink the shaft to a depth of three hundred feet. The work is progressing favorably. Other metals were not asked for, but it is known that cobalt, iron and nickel are prevalent. Whatever may be the result of the operations now in progress it is probable they will determine the value of the deposit. If desirable ore is found in large quantities an immense investment of capital will follow and this locality will make great strides in prosperity. If this happy result is realized, much of the credit must be given to J.A. Carroll, who has persistently sought to have the value of the mines determined and has invested freely of his time and means. The accompanying cuts represent the pleasant face of Eben Hall and the present surface appearance of the mines. That of Mr. Hall is obtained through the courtesy of the Bangor Daily Whig and Courier. The other is made from a photo taken by Henry Connick. The round house shelters the horse employed to raise the ore from the pit and also contains the blacksmith's forge. The other building covers the pit so that work can be carried on in all conditions of the weather."

Daily Sun - Sep. 29, 1899 St. Stephen. - The report that a vein of gold had been unearthed at the Hall nickel mine is not correct. It is copper, but a little brighter than usual."

St. Andrews Beacon - Oct. 5, 1899 St. Stephen. - The work on the nickel is still progressing but not as fast as expected. The shaft, which is eight feet by fourteen, is now down about 37 feet. As the hole was 21 feet in depth before the new company took hold of it it will be seen that it has only been opened up 10 feet farther down in the last two months. The ore, however, is said to be increasing in value all the time and many predict a decided boom for St. Stephen in the near future. Mr. Stephen Chambers, who has charge of the work, feels satisfied that the ore will prove most satisfactory and when the property is thoroughly developed, will prove a bonanza for those interested."

St. Andrews Beacon - Jul. 13, 1899 Canadian Nickel. - Mr. R. G. Leckie, who is connected with the Sudbury nickel mines, has a long letter in the Toronto Globe, combating Mr. S.J. Ritchie's advocacy of an export duty on nickel ore. In one of his concluding paragraphs, Mr. Leckie says:- The foundation for all this unreasoning agitation for an export duty on nickel rests on Mr. Ritchie's desire to make money for himself and friends. He asks for a prohibitory export duty, so they should by the purchase of the ore and matte at their own figures enrich themselves at the expense of the Canadian producer. His object is thus two-fold: To put the Canadian Copper Company under the control of himself and associates, or to compel it to stop work altogether. But other innocent ore-producers would become subject to this monopoly as well. The company developing the nickel deposits at St. Stephen, N.B., could not take advantage of their admirable situation for shipping their ore or matte to the best markets, but would be compelled to send them away westward to Mr. Ritchie's refinery or abandon work. Likewise the nickel producer in British Columbia, instead of being able to find a profitable market by way of cheap ocean freight, would have to send his product by rail to Mr. Ritchie's benevolent institution. From ocean to ocean the Canadian miner, by the sweat of his brow, must be made to bring tribute to him as he sits midway, contented in his benevolent monopoly."

St. Andrews Beacon - Oct. 5, 1899 St. Stephen Nickel. - Good Quality Ore Being Found By Miners. - Traces of Copper Among the Nickel Turned Out. - The report that a vein of gold had been struck by the St. Stephen nickel miners has been replaced by the report that it was a streak of copper, and not gold, that had been run into. S.J. Daily Sun - Jun. 17, 1899 St. Stephen. - The Nickel Deposits Not Panning Out as Anticipated. - (Special to the Sun). - St. Stephen, June 16. - The hopes which were entertained here a year ago of prosperity coming to the town through the nickel deposits have about vanished. The seven tons of ore sent to England for assay did not make encouraging returns. The English capitalists are now negotiating for an extension of their operation to sink a shaft to enable them to secure samples

Semi-Weekly Telegraph - Jul. 8, 1899 Border News. - The Nickel Deposits to be Developed. - St. Stephen, July, 7. - The extension of the leases of the so-called nickel mines having been satisfactorily settled. Work will begin sinking a shaft within two weeks, and continue until the English company, who have secured control, are satisfied with the nature of the ore. They propose sinking a shaft eight by 12 feet, putting on all the men that can conveniently work. Mr. Stephen Chambers, who has had considerable experience in Newfoundland mines, will have charge of the works. Mr. J.A. Carroll, acting as supervisor, will ship samples of ore taken out every ten feet to England for assay. As this company have the necessary capital there is no doubt of the development of these mines which have laid dormant for so many years. The shaft will be sunk on the Carroll claim, which is now about twenty feet in depth, thereby showing particular confidence in that part of their mining privileges.

"N.B. Reporter - Jun. 21, 1899 Did Not Pan Out. - Some months ago several barrels of material taken from the nickel mines at St. Stephen were sent to England to be tested for the exploring company, and we regret to learn it did not pan out in paying quantities. However the enterprise of the promoters has prompted them to make arrangements for exploring at a greater depth when we hope to hear of more encouraging results."

S.J. Daily Sun - Jun. 30, 1899St. Stephen. - Will Sink a Shaft Three Hundred Feet Deep. - To Test a Theory Set Up by British Nickel Experts. - (Special to the Sun). - St. Stephen, June 29. - .... Owen Jones of London, England, representing the syndicate of English capitalists interested in the nickel deposit here, is in town, and has about concluded an extension of the lease of the property. Scientific men in England believe that the deposit will increase in value as they go down, and are willing to invest their money to prove the correctness of their theories. For this purpose men will be put at work at once to sink a shaft eight by twelve feet to a depth it is hoped that paying ore will be found. The surface ore is pronounced valueless."

St. Andrews Beacon - Jul. 12, 1900 Work will be resumed at the St. Stephen nickel mines in an experimental way at an early date; but hopes of extensive operations this season have been abandoned. Many still have faith that favorable developments are to come, and that a great mining industry will be established. - Calais Times."

St. Andrews Beacon - Jan. 25, 1900 Nickel Mines Closed. - Experimental Work At St. Stephen Stopped For Present. - It Is Said That Work Was Costing Company Too Much. - The report that work on the Hall nickel mine in St. Stephen had been suspended, caused considerable speculation as to the cause. Some believed that the ore had proved disappointing, others that the mining was not being done in a satisfactory manner, and so on. Mr. Hazen Grimmer, who was interviewed by the Beacon on the subject, said that work had been suspended until April 1, because it was costing the company too much as it was being conducted at present. The suspension was a result of a correspondence that had been going on with the English syndicate. Mr. Grimmer said that the ore had been improving every assay, the last assay showing 4.186 of copper. It was thought by experts that they were working through a heavy cap over a very rich lode. Once this lode had been struck the success of the project was assured. The development of the mine has proved much more costly than was at first anticipated. It was stated by those who were supposed to know something about it that 300 feet could be sunk at an expense of $5000. Scarcely 80 feet has been mined, and the cost has already exceeded that figure. Work on the mine was begun by the syndicate in July last. Ever since then it has been prosecuted with vigor. During the last few weeks eleven men and a steam pump have been employed and at no time were there less than nine men on the payroll. Mr. Grimmer anticipates that mining will be resumed in the early spring under competent miners and that the work will be pushed forward to a successful conclusion. He entertains no doubt as to the richness of the ore or the ultimate success of the project."

Nov. 1900 - Copied from: St. Croix Courier - Nov. 17, 1960 60 Years Ago. - Negotiations with a Nova Scotia contractor are in progress for the sinking of the shaft at the nickel mine, and something definite is expected to be arrived at very soon."

S.J. Gazette - Jan. 5, 1900 and N.B. Reporter - Jan. 10, 1900 A Calais letter to the Bangor News says: 'Workmen at the nickel and copper mines in St. Stephen are now down to a depth of 75 feet and the ore taken out is almost solid metal, having a large percentage of copper and nickel and some spots of gold visible.'"

N.B. Reporter - Jan. 17, 1900 The St. Stephen mines are promising a paying yield of copper with nickel in addition, and a company has been formed in Calais to open up a similar lead there."

S.J. Gazette - Jan. 5, 1900 and N.B. St. Andrews Beacon - Sep. 20, 1900 We are pleased to note that another effort is to be made to develop the nickel deposit at St. Stephen. It may not be generally known that a new process has recently been discovered by a Mr. Frasch for the extraction of nickel, copper and other metals from their ores and at the same time for the production of caustic soda and chlorine. The process, which is fully described in the Engineering and Mining Journal, is very much cheaper and better than the old one. The Toronto Globe remarks that the invention of this new process is the immediate outcome of the policy adopted by the Government to compel all refining to be done in Canada as well as to secure the manufacture of Ontario's minerals in

Ontario. When the nickel Copper Ore Company found that they would have to pay a prohibitory duty upon the export of nickel and copper ores and mattes they at once set about to find a new process, by which the work of extracting the metals could be done in Canada. This they have been successful in accomplishing."

St. John Star - Jul. 29, 1901 A diamond drill has commenced operations at the St. Stephen nickel mine."

St. Andrews Beacon - Oct. 23, 1902 Operations at the Carroll and hall nickel mines at St. Stephen will commence next spring to determine for all time the value of the deposits there. That these nickel deposits are valuable would seem to be assured by the action of the English syndicate in attempting to gain possession of the property which was made of them on the advice of an expert on mines and mining sent over from London."

St. Croix Courier - Jun. 7, 1906 Rumor has it that exploration work is soon to be resumed at the nickel mine."

St. Croix Courier - Oct. 8, 1908 Jeremiah Carroll.- The death of Jeremiah A. Carroll, which occurred at his home on King street early Sunday morning, removed one of our oldest and best known citizens. Mr. Carroll was born in Moncton eighty years ago. When a very young man he went to the gold fields in Australia and spent fifteen years there where he acquired a fund of information that formed the basis for many a pleasant conversation in later years. Returning to Moncton, he was united in marriage, forty three years ago, with Miss Jane Hannigen, and soon afterwards came toSt. Stephen, where they have since resided. Three sons were born of the union. One died in infancy and two, W. Frederick, and George, survive him, with their mother. Mr. Carroll was a man of strict business integrity and was esteemed by a large circle of friends. In later years he acquired an interest in the nickel deposit on the farm of Eben Hall, who passed away last week, and made many efforts to have it developed, spending freely of his own means to this end. The funeral services were held in the Church of the Holy Rosary Tuesday afternoon and were largely attended. Rev. Father Lavery officiated and the pall bearers were D.T. Dwyer, M.J. O'Donnell, W.J. Commins and P.F. McKenna. Interment was made in the Calais cemetery, at the request of the deceased. The floral tributes were very beautiful."

St. Croix Courier - Oct. 1, 1908 Eben Hall. - A notable life was ended in the demise of Eben Hall, which occurred at his home in Heathland on Sunday last. In February, 1906, Mr. Hall had suffered a paralytic shock from which he never recovered. Through his lengthened illness he was tenderly ministered to and bore his sufferings with christian fortitude. Eben Hall was born at Old Ridge November 28th, 1819, one of a family of fourteen children. Shortly after his birth, his parents moved to the farm just south of Mr. Hall's recent home and there he had since resided. In 1844 he was united in marriage with Sarah Jane, daughter of Jacob Hanson, who was his faithful consort until her death October 5th, 1906. They are survived by twelve children, forty two grand children and several great grand children. The surviving sons an daughters are Geo. Westly of Baillie; Mary F., wife of Jos. McVay; Zachariah C., A.?..th, wife of Archie Maxwell; Unity M., wife of Christie Jackson; and Levi, all of this town; Charles W. and Frank W., both of Eureka, Cal.; Sethley H., of Portland; Addie, wife of Hugh Stevenson, of Niagara Falls, N.Y.; Arthur Alfred of British Columbia; and Wilmot Tilley who lives at the homestead. One son, John Wallace, died at his home in Portland, Me., in February 1905. Mr. Hall was a man of sterling qualities, upright in his dealings with all and intelligently interested in the affairs of life. At one time he built and equipped, at his own expense, a school house at Heathland where the youth of the community received instruction. He followed the lumbering business for sixty years and also established about him a large and well tilled farm, on which, in later years, a deposit of nickel ore was located. In early life he joined the Methodist church in St. Stephen and was a valued member for seventy two years, and served for many years on its trustee board. Stalwart of frame and keen of intellect, his was a striking personality and he will long be remembered by all and held in loving remembrance by his children, to whom he was a devoted father. The funeral services were held Tuesday afternoon and were largely attended. Rev. Geo. M. Young officiated and the pall bearers were F.M. Murchie, W.A. Dinsmore, T.S. Wall and T.R. Mitchell."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Oct. 31, 1912 That Nickel mine Still Looks Good. - A New Interest, and a Powerful One, is Looking the Property Over Very Carefully. - The new development work in connection with the big nickel deposit at the back of the town is progressing favorably, and Mr. Boat, the mining engineer in charge, is very favorably impressed with the conditions revealed. Several men have been set at work stripping the surface outcroppings and it is probable that a steam drill will be at work before very long. Mr. Boat was particularly pleased with some specimens found on Tuesday. Other representatives of his company are expected here at an early date. Mr. Boat's company is a strong one and is very largely interested in the few deposits of nickel known to exist in the world, and of which seven eighths is located in Canada. This St. Stephen deposit is known to be over three miles wide and many miles long, while it will take many years of development to determine its depth. Fortunately, at the present time its 'surface' control is in the hands of those who will put no impediment in the way of its development and the optimistic ones are looking for something really worth while to materialize. The writer acknowledges that his position, so far as St. Stephen is concerned, is among the extreme optimists, but 'there are others.'"

St. Croix Courier - Dec. 2, 1920 30 Years Ago. - .... The large deposit of iron pyrites near St. Stephen, recently referred to in the Telegraph, has been further tested by local and American chemists with the result that the percentage of nickel has considerably increased. A New York chemist finds 2 per cent of nickel in the sample of ore taken four feet below the surface. A subsequent analysis of ore from the same opening, seven feet below the surface, shows nearly 2« per cent of nickel. It may be remarked that the discovery of nickel at Sudbury, Ontario, has recently created intense excitement throughout the world. The Sudbury ore is an iron ore, containing sulphur and nickel. The ore is roasted to burn off the sulphur and is then ready for shipment. The St. Stephen ore is iron ore, containing sulphur and nickel, the latter is not so large in proportion as is found at Sudbury, but still sufficient, in view of its location on the seaboard, to give prospects of being valuable."

St. Croix Courier - May 11, 1922 Work at the Carroll mine was resumed Monday, under the direction of A.C. Jones, of the Windsor, who represents a syndicate which has bonded a number of the mining properties lately."

St. Croix Courier - Aug. 20, 1925 Our Nickel Mine. - Two strangers were in town last week, registered at the Queen, and paid a visit of inspection to the old Hall nickel mine on the outskirts of the town. Nothing has been revealed as to what they found."

St. Croix Courier - Apr. 29, 1926 30 Years Ago. - A diamond borer to operate at the nickel mines has arrived here, and the machinery to drive it will be here in a few days. Mr. Leckie, of the Londonderry iron mines of Nova Scotia, has secured the right to explore the mines for one year, and borings will be made to the depth of five or six hundred feet. The operations will give employment to six or more men this season, and if the ore proves satisfactory, as expected, arrangements are all completed with the Offert nickel company of New Jersey to fully develop the mines. This company controls the nickel output of the United States, and are anxious to find a good property here."

Telegraph Journal - Oct. 4, 1929 Drilling For Ore Near St. Stephen. - Charlotte County Nickel and Copper Deposits Being Investigated. - Fredericton, N.B., Oct. 8 - (Special) - Diamond drilling operations for nickel and copper, which are being carried on a short distance out of St. Stephen by H.W. Schofield, of Saint John, in a deposit of pyrrhotite, were reported today by W.E. McMullin, of the Provincial Crown Lands Department, to be progressing satisfactorily. The work is being done by the D.L. Alexander Drilling Company, a Montreal concern and two drills, one owned by the company and one by the province, are in operation, giving employment to a night crew as well as a day crew. The ores have been assayed, and it is reported that the tests have proved satisfactory. Independent prospectors working the St. Stephen district report having found specimens of ore which showed traces of minerals in light quantities. The assay of the specimens disclosed tracings of lead to the extant of 21 cents per ton, silver at 19 cents per ton, copper at 64 cents per ton and gold at 30 cents per ton. The man who discovered the specimens, which bore the valuable minerals is said to have been seeking the elusive gold hoard of the famous pirate, Captain Kidd, who is reputed to have secreted treasure in the vicinity."

St. Croix Courier - Dec. 12, 1929 Mining Engineers Continue Making Surveys. - W. Koch, resident engineer in charge at the mining development on the Rogers' property was interviewed by the Courier this week with regard to future plans of his company. As might be expected, Mr. Koch had but little news to make public, but said that all the information concerning the ore body on the Rogers' farm which can be procured by diamond drilling and trenching has been obtained. Some weeks ago, both the diamond drilling and the trenching was discontinued for the time being, and just now he and hid assistant engineer are spending their time in making a detailed geological survey of this and nearby properties. They expect to remain here during the entire winter. At the same time, tests are being made on samples of ore and they are being studied by the company's experts, in an effort to determine under what method the ore can best be separated and operations continued in the Spring."

St. Croix Courier - Aug. 15, 1929 Second Drill at Work. - Early this week, the second diamond drill was put at work on the Rogers' property. A number of cores have already been taken by the diamond drillers, and it is reported that results so far are very encouraging. The cores are heavily mineralized, and while it has not been definitely ascertained to just what extent minerals are present, those who are at work at the mine are apparently greatly encouraged by what they are getting."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Feb. 26, 1959 Would Employ Hundreds. - Area Mining Survey May Be Success. - After about 79 years of scattered geological activity and legal and financial gymnastics a rock-hewned area of some five square miles located generally about three miles from St. Stephen off the Basswood Ridge Road may soon yield its dormant riches to benefit the community, according to H.J. Bergmann, consulting engineer for St. Stephen Nickel Mines Ltd. The Montreal mining engineer told the Courier, 'we hope by next Fall to have reached our objective of locating 1,000,000 tons (proven deposits by a preliminary geological drilling survey to justify further intensive studies) averaging a grade of 1.56 per cent nickel-copper and make plans for underground development.' 'If this objective is reached it should provide employment locally as there would be construction involved, plus indirect and secondary benefits of local purchases by the nickel firm.' K.L. Gregory, vice-president of St. Stephen Nickel Mines Ltd., told the Courier later there would be one or two shafts sunk to about 500 feet during this phase of the mining operation and he hoped underground drilling would uncover additional orebodies. Such a find would move the organization into a further phase in approximately a year's time - production and construction of a crushing mill, which would employ hundreds of local men. The mill, with gear to crush 2,000 tons of ore daily, would employ the great bulk of local labor since miners will be brought from outside. Company officials and consulting expert Bergmann may be 'delighted with the progress' but provincial government officials are taking a more cautious view. Hon. Norman B. Buchanan, provincial minister of Lands and Mines, did not comment on the optimistic reports of the company and its expert. 'We haven't received a complete report on their findings. But we certainly hope the winning program is fully realized. We pledge our full co-operation to any industry which may provide employment and economic bolster.' Up to this writing the company has discovered proven economic deposits of over 500,000 tons of ore on the property - located approximately on the properties of Carson McGlinchey and adjacent land owners - but we have only rigorously investigated a token portion of the five odd square miles. Present diamond drilling on the established ore bodies have reached only a vertical depth of 200 feet and the company maintains further sinkings in the near future will reveal an amount of proven ore well over the required 1,000,000 tons. In addition they report the results of electromagnetic surveys on the western portion of the property have shown 'extremely favorable ore deposition.' The company has a total of 115 claims on the property. At present prices of metals - in this case involving nickel, copper and cobalt - gross value of the ore averages around $18 to $20 per ton. Company accountants estimate expenses to retract the ore and crush it will hover from $8 to $10. Governing factors are size of mill and shafts required. It is hoped ultimate daily production would reach 1,000 tons daily. A historical peak at the long looked at mining area shows the present concern took over geological probing in 1957 from the mammoth International Nickel Company in the late 1940's. In the 50's another leading organization took over. Under Inco's management the property was explored extensively, indicating commercial values up to 1,000 feet, at a cost roughly estimated at $100,000, but relinquished control of the property due to legal snarls concerning titles. It was reported the next owners could not exploit the mineral wealth due to heavy financial commitments to a large mill building project nearby. The group apparently retains an interest in the present development. Before that, the records show 'the copper-nickel mineralization has been discovered as far back as 1880 and work had been done on the Rogers Farm deposit in 1892 on the Hall Carroll in 1896. In 1913 G.C. Bateman reported on the property for Canadian Mining and Exploration Co. In 1929 Anaconda Copper Mining Co. did some trenching and later in the same year Bela Low directed exploration work which continued into 1930. In 1935 Mr. Low restaked the property and contracted with Combined Geophysical Methods Inc. of New York City to survey the property. In 1938 Hans Lundberg Ltd., was engaged to extend the survey and recommended further drilling on the Rogers Claims and the drilling of an anomaly on Brown's farm. The district was geologically mapped in 1938, under the direction of Dr. G.S. MacKenzie. In 1942 Guysborough

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Aug. 6, 1959 Resident Geologist. - Outlines Work, Prospects Of St. Stephen Mining Co. - Work done to date by St. Stephen Nickel Mining Co. in outlying St. Stephen areas was outlined along with possibilities for future work and employment by Bert Bourgoin, resident geologist of the company, at this week's meeting of St. Stephen-Milltown Rotary Club. The geologist fashioned a vivid picture of the project in the laymen's eye and forecast possibilities of a bright future for the mining project. In touching briefly on the highlights of the program, the speaker delved into the history of the area in the mining field. Diamond drilling was carried on by his company since 1957 when the property was acquired from Strategic Metals Ltd. who also conducted drilling. Previous to this, International Nickel Co. had done some exploration work there. Commercial metals were found, and the reason given for non-development of the area was lack of present day advanced tools. Magnetic tests were carried out for metals in the past and with the advancement of electro- magnetic tests now being used, metals may not only be found to be present but an idea as to quantity attained. In the new tests metals may be energized and the energization measured, the spokesman said. Cost of surveying to date by his company stands at approximately $50,000. Some 125 mining claims have been made in the area with most having been favorably covered in surveys. Three diamond drills were in use in 1957. April 1959 costs stood at $150,000 or approximately a little over $6 a foot. About three zones believed to have potential quantities of metals for production have not been tested to date with 15 other zones undergoing complete tests. Three of the last fifteen showed definite commercial interest. Singling out the Roger's zone, Mr. Bourgoin stated tests showed the area approached the 1,000,000 ton mark in commercial copper and nickel compounds. Sixteen diamond drill holes were drilled at a cost of $35,000 with a total footage of about 7,000 feet. Findings of other companies were used and gaps in the findings filled in by the present company in their explorations. 'Our main concern now is the sinking of a shaft to find what metals there are more positively and in what quantity. Our findings will be used to determine whether it is economically feasible to expand work with a view toward production. Findings to date have warranted the sinking of this shaft.' The shaft, 9x19 feet will contain three compartments for cages and buckets and be sunk to a depth of 300 feet. At levels of 100, 150 feet and the like drifts and tunnels will be made to the ore deposits. Each 50 feet will have a station for underground drills. 'All of this is necessary to fill out a complete picture of what is there before we can reasonably go into commercial production,' he said. Approximately one-quarter-million dollars is to be spent on the shaft before completion at an estimated cost of $225 per foot. Tunnels will cost about $25 per foot. 'Touching present conditions, the geologist stated the shaft was now at a depth of 20 feet. The process is a bit slow at first but after the 40 foot mark has been reached a head frame will be erected and work should progress at the rate of 10 feet per day or more. The shaft should be completed within a month's time and tunnel drilling begin. In the production field, testing is being carried on by research people on separation methods. The one, if it proves out, which seems more apt for the local mine if decision is made to continue by company officials, would be a new electrical process separation system. In the employment field, it was pointed out some local men would be hired and trained in their work. Mr. Bourgoin pointed out when the time arrives he will give an official announcement local men are needed and they will be hired on a selective basis. No employees are needed at present. In many cases experienced men are needed and as work progresses employment should be found for local men. Construction material for the most part is expected to be bought locally also. The grade of the metals, according to the official, is about the same as in Sudbury, Ont. One-and- one-half percent combined metals makes for $18 a ton said the official. The metal may be mined at a cost of $8 a ton but costs should be slightly higher in the case of this area. A profit of $8 per ton is hoped for. Metals recoverable are 45 percent iron, $3 per ton of cobalt, copper and nickel. There is also a quantity of sulphur. The speaker was introduced by Ted Francis, chairman

St. Croix Courier - Aug. 6, 1959 Resident Geologist. - Outlines Work, Prospects Of St. Stephen Mining Co. - Work done to date by St. Stephen Nickel Mining Co. in outlying St. Stephen areas was outlined along with possibilities for future work and employment by Bert Bourgoin, resident geologist of the company, at this week's meeting of St. Stephen-Milltown Rotary Club. The geologist fashioned a vivid picture of the project in the laymen's eye and forecast possibilities of a bright future for the mining project. In touching briefly on the highlights of the program, the speaker delved into the history of the area in the mining field. Diamond drilling was carried on by his company since 1957 when the property was acquired from Strategic Metals Ltd. who also conducted drilling. Previous to this, International Nickel Co. had done some exploration work there. Commercial metals were found, and the reason given for non-development of the area was lack of present day advanced tools. Magnetic tests were carried out for metals in the past and with the advancement of electro- magnetic tests now being used, metals may not only be found to be present but an idea as to quantity attained. In the new tests metals may be energized and the energization measured, the spokesman said. Cost of surveying to date by his company stands at approximately $50,000. Some 125 mining claims have been made in the area with most having been favorably covered in surveys. Three diamond drills were in use in 1957. April 1959 costs stood at $150,000 or approximately a little over $6 a foot. About three zones believed to have potential quantities of metals for production have not been tested to date with 15 other zones undergoing complete tests. Three of the last fifteen showed definite commercial interest. Singling out the Roger's zone, Mr. Bourgoin stated tests showed the area approached the 1,000,000 ton mark in commercial copper and nickel compounds. Sixteen diamond drill holes were drilled at a cost of $35,000 with a total footage of about 7,000 feet. Findings of other companies were used and gaps in the findings filled in by the present company in their explorations. 'Our main concern now is the sinking of a shaft to find what metals there are more positively and in what quantity. Our findings will be used to determine whether it is economically feasible to expand work with a view toward production. Findings to date have warranted the sinking of this shaft.' The shaft, 9x19 feet will contain three compartments for cages and buckets and be sunk to a depth of 300 feet. At levels of 100, 150 feet and the like drifts and tunnels will be made to the ore deposits. Each 50 feet will have a station for underground drills. 'All of this is necessary to fill out a complete picture of what is there before we can reasonably go into commercial production,' he said. Approximately one-quarter-million dollars is to be spent on the shaft before completion at an estimated cost of $225 per foot. Tunnels will cost about $25 per foot. 'Touching present conditions, the geologist stated the shaft was now at a depth of 20 feet. The process is a bit slow at first but after the 40 foot mark has been reached a head frame will be erected and work should progress at the rate of 10 feet per day or more. The shaft should be completed within a month's time and tunnel drilling begin. In the production field, testing is being carried on by research people on separation methods. The one, if it proves out, which seems more apt for the local mine if decision is made to continue by company officials, would be a new electrical process separation system. In the employment field, it was pointed out some local men would be hired and trained in their work. Mr. Bourgoin pointed out when the time arrives he will give an official announcement local men are needed and they will be hired on a selective basis. No employees are needed at present. In many cases experienced men are needed and as work progresses employment should be found for local men. Construction material for the most part is expected to be bought locally also. The grade of the metals, according to the official, is about the same as in Sudbury, Ont. One-and- one-half percent combined metals makes for $18 a ton said the official. The metal may be mined at a cost of $8 a ton but costs should be slightly higher in the case of this area. A profit of $8 per ton is hoped for. Metals recoverable are 45 percent iron, $3 per ton of cobalt, copper and nickel. There is also a quantity of sulphur. The speaker was introduced by Ted Francis, chairman

St. Croix Courier - Sep. 3, 1959 In Local Area. - Mine Growth Continues Despite Cries of Fraud. - St. Stephen Nickel Mines Ltd., is moving ahead towards hidden deposits of nickel and copper at its mine site in Basswood Ridge - despite reports of U.S. postal fraud orders. A visit to the project just outside St. Stephen showed workers preparing to erect the surface head frame and completing construction of approximately 20-miner 'dry' adjacent to the mine entrance. 'We are going ahead with our program to complete the initial phase of the shaft going down to 300 feet,' Bert Bourgoin, company geologist, said. 'The fraud orders are not affecting our present plans.' It was reported recently in a provincial daily the U.S. Securities and Exchange Commission had announced in Washington the U.S. post office has issued a foreign fraud order against Canam Investments Ltd. of Saint John - the company selling St. Stephen Nickel Mines Ltd. stock. A postal official in Calais confirmed the company is on the department's black list. He said the nickel company's mail is also affected under the same order. The mail is stamped 'fraudulent' and sent back to the senders. 'We haven't seen any mail from the companies through our office yet,' the spokesman said. The Securities commission said the fraud order was based upon evidence the stock was being offered for sale by means of fraudulent representations regarding its market price, future value and 'so forth.' N.B. Securities gave the companies pretty well a clean bill of health. They stated they had examined the mining project and had been satisfied with the operation, which was termed 'speculative insofar as all mining ventures are speculative.' At the mine Tuesday, Karl Thomson, a consulting mine engineer, told the Courier company officials are presently negotiating for purchase of a hoist and air compressor, two major items in the head frame's role. Cost of these two items is estimated at $50,000. He said it would take about two months to erect the headframe completely. 'We could get started right away and be finished in about a month, but there is some holdup in the equipment.' Construction is completed on the head frame's protective cement collar down to about 22 feet. With completion of the head frame, a regular mining operation will tunnel a shaft to about a depth of 300 feet. Here the company will continue exploration work to back up surface drilling results of proven ore deposits. Mr. Thomson estimates about 22 or 23 experienced miners will be brought in from Bathurst, N.B., Ontario and Quebec. At present the company plan building accommodations for their miners. Incoming employees are to obtain rooms in the district."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Nov. 12, 1959 Consider Smelter, Too. - Concentrating Mill To Process Mine Ore ..?.. Company's Plan. - An executive of St. Stephen Nickel Mines Ltd. said Wednesday that the Company will build an ore concentrating plant next spring at their mine in Heathland. ..?.. Gregory of Montreal, the ..?.. vice president, prefaced ../.. announcement during a press conference in St. Stephen with the ..?.. the mining firm will go ..?.. ..?..intensive the program is, ..?.. naturally on the re.?.. underground shaft sinking ..?.. being carried out. 'We ..?.. more is down there ... it's ..?.. of the degree of ..?.. Mr. Gregory said. ..?.. to the concentrator, he ..?.. could handle about 500 to ..?.. a day - to a point of concentrating ..?.. where the ore could be ..?.. economically to a smelter. Mr. Gregory also said his firm is ..?.. 'very serious' thought to the ..?.. of a smelter in addition to ..?.entary-phased concentrating ..?.. An alternate plan on the ..?.. blueprints would be a full.?.. smelting operation ..?.. byproducts would be ..?.. from the ore. ..?.. mining cost point of view, Mr. Gregory said the position of the ore in a developed area like St. Stephen shaves the normal mining costs to about half. 'Here we are close to water and rail ... and we just hook up the power.' Under questioning, Mr. Gregory said there was a basic difference between the depressed Bathurst mining situation and that here. Said He: 'Nickel is a very rare metal, hard to find and therefore its demand is heavy. All things being equal, we will have markets for the metal.' 'We will have spent close to three quarters of a million dollars by next spring before we build the concentrator. I think it can be safely said we don't intend to spend all that money for nothing. 'We expect profits to be fairly substantial ... about a $10 cushion on each ton of ore according to current market metal prices, which hover around the $18 a ton mark,' he said. Replying to reported incidents of the company's mail being stamped fraudulent by American postal authorities, Mr. Gregory said the same thing was happening to over 200 other business organizations and 'that includes prominent concerns'. 'Our American stockholders have faith in the venture,' he said. Might Employ 200. - In terms of district employment, Mr. Gregory said about 15 tradesmen and general labour are working at the mine now. When the mill gets going about 150 local people will be required and he estimated that a total labour force of from 150 to 200 will be needed if it completes its extensive smelting program. Other officials at the conference included H.J. Bergman, consulting engineer for the company, and representatives of the investment firm of Canam. Recently the company signed an underwriting agreement which will provide $1,000,000 to the mining ventures expansion."

St. Croix Courier - Jul. 30, 1959 Mine Company officials Group at Mine Site. - PHOTO of officials - CAPTION: Above are grouped officials, stockholders and workers of St. Stephen Nickel Mines Ltd. prior to the initial dynamite blast that opened ore laden rock near old Roger's farm in Basswood Ridge, and started the company on its first production leg. In the foreground stands Paul Corbin, in black suit, beside two American stockholders. Behind them are officers Andre Bouchard and John Adaskin. On the right hand portion of the picture are a group of company workers, including Bertin Bourgoin, front centre, resident geologist. Graded $18 Ton. - Future Is Optimistic Will Work Year Round. - St. Stephen Nickel Mines Ltd. officials and stockholders Saturday afternoon looked down a $250,000 dynamite blasted hole in the craggy rocks near the old Rogers farm in Basswood Ridge and hoped for big mineral things down deeper. The company took an important step towards production when workmen detonated about 420 sticks or 150 pounds of dynamite around 5:30 p.m. to set off the first of a series of blasting down to buried ore. The spectacular blast sent chunks of rocks showering about 200 feet into the air. About 75 tons of rock were jarred loose in the blast leaving about a six to eight foot crater. Meanwhile, company officials estimated development and administrative costs up to the initial blast totalled $250,000. Bert Bourgoin, company geologist at the mine site, gauged another quarter of a million dollars would be spent in preliminary work before an ounce of ore could be extracted. Presently, workmen are blasting day and night a rectangular hole eight by 19 feet to a depth of about 40 feet - expected to be completed early next week. At that time the 70-foot mine head frame, resembling a grain elevator, will be constructed with a sturdy cement collar (for safety purposes) over the mine opening. This is expected to be completed in six weeks' time, Mr. Bourgoin estimated. The head frame houses a set of pulleys which will govern the movement of a three-department section of buckets or cages drawing up ore from below and for the movement of mine personnel. The head frame also contains two ore bins from which contents will roll into waiting trucks. From there the company will blast down another 300 feet to continue their preliminary geological investigations and prepare underground passages. Mr. Bourgoin thought this phase would be completed by Christmas. Such underground development should back up company's previous surface drilling finds indicating the desired objective of 1,000,000 tons of proven commercial deposits of nickel, copper, cobalt and other byproducts on the property. The initial underground activities are also expected to link the Roger's zone with the Hall-Carroll deposits, about 2,600 feet to the southeast and across the other side of the Basswood Ridge highway. Decision is Coming. - With the completion of underground tests company officials will have to make a big decision: whether to go on to full production and the construction of a crushing plant near the mine site. Mr. Bourgoin said there were no problems of markets for the ore. Operations at the mine will continue through the Winter. Some experts feel underground mining conditions are best during this season. Regarding local employment, Mr. Bourgoin said there is none contemplated at the moment. However, some surface construction will be required later and some district labor will be hired. At present a crew of six are working on the construction job. The company is purchasing all big timber for the 40-foot reinforcing job from a Saint John firm. The outside purchasing is required because the timber has to be creosote-treated - which cannot be supplied by area suppliers. However, the company will fill their timber needs from area suppliers once it gets into mining operations below the initial level. Mr. Bourgoin was very optimistic about another ore zone about 2000 feet west of the Roger's farm which has indicated 'some very nice findings' from surface diamond drilling operations. 'A great deal of public attention has been focused in the Roger's zone where we are blasting the mine entrance. Actually this new zone could provide greater deposits.' 'Another great advantage is that the new zone is close to the present mine site and can be linked economically.' A drilling crew will continue to probe this particular site and also work at large throughout the whole property. Meanwhile, company officials met at a stockholders' meeting late last week in Saint John and visited St. Stephen over the weekend. It is learned that the big stockholders are American. It was reported at the meeting 'the Roger's zone is approaching 1,000,000 tons while the Hall-Carroll zone contains an additional 250,000 tons. The average grade of this ore is approximately $18 per ton at present metal prices."

St. Croix Courier - Dec. 8, 1960 Mine Stock Sale Fraud Revealed. - How the Deal Worked. - The findings of a stock fraud investigation conducted by the provincial government earlier this year and concerning, in part, the sale of stock for St. Stephen Nickel Mines Ltd., were released at mid-week by Premier Louis Robichaud. The report prepared by David M. Dickson, acting administrator under the Security Frauds Prevention Act, had this to say about the sale of stock for the local mine: 'The methods employed by Canam Investments in promoting the sale of St. Stephen Nickel stock were typical of those of the usual boiler-house operation. The names of potential clients were obtained from available shareholders' lists in other companies and from sticker lists, so-called, prepared by professional houses concerned with such activities in the United States. 'A fair share of attention was given to professional people and those in higher income brackets which would account for the inclusion of a large proportion of medical doctors among the some 3,550 shareholders of St. Stephen Nickel. Widows and others inexperienced in the ways of unscrupulous salesmen were not neglected. 'Initially, innocuous-appearing circulars were forwarded to prospects. Some were accompanied by reply cards which when completed and returned indicated interest on the part of the prospect. 'High-class literature prepared by professional writers would then be forwarded to those prospects showing interest. Typical of this literature was the weekly report circulated under the name 'Canam Counsellor' of which about 400 weekly editions were printed. 'One number would show New Brunswick as the 'Province of Promise', another would deal with the great boom in industrial expansion in Canada, and so on. The underlying message of all was the suggestion that St. Stephen Nickel ranked with the greatest mining undertaking in the history of the nation. 'Then would follow the high-pressure telephone calls on the long distance telephone - the 'blower', so- called - initially by the less experienced salesman, the 'starters', and then by the more accomplished salesmen with follow-up sales, the 'reloaders'. 'The sales pitch followed the usual line in such operations: Stock was readily marketable, the company would shortly be listed on the major stock exchanges, large American, Japanese and European industrial groups were greatly interested in the development, a mine would be developed and a smelter constructed, and the value of the stock would soar. 'There was of course no reference to the fact that less than 10 per cent of the proceeds from sales of shares was going into the mining development itself, or that the promoters were themselves 'lining their own pockets.'"

St. Croix Courier - Aug. 4, 1960 Await Developments. - Workers Keep Mine Open. - ..?.. crews at the St. Stephen Nickel Mines Ltd. property in Heathland are operating water pumps and keeping the mine ..?.. possible further underground development and inspect.?.. company official told the Courier. ..?.. Thompson, mine manager, told the Courier 'there was no talk ..?.. down the mine at the moment.' ..?.. commenting on the mine's ..?.. in the light of recent developments which saw the mining firm's ..?.. capital abruptly eliminated ..?.. face of fraud charges by ..?.. and American government ..?.. the firm of Canam Investments, financial underwriters for the ..?.. venture, voluntarily agreed to..?.. their securities licence to ..?.. The provincial government is currently conducting an investigation into the past business affairs and promotional tactics of the investment firm. Bank deposits of company monies were frozen in the process. Mr. Thompson said St. Stephen Nickel Mine officers are looking for other sources of capital in order to continue development operations. Japanese interests have reportedly indicated interest in the mine. Mr. Thompson, in commenting on the report, said details of a proposed visit by the Japanese have not been settled. Currently, he said, five men are employed at the mine in shifts around the clock, operating pumps and lifts underground."

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

Telegraph-Journal - Jul. 20, 1960 N.B. Mining Stocks Investigated. - Companies Lose Licences, Have Assets Frozen. - The New Brunswick government has launched a sweeping investigation into the operation of a number of companies offering mining stock in the United States. In a surprise move yesterday, Fredericton barrister David M. Dickson took over as acting administrator of the Security Frauds Prevention Act. He replaces G. Earle Logan, QC, of Saint John, who had been registrar under the Act since 1923 and administrator since 1956. Government orders-in-council appointing Mr. Dickson and dismissing Mr. Logan were dated July 18. PHOTOS of Dickson and Logan. Mr. Logan could not be reached last night for comment. Also unavailable for comment was Premier Louis J. Robichaud, QC, who also holds the position of provincial attorney-general. Charles R. Allen of Hartland, chairman of the Public Utilities Board, said he had been informed of Mr. Logan's dismissal, but did not wish to comment. He suggested that Mr. Logan's age might have been a factor, but he added: 'We're all expecting the axe.... these are the fortunes of politics.' Under Six Premiers. - Mr. Logan, who is in his 74th year, served during the Conservative administrations of Premiers J.B.M. Baxter, C.D. Richards, L.P.D. Tilley, Liberal Premiers A.A. Dysart and J.B. McNair, Progressive Conservative Premier Hugh John Flemming and briefly under Liberal Leader Robichaud. R.G.L. Fairweather, QC, of Rothesay, former attorney general under the Progressive Conservative administration, scored the dismissal of Mr. Logan as A 'cavalier' move. He said political figures must expect to suffer summary and abrupt dismissal, but surely in 1960, public servants should not be treated in this cavalier way. Meanwhile, Mr. Dickson issued orders cancelling the licences of two stock-issuing companies which had been conducting extensive sales campaigns in the United States, and freezing the assets of three others along with four individuals. Probes Started. - He indicated investigation was under way into the operation of a number of other companies 'which have been suspected of irregular activities in stock transactions.' One source said 'several millions of dollars' were understood to be involved in the transactions under investigation, reported to have been taken place throughout the past year. Mr. Dickson said Royal Canadian Mounted Police are assisting in the investigation. Also taking part are Saint John barrister J. Paul Barry, QC, and David Reevey of the Saint John accounting firm of Reevey, Burnham, Laws and Page. Under orders issued by Mr. Dickson yesterday, the brokerage licences and stock-issuing licences of A.G. Powis and Co. Ltd and TransNation Minerals Limited were cancelled. Other orders were issued 'freezing' the assets of Canam Investments Ltd., St. Stephen Nickel Mines Ltd. and Kennamet Mines Ltd. Also affected by the 'freezing' orders are Kenneth H. Gregory, believed to be of Montreal; Alan Champagne, Montreal; A.G. Powis, at present a resident of Saint John and A.J. Gena, for some time a resident of Saint John. Mr. Dickson indicated that further developments would be announced as the investigation continued. Meanwhile, the New Brunswick Board of Public Utilities and the Motor Carrier Board are scheduled to hold their regular meetings in Saint John Thursday. Mr. Dickson will sit in on the meetings, replacing Mr. Logan as acting secretary of both bodies. Pays Tribute. - Mr. Fairweather, in a statement issued last night said the new Liberal government 'will not increase its public stature by the manner in which it summarily dismisses public servants of many years standing.' Mr. Fairweather paid tribute to 'the first-class service rendered by Mr. Logan for 35 years, through various political regimes.' Last week the Canam company voluntarily surrendered its licence following a closed hearing earlier this month before the Public Utilities Board. At that time Mr. Fairweather, who was then attorney-general, sought suspension of the company's licence. He said books were being audited and the assets of some of the companies had been frozen - prior to Mr. Dickson's move yesterday. The July 9 hearing followed complaints against Canam selling shares in St. Stephen Nickel Mines Ltd. and A.G. Powis Ltd., selling shares in Kennamet Development Corporation. The complaints were registered by the United States Securities and Exchange Commission. SEC spokesmen said the mail and long distance telephone campaign conducted by these companies in the United States made claims which 'wholly misrepresented' the extent of ores and development of mining. Canam Investments Ltd. was also in the news a year ago, when a foreign fraud order was issued against it by the U.S. Post Office. At that time, the New Brunswick Public Utilities Board said it had examined the mining operation of the St. Stephen Nickel Mine and had been satisfied with that aspect of the business, which it termed 'speculative

URN: 0043 / 0039 / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen;

St. Croix Courier - Jul. 7, 1960 Nickel Mine Report: 'Gamble Diminishing But Problems Remain. - St. Andrews. - The consulting engineer to the St. Stephen Nickel Mines Ltd. said here Saturday night 'the gamble at the company's Heathland mine is gradually diminishing.' ..?.. this assessment of the ..?.. progress was disclosed early ..?.. the day to approximately 25 ..?.. stockholders, most of them United States residents, company ..?.. and representatives from ..?.. investments who are under.?.. the venture. Outlining the underground ex.?.. work along two levels of ..?.., Mr. Bergmann said he as.?.. investors seated in the Casino ..?.. Algonquin Hotel property ..?.. gamble .. was diminishing. Mr. Bergmann indicated it ..?.. completely clear sailing to ..?.. shores for the operation ..?.. time. ..?.. said 'we are facing metallurgical problems' - separating metals from their ores and refining them. He added the company ..?.. pondering the problem of ..?.. the crushing plant ..?.. take, as well as other pro.?.. obstacles. Work Continuing. - ..?.. say 'exploration in the ..?.. would continue' and indicated ..?.. returns of samples showed ..?.. ore quality and quantity ..?.. commercial production. At this time, crews have cleared ..?.. 2000 feet of rock in drifting ..?.. from the main shaft along 150 and 250 foot levels, a spokesman of the company in St. Stephen ..?.. Mr. Bergmann was asked if American securities authorities had ..?.. softer approach to the venture ..?.. its financial promotion ..?.. decision was made some ..?.. to stamp the firm's mails fraudulent.' ..?.. replied he had 'made it absolutely clear to the stockholders that ..?.. operation and the financing ..?.. Canam Investments are dis.?.. separate. ..?.. financing is the business of Canam people .. we have a ..?.. mining operation and ..?.. chief concern at this moment, Mr. Bergmann said. ..?.. Scrutiny. - ..?.. that 23 or so of the large ..?.. had been down in the ..?.. inspected the work. The ..?.. would descend this week. ..?.. appeared satisfied with the mine's management, he said. , The meeting was conducted by John Adaskin, the company's managing director. Other officers attending were Andre Bechard, secretary-treasurer and Paul Corbin, director and president. Stock scrutineers at the session were Eastern Trust Co., it was understood. Included among the reports was the financial statement of the company submitted by H. Paul Nadeau, a Montreal chartered accountant. The report showed, as at Dec. 31, 1959, that expenses - development, administrative and organization - amounted to $341,543. The company holds over $153,000 in mining claims acquired for consideration of shares in the company. It is understood that mine expenses hover each week around the $15,000 figure. Capital Stock. - The firm was incorporated with an authorized capital stock of seven million shares at $1 par value, the report disclosed. Issued and fully paid, it was broken down this way: For properties, 75,000 shares at par value of $1; for mining claims, 1,500,000 shares at par value; for exploration as at Aug. 31, 1957, 849,733 shares at par value and for organizational expenses, 11,433 shares at par value. For cash, 1,206,937 shares were distributed at the par value, the report disclosed. Deepest Yet. - The mine has a long history of scrutiny, by mining firms, including the huge International Nickel Co. Ltd., but no production. St. Stephen has by far made the deepest penetration into the heart of the area. The firm began staking and surface diamond drilling on the property close to St. Stephen in about the spring of 1957. Work progressed to the extent that the firm bought the property and in late 1959 and early '60 dug and completed a 300-foot shaft into the hard rock. Later, crews began to tunnel off at two levels in underground exploratory work in drifting and crosscutting operations, among other things."

St. Croix Courier - Mar. 24, 1960 Milestone At Mine: Ore Moves Out. - PHOTO. - Caption. - Two Miners at the St. Stephen Nickel Company mine at Heathland put their weight to a car loaded with ore at the 250-foot level. Car heads for cage where it will be hoisted to surface. The ore then will be analyzed as to quality and quantity of the mineral content. This stage of development follows previous surface diamond drilling tests. -- Assay Tests Encouraging, Content Called 'Surprise'. - Down 250 feet in the dark bowels of the rock corridor at the Heathland nickel mine, two miners crouched Monday to light fuses leading to caps of dynamite which would blast out another seven or eight feet of tough rock along the ore body. After the miners, with officials and a Courier reporter, briskly retraced their steps through the mine passage, lit only by the lights from the miners' caps, to a waiting cage which hoisted them to the surface, the sound of the caps exploding announced a further step in the mine's progress. The mine, which has a long history of investigation but no production, apparently is closer to the latter stage than ever before. Initial assays of ore taken from the current exploration work at the 150 and 250 foot depth indicate justification for enthusiasm noted in a statement this week from the office of St. Stephen Nickel Mines Limited. 'We are much encouraged by our underground assay results. Although we had expected a better grade than was anticipated at first, these current results are a very pleasant surprise. 'This grade of ore in places is worth $35 per ton versus the original $18 estimate for the whole ore deposits.' First company estimates figured roughly about one per cent of nickel and around .5 per cent of copper, with an average grade of 1.5 per cent. An assay office and laboratory is currently being set up on the mine property. About 20 miners are now cutting near ore bodies (to measure length and width of ore) at the two levels from the recently completed shaft. About 500 feet of lateral development has been completed at the two depths up to now, said Bert Bourgoin, company geologist. The contract of development between the mine owners and contractors, R.F. Fry and Associates, calls for about 2000 feet of ore-laden rock to be removed, including the building of razes which connect the two levels. It was officially estimated this underground development work and analysis will take up the summer and early fall before company officials can decide definitely on the production question. The mine was in danger of dying on a recent Sunday - not from lack of ore but from an over-abundance of water which poured three feet deep into the mine passage and threatened to drown choking pumps. A total of over 420 bags of cement were needed to plug a particularly dangerous hole. The danger of seeping water still exists. One view put forward is that so many diamond drills have poked into the area the underground area is a 'veritable sieve.' No previous records have been kept of diamond drill probings made by previously interested companies for St. Stephen Nickel to consult, it was understood."

Woodstock Dispatch - May 1, 1901 and Daily Sun - May 3, 1901 Woodstock Iron Works. - May Be Operated Again. - Henry A. Connell Negotiating For Its Sale. - Dr. Bailey's Opinion on the Prospect of Success. - From the best information available it seems more than probable that the great Dominion Iron and Steel Company operating at Sydney will buy the old smelting works at Upper Woodstock and put them to work again. The Dominion Company want just such iron as that mined in this county to mix with their own ore. At present they are getting iron from Cuba for mixing purposes and this Carleton iron they are sure will answer the same purpose and can be got to their works more economically. It is now about eighteen years since the mine and smelting works were operated. The resumption of work there will mean the employment of about 300 men. Dr.

Bailey of the University of New Brunswick writing about this iron says that it extends in probably more than one belt across the principal part of the county of Carleton, and they have their greatest thickness and are most readily accessible in Jacksontown, about three miles north east of the town of Woodstock. As seen at Jacksontown the beds have a thickness ranging from one foot to sixteen feet. In 1874 the quantity of ore used was on an average, three tons to the ton of pig iron and the cost at the furnace $1.20 per ton. The cost of pig produced was $20.00 to $22.00 per ton. Dr. Bailey says 'Iron smelting at Woodstock is now, however a thing of the past.' Is it possible to look forward to a resumption of operations? In attempting to answer this question 'he says' many considerations arise, the main one being, of course, the cost of manufacture and transportation to market. The figures as to the former, already given, are based upon the conditions at the time of working, or about thirty years ago. Since then a much larger proportion of Carleton county has been denuded of forest, especially in the vicinity of Jacksontown, and the cost of fuel has been considerably increased. It is not, however, probable that this alone would prevent the ores being worked, more especially as their position, on the bank of the St. John River, is in every way favorable to the easy and cheap removal of the producer. A more serious difficulty is to be found in the nature of the product itself, which owing to the high percentage of phosphorous, was often found to be brittle or cold-short to a degree which detracted very materially from its value. On the other hand, it is difficult to reconcile this deficiency with the statements given as to experiments made in England with armour-plates constructed of Woodstock iron, which, according to a paper by Mr. Wm. Fairbairn, F.R.S., published in the Artizan, had a resistance in excess of that of any other plates then tested. It is also to be observed that the presence of phosphorous is not now the serious objection to the use of iron ores that it formerly was, the introduction of the basic process of Thomas and Gilchrist making it possible to reduce such ores effectively. It is also not impossible that processes may be introducedwhereby the extensive deposits of nickeliferous pyrrhotite occurring near St. Stephen may be used in conjunction with the Woodstock ores, the combination, after the removal of sulphur, affording an iron suited for the manufacture of armour plate. While, then, it is doubtful whether, in the present condition of the iron industry and in the face of adverse tariffs, the Woodstock ores could be worked with profit, they must still be looked upon as valuable assets, which changed methods of treatment and changed commercial conditions may at any time bring again into

Nov. 1893 - Copied from: St. Croix Courier - Nov. 15, 1923 30 Years Ago: J.H. Kelley, who is interested in the Carroll nickel mine, has returned from New York. He says that the yield of nickel ore sent there for treatment is so encouraging that they will go deeper in the spring in the hope of finding a profitable percentage. The New Brunswick Red Granite Co., of Maine are scowing their quarried granite across the St. Croix to their polishing mills around by way of the bridge. Black Granite. - There has recently been discovered on the mountains of Bocabec, about eight miles from St. Andrews, a species of black granite which is likely to lead to a new and most important industry in this community. From appearances, it would seem that the supply is inexhaustible and so far as tested the grade and quality of the stone for polishing purposes is superior to any granite yet quarried in this country. It is beyond doubt a real black granite, beautifully mottled and free from any soft or foreign substance to interfere with its polishing brightly and smoothly. The samples thus far taken out have been polished and finished up most satisfactorily, and are handsome specimens of as have ever been shown in this county. Sheriff Stuart is fortunate discoverer of this valuable stone and he has secured the control of the right to quarry which it is thought by granite manufacturers of the county will prove an independent fortune to him. Already he has received some good orders from the St. George granite men for stone from his quarry, for which he will receive a good price. The granite business has now become very firmly established at St. George, and is a very important industry to this county and it may be indeed that as an industry it is only in its infancy in Charlotte County. There is no possible doubt but that such stone as Sheriff Stuart is now taking out of his quarry is bound to sell in any market and needs only to be seen to be sought after by all stone dealers."

St. Andrews Beacon - Feb. 21, 1895 A thrilling narrative is told within the blue covers of the Surveyor-General's report ... for the 10 months ending 31st October ... (income from) mining, $3,158.26 ... The mining licenses include 5 for search in Charlotte, covering 25 square miles, and 1 for prospecting, covering 20 acres. Three leases for copper in this County, amounting to 2,560 acres, were also issued during the period under review. ... In treating of mining industries , it is pointed out that the samequantity of granite was quarried in St. George last year as the previous year, viz:- Milne, Coutts & Co., 400 tons; Tayte, Meating & Co., Epps, Dodds & Co., and Taylor Bros., 300 each. The total value is represented at $104,000. Incidental allusion is made to Bocabec black granite, which takes a fine polish, and, it is thought, can be readily marketed. . Speaking of the nickeldeposits at St. Stephen the report states that it is probable the capacity of the deposits will be tested during the coming summer. The report of the estimate of the ore as given by the chemist of the Geological Survey of Canada is reproduced. Calculated upon material free from all gangue, this ore shows:- Nickel, 1.83 per cent.; cobalt, 0.17 per cent, copper, 0.33 per cent. Similar ore was also analyzed from L'Etete, Charlotte County, and both are described as resembling much of the ore found in the Sudbury district. Specimens of the St. Stephen ore analyzed by other parties, gave results in some instances as high as 2.6 per cent. of nickel. The quantity of ore, both at St. Stephen and at L'Etete appears to be large and the facilities for mining and shipment are good."

St. Andrews Beacon - Dec. 7, 1893 CHARLOTTE COUNTY.- ... Then look at the natural resources of this county... The famous red granite quarries of St. George are in this county, and no where in Canada can stone be found to match it. Charlotte county can also boast of the only black granite quarry in Canada, and though it has its reputation yet to make, we have no doubt as to its ultimate triumph over all foreign rivals. Then there are the nickel deposits in the neighborhood of St. Stephen, which may some day prove a mine of great wealth to Canada. At Letang there can befound some of the finest limestone that one could wish to see, and a little further east, in the neighborhood of Point Lepreaux, promising deposits of

URN: 0043 / 0039 / SPRI / Names: Hall-Carroll - St. Stephen; Rogers Farm - St. Stephen; Mineral Springs;

N.B. Courier - Sep. 1, 1833 Mineral spring. - We learn from a communication in the St. Stephen ""Times"", that there has recently been discovered in the Parish of St. David, about a mile from the Ledge in St. Stephen, a Mineral Spring, the waters of which are considered as possessing stronger medicinal qualities than those of the celebrated Wilmot Springs of Nova Scotia. The waters have not yet undergone a chemical analysis; but there can be no doubt, (and such is the opinion of medical men,) that they will be found efficacious in many diseases. The waters are saline, discharging a soft white substance, resembling curdled milk. The springs are situated about four miles from the villages of St. Stephen and Calais. The correspondent of the Times also states, inSt. Stephen there are several Sulphur springs, and a spring lately discovered possessing chalybeate properties; and adds, ""When these waters are better known, together with the growing importance of the adjacent country, its salubrity and natural attractions, it is not too much to anticipate that St. Stephen and Calais will become pleasant and frequent resorts in the summer months, not only to the invalid, but to the gay and fashionable of both

St. Andrews Beacon - Dec. 26, 1912 A rumor is current in Sackville that the Canada Stone Co., Limited, Montreal, a concern capitalized under Dominion charter at $1,000,000, for the purpose of operating quarries throughout Canada, has taken over the Sackville Freestone Company, Ltd. It is further understood that the Canada Stone Co. will likely take over other quarries in the lower provinces and other parts of Canada.It now turns out that the 'mining engineers' who visited St. Stephen some time ago, ostensibly to work the nickel deposits in that vicinity, went there to lay a 'plant' for St. Stephen merchants who were suspected of smuggling. One of their earliest victims was the St. Stephen paper, which gave them a very nice write up, by this means lulling suspicion concerning them. They got very little for all their pains however. This is a pretty mean way for a government to seek to get information against their own friends."

St. Croix Courier - Apr. 7, 1892 Minerals of New Brunswick. - Extracts from a Paper by Prof. L.W. Bailey, of the Geological Survey of Canada. - COPPER. - The ores of copper found in New Brunswick include native copper, copper glance, chalcopyrite or copper pyrites, bornite or erubescite, cuprite and malachite. NATIVE COPPER has been reported as occurringsparingly in connection with the basalt traps which form the northern half of the Island of Grand Manan. It hasalso been observed at Clark Point on the Mascarene shore of Passamaquoddy bay, and it is stated to have been found in small quantities along the coast, near the head of the Bay of Fundy. Little that is definite, however, is known of either locality. COPPER GLANCE accompanies the native copper in the traps of Grand Manan, where it has been found in small quantities of Grand Manan, where it has been described by Prof. E.J. Chapman as being sufficiently abundant to give promise of profitable extraction. Little effort, however, has as yet been made in this direction. The same mineral, and in larger quantities, has been found associated with other copper ores at different localities along the coast of Charlotte county, and on the adjacent islands among which may be mentioned Crow Harbor Island, Simpson's and Adam's Islands. It is,however, a less abundant mineral than the species nextdescribed. COPPER PYRITES OR CHALCOPYRITE is the most widelydistributed as well as the most abundant of the copperores of New Brunswick, and has been observed at many localities. The larger number of these occur along the southern seaboard, where a band of copper-bearing rocks, believed to be of pre-Cambrian age, is found to extend, with some interruptions, along the greater part of its length. Others are found in the interior, more particularly in connection with the older schistose rocks or the intrusive masses by which these have been invaded. A detailed list of these localities so far as they occur in the southern part of the province, will be found in the Report of Progress of the Geological Survey for 1870- 71. In the northern part of the province, the most noticeable localities are Bull's Creek, in the vicinity of Woodstock and the Tattagouche River, near Bathurst. InWestmorland county, ores consisting in part of this species occur in connection with rocks of the carboniferous age, near the town of Dorchester. BORNITE OR ERUBESCITE, sometimes known as peacock ore, accompanies the other ores of copper, more particularly about Passamaquoddy bay and the head of the Bay of Fundy, sometimes occurring to the exclusion of other varieties. Where abundant, it constitutes a very valuable source of the metal, and the ore of some of the most promising mines yet opened has been chiefly of this species. NICKEL. - Considerable deposits of pyrrhotitehave for many years been known to occur in different parts of Charlotte county, usually in connection with copper pyrites, but until recently have been considered to be without value. Attention, however, having been redirected to them in consequence of the developments at Sudbury, in Ontario, these have also been found to be nickeliferous, and attempts are now made to test their value. The deposits appear to be large, but, as at Sudbury, the nickel contents vary considerably. A fair average sample of 75 lbs., analyzed under the direction of Dr. Hoffman, of the Dominion geological survey, yielded nickel, 4.718 per cent., the material very closely resembling, according to Dr. Hoffman, a large proportion of the ore at Sudbury, Ont. BUILDING STONES. - Very extensive and valuablebeds of granite, freestones, slate, marble, etc., existsin the province, and in the case of the first two have been largely quarried for exportation, but have not beenthought to require extended notice in the presentconnection. The same is true of another of the rocks or minerals, including limestone, clays, infusorial earths, bog-ores, salt, &c. These may be made the subject of a subsequent contribution. LIMONITE. - In addition to the limonite referred to above as associated with the hematites of Carletoncounty, this same mineral is found at various localities in the form of bog ore. The largest deposits are upon the banks of the St. John river at Burton, in Sunbury county, and considerable quantities of the ore were removed during the continuance of operations at Woodstock, for admixture with the hematites of that locality. Spathic iron is only known to occur in the form of small veins in certain parts of Queen's and Charlotte counties. At West Beach, twelve miles east of the city of St. John, upon the shore of the Bay of Fundy, are beds consisting of red hematite mingled with specular iron ore, while at Black River, two or three miles east of West Beach, some of them with a thickness of 20 feet. They have not, however, as yet attracted the favorable notice of such iron experts as have visited them. Magnetite is not uncommon in the form of scattered grains in the crystalline rocks of the southern counties, and small veins are sometimes met with, but none has as yet been observed sufficiently large to

At West Beach, twelve miles east of the city of St. John, upon the shore of the Bay of Fundy, are beds consisting of red hematite mingled with specular iron ore, while at Black River, two or three miles east of West Beach, some of them with a thickness of 20 feet. They have not, however, as yet attracted the favorable notice of such iron experts as have visited them. Magnetite is not uncommon in the form of scattered grains in the crystalline rocks of the southern counties, and small veins are sometimes met with, but none has as yet been observed sufficiently large to

Baillie Gold;

St. Andrews Beacon - Jun. 14, 1900 Minerals of Charlotte County. - An impression prevails in St. Stephen that the English capitalists will abandon any further attempts to develop the nickel properties. Much, it is said, will depend upon the character of the report submitted by Mr. Hazen Grimmer who is now in England. As Mr. Grimmer, expressed his firm belief in the richness of the deposit before leaving for England it is difficult to see upon what ground the impression above alluded to is based. It is to be hoped that the rumor of abandonment is incorrect. It is worthy of note that the syndicate has renewed its option.The Oliver copper mine in the parish of St. George is being developed by Mr. H.H. McLean and a number of other gentlemen. The outlook for this mine is promising. Messrs. Fred W. Andrews, W.E. Rose and N. Marke Mills have secured 37 areas in Baillie settlement, in order to ascertain the value of a gold deposit they have located there. The surface croppings assay $2 per ton, and the quartz is expected to become richer as it goes down."

St. Croix Courier - Aug. 10, 1961Geologists Find: Tin in Them Thar Hills The prospect of a new tin mine in this area is looming closer ..?.. Geologists at Mount Pleasant where diamond drilling is being carried out in search of tin, zinc, and molybdenum, say early results are 'very interesting' and 'encouraging.' A Newcastle diamond drilling firm ..?.. Mount Pleasant to a depth of 5,000 feet since Spring and ..?.. reach a depth of 10,000. Work ..?.. done on the north side of the mountain. Geologist James Martin told the Courier this week that while findings are good, it might be some time ..?.. actual mine is opened up. ..?.. guess was that, with any ..?.. luck, a shaft might be started by the end of the year. There was also talk of constructing ..?.. road to the mountain. It ..?.. stretch from Piskahegan ..?.. Tracey Brook. Mr. Martin said construction of such a road would ..?.. facilitate operations at the ..?.. ..?.. hoped that some financial ..?.. could be obtained for construction of the access road. Unofficial ..?.. indicated mining officials ..?.. the N.B. provincial ..?.. about the matter. Meanwhile, some 32 men are currently living in a tent camp at Pomeroy ..?.. A Toronto group have un..?.. seismic work west of Mount Pleasant in an effort to spot old river ..?.. the valuable ores might ..?.. be located. ..?.. have been able to say de..?.. that pre- pleistocene river ..?.. to exist in the area. ..?.. chemical laboratory has been installed at the site to facilitate the testing of rock samples brought up by the diamond drill. It is the results of these tests which have left geologists optimistic. Work at the Mount Pleasant site has been carried on intermittently for the past two years. Mount Pleasant Mines was formed in Ontario by Ottawa geologists Dr. William Young and Dr. John Riddell, a group of 100 claims was staked on the mountain. Eighty of these were optioned to Kenco Explorations, a subsidiary of Kennecott Copper (U.S.), and drilling was carried out to a depth of 10,000 feet. A considerable number of tin samples were located by the Kenco group at that time. Later Kenco moved west in search of copper and Mount Pleasant Mines obtained a majority interest in the mountain. Since that time, the work has been carried on exclusively by this group, with Dr. Riddell as managing director. The group has divided the mountain into two zones - the north zone which is currently being explored; and the south, where work will soon commence in search for tungsten and molybdenum. A third group of claims west of the mountain is being explored by the Toronto seismic experts."

URN: 0044 / Names: Mount Pleasant;

St. Croix Courier - Feb. 22, 1962 Canada's First Tin Mine May Be Near St. Stephen.- $350,000 Program. - New Underground Operation Started at Mount Pleasant. - By John McCaw. - Canada may yet get its first ever tin mine, Mount Pleasant Mines, located a scant 30-odd miles from St. Stephen, has started a $350,000 underground program to get a better look at mineralized tin-molybdenum zones indicated by surface exploration and diamond drilling. Engaged for the past two years in investigation of its 347 claim property, the company says it plans to drive two 1,600 foot adits (tunnels with one end open) into mineralized zones. The activity comes at a time of world-wide shortage and as late as December 1961 the metal was selling for $1.23 a pound in New York, up almost 20 cents from the price a few months earlier. President of Mount Pleasant Mines Limited, John E. Riddell, says the new developments will allow the company to extract bulk samples for testing and give the engineers an idea of possible production. In a December 1961 message to shareholders, Mr. Riddell told of the underwriting agreement with W.D. Latimer Ltd., and Mount Robb Investments for the supply of sufficient funds to carry out the recommendations made at the annual general meeting. In his letter the president said the next six months should see substantial advances in the company's affairs. New Smelting Process. - Point number one noted by Mr. Riddell was: Establishment of substantial tonnages of probable or proven ore. no. 2: Development of satisfactory ore-dressing programs suitable for the production of saleable tin, base-metal, molybdenum and tungsten concentrates. No. 3: Development of a new tin smelting process through metallurgical studies currently in progress at Geo-Met Reactors Ltd. Approve Agreement. - At the annual general meeting

October 1961, shareholders approved an agreement with Geo-Met Reactors Ltd., a private company engaged in applied research in the field of extractive metallurgy. At that time Mount Pleasant purchased a 20 per cent interest in this company and had an option on a further 20 per cent interest. Geo-Mat Reactors is currently engaged in investigation applications of a new process to reduce oxidation reactions in complex sulphide and oxide ores. This process was originally developed by the Pulp and Paper Research Institute of Canada for use in the treatment of sulfite liquors. The shareholders were told the major portion of the exploration was carried out in 10,000 feet of diamond drilling and 13,000 feet of surface stripping in the all-important North Zone of the main block. Survey Not Haphazard. - It had not been a haphazard investigation, management said. Results of detailed geochemical surveys were used to control the diamond drilling. The investigation will also supply the company with information on the possible volume and value of other minerals on the property - copper, zinc, lead, silver and tungsten. The complicated nature of the mineralized zones makes precise calculation of indicated tonnages difficult. Based upon work to date, however, the important North Zone is estimated to contain 1,000 tons per vertical foot. Depending on the mining rate, but assuming a 300 ton per day operation, and a working depth of 370 feet (as indicated by the primary geochemical surveys) the resulting 370,000 tons would be enough for a better than a three-year mining operation. Following the recent financing deal approved at the annual general meeting of shareholders, Mount Pleasant has approximately 2,000,000 common and 60,000 preference shares outstanding and under option, out of 5 million common and 200,000 preferred authorized. Finances for Operation. - According to a news story in 'The Northern Miner' finances for the underground operation were obtained through the sale and option of 500,000 treasury common shares which netted the company $350,000. Company stock has been active and strong in recent weeks, moving sharply from a low of 32 cents in 1961 to a high figure of $2.70 at the close of Tuesday's trading on the Canadian Exchange. Figures in a Toronto Daily Star news story on the mine, show that Canada, with no tin mines of her own was forced in 1958 to import 3,480 long tons of the mineral (2,240 pounds to the ton) making an import level of better than seven and three quarter million pounds. With the estimated gross tonnage indicated at 370,000 short tons and the current price of tin on the open market estimated at $15 a ton, gross income for the three year operation could return more than 5 1/2 million dollars in New Brunswick - Mount Pleasant Mines Limited. Editor's Note - Concerning Molybdenum - the steel industry is by far the larger user of this mineral, but considerable quantities are used in the electronics industry, chiefly as plate and wire. Wire is also used in small resistance furnaces. A minor quantity is also used in the manufacture of dyes and chemicals. About Tungsten - This mineral is of major importance in the electrical industry. It is used in the production of incandescent electric lamp filaments; filaments, heaters and supports in radio tubes. Tungsten is also used in a variety of other ways, from filaments and targets in X-ray tubes to contact points in automotive systems. These facts are taken from volume 7 and 10 of Collier's National Encyclopedia."

URN: 0045 / Names: Burnthill Tugsten;

Campbellton Graphic - Dec. 30, 1910 The Miramichi Mineral is Wolframite. - A very Valuable Find Said to be Present in Great Quantity. - The mineral recently found near the mouth of Burnt Hill stream on the S.W. Miramichi by Samuel Freeze of Doaktown, is believed to be the rare and rich mineral known as Wolframite from which is extracted the metal tungsten, used for films in electric lights. Twenty sacks of it were shipped from Boiestown to Montreal to be tested. The supply is said to be

Campbellton Graphic - Jun. 23, 1911 New Companies. - The incorporation has been granted to Samuel Freeze and Isabella Freeze, of Doaktown, Matthew Lodge and Arthur Williams, of Moncton, to conduct a general mining business under the name of the 'Acadia Tungsten Mines, Ltd.,' with a capital stock of $90,000."

S.J. Globe - Apr. 30, 1912 and Granite Town Greetings - May 10, 1912 Millions In A Miramichi Mine (Chatham World). - Mr. Samuel Freeze is confident that there are millions in the tungsten mine he is about to open at Burnt Hill, South West Miramichi. Besides tungsten ore the mine produces topazes, several bags of which Mr Freeze has gathered on the surface. Some of these will be ground for use as a polisher in place of emery powder or diamond dust. The capital of Acadia Tungsten Mines, Ltd., is $99,000, in shares of $10, and it is all owned by Mr. Freeze, managing director; Mr. Matthew Lodge, president, and Mrs. A.E. Williams, executrix. Mr. Freeze, who was a miner in the West in his youth, and visited the Klondyke some years ago, has long been impressed with the conviction that New Brunswick offers as good a field for the prospector as any other land, and he has done more or less prospecting every year. This is his best find, and he looks confidently forward to the sale of a great quantity of tungsten ore at a big profit. The ore is in or near the surface, and the mine will be a producer from the start. Reduction works will be built at the mine for treating the ore."

URN: 0045 / Names: Burnthill Tugsten;

Kings County Record - Sep. 2, 1954 N.B.'s Mineral Wealth. - Already encouraged to look for a greater measure of prosperity by reason of the development of base metal mining in the Gloucester county area and, to an important although lesser degree, by theproduction of tungsten at Burnt Hill, York county, the people of New Brunswick will watch with keen interest developments that may follow the discovery of uranium deposits in both Restigouche and York counties. For many years it has been known that beneath the surface of New Brunswick lies metallic wealth of great possibilities, but little was done, on any organized basis, to capitalize on these resources until the discovery was made two years ago of the vast metal deposits in the Bathurst area. As the result of the Gloucester county finds, one of Canada's greatest mining rushes and development programs came about. These in turn encouraged prospectors to search carefully elsewhere in the province, and the latest discovery indicates that there may be full exploration in Restigouche and York to determine whether the uranium may be present in workable quantities. Meanwhile while enthusiasm is not being allowed to run wild until more extensive exploration is carried out, there appears to be real justification for the anticipation of a great fresh source of activity and revenue for New Brunswick residents."

Kings County Record - May 31. 1956 Photo of Burnthill mine ...."

St. Croix Courier - May 31, 1956 Conservative Ad. PHOTO. - Caption - More work and wages for New Brunswick as huge mining corporations undertake permanent construction of new mills in the heart of the mining area of our prosperous and expanding province. PHOTO. - Caption - For the first time in its history, the north shore of New Brunswick is on the threshold of opportunity and prosperity. To aid in this development new roads such as this have been built through wilderness by the Conservative Government, led by Hugh John Flemming. PHOTO. - Caption - Thanks to encouragement from the Flemming Government this Tungsten mine in York County is now in production."

URN: 0045 / 0275 / Names: Burnthill Tugsten; Woodstock Fe;

St. Croix Courier - Oct. 13, 1955 New Brunswick Premier Presents Radio Address. - ... Hugh John Flemming ... Two mines are inactual operation producing concentrates. One of which the Tungsten mine in York county is running and is providing a constructive addition to employment and production in the central New Brunswick area. Mine Work Progressing. - The work of developing two of the largest base metal ore bodies in the world isgoing on steadily forward on the properties of Brunswick in Gloucester County and at the American Metals site north of Newcastle in Northumberland Co. It is difficult for any of us to properly estimate what the creation of these two huge mines will mean to the economy of our Province. Near Bathurst, a pilot plant has been in operation for some time and the specific metallurgical problems which face every mining development are being solved. The Management of the Brunswick Mining and Smelting Company seem confident that a mill capable of handling four thousand tons and upwards per day will be possible. Of course this will mean a great boost to employment and income in the Bathurst area. As you know, the government and the mining company have co-operated in building access roads into the area which has greatly facilitated the exploitation of the site. At this site, nearly one million dollars have been spent on buildings, machinery and equipment up to date. Stores are located at a cost of nearly $100,000; the deferred mine development at this point is nearly two million dollars; making a total of something over three million dollars altogether spent at this place, and the spending is continuing at the rate of about $4,000 per day. Your Government has been equally prompt in joining with the American Metals Company in order to begin construction of the necessary road surfaces and bridges to join the company's site and tide-water at Newcastle. This work is going ahead at top speed. Completion will greatly assist in bringing New Brunswick's second huge base metal development into early operation. Manganese Ores. - Although the companies I havejust reviewed are better known than other explorations and developments now going forward, it will be of interest to learn that manganese ores from the Woodstock district will be tested at its Niagara Falls plant by Strategic Minerals Ltd. Public announcement was made some time ago of the evidence of millions of tons of low grade manganese ore in lower Carleton county. Use of this ore body will depend of course upon the solution of special metallurgical problems. Latest word from the company indicates that their experiments are meeting with definite encouragement and I feel sure that we will have further news soon which will be of great importance. At the site of the New Larder U Development in Gloucester County, information indicates that a shaft has been sunk to a depth of 1,100 feet and work here seems to be proceeding vigorously so that this mine may be New Brunswick's next mineral production. The mining picture is, therefore, bright with promise and there can be no doubt that capital investment in this respect will be considerable during the years immediately ahead. Of course our Provincial prospects do not cease with mining ...."

St. Croix Courier - Dec. 24, 1953 PHOTOS. - Mining activity at high level in northern New Brunswick - Top left, A Canadian Manganese crew is shown diamond drilling for manganese on the company's property at Tetagouche Falls, some eight miles from Bathurst. Top right, a grader and four of the 100 trucks used in the construction of the 66 foot wide highway connecting Bathurst with the two main properties of the New Brunswick Mining and Smelting Company are shown hauling gravel as the 13 1/2 mile stretch nears completion. Lower left, with installation of the equipment almost completed, Keymet Mines' concentrator at Elm Tree, 14 miles northwest of Bathurst, is expected to go into operation in February. To the right of concentrator (left) can be seen the head frame of the company's shaft, which has reached a depth of 950 feet. Extreme right is the hoist room. Lower right - Above is shown deep trenching exploration on the Canadian Manganese property at Tetagouche Falls. (NB Government Photos). MAP of province with mineral occurrences and areas of exploration... Fredericton.- A titanium find, several new base metal strikes plus reports of early drilling operations on the Province's lone uranium potential marked the closing stages of the biggest year on New Brunswick's mining history. Sparked by a 12-month-old multi-million dollar base metal strike in the Bathurst area, outside mining corporations and native New Brunswickers have staked close on 40,000 claims, a single-year record unequalled by any province in Canadian mining annals. Widely Distributed. - Spreading beyond the Bathurst area to all sections of the Province, the unprecedented staking rush has turned up potential radio- active minerals near Hampton in the south of theProvince; revived interest in nickel deposits at St.Stephen, in the southwest corner; manganese near Woodstock, farther north on the western border; titaniumin the northern section; and more base metal finds in the Bathurst and central New Brunswick sections.The staking rush prompted by the Bathurst strikes has been followed by a flow of capital. Fourteen companies have been incorporated in New Brunswick with a combined capitalization of close on $38,000,000. These figures do not include companies incorporated outside the province which are carrying out mining operations and investigations. Economic Value. - Exploration and development to date has given much employment to New Brunswick people, one authority estimating that wages, supplies and services have added upwards of $10,000,000 to the Province's economy during the past 12 months. Confident that the Province stands on the threshold of its greatest mining boom, Premier Hugh John Fleming's administration since the first of the year has: (1) Authorized a $3,000,000 extension to the New Brunswick Electric Power Commission's plant at Chatham to provide power for the mining interests in the Bathurst area; (2) Joined the M.J. Boylen interests in financing an upwards of $300,000 highway project connecting the CNR, 13 1/2 miles distant, with the Brunswick Mining & Smelting Company's multi-million dollar base metal-pyrite ore-body strike on the old Bathurst iron mine property. (3) Waived the 1953 annual 25-day work period regulation with a renewal of all mining claims in order to give local prospectors an equal 'break' with the wealthy outside corporations. (4) Agreed to carry out surveys leading to the early construction of six-mile and three-mile stretches of road connecting the new main highway with the Anacon-Leadridge and New Larder 'U' properties, respectively. Surveys Conducted. - Since Brunswick Mining & Smelting's 30 million-ton base metal strike, claimed to be one of the largest in Canadian mining history, an estimated 250,000 acres throughout New Brunswick have been surveyed geophysically by Canadian, United States and provincial mining groups as well as individual prospectors, with 50 diamond drills operating in the Bathurst area and 10-15 elsewhere in the Province. Latest developments from the staking rush that has blanketed the Province include:(1) A reported titanium strike by Fundy Bay Copper Mines, Ltd., in the Ramsay Brook district about 35 miles south of Campbellton.(2) A manganese strike in the Jacksonville area, north of Woodstock, by Strategic Materials, claimed to be larger than that of the Canadian Manganese Company's finds at Jacquet River, 40 miles east of Campbellton andTetagouche Falls, eight miles west of Bathurst. (3) Lead-zinc-copper discoveries at Temple andMeductic, York county, by Jack McClaskey, Toronto, and N.B. associates, showing interesting veins of massive pyrites and sulphides. (4) Impressive new finds on the New Larder 'U'lead-zinc-copper property.(5) A base metal find in the Nigadoo district of Gloucester county.(6) Discovery of copper in Westmorland county.(7) Lead-zinc-copper finds in Albert County.(8) Copper-nickel strikes in Charlotte County.(9) Discovery of radio-active minerals in the Hampton-Norton district, Kings County. (10) Lead-zinc-copper finds near the old antimonymines in the Lake George district, York county, and discovery of antimony near Welsford, Queens County. Trynor Co. contract. - Trynor Construction Company, Ltd., has been awarded a $50,000 contract by Brunswick Mining & Smelting to strip the over-burden onits old Bathurst Iron Mine property. First to sink a shaft and go into production,Keymet mine near Elmtree, 16 miles northwest of Bathurst, has completed construction of a 200-ton mill, which is expected to be in operation early in February.Kingston Uranium Mines Ltd., a Saint John Group, is reported ready to commence drilling operations on its Norton-Hampton district claims, where a radio-active mineral authority claims the company has a 50-50 chance for a mine, the first of the new year.Fundy Bay Copper Mines expects to commence drilling on its Ramsay Brook titanium claims before the end of the current calendar year. New Calumet Mines Ltd. Has had encouraging results from deeper drilling in the Orvan Brook (Gloucester County) lead-zinc-silver deposit discovered in 1938.Strat Mat and Fundy Bay Copper are reported drilling on a 20-square mile concession in the Jacksonville district. Further Investigations. - International Nickel isreported to have carried on aerial electro-magnetic surveys over various areas of the Province, and J.C. Udd further investigations on his nickel claims at St. Stephen.Burnt Hill Tungsten Mines, Ltd., report locating another surface vein showing good grades of tungsten on the company's York County property, between 50 and 60 miles northeast of Fredericton. Construction on a 100-ton mill is already well under way, and the company plans to continue its mining operations during the winter. Diamond drilling is already well under way on theMcCluskey and associates base metal strike at Temple and as soon as hole No. 1 is down to 500 feet drilling will commence on the syndicate's Meductic find. Deep trenching and drilling exploration on theCanadian Manganese Company's manganese claims at Tetagouche Falls, eight miles west of Bathurst, is already well under way. Both Noranda Mines and M.J. Boylen, Ltd. haveoutlined substantial tonnage of base metal ore on a concession 12 miles northwest of Bathurst pioneered by the Fredericton-owned Rocky Brook- Millstream Syndicate, but subsequently optioned to Canadian Mining interests.Promising. - Drilling on the Brunswick orebody to a depth of 1,000 feet has shown it to live up toexpectations, and while Brunswick's second property. Anacon-Leadridge, as yet is incompletely explored along the strike and in depth, sufficient work had been done by late summer to indicate a persistent ore zone over a length of 1,400 feet, with indications of some ore up to 600 feet to the north, and with some 3,000 feet of favorable unexplored ground to the south. At both Brunswick's properties it is likely that the known ore bodies will persist below the 1,000 ft. level and that other bodies will be found down to even greater depths. The same applies to other properties in the immediate vicinity, even though lacking significant surface showings, and one authority states it is not out of the way to think in terms of 100 million

tons or more as the eventual total for the Bathurst area. Start Next Year. - Tests on the original Brunswick orebody have shown that a profitable operation is feasible and the company will probably commence mining operations during the winter or spring with the scale of operations estimated at least 6,000 tons per day. In addition to the base metals, tin and silver, an important feature of the Bathurst ores is the high sulphur content particularly of the pyrite which forms up to 90 per cent of

Lower right - Above is shown deep trenching exploration on the Canadian Manganese property at Tetagouche Falls. (NB Government Photos). MAP of province with mineral occurrences and areas of exploration… Fredericton.- A titanium find, several new base metal strikes plus reports of early drilling operations on the Province's lone uranium potential marked the closing stages of the biggest year on New Brunswick's mining history. Sparked by a 12-month-old multi-million dollar base metal strike in the Bathurst area, outside mining corporations and native New Brunswickers have staked close on 40,000 claims, a single-year record unequalled by any province in Canadian mining annals. Widely Distributed. - Spreading beyond the Bathurst area to all sections of the Province, the unprecedented staking rush has turned up potential radio- active minerals near Hampton in the south of theProvince; revived interest in nickel deposits at St.Stephen, in the southwest corner; manganese near Woodstock, farther north on the western border; titaniumin the northern section; and more base metal finds in the Bathurst and central New Brunswick sections.The staking rush prompted by the Bathurst strikes has been followed by a flow of capital. Fourteen companies have been incorporated in New Brunswick with a combined capitalization of close on $38,000,000. These figures do not include companies incorporated outside the province which are carrying out mining operations and investigations. Economic Value. - Exploration and development to date has given much employment to New Brunswick people, one authority estimating that wages, supplies and services have added upwards of $10,000,000 to the Province's economy during the past 12 months. Confident that the Province stands on the threshold of its greatest mining boom, Premier Hugh John Fleming's administration since the first of the year has: (1) Authorized a $3,000,000 extension to the New Brunswick Electric Power Commission's plant at Chatham to provide power for the mining interests in the Bathurst area; (2) Joined the M.J. Boylen interests in financing an upwards of $300,000 highway project connecting the CNR, 13 1/2 miles distant, with the Brunswick Mining & Smelting Company's multi-million dollar base metal-pyrite ore-body strike on the old Bathurst iron mine property. (3) Waived the 1953 annual 25-day work period regulation with a renewal of all mining claims in order to give local prospectors an equal 'break' with the wealthy outside corporations. (4) Agreed to carry out surveys leading to the early construction of six-mile and three-mile stretches of road connecting the new main highway with the Anacon-Leadridge and New Larder 'U' properties, respectively. Surveys Conducted. - Since Brunswick Mining & Smelting's 30 million-ton base metal strike, claimed to be one of the largest in Canadian mining history, an estimated 250,000 acres throughout New Brunswick have been surveyed geophysically by Canadian, United States and provincial mining groups as well as individual prospectors, with 50 diamond drills operating in the Bathurst area and 10-15 elsewhere in the Province. Latest developments from the staking rush that has blanketed the Province include:(1) A reported titanium strike by Fundy Bay Copper Mines, Ltd., in the Ramsay Brook district about 35 miles south of Campbellton.(2) A manganese strike in the Jacksonville area, north of Woodstock, by Strategic Materials, claimed to be larger than that of the Canadian Manganese Company's finds at Jacquet River, 40 miles east of Campbellton andTetagouche Falls, eight miles west of Bathurst. (3) Lead-zinc-copper discoveries at Temple andMeductic, York county, by Jack McClaskey, Toronto, and N.B. associates, showing interesting veins of massive pyrites and sulphides. (4) Impressive new finds on the New Larder 'U'lead-zinc-copper property.(5) A base metal find in the Nigadoo district of Gloucester county.(6) Discovery of copper in Westmorland county.(7) Lead-zinc-copper finds in Albert County.(8) Copper-nickel strikes in Charlotte County.(9) Discovery of radio-active minerals in the Hampton-Norton district, Kings County. (10) Lead-zinc-copper finds near the old antimonymines in the Lake George district, York county, and discovery of antimony near Welsford, Queens County. Trynor Co. contract. - Trynor Construction Company, Ltd., has been awarded a $50,000 contract by Brunswick Mining & Smelting to strip the over-burden onits old Bathurst Iron Mine property. First to sink a shaft and go into production,Keymet mine near Elmtree, 16 miles northwest of Bathurst, has completed construction of a 200-ton mill, which is expected to be in operation early in February.Kingston Uranium Mines Ltd., a Saint John Group, is reported ready to commence drilling operations on its Norton-Hampton district claims, where a radio-active mineral authority claims the company has a 50-50 chance for a mine, the first of the new year.Fundy Bay Copper Mines expects to commence drilling on its Ramsay Brook titanium claims before the end of the current calendar year. New Calumet Mines Ltd. Has had encouraging results from deeper drilling in the Orvan Brook (Gloucester County) lead-zinc-silver deposit discovered in 1938.Strat Mat and Fundy Bay Copper are reported drilling on a 20-square mile concession in the Jacksonville district. Further Investigations. - International Nickel isreported to have carried on aerial electro-magnetic surveys over various areas of the Province, and J.C. Udd further investigations on his nickel claims at St. Stephen.Burnt Hill Tungsten Mines, Ltd., report locating another surface vein showing good grades of tungsten on the company's York County property, between 50 and 60 miles northeast of Fredericton. Construction on a 100-ton mill is already well under way, and the company plans to continue its mining operations during the winter. Diamond drilling is already well under way on theMcCluskey and associates base metal strike at Temple and as soon as hole No. 1 is down to 500 feet drilling will commence on the syndicate's Meductic find. Deep trenching and drilling exploration on theCanadian Manganese Company's manganese claims at Tetagouche Falls, eight miles west of Bathurst, is already well under way. Both Noranda Mines and M.J. Boylen, Ltd. haveoutlined substantial tonnage of base metal ore on a concession 12 miles northwest of Bathurst pioneered by the Fredericton-owned Rocky Brook- Millstream Syndicate, but subsequently optioned to Canadian Mining interests.Promising. - Drilling on the Brunswick orebody to a depth of 1,000 feet has shown it to live up toexpectations, and while Brunswick's second property. Anacon-Leadridge, as yet is incompletely explored along the strike and in depth, sufficient work had been done by late summer to indicate a persistent ore zone over a length of 1,400 feet, with indications of some ore up to 600 feet to the north, and with some 3,000 feet of favorable unexplored ground to the south. At both Brunswick's properties it is likely that the known ore bodies will persist below the 1,000 ft. level and that other bodies will be found down to even greater depths. The same applies to other properties in the immediate vicinity, even though lacking significant surface showings, and one authority states it is not out of the way to think in terms of 100 million

tons or more as the eventual total for the Bathurst area. Start Next Year. - Tests on the original Brunswick orebody have shown that a profitable operation is feasible and the company will probably commence mining operations during the winter or spring with the scale of operations estimated at least 6,000 tons per day. In addition to the base metals, tin and silver, an important feature of the Bathurst ores is the high sulphur content particularly of the pyrite which forms up to 90 per cent of

Royal Gazette - Sep. 21, 1841 and N.B. Courier - Oct. 2, 1841 and St. Andrews Standard - Oct. 8, 1841 and Weekly Observer - Oct. 5, 1841 The following letters from Dr. Gesner to His Excellency the Lieutenant Governor, which have been handed to us for publication, contain much interesting and valuable details, in addition to those already beforethe Public of that gentleman's scientific labours in his geological researches in various sections of the Province:- Saint John, 17th June, 1841. Sir, - I beg leave to state for the information of His Excellency, that I have just completed a section across the country from St. Stephen's (Charlotte County), to Fredericton, in the direction of the new road now opening between those places. I have examined the uninhabited country on the Magaguadavic River, Loon Lake, Oromocto Lake, and the Wild Lands adjacent. Somewhat contrary to my expectations, I find there are large tracts of excellent land in this quarter, with occasional traces of intervale. Many of these lands are as I believe ungranted, and would afford excellent situations for immigrants. On the south east side of the Magaguadavic, where it is crossed by the road, there is some rocky and elevated ground; but these ridges are met by excellent soils which are capable of successful cultivation. The rivers are navigable for canoes, and abound in fish, (trout, &c.), but the most important circumstance for the new settler, is the opening of the beforementioned road, whereby access can be had with the sea shore for fish, and finally for a market; and also with the capital of the Province. The inhabitants (twenty six families) in the Harvey Settlement, are in a prosperous condition, and other Villages might be established, on some of the tracts alluded to. These circumstances will be communicated to the Board of Emigration here, and I have taken this liberty, knowing the interest His Excellency feels in Emigration, the best means of improving the condition of the country. The Coal Field is found to extend farther in this direction than was expected. The particulars concerning it and minerals in this quarter will be fully set forth in my report for the season. I intend leaving town on Monday next to explore the Schoodic River along the American line to the Monument and Eel River, and will if it shall seem necessary, communicate to His Excellency anything of importance which may be discovered on that tour through the Wilderness. I have the honor to be, Sir, Your most obedient, humble servant, Abraham Gesner. To Alfred Read, Esquire, Private Secretary, &c. &c. ---------Saint John, August 5, 1841. Sir, - I have the honor to inform you for the information of His Excellency, that my explorations have been recently directed to parts of the counties of Carleton and York.The most important examinations have been those of three several deposits of excellent iron ore, on the farm of Colonel Ketchum, at Woodstock. This Ore was discovered by the inhabitants several years ago. It is a compact red hematite, which will yield from 50 to 60 per cent of cast Iron. The united thickness of the beds is seventy five feet. The situation of the ore in the original forest of the country, and its inexhaustible quantity, offer every advantage for the manufacture of iron, and being placed on the American frontier, and high road to Canada, its value is much increased.Two remarkable Medicinal Springs have been found to exist on the Keswick River, about eighteen miles from Fredericton; the water has not yet been submitted to Chemical analysis, but it is evidently calculated to relieve several kinds of disease. Some singular discoveries have been made in regard to the change in the level in the Saint John. Below Woodstock the River has asserted its ancient bed, which is upwards of thirty feet above the present channel. This circumstance accounts fully for the terraces or steps of the valley at Woodstock. It affords me much pleasure to state that there is every prospect of a good crop, and the inhabitants of new settlements under their prosperity appear contented and happy. I have the honor to be, Sir, Your most obedient, humble servant, Abraham Gesner. To Alfred Read, Esquire, Private Secretary, &c. &c. ---------Saint John, 27th September, 1841. Sir, - Having recently made a geological examination of the county of Kent, and a part of the County of Northumberland, I beg leave to transmit a brief report of my explorations, agreeably to the request of His Excellency the Lieutenant Governor, for whose satisfaction it is submitted. Information had been received, that indicationsof coal had been seen at the Tedish River, in the county of Westmorland, near the site where the probability of its existence had been previously noticed. Upon an examination of the banks of this River, the outcropping of coal measures was discovered, with a superficial stratum of Coal, eight inches in thickness. The occurrence of the usual shales with a perfect and continuous stratum of coal, renders it almost certain that there are far more extensive deposits beneath, which, from the horizontal position of the strata, do notappear at the surface. Another outcropping of coal was discovered by my son, on a Branch of the Cocagne River, in the county of Kent, and within two and a half miles of the harbour. The superficial coal stratum at this place, is situated in the bed of the stream, three feet beneath the water, which renders its admeasurements difficult, unless the rocks were bored. It appears, however, to be sufficiently thick to be worked advantageously, and the inhabitants are now preparing to raise a quantity of it for domestic purposes. Outcroppings of coal also appear on the Buctouche and Richibucto rivers; but the situations where the upper Coal stratum appears in this quarter, are too numerous to admit of having their particular details given on the present occasion. The discovery of coal in this part of the Great New Brunswick Coal Field, is important, in regard to the proximity of this mineral, to the site where the anticipated canal to unite the waters of the Bay of Fundy and Gulf of St. Lawrence, will probably be fixed. The whole of the county of Kent is situated on this vast coal field, which in this quarter presents a broad level surface, not elevated upon an average, more than twenty five feet above the level of the sea.A deposit of bog iron was found at Richibucto, and which might be worked with the coal in this vicinity. Having examined the banks of the principal streams of Kent, I next proceeded to the exploration of the Miramichi River, in the county of Northumberland.Coal exists here also, and thin strata appear about five miles below Chatham, and on the Bartibog River. It also appears in the banks of the Southwest Branch of the River, and numerous other situations near Boiestown, the Ranous stream and others. The rocks of this coal field will supply excellent freestones, flagging-stones, and grindstones. They abound in the remains and impressions of plants which are analagous to those now growing within the tropics, and such as could only have flourished in a warm climate, being entirely different form any now living upon the surface beneath which they are buried. The strata in general are covered by a deposit of debritus and beds of clay and sand, the whole averaging about four feet in thickness. The soil in general is light and sandy, and there are extensive tracts of a good quality of land. Almost the entire surface is capable of cultivation. Notwithstanding, there are occasional Carriboo bogs, and sandy barrens, unfit for settlement. An immense tract of country bordering upon the Miramichi, and its branches, was overrun with devouring fires in 1825. The groves of pine were robbed of their foliage, and still stand in leafless trunks amidst the underbrush and other kinds of wood, which are destined to succeed them. As this part of the country is low and level, the rivers are navigable some distance from their mouths; and the streams are not broken by falls and rapids, so as to prevent the passage of boats and canoes. From the Southwest Branch of the Miramichi, we descended the Nashwaak to the River Saint John, and found that all the rocks along this stream belong to the Great Coal Field, the boundaries of which will be reported when its North Western limits have been ascertained. The attention of the inhabitants heretofore appears to have been devoted almost exclusively to the transportation of pine and other kinds of timber, formerly abundant in this part of the Province. The best interests of the Country do not appear to have been advanced - agriculture has been much neglected - nor does the trade in timber seem to have been profitable to those who have been engaged in it. The inhabitants are settled along the banks of the principal streams. Remote from these, the country is in its native wilderness

state; except where the lumbermen have removed the largest trees, or such as were adapted to the English market. Most of the rivers are lined on each side by tracts of excellent intervale. Many of these tracts still remain unreclaimed by the hand of industry. These intervales like those on the upper part of the Saint John, are remarkable for their terraces, which have evidently been formed by the bursting of lakes, and changes in the level of streams, by the lowering od their beds. Four of these terraces appear, are seen at some situations, and there are instances where the former beds of the streams are now covered with graceful elms. Some of the most extraordinary Geological facts in this Division of the country are seen in the evidences of changes of level. At Bathurst the country has been uplifted, while at the mouth of the Miramichi, the shore has been depressed within a comparatively recent period, and large peat bogs are now buried beneath the sea. A visit was made to a mining establishment of anEnglish Company at Bathurst, conducted by Mr. Stevens, a most enterprising individual. The first efforts of the Company were directed to the mining of Copper Ore, veins of which are evidently contained in the slates of Tete-a-gouche River. At present the mining of manganese is carried to some extent, and powerful machinery has been erected with sufficient water power, which will be directed to cleaning the Ore, and other operations. The Mine of Manganese is situated eight miles from the Town of Bathurst, the one occurs in veins and disseminated masses in Clay slate. Fifty tons were ready to be shipped at the time of my visit. The sterling price of the Ore is stated to be ten pounds to the ton. This is evidently a mining district, and one of great importance to the country. I have also analysed two kinds of marl in the county of Gloucester. They are superior in quality, and will soon be applied to agricultural purposes. The counties of Northumberland, Gloucester and Restigouche, are evidently rich in mineral wealth, and I regret that my examinations could not be extended to them this season. My object has been to complete the Geological exploration of all the southern and eastern parts of the Province, as far Northward as the Main Southwest Branch of the Miramichi and Woodstock, which I am in hopes of completing

Fredericton Daily Gleaner - Nov. 13, 1890 and Evening Gazette - Nov. 14, 1890 and Daily Times - Nov. 15, 1890 and N.B. Reporter - Nov. 19, 1890 Copper Ore. - A correspondent writing from Bathurst, under the date of Nov. 4, mentions a visit he had just paid to the Baldwin Copper Mine in Gloucester county, and obtaining some fine specimens of yellow and gray copper. He forwards us a few samples of the ore which looks well. Our correspondent expresses his regret that such valuable minerals as these as well as of silver in Gloucester county should be allowed to lie idle for lack of capital required to successfully work them. Gloucester has no doubt great wealth in its minerals, and if some of those English capitalists who seem to be diligently seeking for promising enterprises in which to invest their capital would but visit these mines with an expert there is but little doubt their capital would earn a percentage of interest sufficient to pay them well for their investment, as well as being a great benefit to the surrounding country. [Newcastle Advocate.]"

Daily Telegraph - Sep. 23, 1879 A Metalliferous Belt in New Brunswick. - By Edward Jack. - Any person who has examined the rock formation on the Saint John, between Fredericton and Woodstock, must have noticed a belt of granite and associated rocks crossing that river near Sullivan's Creek and Bear Island. This also crosses the Province in a N.E. course, extending nearly or quite to the Bay of Chaleur. South of this there exists a belt of rocks in which various metals and minerals have at different times been found. Commencing at Lake George, on the west side of the Saint John, we find various and in some cases extensive veins of sulphide of antimony, quartz accompanying which, the Hon. Mr. Hibbard states, has frequently yielded an assay of about $4 worth of gold to the ton of rock. The metalliferous district crosses the Mactaquac and Keswick, and I was shown by the late Mr. B. Friel a very fine specimen of sulphide of antimony which he informed me he had found in Smoky Brook, a branch of the latter stream. Thence the Nashwaak is crossed and I am informed by Mr Alexander Gibson that two or three days since he, in company with some others, obtained about 30specimens of gold near Burch Island, on that river, and that in the neighborhood of the place of discovery there was a large vein of rusty and honeycombed quarts in the bed of the river. The Taxis and Southwest Miramichi are next intersected and last summer Mr. S. Freeze, D.C.L. Surveyor, showed me several pieces of gold, which he had, himself, found on the former river and the late Mr. S. Shea, of Woodstock, told me that the best chance which he found for gold washing on the Miramichi was near Price's Bend. Graphite is found on Salmon Brook and there occursat Burnt hill, molybdenite. Thence crossing the Dungarvon we again find molybdenite on Bamford Brook and reaching the Northwest Miramichi the yellow sulphide of copper is there found. Farther still to the N.E. copper and manganese are found at the Nepisiguit and Tatagouche. Near Bathurst bridge, on the subcarboniferous rocks, there is found copper ore deposited in pockets, evidently from solutions, the primary source of which was on the adjacent and older rocks. The proximity of the granite belt appears to have had some connection with the deposit of metal and Bernard Van Cotts, in his treatise on ore deposits, says that nearly all the mineral wealth of Cornwall is found in close proximity to the granite. The district above referred to is largely covered by forests, and is well intersected by rivers and streams offering good rock exposures, and it is not at all improbable but that careful explorations made by competent persons may bring to light valuable veins of metals, which may at some future day become a source of labor in place of the forests, which are disappearing so fast before the lumberman's axe. I need not recapitulate several genuine finds of alluvial and quartz-bearing gold, one of which has been lately reported. They will be fresh in the memory of all who take an interest in the subject."

S.J. Weekly Chronicle - Jun. 1, 1838 Gloucester Mines. - Mr. Stevens, the gentleman who has purchased the privilege of working the mines inthis County, and who proceeded to Great Britain last fall, with several specimens of Ores which he had collected, arrived in the Queen, accompanied by a number of Miners, for the purpose of prosecuting his researches. They proceeded to Bathurst in the Steamer Cape Breton, on Sunday last. Mr. Stevens has been so far successful in the mother country, as to form a company, with ample capital to work the Mines, should the ore, on further inspection, prove sufficiently rich and abundant. The specimen of copper, more especially, which he procured, we understand, is unusually

The Mining Review: A Monthly Record of Geology, Mineralogy, and Metallurgy. - Oct. 31, 1840 and N.B. Courier - Nov. 28, 1840 and Miramichi Gleaner - Dec. 22, 1840 Geology and Mining Prospects of Gloucester and Restigouche, New Brunswick, by W.J. Henwood, F.R.S., F.G.S., &c.- Some gentlemen with whom I have the honour to be acquainted, thought fit to repose sufficient confidence in me to send me to New Brunswick to inspect the geologyand mining prospects of the counties of Gloucester and Restigouche. My report comprised an abstract of the geological characters of the district, and remarks on the economic portion. The first I am, of course, at libertyto make use of - the second, as it was a private affair, I am not at liberty to disclose. Taking the rocks of this portion of New Brunswick in the standing order, the lowest consists of granite, not very different incharacter from our Cornish granite. This is utterly devoid of mineral veins. On this reposes a thick-bedded slate, which Dr. Boase has called ""cornubiant"", and of which the types may be found at Dolcoath and Cook's Kitchen, in this county. This is traversed near the point of junction with the granite, by numerous granite veins, and also by other veins of sulphur much resembling our Cornish elvans. At still greater distance from the granite, the rock becomes deep blue, of a silky lustre, and very thick bedded - in fact, very like the blue killas of the Gwennap district. In some portions of this, I discovered remains of encrinites and numerous isolated pipe-like or vermicular masses of the grey oxide of manganese. This is very peculiar, and of a character that I never before met with. This mass contains veins and irregular patches of greenstone, in no way distinguishable from that of North Roskear, or St. Just. But this is also without mineral veins. Reposing in a comfortable manner, as regards the laminae of the slate, are certain beds of conglomerate, well exposed in the 5 banks of the Tattigouche. These conglomerates seem to belong to the coal measures, and numerous sandstones and conglomerates, belonging to the same formation, repose conformably on the granite before mentioned, and perfectly horizontal in the banks of the Nepisiguit. In this, ferns, and other plants of the coal measures, are found in great abundance. The beauty and the extent of these coal measures it is almost impossible to describe. In fact, we pass over nothing else from Fredericton to Miramichi, and thence to Bathurst, a distance of at least 150 to 160 miles. They consist of various beds of sandstone, shell, and conglomerate, with numerous thin seams of coal, few of which are not more than a foot or two in thickness. The whole of the district is particularly rich in fossil flora. In one of these beds, a blue shell, containing fern and other plants, is a peculiar formation of copper, specimens of which have been shown to Mr. Carne, Mr. Fox, and other gentlemen conversant with copper formations, and they, I believe, as well as myself, never saw anything like them. Specimens of lignite, impregnated in the laminae as well as in the fracture by rich vitreous copper ore, and coated with green carbonate of copper, and isolated and detached nodules, from the size of a filbert to that of a walnut, sometimes wholly consisting of vitreous copper ore - Sometimes the nucleus of these in the external parts of common pyrites - and sometimes the interior of copper pyrites and the exterior of vitreous copper. So persuaded was I of this formation being a unique one, that when specimens of lignite containing vitreous copper ore and nodules of the same substance were shown me at Halifax, on my way home, by the Hon. Samuel Cunard, I thought I at once recognised them as Bathurst specimens, which they were exactly alike; but, to my astonishment, I was informed that they were not from that locality, but from the neighborhood of Pictou, in Nova Scotia, and that they were found there in considerable quantities, under precisely similar circumstances, in the coal formations which were worked there. This neighborhood has received considerable elucidation from the labours of Mr. Gesner, the provincial geologist of Nova Scotia and New Brunswick, whose works are, perhaps not sufficiently known or appreciated in this country; for in a new and unexplored region of this kind, much labour is unavoidably wasted in the mere mechanical process of moving from place to place, which in a civilised and cultivated country like our own, may be at once applied to the pure geological work of examining the rocks. Mr. Gesner has presented the Royal Geographical Society of Cornwall with copies of his works, and has promised us a series of geological specimens in illustration of them. It is, perhaps, also due to Mr. Gesner's individual labours, to say that he has at his residence in St. John's, New Brunswick, an admirable museum, wholly fitted 6 up by himself, illustrative of the geology, botany, and fauna of New Brunswick and Nova Scotia, which should be seen by every visitor to that place, and which, through the politeness of the proprietor, is freely open at all times. Serpentine occurs in isolated masses in several parts of the shores of the Bay of Chaleur. On one part of the shore of this bay I discovered remains of turbinolia, encrinites, and other organic bodies, which are the precise counterparts of some of those on the table presented to us by the liberality of Mr. Peach, of Goran, of this county. In fact, the resemblance is so close in mineral character, structure, and every other particular, that if they were mixed I believe it would be impossible again to separate them - and, indeed, they mark the same epoch of formation. In many parts of that bay, and in many places on the banks of the river Restigouche, which divides New Brunswick from Lower Canada, are seen trap dykes, and near Dalhousie on that river, between two such, I discovered a fine series of the Silurian rocks of Mr. Murchison, particularly rich in organic remains, many of which I have reason to believe, are quite new. Similar rocks are exposed to a great extent in the cutting of the Erie Canal, at Lockport, near Niagara. These have been examined and described in detail by the state geologists of New York, who have discovered many novelties among them. Large collections of these are on their passage; and whether it may be best for the interests of science that they should be placed in this society's collection, or whether it may not be better to hand them over to the inspection of that most accomplished geologist, Mr. Murchison, is a question on which I venture to give no opinion. But I am prepared to dispose of them in that manner which may be thought best and most useful to science. In reviewing these formations, according to the theories of modern and eminent geologists, the slate rocks will be considered the older formations - the granite next in age, its veins being injected through the slate - whilst the coal series deposited on both, but containing no vein of granite, will be considered the more recent of the whole. This, I believe, in conclusion, is an abstract, and a brief one, of the labours in which I have been engaged for three or four months past, and which, when opportunity offers, I may work out in more detail, and place it either before this society, or some other, where it may be most generally useful. Read at the late meeting of the Royal Geological Society of Cornwall, a detailed report of the interesting proceedings appeared in the Mining Journal of

URN: 0054 / IDX_Names: Brunswick # 12;

Kings County Record - Jan. 21, 1965 Mining Development Could Be Huge-Scale. - By Hugh Winsor (Formerly of Norton; writing in the TorontoTelegram). - While most mining eyes were focused on the spectacular base-metal discovery in Timmins last April the first carload of lead concentrate spewed out of the pithead mill at Bathurst Mines No. 12 ore-body. And with it began a new chapter in New Brunswick's mining development which, provincial officials say, could rival the Timmins find in dollars and cents value. Although the huge Bathurst lead, zinc, copper and iron deposits - among the largest base metal deposits in Canada - were discovered in 1953, it has taken more than a decade to put them into profitable production. The most significant development, Brunswick Mining and Smelting Corporation's 4,500 ton-a-day concentrator, swung into full production only in September, but the total mineral output of the province for 1964 leaped ahead 80 per cent to $50,000,000. A similar increase is expected this year. Premier Louis Robichaud has announced that the Bathurst area's known reserves are 'not less than 180,000,000 tons of ore' (although an exact total has not been published). $2 Billion Area. - At current prices this would place their worth at more than $2,000,000,000. 'But we can expect much more than this,' predicted C.S. Clements, director of the N.B. Mines branch. 'The geological work promoted by the original flurry was hastily done by what are now considered primitive methods. 'Many of these areas need to be gone over a second time. I am confident there are more profitable deposits to be found - after all, the Timmins find was missed the first dozen times around.' The opening of Brunswick's concentrator and construction of a lead-zinc smelter (to be completed in 1966) was just the overture, according to its backers. They subsequently have announced a $17,000,000 plan which, if it is completed, will make the province a major steel, fertilizer and chemicals producer as well as base metals. Employ 1,000. - Expenditure on the Brunswick group's development alone could total $200,000,000 while employing directly 1,100. But it will add an estimated $90,000,000 annually to gross provincial output and create 4,000 jobs in all in a previously depressed area. Any 'if' attached to the development will depend primarily on one man, K.C. Irving, an economic tsar in the province but an enigma to the rest of the country. Although Mr. Irving has long dominated New Brunswick's pulp, construction, oil, and communication industries, he is a recent entry into mining. The presence of base metals in New Brunswick had been known since the turn of the century, and the ore samplers which provided the tip-off to the Bathurst find lay in a dusty basement at the University of New Brunswick for 10 years before a post-graduate student polished them up and found the lead and zinc. On the basis of these samples, a group headed by M.J. Boylen was persuaded to explore the area by a drilling program. His discovery detonated a 41,000 claim-staking explosion in 1953, and at least 20 other ore bodies were found. Most of the major mining groups, including Anaconda and Kennecott Copper, Rio Tinto Zinc, Noranda, Texas Gulf Sulphur and Consolidated Mining and Smelting moved in and a few mined some ore. Postponed. - Mr. Boylen made a deal with St. Joseph Lead of New York to develop his major holdings but low base metals prices in 1956 closed the program until 1960. St. Joseph Lead and Sogemines, a Belguim group, were preparing to ship concentrates overseas when newly- elected Premier, Louis Robichaud blocked any shipments of ore from the province unless a smelter was erected. There wasn't, and Mr. Irving and another New Brunswicker, E.R.E. Carter, president of the Patino Mining empire, stepped in to buy the New York company out. Plans for an ore concentrator and production were soon to follow, and in 1963 the $29,000,000 smelter was started ($20,000,000 backed by the N.B. government.) The latest proposal (which still has some mining and financial men puzzled) calls for two more mines to be opened, and a roasting mill to process iron sulphide ores. The sulphur gas given off will make sulphuric acid which will be combined with phosphate rocks and ammonia to produce fertilizers. An Irving subsidiary has taken over design, construction and administration of the project. And although Mr. Boylen still holds about one-third of the Brunswick shares, the Irving interests are now believed to have voting control."

URN: 0054 / 0059 / 0144 / EXPL / IDX_Names: Brunswick # 12; Shippegan Uranium; Brunswick # 6; Exploration - General;

St. Croix Courier - Aug. 8, 1957 Find Hematite Deposit on Shippegan Island. - Base Metals Development In N.B. Is 'Keeping Pace' - Fredericton. - Early August found fewer drills operating, but general development of the Bathurst-Newcastle base metal deposits keeping pace with a year ago. Commencement of drilling on a reportedly high grade uranium strike on Shippegan Island, 62 miles northeast of Bathurst, has touched off fresh interest and staking of 250 new claims around a 36 claim radioactive hematite deposit on the island. Discovered on the beach at low tide last year, Jack McCarthy, Bathurst prospector, reports the source of the float has since been traced to the island proper. A Montreal company has been given a 12 months option on the 36 claims, and a contract to drill six holes to a 3,000 foot depth let to a Bathurst drilling firm. Brunswick Mining and Smelting Co. has recentlyadded a seventh permanent headframe to New Brunswick's mineral belt skyline with the sinking of a second shaft at No. 12 (Anacon) property, 22 miles southwest of Bathurst. Underground crews are drifting at various levels, and a water tower for fire protection is being erected. Stripping operations and pilot mill tests arecontinuing at the company's no. 6 (Brunswick) property, some five miles distant. St. Joseph Lead Co., operators of the close to 60 million ton lead-zinc project, are convinced they have their metallurgical problems licked and have completed the design for a 2,000 ton concentrator to handle ore from both properties. A start has also been made on the design for a lead smelter at Bathurst. Construction of the concentrator is expected to start next year. North of Bathurst, Billiton Co., is sinking ashaft on the Nigadoo River property to 900 feet and developing a couple more levels. Some few miles distant,Anacon Lead Mines is doing underground development at its Sturgeon River mine, and there is some talk of the company erecting a 500 ton mill on the property. Since the installation of no. 2 section of its 1,500 ton mill early in the spring, Heath Steele has beengradually stepping up both mine and mill operations at its lead-zinc-copper mine, 24 miles northwest of Newcastle. Full scale testing of upwards of 60,000 tons of stockpiled ore is being carried out and regular shipments of copper concentrates have been made since the opening of the provincial highways to heavy traffic following the annual closing due to frost conditions. Meanwhile several miles of track have been laid and construction of the CNR's 22 mile line from Bartibog on its Halifax-Montreal main line into the mine isexpected to be completed shortly. Again this year midsummer found a number of Canadian, British, United States and European mining groups' field parties prospecting and doing geophysical work and diamond drilling on claims staked over hundreds of square miles extending from the Miramichi River north into Restigouche county and north shore west to the Tobique river watershed. Consolidated Mining and Smelting is reported tihave turned up a sulphide deposit in the Nine-mile Brookarea and to be drilling in the 44 mile Brook district. Anaconda Co. is said to have uncovered a find bytrenching in the Caribou district and to be doing some exploration in the Tetagouche Lakes area. Mining Corp of Canada has completed a drilling program in the Caribou-Tetagouche Lakes area on ground held by Coulee Lead and Zinc and are re-assessing. Madsen Red Lake and Headway Red Lake are doing general prospecting around Nine-mile Brook. Dominion Gulf is doing some soil sampling in the Caribou-Tetagouche Lakes area as well as some work on ground options from Area Mines in the 40-mile Brook district. They expect to drill later. A Karl J. Springer field crew is cutting lines on the Gloucester county holdings. Springer is said to have options on 100-claim group of Jack McCarthy and a 10 claim group of William McCarthy. Lucky Lake Mines is reported trenching and doing general exploration on claims in the Bathurst area. Kennco has called off a drilling program in the Bald Mountain area, where the company is reported to have a mine, and is doing geology work. The company expects to do more drilling later. Middle River Mining Co., Texas Gulf Sulphur subsidiary, Conwest and Great Sweet Grass are all reported to have discovered important strikes in the Bald Mountain district. Conwest is said to be drilling on its claims. New Rouyn Merger and Sand River have done a survey and are starting drilling in the Island Lake area, southeast of Heath Steele, in a couple of weeks. Arista Mines is doing a survey on one property in the Bathurst area and is to start drilling on a property adjoining Nigadoo Mines claims on the north. A Montreal company, Newcastle Mines Ltd., plans to start a program to check work on anomalies and further geophysical on claims in the Bathurst area. Anthonian Mining Corp. and DiNor Ltd., are drilling on separately held claims in the Tobique River district, near Plaster Rock. Rio Canadian is staking claims in the Miramichi River area, near Newcastle, and also in the Hampstead and Belleisle Creek districts in southern New Brunswick. Larum Mines and Glenburke are reported

URN: 0056 / IDX_Names: Lumsden;

N.B. Reporter - Nov. 5, 1902 It is reported that a rich vein of silver has been struck on the property of C.I. Prescott at Lumsden, Albert County."

Weekly Record - Fri., May 22, 1903 For the past few weeks work has been vigorously pushed at the Lumsden Mine situated a distance of about six miles from Albert, A. Co., by the energetic lessers, M.D. Fullerton and Alba Anderson. One pure gold nugget of considerable size was taken from the mine during the past week, also valuable leads of copper and silver have been struck, and considerable excitement is being manifested."

Kings County Record - Jun. 22, 1928 Investigating New Brunswick Copper Property. - Copper properties in New Brunswick, especially in Albert County district where the Consolidated Mining and Refining Company, of Trail, B.C., are operating, are being subjected to intensive investigation by the Huronian Belt Company, who were reported as coming to the Province for mining work recently. Their engineer, Mr. W.M. Goodwin, who has been in Albert County, left one of his assistants, Mr. H.A. Steven, in charge of operationsthere, and Mr. Steven is now working on the Lumsden property north of Albert Village, in

URN: 0056 / 0901 / IDX_Names: Lumsden; Elmtree;

Campbellton Graphic - Sep. 18, 1913 More Mineral Wealth in N.B. - Great Showing of Silver, Lead and Zinc Ore is Reported. - The Sussex Record says: We are pleased to make note of the existence of a very large body of silver, lead and zinc ore, which is located in Northern New Brunswick, near Petit Rocher Station, on the I.C.R., a short distance above Bathurst. This being additional evidence of the great mineral wealth of New Brunswick. On Friday last, we had the pleasure of examining some splendid pieces of silver, lead and zinc ore from this locality. This is the zinc deposit erroneously credited to Albert Co. The Mr. Nason (Not Nase) who had been up to this zinc deposit, on completing his examination at Petit Rocher, then went to Albert to lookover the Lumsden Copper Mines there so that the Standard reporter got things mixed. This silver, lead and zinc ore deposit is one of the most promising bodies of ore in all New Brunswick, and can be traced a long distance on the surface. The vein or ledge is from 20 to 32 ft. and is a solid mass of good ore from wall rock to wall rock. Should the examination and report of the M.E. be satisfactory, a sale of property will no doubt be effected at a very remunerative price, otherwise a company may be formed to work the same. Assays of the ore, made in Denver, Colorado, show the value of this ore to run from $30 to $90 per ton. The property is owned and controlled by W.S. Montgomery, of Dalhousie, Jas. Dickie, River Charlo, Warren Taylor, Salisbury and E.A. Charters, Sussex, N.B. Mr. Charters was instrumental in having a wealthy New York Mining Corporation send Mr. Nason to meet him and go to examine the mine. We only hope that the good work may proceed and many more valuable mines of New Brunswick be brought to the front."

URN: 0056 / GYP / HILL / E4 / A2 / J8 / IDX_Names: Lumsden; Gypsum; Grey Brook Gypsum; Alma Coal; Albert / Kings County Oil Shales; Albert Mines;

Kings County Record - Mar. 18, 1921 Albert County Rich in Minerals. - Much Activity in Mining Work Being Carried On. - Albert Tribe of Sussex Made Valuable Find of Coal at Owls Head, Alma. - There is much activity in mining circles in Albert county, at the present. At Hillsboro, where more men are employed in mining work than anywhere in New Brunswick, except the Grand Lake coal regions, the Albert Manufacturing Company, of which Hon. C.J. Osman is President, is enlarging their plant so that the output of gypsum, andgypsum products will be about doubled. And one or two smaller companies are increasing their output. At Albert Mines, the site of the former Albertiteproduction, men are seeking the veins of this mineral, which are generally believed to be quite as rich as the ones formerly mined. The company promoting this work are said to be satisfied that the development of this property will soon reach the proportions of the first operation at Albert.At Rosevale, another company is erecting a plant of large dimensions for the purpose of extracting oils from the extensive beds of shale that exist in thatdistrict, and in the hills of Lumsden, back of Albert, a veteran prospector is seeking the vein of gold that was found and lost by a man named Steadman, fifty years ago. This man, Mr. B.F. Fales, worked with Steadman at that time, and is confident he can locate the vein. According to tradition it was rich in gold. Down at Owls Head, Alma, a promising vein of coal has been discovered, and sufficient work has been done to prove that it is not a pocket, but a real vein six feet deep. This was located, not buy a prospector, but by a carpenter employed at Alma, Mr. Albert Tribe, a native of Sussex, Kings County, who noticed the coal on the cliff as he was walking on the beach, and after hours, dug out a quantity and tested its burning qualities, and being satisfied, continued digging until the vein was discovered. It has long been recognized that Albert county is very rich in minerals, probably more so than any other county in the province. Beside the above mentioned, there are extensive deposits of manganese and copper. Manganese has been mined in past years, but so far there has been no attempt to develop the copper mines, although there has been sufficient test work done to indicate vast copper deposits."

URN: 0069 / IDX_Names: Austin Brook;

North Shore Leader - Oct. 26, 1906 Bathurst Has More Iron Ore. - Ottawa Report Says Expert Has Discovered New Vein, Extending 1800 Feet Down to Nepisiguit River. - Ottawa, Oct. 25. - Einar Tindman (Lindeman), who was secured by Dr. Hannel to report upon the three iron ore deposits near Bathurst, has discovered another deposit of a much larger dimension in the same neighborhood. It is 25 feet high to one hundred feet wide and extends 1,800 feet down to the Nepisiguit River, which it crosses. This shows the value of the work which is being purchased by the department."

North Shore Leader - Dec. 6, 1907 Looks Like Iron Boom In Province. - North Shore Men Seek Incorporation For $49,500. - Fredericton, N.B., Dec. 4. - The New Brunswick Iron Mines Company have made application for incorporation. The applicants are Jas. Robinson, of Millerton, John Ferguson and W.E. Fish, of Newcastle; Fred M. Tweedie and R.A. Lawlor, of Chatham. The object is to purchase and lease mining rights in the province of New Brunswick. The office or chief place of business is to be Newcastle in Northumberland county. The amount of capital stock is to be $49,500."

URN: 0069 / IDX_Names: Austin Brook;

North Shore Leader - Nov. 15, 1907 Richest Iron Deposits in Canada. - The Drummond Mining Co., of Montreal, Have Leased the Gloucester Valuable Iron Mining Areas. - Fredericton, Nov. 14. - The Drummond Mining Company of Montreal have secured the lease of valuable iron mining areas in the county of Gloucester and will immediately undertake the development of the property. The deal was put through at Montreal last week by T.M. Burns, M.L.A., of Bathurst, who was here Sunday en route home. He is very enthusiastic in regard to Gloucester's iron deposits and claims they are the richest in Canada. Recent bits he says have shown a depth of 324 feet of solid iron ore close to the surface and can be mined at small cost. The property is located in the Nepisiguit river, 11 miles from Bathurst. In order to develop the property it will be necessary to build a branch line of railway to Bathurst. Under the terms of the lease the government is to receive a royalty of five cents per ton on all ore mined. It is reported that the Drummond company agreed to pay eighty thousand dollars for the lease, which was hitherto held by a local syndicate. T.G. Loggie, chief draftsman of the crown lands department, claims that the Gloucester iron deposits are the most valuable in the world. Messrs. T.M. Burns and Hussey have returned from Montreal. Mr. Burns states that the transfer of the mining property has been completed. Communication has been had with the minister of railways who expresses a willingness to run a branch line from the I.C.R. to the mine. The operating of this property will necessitate the spending of many thousands of dollars which will be a great benefit to Bathurst."

St. Andrews Beacon - Nov. 28, 1907 It's Stones Are Iron. - A Mountain of Iron in Gloucester County. - (St. John Sun). - Premier Robinson, who was in the city, expressed the opinion that the smelter to be erected by the Drummond Mines, Ltd., for working the Gloucester ore, would be located at Bathurst. According to expert reports made on this property, the mineral formation in that section is something remarkable and is unique in the history of mining in Canada. The bed is a veritable mountain of iron. The property is some fifteen miles from Bathurst on the Nepisiguit river and within a few miles of Grand Falls. It is, from expert observation, an outcrop of what promises to be a large seam. The mountain of iron covers some 12 acres and is of such formation that a great deal of mining can be done in what will be practically open quarries. The ore can be uncovered on the side of the mountain and without the sinking of any expensive shafts. Mineralogists who have for the past year been making an examination of the property on behalf of the Drummond concern, report that the ore is undoubtedly the richest in Canada and in certain respects is perhaps the richest in the world. It is especially rich in hematite. The property which has recently been leased, is some distance away from the more frequented districts and for this reason the existence of the iron mountain was unknown to many save those who interested themselves in it. In consequence of this, two or three private persons were able to secure control of all property they wished, namely something over twenty acres. In the terms of the lease the Drummond mines will pay five cents per ton royalty on all ore taken out. The fact that mining can be carried on as in quarries, and without the immediate necessity for the sinking of expensive shafts and construction of hoisting plants will greatly cheapen the work and practically the only undertaking of importance in connection with development will be a railway line about 15 miles in length from the iron mountain to Bathurst. It is estimated that the Nepisiguit river is capable of supplying 10,000 horse power which will be a great deal more than can be required in the mines. The Drummond people have hitherto confined their attention to Cobalt."

North Shore Leader - Sep. 13, 1907 Iron Ore On The Nepisiguit. - Active Steps Have Been Taken To Exploit The Property - Ore Very Extensive. - For years a number of Gloucester county gentlemen have been aware of the existence of iron ore on the Nepisiguit river, and have held mining rights to the property but it is only lately that active steps have been taken to exploit the property and things now look promising for its development. A party of experts are now on the ground and are using the government diamond drill in prospecting. A number of holes have been bored and the samples obtained have been pronounced by the Dominion expert to be of the best grade. Several foreign experts have also examined the samples and are of the same opinion. The borings made show the deposit of ore to be very extensive, and parties are now negotiating for the property. T.M. Burns, M.P.P. of Bathurst, is one of the parties deeply interested in the property. The deposit is on the Nepisiguit river about twenty miles from Bathurst, and ten miles from the Intercolonial railway at a point near Red Pine. If this company takes over the property, a ten mile span will be built from the I.C.R. to the mines and shipping facilities either at Bathurst or Newcastle will be provided for shipping the large quantities of ore to Sydney. Bathurst, which is about thirty miles by rail, from the mine, lacks deep water shipping facilities for the commercial handling of this material, and the company is looking towards Newcastle, which is only ten miles further, to provide the necessary facilities. If the project goes through to a successful issue, and things look good, Newcastle will have a large ore handling plant here in a few years. This will be an important industry and everything should be done to assist it."

North Shore Leader - Aug. 21, 1908 The Gloucester Iron Mine. - Messrs. Thomas J. Drummond and George E. Drummond, Edgar McDougall and W.F. Parsons, of the Drummond iron properties, waited upon Premier Hazen Tuesday morning to confer with him in connection with the proposed development of the iron mine near Bathurst. They are desirous of securing the right to the timber on the property, and it was agreed that the Premier, Surveyor General and other members of the government should visit the property early in September."

North Shore Leader - Aug. 28, 1908 Ready to Ship 1000 Tons A Day. - Making Ready For Taking Out The Ore Just As Soon As The Branch Is Completed. - Mr. John Drummond, of Midland, Ont., a director of the Drummond iron mines in Gloucester County, says that the work of development of the mines has already commenced and there is a great deal to be done. A crew of men are now employed making ready for taking out the ore which will be started just as soon as the branch railway from the mines to connect the I.C.R., a distance of twenty-three miles, is commenced. 'If we had the railway into the mines now,' said Mr. Drummond, 'we could be shipping 1,000 tons of ore per day now. To do that we would have to employ about 200 men or more.' It is understood that just as soon as the Railway is completed the shipments of ore will start briskly although arrangements have not as yet been closed about docks for water shipment. The vast smelters, which will be necessary, will come, of course, in natural course of events as the development of the mine continues. The Messrs. Drummond are optimistic over the future of this mining property and are now assured that it is an even better proposition than they thought for when taking hold. That such energetic mining people have control of the property should be gratifying to the people of the province and the development promises to make a lively boom in Gloucester county especially."

URN: 0069 / IDX_Names: Austin Brook;
St. Croix Courier - Dec. 17, 1908 New Iron Deposits. - The Greatest In The Dominion Located In New Brunswick. - Magnificent Future Assured The Province Through Inexhaustible Deposits in Gloucester County. - (Gleaner). - That New Brunswick possesses the greatest deposits of hematite iron ore of a merchantable quality yet discovered in Canada is now beyond all question. The well known mining engineer, John E. Hardman, of Montreal, who has visited the Drummond mine in Gloucester county several times, and made an exhaustive examination, reports the mine the most valuable one that he has ever examined, and states that it is the largest body of iron ore known to him in the Dominion today. He estimates twenty million tons of ore, containing 55 per cent metallic iron, is already proven, with a large portion stripped and standing to the height of 78 feet above the level of the surrounding country. This ore can be won by open quarrying. The main body already shows a width of over 160 feet without discovering the hanging wall, and this has been proved by diamond drills to a depth of 500 feet and a length of 2,600 feet. A.H. Strong, the well known New York mining engineer, has also examined the property and confirms Mr. Hardman's report. Both agree that the deposit is practically inexhaustible. The Drummond iron range, situated as it is on the Nepisiguit river, only twenty five miles from the seaport of Bathurst, has yet potentialities for the province of New Brunswick, as well as for the owners, the Drummond Mines, Limited, and their newly organized Canadian Iron Corporations, Limited. The export market in sight for this ore is very great, so great indeed that it is estimated that the mine will be shipping at the rate of 2,000 tons of ore per day as soon as the railway and shipping docks are constructed and the harbor at Bathurst made adequate to the new demands. New Brunswick now takes her place among the mineral producing provinces of the Dominion. The discovery and development of a mine as great as this means the attraction of capital to the province and a full prospecting of its mining possibilities. Her wealth of hard wood forests indicates New Brunswick as the future seat of a successful charcoal iron industry with its auxiliary industries, such as bi-product plants for the production of wood alcohol and acetate of lime, etc., as well as the necessary charcoal fuel. The operation of this mine on a large scale cannot fail but result in time in the large development of the manufacture of iron and steel products within the borders of the province. This morning Geo. E. Drummond, president of the Drummond Mines, Limited, and his brother, John J. Drummond, one of the directors of the company had a conference with the premier and members of the executive council regarding cooperation on the part of the province in the building of the railway from the mines to the seaport. Most of the members of the government have already visited the mine and are fully aware of its great importance in the development of the resources of the province. Messrs. Drummond when appearing before the government today, were accompanied by W.F.C. Parsons, the company's chief steel expert, and Oswald S. Crocket, M.P.,

North Shore Leader - Dec. 18, 1908 Gloucester Iron Mines. - That New Brunswick possesses the greatest deposits of hematite iron ore of a merchantable quality yet discovered in Canada is now beyond all question. A well known mining engineer, John E. Hardman of Montreal, who has visited the Drummond Mine in Gloucester county several times and made an exhaustive examination, reports the mine the most valuable one that he has ever examined and states that it is the largest body of iron ore known to him in the Dominion today. He estimates there are twenty millions of tons of ore containing 56 per cent. metallic iron with a large portion stripped and standing to a height of 78 feet above the level of the surrounding country. This ore can be won by open quarrying. The main body already shows a width of over 160 feet without discovering a hanging wall and this to a depth of 600 feet and a length of 2,600 feet. Mr. A.H. Strong, a well known New York mining engineer, has also examined the property and confirms Mr. Hardman's report. Both agree that the deposit is practically inexhaustible. This Drummond iron range situated as it is on the Nepisiguit River, only twenty- five miles from Bathurst, has vast potentialities for the province of New Brunswick as well as for the owners of the Drummond Mines, Ltd., and their newly organized Canadian Iron Corporations, Ltd. Export market in sight for this ore is very great, so great indeed, that it is estimated that the mine will be shipping at the rate of 2000 tons of ore per day as soon as the railway and shipping docks are constructed. New Brunswick now takes her place among the mineral producing provinces of the Dominion. Discovery and development of a mine as great as this means the attraction of capital to the province and full prospecting of its mining possibilities. Her wealth of hard wood forests indicates New Brunswick as a future seat of a successful charcoal iron industry, with its auxilliary industries such as big product plants for the production of wood alcohol and acetate of lime, etc., as well as necessary charcoal for fuel. The operation of this mine on a large scale cannot fail but result in time in a large development of the manufacture of iron and steel products within the borders of the province. The business people of Newcastle should unite and do all in their power to have this company construct their shipping docks some place along the Miramichi. French Fort Cove affords a grand opportunity for shipping facilities; the river bank is high and the channel deep enough to allow large steamers to stand in close to the shore. The siding to be built from the I.C.R. line would be short, and over level ground. It would be a waste of money to spend large sums dredging other harbours when shipping facilities are so great along the Miramichi."

North Shore Leader - Jan. 24, 1908 The Iron Mines in Gloucester. - Drummond Mines Company To Start Development Work At Once .. The I.C.R. Branch Line. - Fredericton Gleaner. - Mr. T.M. Burns, M.P.P., who is at the Queen Hotel, says that the Drummond Mines Company will immediately start upon development of their iron mines in Gloucester Co. Mr. Parsons, the expert mining engineer in the service of the Drummond company, is expected to arrive at Bathurst during the next day or two and will look after the starting of the development work. It is thought that much of the time from now until spring will be utilized for having a diamond drill at work on the property and possibly before spring comes some further work may be done. The I.C.R. engineers have been at work for some time on the branch line of the I.C.R., which will run in from near Bathurst to the mines. Their work has not as yet been completed, and for that reason it would be impossible to get a close estimate of the cost of building the road, but roughly speaking Mr. Burns thought it would likely cost somewhere between $20,000 and $25,000 per mile. By one of the routes possible into the mines from the main line of the I.C.R. the branch would need to be only 11 or 13 miles in length, but that would include bridging the Nepisiguit river. The other route, which would have no bridges, would be eighteen miles in length. The engineers have not determined upon which route will be adopted."

URN: 0069 / IDX_Names: Austin Brook;

North Shore Leader - Jun. 5, 1908 New Brunswick Iron Mines. - Organized in Newcastle Last Thursday. - Have Secured Services of Provincial Govt's Diamond Drill. - The New Brunswick Iron Mines Co., Ltd., was organized last week, in the office of Wm. E. Fish, Newcastle. The election of officers resulted as follows: - James Robinson, Ex. M.P., Millerton, president; Wm. E. Fish, vice-president; John Ferguson, Sec'y Treasurer, R.A. Lawlor and F.M. Tweedie of Chatham, additional directors. The company have secured from the provincial government the use of the latter's diamond drill. Mr. Lindenman, Swedish expert of the mines Department at Ottawa, will arrive on or about the 15th inst. to begin active search, between the Little River and Tomogonops Branches of the Northwest Miramichi. The Company's areas touch those of the Drummond Company on the Nepisiguit recently purchased from T.M. Burns. It is to be hoped that the N.B. Iron Mines Co. will strike it as rich as the Drummond people are reported to have done."

North Shore Leader - Mar. 20, 1908 N.B. Iron Mines Co. Ltd. - Application has been made by James Robinson, ex-M.P., Millerton; John Ferguson and Wm. E. Fish, Newcastle, Fred M. Tweedie and R.A. Lawlor, of Chatham, for incorporation as the New Brunswick Iron Mines Co. Ltd., with $49,500 capitalization to carry on a general mining business in the province."

North Shore Leader - May 1, 1908 Will Develop Gloucester Mines. - Company Will Commence Operations This Summer. - Bathurst, April 24. - Mr. T.M. Burns has received word from Mr. Drummond in connection with the iron deposits in Bathurst which is very favourable. In his letter, Mr. Drummond states that his company intend going ahead and opening up the mine during the present summer. The local government will be approached in regard to certain concessions and rights to control the immense water power of the Nepisiguit River. He further states that he considers the iron deposits in Gloucester county among the best in Canada. He intends visiting Bathurst in the near future and we will then be able to learn just what they intend doing in regard to smelting, etc. Some three or four years ago a company was formed and a charter obtained permitting them to build a railroad from here to the Twin Tree mine, so called from a freak of nature whereby two fine trees having but one top stand directly behind the camp. Steps are now being taken to have some alteration made in the charter after which the company will proceed to carry out the plan for which it was organized."

North Shore Leader - Nov. 13, 1908 Bathurst Iron Areas Change Ownership. - Halifax, Nov. 8. - The transfer of the Drummond iron ore properties at Londonderry, Torbrook and Bathurst, to a wealthy English Syndicate, headed by Sir James Heath, has been consummated and very shortly the blast furnaces at Londonderry will be put in operation to test the quality of the Bathurst ores."

North Shore Leader - Nov. 20, 1908 The Gloucester Iron Mines. - Members of Local Government Inspect The Property - Three Borings Made. - Messrs. Morrissy, Maxwell and Grimmer who were inspecting the Drummond Mines, returned to their respective homes Saturday. These gentlemen expressed themselves as highly pleased with what they saw. They had no idea what was to be seen until they reached the mine. They were shown a mountain of iron about one hundred feet high and extending back several hundred feet. A portion of this has been cleared of timber and is all ready for beginning operations. Some idea of the vastness of these areas may be conceived from the following: The diamond drill when testing bored down five hundred feet at the face of this mountain and brought up a core of rich iron ore. It was then moved five hundred feet back and another hole made four hundred feet in depth with the same result. Another boring seven hundred feet to one side was found to contain the same material to a depth similar to the first. When tested this ore was found to vary from 54 per cent. to 67 per cent. iron. Eighty tons of ore have been quarried and will be shipped to Londonderry to test its steel-making qualities. A meeting of the government will be held this week when the Drummonds will be present and discuss the matter in detail."

North Shore Leader - Apr. 9, 1909 May Ship Ore From Newcastle. - Prospects Bright For The location Of A Shipping Point Here. - The prospects look very bright for the shipping of the Drummond mine iron ore here. Mr. Taylor, one of the company's men, has been here to look over the ground again, and the site likely to be purchased will be west of Mill Cove along the water front. Mayor Miller returned on Monday from a trip to Montreal and Ottawa whither he went to interview the Canada Iron Corporation and the Dominion government to the making of Newcastle the shipping port for the Drummond mines. The Mayor has a definite proposition from the company which he will at an early date, submit to a public meeting. The corporation stipulate for wharves to be built and leased to them they to pay for the maintenance of same and have the option of buying them within twenty years at cost. The company's officials assured Hon. John Morrissy and His Worship Mayor Miller when they were in Montreal some weeks ago, that Newcastle was far the best shipping point on the North Shore, and it was likely that they would locate here. The Dominion government has promised assistance, and the local government has been asked to contribute. The latter's reply is expected soon."

Campbellton Graphic. - Apr. 13, 1909 Making Survey to Glo. Mines. - Large Staff of Engineers at Work at Bartibogue Station Running Lines to Mines. - Level Country. - An engineering staff has been sent to Bartibogue to run lines for the proposed railway to Gloucester mines, and already good progress has been made. The route as gone over, presents very favorable ground for the proposed line. It is almost level, no large river to cross, and the mines are only about thirteen miles from Bartibogue station. The general impression now is that Newcastle will be made the headquarters for the Drummond Mines Company. A fine site at what is known as Mill Cove, with deep water a few feet from shore is procurable, little wharf building is necessary, high bank with solid freestone foundation, and only a short distance from the I.C.R. track. S.W. Miller, Mayor of Newcastle, is leaving no stone unturned to have the company locate here and things look favorable to that town."

North Shore Leader - Apr. 16, 1909 Making Survey to Gloucester Mines. - An engineering staff has been sent to Bartibogue to run lines for the proposed railway tc the Gloucester mines and already good progress has been made. The route as gone over presents very favorable ground for the proposed line. It is almost level, no large river to cross and the mines are only about thirteen miles from Bartibogue station."

Campbellton Graphic. - Apr. 20, 1909 Gloucester Iron Mines Discussed. - Want Bill Changed in Reference to Royalty, Also to Pay for Nepisiguit Power. - Changes Agreed To. - (Special to the Graphic). - Fredericton, April 19. .... iron mine was debated at length in committee. Messrs. Byrne and Currie strongly opposed making the royalty five cents per ton for eighty years. They thought it should be ten cents after twenty years. Mr. Byrne urged a provision compelling the erection of smelting works and coke ovens be inserted. Mr. Tweedale agreed with the above and urged making a charge for water power on the Nepisiguit. The Premier agreed to this and the bill passed without further amendment."

St. Andrews Beacon - Apr. 22, 1909 Premier Hazen has introduced a bill in the Legislature to provide for the development of iron deposits in Gloucester held by the Drummond Mines Company. A line of railway nineteen miles long, is to be constructed to connect the property with the Intercolonial, and the Government will guarantee the bonds for this with the understanding that they also be guaranteed by the Canada Iron Co. After one year the Province is to receive a royalty of 3 cents per ton on the output of the mines, to hold good during the term of the lease. The Premier stated that the company expected to mine from two to three thousand tons per day on 150 days in the year. He said that at first the ore would be shipped away, but eventually the company would erect smelters at some convenient point and employ a large amount of labor. When the bill came up in the legislature objection was made to the 80 year arrangement respecting royalties. It was contended that the term should not be made more than twenty years, as it was unfair to deprive the province of a possible income of revenue from this mine for such a long term of years as the ..?.."

Campbellton Graphic - Aug. 31, 1909 Bathurst and the Iron Industry.- The meeting at Bathurst on Friday, at which the Minister of Public Works, and Messrs. Turgeon, Loggie and Drummond spoke, directs attention anew to the prospect that the development will give a great impetus to that country, and indeed, to the whole province. The people of Gloucester county are naturally anxious that the great mass of ore of which they are the fortunate possessors shall be the basis of a big industry and that their rail and harbor facilities shall be so improved as to permit of the freight being handled cheaply and expeditiously. Having an active and influential representative in Mr. Turgeon they turn naturally to him in such a situation. Mr. Turgeon has persuaded the Minister of Public Works to go personally to look into the question, and the inspection and the speeches which followed have greatly increased the confidence with which the people of Bathurst, and of the province generally, await the exploitation of the great body of ore which has so long lain useless. Hon. Mr. Pugsley evidently believes that all reasonable assistance should be given by the Federal Government in the matter of making Bathurst ready to handle the ore shipments. Mr. Drummond's speech indicates a determination to push the mining industry along rapidly in the future. The outlook is one with which Gloucester has reason to be pleased. - Telegraph."

Campbellton Graphic - Aug. 31, 1909 Great things in Store For Bathurst in Near Future. - Development of Iron Mines Only Commenced - ... Hon. Mr. Pugsley present. - Bathurst. - Aug. 28 ... He (Pugsley) referred to the activity and business integrity of the Drummonds, and prepared all the encouragement possible. He referred to the great progressive strides made throughout Canada and especially the west and added that 'if in the west they had such a valuable country as you have within twenty-one miles of a harbor, they would feel they had incalculable wealth and would put forth tremendous efforts to obtain what you now seek. I therefore say to you that there is no place that has a brighter future than your town. It means the building of a vast iron industry in your midst with all the by products resulting from such an enterprise. You can rely with confidence on the fact that whatever the government can reasonably do will be done for you. .... Thomas Drummond next spoke, briefly reviewing the possibilities of the iron industry in Gloucester. 'Within the next few months,' he said, 'we will be shipping ore from Newcastle and next from Bathurst when your harbor is ready. You see what we are doing speaks for itself and shows that we are in earnest. The trade is at your back; it is knocking at your doors for an exit. Open the doors and we will give you the trade.' ..."

Campbellton Graphic - Feb. 2, 1909 Iron Ore Will Be Loaded Here. - Messrs. Drummond and Parsons Here Last Week Looking At Shipping Facilities. - Temporary Shipping Point. - Messrs. Drummond and Parsons of the Canada Iron Corporation, who control the Gloucester iron mines, were in town on Saturday looking over the facilities here for shipping. They were met by F.M. Murray and J.T. Reid, vice president and secretary of the Board of Trade and driven around town. They also visited the wharf and afterwards met the Council of the Board in the Town Council rooms. Mr. Drummond explained that the Government had decided to put Bathurst harbor in condition to handle the shipping in connection with their industry, but in the meantime they wanted a port from which to ship their ore in large quantities, for a few years until their smelter works at Bathurst were erected and the necessary wharves built and dredging done at Bathurst. Mr. Drummond further stated that other things being equal they would probably use Campbellton for shipping their ore. This would mean one or two steamers a week, shipping to commence early next fall or as soon as their branch line from the mines could be built. Messrs. Drummond and Parsons left for Bathurst Saturday evening."

North Shore Leader - Feb. 19, 1909 The Drummond Iron mines. - Drummonds Give Notice Of Application For Legislation To Incorporate Company To Conduct Terminals. - The Royal Gazette last week contained notice that the Legislature will stand prorogued until the 19th day of March. Notice is also given of application for some important legislation in connection with the development of the Drummond Iron Mines in Gloucester County. Mr. Oswald S. Crocket, M.P., as solicitor for the applicants, gives notice of application for the incorporation of Thos. J. Drummond and Edgar McDougall of Montreal, W.F.C. Parsons of Londonderry, N.S., John J. Drummond of Midland, Ont., Wm. Mcleod and Robert W. Tooper, of London, Eng., as the New Brunswick Locks and Terminals Limited, for the construction and operation of docks, dockyards, wharves, and terminals at Bathurst, Newcastle, and other ports on the Bay of Chaleur and the Miramichi River. Application will also be made to amend the act incorporating the Twin Tree Mines Railway Company by changing the name of the company to The Northern New Brunswick and Seaboard Railway Company, and defining Alston Point on the north side of Carron Point on the south side of the entrance to Bathurst Harbor as the terminus of the proposed railway and increasing the capital stock of the company to $1,000,000 and the aggregate amount of debentures which the company may issue from $250,000 to $500,000 and making them payable in thirty years instead of twenty years."

URN: 0069 / IDX_Names: Austin Brook;
Campbellton Graphic. - Jun. 18, 1909 Contract Awarded for Glo. R.R. - Wheaton Bros. Will Build Line From Drummond Mines to I.C.R. - To Rush Work. - Fredericton, June 17. - Wheaton Bros., Folly, N.S., have been awarded the contract for the construction of a railway from the Drummond Mines in Gloucester county to Bathurst where smelters and shipping facilities will be constructed. This road will be upwards of 16 miles in length and Wheaton Bros. already have a good sized crew on the work. Wheaton Bros. have had a sub-contract on the G.T.P. under the Toronto Construction Company near Stanley. They made excellent progress on the G.T.P. and expect to push the work on the Drummond line as rapidly as possible. Mitchell and Sutherland Bros., the other Nova Scotia firm have completed their subcontract on the G.T.P. under the Toronto Construction Co. and have accepted a contract on the Drummond line."

Campbellton Graphic. - Sep. 3, 1909 Railway to Gloucester Mines Making Rapid Progress. - Track Laying To Begin About Sept. 25 Bathurst, Aug. 30. - Work is being pushed on the line or railway from Bathurst to the iron mines, owned by the Drummonds. Grading is well advanced and it is expected that rail-laying will begin about September 15. A staff of civil engineers are at work in Bathurst harbor, taking soundings preparatory to the dredging to permit the exportation, in large vessels, of the product of the iron mines."

Campbellton Graphic - Feb. 11, 1910 A Ridge of Iron in Gloucester Co. - Chatham, Feb. 10. - Messrs. P.J. Burns and J.J. Harrington of Bathurst, who were in Chatham this week, reported the discovery of another iron deposit in Gloucester Co. This ridge, 300 feet high, and running through the forest to the Miramichi. The indications are that it is a much more valuable deposit than the one that has been purchased by the Drummond Co. It was discovered by lumbermen."

Evening Times & Star - Jul. 29, 1910 Bathurst Iron Mines. - John J. Drummond, a member of the executive of the Canadian Iron Corporation, which is developing the iron deposits at Bathurst, has arrived in the city and is at the Royal. He said last night that the corporation have just finished the railway from the mines at Bathurst to the I.C.R. The road is to be known as the New Brunswick and Seaboard Railway. It is expected that the first ore trains will be running by August 10, and the first ore will be shipped from Newcastle on the 15th. The contracts for the Bathurst ore, he said, were mostly for the United States though some cargoes have been ordered for the old country."

URN: 0069 / IDX_Names: Austin Brook;
Campbellton Graphic - Jun. 24, 1910 Development At Drummond Line. - North Shore Will Reap Benefits Of Big Gloucester Iron Enterprise. - Speedy Progress. - Bathurst, N.B., June 14. - Gloucester county, New Brunswick, promises to be one of Canada's great iron mining centres. Newcastle, Northumberland county, will for a long time - and perhaps always - be the chief port for the shipment of the ore. The success of the Drummond prospect is assured beyond all question and it will not be long before hundreds of thousands of tons of iron ore are being sent abroad from that mine. The Drummond mines cover five square miles at the Junction of Austin Brook with the Nepisiguit River - 23 miles from here and about a mile and a half above the Gloucester County Grand Falls, with its immense 10,000 or 12,000 horse power that great power will not be used however by the Drummonds. They will get their power at the Narrows about two miles from the mines (by the construction of a dam) and three and a half miles from the Grand Falls of the Nepisiguit. The story of the discovery of the mine some seven years ago by William Hussey, an old guide and traveller, and how it had been financed for years by T.M. Burns, ex-

M.P.P., has already been told. Had Mr. Burns been easily discouraged he would have abandoned the enterprise often, having spent some thousands of dollars upon it. But with greater confidence than ever he kept up the prospecting work, and finally in 1906 he obtained the best possible evidence that his work had not been in vain. That year, Mr. Burns, through Mr. Turgeon, M.P. of this county, got the ear of the Geological Department at Ottawa; and Mr. Lindenmann, an expert in mineralogy, was sent here to explore the Austin Brook region. The expert was not long in locating an immense quantity of iron ore. Having indicated the places where borings should be made to test the quality and quantity Mr. Lindenmann returned to Ottawa, leaving further explorations to Messrs. Burns and Hussey. They secured the use of the Provincial Government drill and it was not until then that they were satisfied that they had struck it rich. The Drummonds of Montreal took an option on the property towards the close of 1907 and it was not long afterwards that Mr. Burns divided with Mr. Hussey, $80,000 as a result of their transfer of the property to the new owners. From that moment the success of the iron industry of Gloucester county was assured. Before closing their option the new owners had the promise of the Dominion Government to build a railway into the mine as a branch of the I.C.R. The latter authorities located two lines - one from the mines to Red Pine Station on the I.C.R., a distance of about 14 miles and about as many more from Bathurst; and the other from the mines to Black's Cut, a distance of some 19 miles, and four miles from town. An agitation was started by the citizens of Bathurst to have the railway built from the mines to this place. In the meantime the mine owners on assurance of a $6,400 a mile subsidy from the Dominion government and the Provincial Government guaranteeing the bonds for a branch line decided to construct the road themselves from the mine to Black's Cut on the I.C.R. a few miles from here, the understanding being that the line would be extended to this port, the Dominion Government further agreeing to dredge Bathurst Harbor to permit shipments of ore; and the Gloucester County Council exempting the Drummonds from taxation for 20 years and voting a bonus of $25,000 to be paid when shipments would be made from a port in Gloucester County. The new railway is about completed between Black's Cut and the Drummond Mines. The contract was given to Messrs. Wheaton Brothers and it is needless to say that the well known and reliable railway constructors are making a high class road in every respect. Ballasting is now being proceeded with and the line will be opened for traffic the present month. Mr. James J. Taylor, now on the St. John Valley Railway Survey was in charge of the engineering work on the Northern N.B. and Sea Board Railway the name of the Drummond Mines line. His associates were Messrs. Daniel Shaw and Charles Bruce - the latter now being in charge of the completion of the works. Mr. Taylor is a man of experience, ability and character, and it is felt in engineering circles that the Provincial Government was fortunate in securing his services as an associate of Mr. D.F. Maxwell in the survey of the St. John Valley line. Most Bathurst people hope to have their harbor dredged to such an extent that all the ore from the Drummond mine will be shipped from that port within the next few years. Some wise heads appear to feel however, that it is not practical to think of making Bathurst a port of shipment at all - that the cost would be too great, etc. Others see prosperity both for Newcastle and Bathurst through the shipment of ore within the next few years. For over a year in the immediate vicinity of the mines the Drummond people have been making large improvements, clearing grounds, constructing dwelling houses, store houses, etc., and unearthing the iron preparatory to taking it out. Immense machinery for the working of the mines is now being placed in position there. Already a large store has been opened at the mines by Mr. T.M. Burns and it is expected that within a year what was a forest little more than twelve months ago will be a thriving village and rapidly going on to town or city size. In a few months several hundred men will be engaged at the mines. There are splendid farming lands between here and the mines. Mr. A.J.H. Stewart has induced Surveyor General Grimmer to instruct that these land be surveyed into farms of 100 acres each and it is expected that the lands will be occupied at no distant date by between 160 and 200 new settlers. What has been the effect of the Drummond Mines and the new railway on the business of Bathurst? Most marked, indeed. The population of the town is showing a very noticeable increase and property values have been greatly enhanced. There is a feeling of hopefulness to be observed on every hand; and while the leading business men hope for nothing like a mining craze all are experiencing the good effect of the advance of a genuine mining boom. Who are the Drummonds? They are Montreal gentlemen, three brothers of the late Dr. Drummond, who next to Sir Wilfred Laurier, stood close to the hearts of the people of Quebec - Dr. Drummond who will long a place in the affections of French Canada as the discoverer of 'The Habitant'. The living brothers are Messrs. Thos. J., George E. and John J. Drummond. They are the moving spirits in the great Canada Iron Corporation of which Mr. Edgar MacDougall of Montreal is managing director of the Royal Bank of Canada, president of the Lake Superior Corporations at Sault Ste. Marie Ontario, and a past president of the Montreal Board of Trade. The Canada Iron Company is the parent Company of the Drummond Mines Company, Northern New Brunswick and Sea Board Company, the N.B. Docks and Terminals Company at Newcastle, Londonderry (N.S.) Iron & Mining Company, Londonderry Pipe Works, Annapolis Iron Company, Pipe Works at Three Rivers, Quebec, silver ore deposits at Cobalt, iron deposits and mineral springs at Radnor - the source of the celebrated water of that name - besides other companies of importance. It is understood that they have unlimited capital behind them and that in connection with the Bathurst mines, English capital to the extent of three millions of dollars has been placed at their disposal. Messrs. John J. Drummond and managing director MacDougall were here the other day and in company with Mr. W.F.C. Parsons, went over the new railway to the mines. They found things in excellent shape at the mines where the superintendent Mr. T.T. Fulton, had changed the aspect of the place from a wilderness into a hustling mining camp. About 50 men at present are at work there. The number will be increased to several hundred within the next few months. Mr. Parsons referred to above, is chief engineer of the Canada Iron Corporation for the Lower Provinces. He had practical as well as scientific knowledge. It is said that the Drummonds had turned down the Bathurst mine proposition and were only induced to take it up again on the urging of Mr. Parsons is too shrewd either to confirm or deny the story. There is no doubt however, that Mr. Parsons enjoys to the fullest extent the confidence of his principals; and that in the mountains of rich iron ore on the property acquired from Mr. T.M. Burns, it is believed that the Drummonds have one of the most valuable mines in the world. That property, as already stated, covers five square miles. Since securing that the Drummonds have obtained licenses to search on eighty additional miles in this county. The discovery of the Drummond mine aroused active interest, and it is safe to say that hundreds of licenses were applied for and obtained to search for iron and other mineral deposits in all parts of Gloucester County. Have any other rich discoveries been made in this County? The writer shall endeavor to answer that question in another issue of the North Shore Leader. Michael McDade. (The above article, written by a gentleman, who has been associated with many important projects, including the Albert County oil wells, is of very general interest. It is the first account of the Drummond properties. - Leader.)"

Moncton Daily Times - Mar. 11, 1910 and Campbellton Graphic - Mar. 11, 1910 Mining Disputes From Gloucester County. - Fredericton, March 10. - On Wednesday at Fredericton Surveyor General Grimmer held two investigations regarding mining leases in Gloucester county. In one of these Mr. T.M. Burns, ex-M.P.P., claims that he had a man named Hussey employed prospecting for iron ore on Nepisiguit, and that when Hussey found ore he took our a license in his own name. Mr. Burns claims that as Hussey was hired by him to prospect, he (Burns) should own the license resulting from his prospecting. Another case was that in which Mr. Burns claims an interest in a license to search that was issued to John Robertson, of Bathurst, and in which Mr. Burns claims that he was to have had an interest. A.J.H. Stuart, of Bathurst, is arranging to have an investigation held by the Surveyor General regarding a difference in lines of blocks of land in Gloucester county on which mining licenses have been issued by the Crown Land Department to George Robertson of Bathurst and Messrs. Payne and

Campbellton Graphic - Mar. 15, 1910 Mountain of Iron In Gloucester Co. - T.M. Burns Tells of Another Rich Discovery. - Capital Interested. - One man who has a firm faith in the future of New Brunswick, as a mineral producing country, is Mr. T.M. Burns of Bathurst, who arrived in the city yesterday enroute home from Fredericton where he was in consultation with the Crown Land Department with reference to some mining claims in his own county of Gloucester. Mr. Burns expects the greatest development and he is particularly interested in a recent discovery of hematite ore on the Tetagouche River about 14 miles from Bathurst. 'We have not been saying much about this find,' said Mr. Burns, 'but I will tell you that if our expectations are realized, the Drummond mines will show nothing like the output of the Tetagouche ore. There is a bank there 300 feet high and while I do not say it is all pure ore, the indications point very much that way. No company has yet been formed, but a number are interested in the development of the mine and are determined to have a fair trial made. The presence of iron in this district was discovered by two lumbermen who came sliding down the hill to get some water for their dinner from the brook below and slipping dislodged the earth and revealed the bright shining substance which experts have found to be a good quality of hematite.' 'Evidences of the valuable mineral deposits in Gloucester are not lacking,' said Mr. Burns. 'The American Steel Company has sent their representative, a Mr. Roberts, to Bathurst, with a steel drill, to investigate the property held by Mr. Geo. Gilbert, and a German engineer has returned to Europe to make a report after examining the ores found in the country.' 'With regard to the Drummond Co. you can say the railroad is now completed and the machinery is being transported over the new road and the rails used are five pounds heavier than those on the I.C.R.' Asked concerning the chance of Bathurst being made the permanent shipping port, Mr. Burns said that he believed this would eventually be done, although the Drummonds said they would require Newcastle and Bathurst. There seemed to be a great deal of delay in getting any dredging done in Bathurst harbor. The Federal member had made promises for years but had not succeeded in getting the harbor dredged. One summer's work with an ordinary clam shell dredge would complete the work but under present conditions there seemed to be much difficulty in getting this done. - Standard."

S.J. Standard - May 23, 1910 Development at Newcastle. - Initial Steps Being Taken in Construction of Drummond Iron Mines Terminals. - Newcastle, N.B., May 21. - Very extensive development in the Drummond iron mines is shortly looked for. John Drummond of Montreal and Engineer Parsons were in Newcastle this week in connection with the construction of terminals here for the exportation of the iron ore. It is announced that the Drummonds intend to get out from one thousand to twelve hundred tons of ore per day in the immediate future. Fourteen car loads of machinery have already been placed in the mines and the preliminary work is very well advanced. The new industry will prove a great boom to the entire province."

Daily Telegraph - Oct. 18, 1910 New Brunswick's Iron Industry. - (North Shore Leader) - Concurrently with a boom in other lines, came the unexpected announcement that the inaugural shipment of the iron ore would be made this week from Newcastle. While considerable had heretofore appeared concerning the development process at the Bathurst Mines, the actual expectation can only serve as a fair criterion of the accomplishments of the Canada Iron Corporation in northern New Brunswick. Five thousand tons of ore was the extended exportation this week from the immeasurable Gloucester districts. Developing the natural resources is in itself a great and commendable work. But when a company in its attainments in this direction is enabled to export its material, then still greater credit is due to the promoters. The Drummonds have striven considerably against hindrances which they were inevitably confronted with. Nevertheless their exploitations at the mines; the erection of the railway, terminals and docks and the subsequent shipment of the ore was executed expeditiously. Indeed, the final arrangements were perfected in phenomenal time, many fearing that the initial shipment would not take place until several months had elapsed. Mr. Parsons tells the Leader that shipments will be made practically weekly. He is prone at the present time to discuss the possibilities of the creation of a large smelter here. Still, if the coal supply was obtainable in sufficiently large quantities, there would be excellent chances for the smelter being located in Newcastle. At all events the proposition is an admirable one and will prove advantageous in more than one way. In addition to giving Newcastle more elaborate advertisement, it will be an incentive for further development of the natural resources."

Evening Times & Star - Oct. 21, 1910 Newcastle Ore Shipments. - (Newcastle Advocate). - The steamer Skorstad arrived at the Drummond terminal Thursday for iron ore. Ore has been arriving daily since the 5th instant, at the rate of about 1,000 tons a day. Much interest has been manifested in the work and there have been many visitors to the terminals. Several steamers, capable of carrying 5,000 tons, are chartered for the work. The development of the ore means much to northern

URN: 0069 / IDX_Names: Austin Brook;

Daily Telegraph - Sep. 3, 1910 Ore Shipments From Newcastle in a Fortnight. -Drummond Company Have Installed an Up-To-Date Plant for Handling Output of Gloucester Mines. - Newcastle, Sept. 2 - The Drummond shipping plant here is rapidly nearing completion. It is expected that it will be finished and a ship arrive for ore about the middle of this month. There are now about seventy men employed on the work. The building of the railway spur was begun last October, and work on the trestle was started in January. 900,000 feet of lumber, mostly southern hard pine, but partly spruce, has been used in building the terminal works. The heavy structure, railway trestle and ore pockets are 518 feet long. The conveyor trestles, to take ore from the brow of the cliff over the wharf to the vessels, is 135 feet in addition. The ore bin and engine tower are 33 feet above the wharf, and the ore pockets 100 feet. There are 20 pockets, each capable of holding 500 tons, 10,000 tons in all. The vessels of 4,000 to 7,000 tons that are chartered for this port can be filled with ore in from two to three and one-half hours. Counting on two trains a day of 1,000 tons each, at the start, it will take five days to fill the pockets, which will then be refilled as they are emptied into vessels. At the mines all the preliminary work has been finished, ore is being raised, and cargoes will be brought to Newcastle as soon as terminal work is accomplished. The chief engineer for the Drummond Co., here has been W.F.C. Parsons, and the resident engineer in actual charge is A.V. Tracy-Gould, of Norfolk, England, who in about a month after his services here are no longer required, will go to Algoma, Ontario, to superintend similar constructions for the Drummonds there. D.S. Grimmer, son of the provincial surveyor general, who has been accountant during construction, will remain as shipping superintendent. The permanent force needed to load the ore on the vessels will be only about eight men, besides the superintendent, so perfect are the mechanical contrivances for doing the work. At the wharf there is 32 feet of water at high tide, and about 28 at average low water. When the Horseshoe, down the river, is properly dredged, vessels of 10,000 tons will be used. There is no prospect of any early construction of a smelting plant on the Miramichi."

Campbellton Graphic - Sep. 9, 1910 Drummond Plant Nearing Completion. - The Drummond shipping plant is rapidly nearing completion. It is expected that it will be finished and a ship arrive for ore about the middle of this month. There are now about 70 men employed at the work. Reid and Archibald have the contract for the timber work, while all the machinery is being shipped by the Brown Machine Co., of Glasgow, N.S. The building of the railway spur was begun last October, and work on the trestle was started in January. 900,000 feet of timber, most;y southern hard pine, but partly spruce, has been sued in building the terminal works. The heavy structure, railway trestle and ore pockets are 518 feet large. The conveyor trestles, to take ore from the brow of the cliff over the wharf to the vessels, is 135 feet in addition. The ore bin and engine tower are 55 feet above the wharf and the ore pockets 100 feet. There are 200 pockets, each capable of holding 500 tons - 10,000 in all. The vessels of 4,000 to 7,000 tons that are chartered for this port can be filled with ore in from two to three and one half hours. Counting on two trains a day of 1,000 tons each at the start, it will take five days to fill the pockets, which will then be refilled as they are emptied into vessels. At the mines all the preliminary work has been finished, ore is being raised and cargoes will be brought to Newcastle as soon as terminal work is accomplished. The chief engineer for the Drummond Co. here is W.F.C. Parsons, and the resident engineer in actual charge is A.A. Tracy-Gould, of Norfolkstone, England, who in about a month, after his services here are no longer required, will go to Algoma, Ont., to superintend similar constructions for the Drummonds there. D.S. Grimmer, son of the provincial surveyor general, who has been accountant during construction, will remain as shipping superintendent. The permanent force needed to load the ore on the vessels will be only about eight men, besides the superintendent, so perfect are the mechanical contrivances for doing the work. At the wharf there is 32 feet of water at high tide, and about 28 at average low water. When the Horseshoe, down the river, is properly dredged, vessels of 10,000 tons will be used. There is no prospect of any early construction of a smelting plant on the Miramichi."

Campbellton Graphic - Apr. 7, 1911 Drummond works. - Engineer W.F.C. Parsons, a promoter of the Bathurst Mine for the Canada Iron Corporation, was in town on Tuesday. Mr. Parsons made an inspection of the terminals here. He said that shipments of the ore would be resumed in May. At the mine the development of the ore has progressed favorably and thousands of tons were taken out during the winter. The ore is reported to be of a very fine quality."

Daily Gleaner - Dec. 5, 1911 Big Mining Suit Was Dismissed. - Action of Grey Siding Company Against Drummond Mines Decided by Judge. - (Montreal Star). - The action of W. Marshall and the Greys Siding Co. against R.G. Leckie and the Drummond Mines Limited, for $150,000 was dismissed today by Mr. Justice Greenshields. ... Ontario properties..."

Campbellton Graphic - May 19, 1911 Iron Ore Shipments. - (Union Advocate). - The Intercolonial Railway sent Sunday evening to Nepisguit Junction an engine and a train crew to start hauling iron ore to the docks at Newcastle. The ore will be shipped to different points. There are about 52 cars of ore at Nepisiguit Junction ready for shipment. A steamer for the Canada Iron Corporation arrived here from Baltimore on Friday and sailed on the following day with a large cargo of iron from Bathurst mine. Engineer W.F.C. Parsons was in Newcastle Saturday and he said that the developments at the mines was very large and he looked for large shipments from Newcastle during the summer. Another ship came in on Monday, and trainloads of ore are arriving from the mines daily."

URN: 0069 / IDX_Names: Austin Brook;

S.J. Standard - Oct. 24, 1911 and Daily Gleaner - Oct. 24, 1911 Progress of the Bathurst Mines. - The summer will See Great Activity at the Drummond Iron Mines. - Extensive Improvements to the Plant. - Great progress is being made in connection with the development of the Drummond iron mines near Bathurst, and the company expect to put out 2000 tons of ore a day next summer. Arrangements are being made to put in a concentrating mill at the mines with a capacity of 700 tons a day and when the shipping season opens next spring it is the intention to keep this mill in operation day and night. A.H. Parsons, of Middleton, N.S. and J.J. Drummond, of Montreal, who have been on a trip of inspection to the mines were at the Royal yesterday, and will leave today to inspect the company's properties in Nova Scotia. In conversation with a reporter Mr. Parsons said that while the steel market was very dull at the present time, they has hopes that conditions would improve before next summer, and were making arrangements to greatly increase their output from the Drummond mines. 'The new concentrating mill will assist materially in the handling of the output,' he added. 'We will continue operations all winter. We have a good deal of ore stored ready for shipping, and we will do a good deal of stripping this winter for the purpose of getting the property in shape for extensive operations next summer. This summer we have shipped much ore to Philadelphia, as the market in England is rather dull.' In reply to a question Mr. Parsons said the company was employing 250 men at the Drummond mines, and that quite a town had grown up at the mines. The company put up about 20 workingmen's dwellings this summer, and will make preparations for accommodating a larger number of people next summer."

Fredericton Daily Gleaner - Sep. 15, 1911The Iron Mining Industry In N.B. - The Drummonds Say That Reciprocity Would Undoubtedly Injure Their Business. - Bathurst, Sept. 14 - It having been reported in certain localities of the county of Gloucester by the canvassers of the Liberal party that the Drummond people of Montreal, who are so largely connected with the iron mining industry in this and other provinces, are in favor of reciprocity. Mr. T.M. Burns, Conservative candidate, wired Mr. George E. Drummond and the following is his reply: Answering your telegraphic inquiry as to my opinion of the reciprocity pact, I cannot do better than to give my views as expressed in a telegram sent to your opponent, Mr. Turgeon, on Aug. 26th, and reads as follows: 'Telegram just received. My associates and self are strongly opposed to the reciprocity pact, which if unfortunately carried will, we are absolutely convinced, seriously injure in the course of time every Canadian industry and interest, and moreover will strike a serious blow at the fiscal and political; autonomy of Canada.' (Sgd) George E. Drummond. Mr. Turgeon, the Liberal candidate in Gloucester, has wisely kept the above answer quiet."

Campbellton Graphic - Jun. 20, 1913 Will Ship Large Quantities of Ore. - Bright Outlook for the County of Gloucester. Large Shipments Are Ready. - 'Our company will ship 150,000 tons of iron ore, during the summer,' said J.J. Drummond, proprietor of the Drummond Iron areas near Bathurst, yesterday. Uo to the present time our shipments have been practically experimental but now we have regular contracts and hope to increase the output each year. The ore is sent to Philadelphia where the business is on a sound basis.' Mr. Drummond said that the company had about 30,000,000 tons of ore in their holdings 'we have three vessels under continuous charter for carrying the ore' he continued 'and these are loaded at Newcastle. The whole northern part of the province has advanced greatly within the last few years. The government has thrown open a large tract of land for settlement and farmers are taking up land in all directions. Dredges are at work deepening the Bathurst harbor, and there will be twenty-five feet at low water at the different docks. We expect soon to have a large pulp mill established there. Accompanying Mr. Drummond were W.F.C. Parsons, of Middleton (N.S.), and general manager of the company, and G.G. Fulton, who had charge of the operations at the mines. Another View. - Bathurst, June 16 - The interview published above from the St. John Standard of this date referring to dredging at Bathurst harbor by J.J. Drummond, is very misleading. While it may be true that the Maritime Dredging Company has the contract for the inner harbor work, it is not true that they have the 'matter now well in hand.' Not an hour's work has yet been done by this company either inside or outside Bathurst harbor. They have no large suction dredge at work, nor any scows here yet. The suction dredge at work is a government dredge placed at work on outer harbor by the late Liberal government through the efforts of Mr. Turgeon, M.P. The outer harbor work is not yet completed, but is progressing favorably. Mr. Drummond 'pays a high compliment to the dominion government,: says the Standard. The Liberal government deserves the credit by beginning this important work in 1910. The present government ordered the government dredge away from Bathurst in April last, and it was only after a strong delegation composed of Conservatives and Liberals, had gone to Ottawa that Hon. Mr. Rogers was induced to leave the suction dredge at work on the outer harbor and call for tenders for inside work. If Mr. Drummond is no more accurate touching his opinions on the construction of Dreadnoughts in Canada than is in his interview, not much reliance can attach to his 'emergency' interview."

Kings County Record - Jan. 12, 1912 and S.J. Globe - Jan. 12, 1912 Another Big Mining Proposition. - Dominion Iron and Steel Company Interested in New Brunswick Properties.- What looks like another big New Brunswick iron proposition is forecasted in a recent issue of the provincial gazette. Notice is given that Hector McInnis, K.C., of Halifax, a director of the Bank of Nova Scotia and one of the best known lawyers in Nova Scotia has applied for mining rights covering an area of 66 square miles in the counties of Northumberland and Kent. The property surrounds the rich bog iron deposits in the vicinity of Rogersville. This body of bog ore was located several years ago and two blocks of five miles each were taken up. Later on two large iron corporations had men on the ground looking over the situation and it is understood that the Dominion Iron and Steel Company, whose prospectors worked last summer on properties in the neighborhood are really behind the application of Mr. McInnis. While it is understood that nothing of a very definite character was determined by last year's operations, those who looked over the property saw enough to justify their principals in getting a hold on the supposed deposits. Next summer will probably see further prospecting on the holdings and if results justify action, it would not be surprising to see the big Nova Scotia company carrying on active work within the next few years. The sale of the big iron deposits on the NorthShore to the Drummonds and their activity since they acquired their rights there has attracted much attention to the possibilities of New Brunswick as a producer of commercial iron ores and the Dominion Iron and Steel company has evidently made up its mind to get in on the ground floor, if the Rogersville deposits should prove as rich as reported. An operation by this big company in New Brunswick would mean the employment of hundreds of hands and the building up of an industry which would have an effect on the advancement of New Brunswick as an important part of the Dominion. The outcome of this latest location will be watched with interest."

Moncton Daily Times - Mar. 11, 1910 Fresh Interest Taken in Mineral Resources of New Brunswick. - (Bradstreets). - There is a growing interest in the mineral resources of New Brunswick, which is partly due to the development of new iron mines in Gloucester county. A company working there is said to have discovered rich ore and is installing a plant to raise 2,000 tons per day. Seventeen miles of railway to connect with the Intercolonial is nearing completion, and shipment of ore will be made from Newcastle on the Miramichi until proper facilities can be provided at Bathurst harbor near the mines. It is announced that an excellent deposit of coalhas been discovered in the same county, which seems to point to the establishment of a smelting industry. During the last year forty seven licenses to search for minerals in Gloucester county were issued and seventy for other parts of the province. Coal, iron andantimony are now mined, besides extensive lime, plaster and granite industries. Other parts of the province arereported to show oil in paying quantities."

URN: 0069 / T8 / IDX_Names: Austin Brook; Gloucester County Coal;

Campbellton Graphic. - Mar. 26, 1909 Gloucester County is Rich in Coal. - The Tracadie Coal Company Commences Operations on ..?.. - St. John, - A prominent Bathurst man, who was in the city yesterday told something about a big coal discovery in Gloucester county, after boring with a calyx drill for one year the county proved to be a solid coal bed. Borings have been made at different places near where the cropping of coal showed at the surface. In one place was found a bed of coal two and a half feet thick at 33 feet below the surface and another rich bed about five feet thick at 500 feet below the surface. The coal is of a better quality than the Pictou. There are also valuable deposits of fire clay. The Tracadie Coal Company, who own a large tractof the coal region, are awaiting spring to resume operations. It will take some time to properly prospect the whole area where coal is showing up. Their engineer claims from the run of the leads he went through at different places that a ten foot seam can easily be located which, in connection with the Drummond iron works at Bathurst, will certainly create an extensive industry, within that county."

Morning News - Aug. 22, 1862 Gold in Victoria County. - The Grand Falls Guardian of the 19th inst. Contains the following paragraph: ""Some little excitement prevails at present in the lower part of this county, owing to alleged discoveries of the precious metal up the Tobique River, some fifteen miles above the Forks of the Nictaux, in the vicinity of the Serpentine. Parties are now on the ground prospecting."""

New Brunswicker - Aug. 26, 1862 We learn from the Woodstock Journal that quartz properly described as ""gold bearing"" has been found on the Serpentine, a branch of the Tobique."

Weekly Record - Fri. Oct. 9, 1891 We understand that W. N. Gould of this place has been engaged in connection with some parties in making a protracted exploration for minerals, etc., in the vicinity of the Tobique. The prospects are so far considered exceedingly good in the mineral line."

Weekly Record Fri., Jan. 21, 1898 The reported discovery of free gold on the Serpentine River, a short distance above where it empties into the Tobique, if correct will prove very satisfactory news to those engaged in mining pursuits in N.B. Confirmation of the fact is necessary as so many fairy tales in this respect have been told in the past."

Gazette - Oct. 23, 1899 Gold in New Brunswick. - (Special to the Gazette). - Ottawa, Oct. 23. - Mr. Chalmers, the member of the Geological Survey staff engaged in field work in New Brunswick this last summer reports the discovery of alluvial deposits of gold on the Serpentine of the Tobique River in Northumberland county, which he considers to show promising signs of the presence of gold in paying quantities."

St. Andrews Beacon - Sep. 20, 1900 Gold on the Tobique. - Robert Chalmers of the Geological Survey, Ottawa, came down from an inspection of the Tobique on Wednesday. He was looking for, and found gold, in alluvial deposits. Whether they are rich enough to pay working or not he does not know; but he is of the opinion that the traces of gold are native and not any glacial deposit. Found in the gravelly bottom of the Serpentine it is evident that the precious mineral has been washed down from the mountains. To find the parent deposit is the next question. - Hartland paper."

URN: 0084 / 0666 / 2050 / C1 / IDX_Names: Serpentine River; Muniac River; Birch Island Gold; Tobique/ Giberson Gold;

St. Croix Courier - Mar. 22, 1892 New Brunswick as a Gold Producer (The Colliery Guardian). - The amount of information in the hands of the public respecting the gold bearing districts of the province of New Brunswick is very small. There have been frequent reports of the discovery of gold at various points. According, however, to an opinion expressed by Professor L.W. Bailey, the majority of such appear to have been largely unfounded, although rocks nearly resembling those of the auriferous belt of Nova Scotia, and believed to be of the same age, are largely developed in the province. In connection with these rocks many of the reported discoveries of gold have been made.They are composed of slate and quartzite belts, and border the great central granitic axis of York and Northumberland counties. A great part of this region is still densely forest-clad and difficult of access, but should any portion of it prove to be auriferous the discovery would be of inestimable value to the province. Among the points at which gold has been reported in small quantities maybe mentioned the vicinity of the St. Croix River, in Charlotte county, the Nashwaak river above Stanley, in York county, the Muniac River, in Carleton County, and the Serpentine river in Victoria county. The head watersof the Tobique river would also appear to offer prospects of important discoveries, according to a report which has reached us from a correspondent in Restigouche county, and we recommend this district to the prospectors, as worth remembering when in the vicinity."

URN: 0084 / 0669 / X6 / O7 / GEOL / IDX_Names: Serpentine River; Tobique River; Tobique Gypsum; Salt/Potash - Sussex Area; Geology - General;

Colonial Farmer. - Jul. 17, 1871 Geological Report. - Continued. VI. Tobique Valley and Tributaries. In the course of my explorations of last season, I undertook an excursion up the river Tobique and one of its most important branches, the Serpentine, partly with the view of making an examination of the great Lower Carboniferous outlier there, and partly to visit certain lands which had been leased from Government on the latterstream for gold mining purposes. The Tobique is a large tributary of the St. John, falling into the main stream about fifty miles above Woodstock, from the northeast, its general course thus coinciding with the strike of the rocks in the high lands constituting the water-shed between the St. John and the Gulf of St. Lawrence; one of its main branches, called the little Tobique, or Left-hand branch, with a general south-easterly course, connects by a short portage with the Nepisiguit flowing, into the Bay of Chaleurs; while the other or Right-hand Branch, falling into the main 6 river at the same point but from the opposite direction, through a very rugged mountainous country, is, in its turn, composed of two branches, the Campbell and Serpentine rivers. These streams form a junction at the distance of ten miles from the main forks, from which point the Tobique flows through a rich and fertile valley in a southwesterly direction to join the St. John river, a distance of sixty-two miles, following the windings of the stream. On the Serpentine, which had not previously, so far as I am aware, been visited by any one with the special view of ascertaining its geological features, the land leased for mining purposes commences about three miles from its junction with the Campbell River, and extends some twenty miles higher, the stream for the greater part of the distance cutting across the strike of the rocks; but owing to the extreme difficulty of exploring this region, I was compelled to content myself with penetrating about seven miles from the commencement of the leased lands, or twenty miles from the main forks of the Tobique. The main Tobique, for about two miles from its junction with the St. John, flows with great rapidity through a deep, rocky gorge ..?.. coinciding with that of the slates, which dip N 70 deg. W <60 deg.; they are here highly calcareous, and enclose many seams and bunches of pure calcspar. Half a mile higher a narrow band of red and green slate occurs, associated with a tolerable pure compact or massive limestone, containing fossils, apparently in considerable profusion, although only visible on weathered surfaces. Among them, according to Mr. Billings, are Favosites Gothlandia, Atrypa reticularia, and Strephomena perplana, belonging to the Upper Silurian series. Above this the river assumes a course nearly at right angles to the strike, cutting sparingly calcareous but highly ferruginous and contorted brown weathering slate and quartzite, which must underlie those formerly referred to as prevailing at the mouth ofthe river. Small straggling strings of galena were observed at one place filling cracks in the rock, but are of no economic importance, except as indicated the metalliferous character of these rocks. At three and a half miles from the mouth, measured in a straight line on the strike, the soil assumes a red tint from the proximity of the red conglomerate of the outlier; a small patch of which is visible in the bank here, but is again succeeded by the older rocks, till reaching Red Rapids, four and a half miles up, where this formation; apparently identical in character with that mentioned in other parts of this report as the lowest rock in the Carboniferous series; appears in force in the bed and banks of the river, dipping due E. <4 deg., extending over half a mile farther up stream, and forming a steep, rocky channel. About this point the rock exposures are few, and 7 or a distance of nine and a half miles indicate no change, except in the prevalence of finer red calcareo-arenaceous sediments in ascending. - Then, about half a mile below the Wapskehegan, appear red and grey, and green marls, interstratified with blue limestone, all in thin alternating bands, still dipping slightly SE., and extending to the mouth of that tributary; a little above which the limestone re-appears in more massive beds, some being thirty inches thick, interstratified, as before, with red shales or marl, also of greater volume. This is a distance, in a straight line, of fourteen and a half miles from the mouth of the river, and here the outlier attains its greatest breadth, of about nine miles, of which by far the greatest proportion lies on the southeast side of the river. The general character of the limestone of the Tobique outlier is fine-grained, with conchoidal fracture, mottled red and pink and green, but sometimes bluish-grey; frequently lined with calcareous spar, and containing, according to Professors Hind's analysis, 82.6 per cent. of carbonate of lime. Superimposed upon the limestone and marl bedshere, are heavy beds of gypsum, which first appears at the mouth of the Wapskehegan, but in much greater development at Plaster Cliff, a mile and a quarter higher; where, for a distance of 80 or 100 yards, they rise perpendicularly from the left bank to the height of 120 feet. The great body of the rock is an impure, massive but earthy and exfoliating red and greenish gypsum, containing a varying proportion of carbonate of lime and silicious matter; but it is seamed with layers of pure white gypsum and of fibrous selenite, containing, according to the analysis of the late Dr. Robb, 77.7 per cent of sulphate, and 3.0 per cent of carbonate of lime. Nodules of nearly pure carbonate of lime are occasionally met with, imbedded in red gypsum. The whole appears to dip SE at a very low angle, and to be of limited extent, where it abuts upon the river; but I am informed, on competent authority, that the plaster beds are traceable at least four miles up the Wapskehegan, alternating with the other rocks of the series. Two small brooks were observed flowing into the river near the junction of the gypsum and marl beds, the waters of which were decidedlysaline and brackish; this character being, doubtless, derived from salt springs, which however, were not met with. Above Plaster Cliff, for a distance of eight miles, the strata, which are now horizontal, consist, as before, or grey and red sandstone and conglomerate, blue, red and green limestone, and marl; thereafter, at the point indicated, near Phillip's Brook, promontories and low knobs of dark brown amygdaloidal trap appear at intervals among the red rocks on the left bank, becoming more numerous and extensive in ascending the river. The red rocks, however, continue to occupy exclusively the 8 ed and right bank of the river, and occasionally also appear on the left bank, but now with westerly dip, until a point thirty-one and a half miles from the mouth is reached, where the outlier may be said to terminate; although for the last three miles of this distance, or from Blue Mountain upwards, only slight traces of its existence can be detected in the red color of the rocks in the bed of the river, where they are at rare intervals seen in place. Thus the total length of the outlier, measured in a straight line, may be stated at twenty-seven miles; it is of rudely elliptical form, and its total area is not less than 100 square miles. It is bounded on all sides by ferruginous and generally non-calcareous slates and quartzite, its outlines forming a very marked topographical feature, being defined by lofty ridges of the older rocks. A comparison of the rocks of the outlier, both in respect to their mineral character and apparent order of sequence, leaves little room to doubt that they belong to the same series which I have described as laying at the base of

URN: 0087 / IDX_Names: Dorchester Copper;

Chignecto Post - Sep. 14, 1876 Copper Ore Discovery In Dorchester.- The Portland Mining Company has been prospecting at Squirreltown, 4 miles from the Corner. They have had about twelve men at work. The ore tested gives favorable indications. Mr. Atwood is the Chemist and Mr. Merrill is the geologist under whom the operations are being conducted. They have secured through their attorney, A.E. Oulton, Esq., leases of land from Messrs. King, Fillmore, Crossman and Cole of about three hundred acres of land. The extent of the vein has not yet been determined."

S.J. Globe - Aug. 27, 1880 Mine Sale. - It is rumored that the copper mine in Woodville, owned by E.A. Record and others, of Moncton, has been sold by them to an American company for $40,000. This is good news, if true, and we congratulate Moncton on the influx of so much ready cash. It is said the mine is panning out in good style and in paying quantities. - Sackville Transcripts."

S.J. Daily Sun - Mar. 18, 1880 E.F. Couch, of gold mine fame, was at the International yesterday on his way to Halifax."

Chignecto Post Sep. 2, 1880 and S.J. Daily News - Sep. 4, 1880 and Moncton Daily Times - Sep. 3, 1880 The Dorchester Copper Mining Company, being Record, Trite & Co., we understand, have sold out for $40,000 to a company in Newfoundland. Your correspondent visited the mine and found twelve leads from seven to twelve inches thick, running as is supposed into a large vein which they have not yet reached. There are some five or six pits sunk, twelve to fourteen feet deep, and all indicate copper. Mr. King, on whose land the mine is, informed your correspondent there had been extracted over eight hundred pounds of pure copper. Many pure nuggets of copper have been raised at a distance of fourteen feet from the surface, weighing from one to thirty pounds. Mr. King, we understand, will receive $10,000 for the right to dig this mineral. The mine is situated about two and a half miles from the Corner, and will make Dorchester a lively place should it go on. I found some two miners with several workingmen exploring preparatory to beginning with a large force."

Daily Telegraph - Sep. 4, 1880 A Valuable Mine. - A Dorchester correspondent of the Sackville Post says that he understands that the Dorchester Copper Mining Company, being Record, Trites & Co., have sold out for $40,000 to a Newfoundland Company. The correspondent visited the mine, and found twelve leads, from seven to twelve inches thick, running, as is supposed, into a large vein which they have not yet reached. There are some five or six pits sunk, twelve to fourteen feet deep, and all indicate copper. Mr. King, on whose land the mine is, informed him there had been extracted over eight hundred lbs. of pure copper. Many pure nuggets of copper have been raised, at a distance of fourteen feet from the surface, weighing from one to thirty lbs. Mr. King, it is understood, will receive $10,000 for the right to dig this mineral."

Chignecto Post - Aug. 25, 1881 and S.J. Globe - Aug. 26, 1881 Dorchester.- It is reported that Messrs. Couchand Saunderson have negotiated the sale of the Dorchester copper mine, to a Boston company, for $90,000."

S.J. Globe - Dec. 2, 1881 More Copper. - For substantial reasons Mr. W.W. Wells, of Dorchester, is now looked upon as a good authority on the copper finds of his district, and since he has been in the city has been interviewed by lots of people on that subject. The most recent find was made fifteen yards from Willow Farm. The copper is reported to be of the most excellent quality yet found, and it is believed the most valuable portion of the vein is on Messrs. Gilberts' farm. The new mine was opened by speculators, but the portion on the Willow Farm will be worked by the owners of the property, if worked

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Dec. 8, 1881 Mining Speculators in a Squabble. - Specials, Trains and Lawyers and injunctions and Lots of Scheming. - Just now there is music, mirth and murder amongst the mining gentlemen who make their headquarters in Moncton. Where all was calmness and serenity a few short weeks ago, turmoil and wrangling and lawyers have appeared. The Malagash copper mining property in Cumberland County, is the real bone of contention, the immediate cause of the excitement being the alleged crookedness of the owners and the parties negotiating for the possession of the mine. It appears that two different sets of capitalists have coveted the property in question, Mr. E.C. Couch, of Newburyport, Mass., being at the head of one, and Mr. L. Carvell, of Hampton, being at the head of the other and having associated with him, it is understood, Mr. C.F. Wilder, of Boston, and some other gentlemen. What negotiations may have taken place between these parties and Dr. McLean, of Amherst, whose name has been used as the owner of the Malagash property, but who is understood to have associated with him other parties, would be tedious to detail and perhaps not interesting. However, it appears that both Mr. Couch and Mr. Carvell obtained documents from Mr. McLean, neither of which up to Monday, had been recorded. On Sunday morning last, Mr. R. Barry Smith, barrister, of Moncton, took the train for Halifax for the purpose of searching the records and, no doubt, filing Mr. Couch's claim should everything prove satisfactory. Mr. Carvell got wind of this and after telegraphing Mr. Rigby, Q.C., of Rigby and Tupper, Halifax, took a special train Sunday night and also proceeded to Halifax. He was met at the station by the law firm in question and steps immediately taken to have obtained in the premises an injunction from Chief Justice McDonald. Mr. Carvell's claim was then filed with the Commissioner of Mines and a copy of the injunction served on that official. Mr. Smith, Couch's lawyer, on visiting the Mines office, discovered what had been done, and telegraphed Mr. Couch at Moncton, and the result was that the latter gentleman, taking along with him Mr. Holstead; of Moncton, hired another special train and about 11:30 Monday night, he left this station for Halifax. The train left the track while leaving the Moncton yard, and the engine of a special at Painsec was backed up to the wreck and the party taken aboard. At Dorchester, Mr. W.W. Wells was taken on and the party proceeded to Halifax post haste. An effort is being made, we understand, to have the injunction set aside. Mr. Carvell returned to Moncton yesterday but the lawyers and the Couch party are still in Halifax. Many stories of crooked dealing are current, but it is generally believed that Mr. Carvell and his party have the inside track in more than one respect, though the Couch party boast of having the most money. It is said Mr. Couch coquetted with Dr. McLean about the price to be paid and thus lost his opportunity. Further developments will be awaited with interest. The Halifax papers as yet have contained no reference to the affair. It is reported Mr. Couch has eight lawyers employed."

Chignecto Post - Dec. 8, 1881 Copper is still active. Late on Monday evening, Mr. Edward F. Couch, at Moncton, was informed by a telegram from Halifax that his interests in the Malagash mine were critically endangered through the machinations of hostile operators. Couch at once hired a special train and at midnight came tearing into Dorchester at a furious rate. Barely taking time to distribute a basket of champagne in honor of his recent marriage, he snatched Wells from the arms of Morpheus and off up the Dorchester grade like a tornado. He took Wells along to supply him with law at

Moncton Daily Times - Dec. 9, 1881 The Malagash Copper Mine. - Dr. McLean Charged With a Breach of Agreement. - Particulars of the Injunction. - (Halifax Herald). - Hon. Samuel Creelman, Commissioner of Mines, has been served with a writ of injunction, preventing him from granting a mining licence for a copper mine at Malagash to Mr. E.F. Couch, or his agents. It appears that Mr. Lewis Carvell, formerly Superintendent of the Intercolonial Railway, on the 27th of November, entered into an agreement with Dr. McLean, of Amherst, (who held a licence to search for minerals for an area of five square miles at Malagash) to have the district examined by a competent Mining Engineer within 20 days, and that if a favorable report was obtained, then Dr. McLean was to convey to Mr. Carvell all his right title and interest in the mines for the consideration of $5,000; and that when the mine was sold by Mr. Carvell, Dr. McLean was not to transfer his right in the mine to any other person until after the expiration of the twenty days. Mr. Carvell alleges that he has fulfilled his part of the agreement, but that Dr. McLean has violated his part of the contract by transferring his rights to E.F. Couch. On the 3rd instant, the arrangements between Dr. McLean and Mr. Couch were completed, and one of them came to Halifax by the early train from Moncton, intending to file the transfer in the Mines office on Monday morning, as soon as the office opened. On the morning of the 4th Mr. Carvell heard of the transaction, telegraphed to his brother, Senator Carvell, who was in Halifax, requesting him to engage a lawyer; hired a special train from Moncton and arrived at Halifax at midnight. He consulted with Mr. S.G. Rigby, Q.C., who immediately went to work, prepared a bill in Equity, issued a writ and obtained from the Chief Justice an order for an injunction preventing the transfer from being recorded. All this was done before nine o'clock Monday morning, necessitating the waking up out of their midnight slumber of Mr. Prothonatary Parsons, the Chief Justice and divers other functionaries. It is said that when the transfers were presented Monday morning, about ten o'clock, at the Mines office for the purpose of recording it, there was considerable astonishment manifested when it was stated that it would be a heinous contempt of court to do so in the face of an injunction that had been served but a few minutes previously. [Mr. Couch and his lawyers returned from Halifax yesterday morning. It is understood they have taken steps to have the injunction set aside if possible]."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Globe - Dec. 9, 1881 The Malagash Copper Mine. - The copper mine discovered at Point Malagash, Cumberland County, N.S., by Mr. Couch, who has fairly earned the name of the Scientific American in regard to copper, has become the subject of a heavy suit in the Halifax Equity Court. It appears that after Mr. Couch and his party visited the mine and received a favorable report of its indications from the experts and assayers, certain members of the proposed company finally negotiated a transfer of property from Dr. McLean, of Amherst, to themselves, ignoring Mr. Couch and Conductor Hilson, the latter of whom was the joint owner with McLean of the mine. Mr. Couch, however, continued his explorations and finally obtained a new transfer from Dr. McLean, and on Sunday morning his solicitor Mr. Smith, of Moncton, started for Halifax to investigate the title and record the transfer. Mr. Lewis Carvell, who is the head of the party adverse to Mr. Couch, learning Mr. Smith's departure, engaged a special and on Sunday evening left Moncton for Halifax and on Monday morning, previous to the opening of the Mines' office, an injunction, obtained for Mr. Carvell by Messrs. Rigby and Tupper, was served on Hon. S. Creelman, Commissioner of Mines, &c. When Mr. Smith arrived at the Mines Office at 10 o'clock, he was informed by the Commissioner that the injunction had been served, and that he could register no transfers of McLean's interest. Mr. Smith then telegraphed the facts to Mr. Couch and interviewed Messrs. Rigby and Tupper, who supplied him with a copy of the papers and order of injunction, and also retained Messrs. Meagher, Chisholm & Ritchie as solicitors for Mr. Couch. The latter engaged a special at cost, it is stated, of $150, and proceeded to Halifax in company of Messrs. Hilson and McLean and two other counsel, Messrs. Holstead and Wells. The run to Halifax from Moncton was made in five hours, or at the rate of forty miles per hour, including stoppages at Dorchester and Truro. On the arrival of the party, papers were at once drawn with a view to dissolving the injunction, and the application for that purpose will be made in a few days. This sudden rupture and prompt action have caused general excitement in mining circles in Moncton and Halifax. Mr. Couch expresses himself as determined to get the property if money and legal ability can bring about the result, and to that end has engaged the services of eight legal gentlemen, of whom three - Messrs. Holstead, Smith and Wells - are from New Brunswick and five are members of the bar of Nova Scotia. It is understood that Mr. Meagher, of Halifax, the leading counsel for Mr. Couch, expresses himself strongly of the opinion that the injunction cannot stand, having been obtained by a suppression of material facts within the plaintiff's knowledge. This mine is said to be very valuable, and the contest will, no doubt, be a long and bitter one. Mr. Couch is still in Halifax, but the lawyers returned home by Wednesday night's train, having decided on the course to be pursued. It is stated that one of them will be selected to assist Mr. Meagher in the argument when the case comes up for hearing."

S.J. Daily Sun - Dec. 10, 1881 Dorchester Copper. - Twenty tons of ore have been got out. It is being assorted and barrelled for shipment to Boston."

S.J. Daily Sun - Dec. 12, 1881 Our Mining Interests. - The Maritime Provinces, instead of seeing their mining properties going begging, are called upon to witness a struggle for their possession. The Carvell-Couch embroglio is a new thing under the sun and goes to show the increased value which is placed on Maritime copper deposits. A correspondent deals with the subject in another column."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Daily Sun - Dec. 12, 1881 King Copper. - Woodville Copper Mine, Dorchester, N.B., and the New Bonanza at Malagash, Cumberland County, N.S. - Mr. Editor. - Some weeks since the mining world was electrified by the news of the sale of the Woodville copper mine, Dorchester, N.B., for the munificent sum of $270,000, by Mr. E.F. Couch, of Newburyport, Mass., to Boston capitalists, and the excitement and speculation in regard to the same are still intense. Mr. Revere, the manager of the mine, on behalf of the Boston capitalists, is prosecuting the work vigorously, and in a thorough manner exposing the different lodes of copper which seemingly day by day to grow in richness and magnitude. This property will, in all probability, give employment to a large number of laborers, and in addition to circulating a large amount of money in Dorchester and vicinity, will ultimately give such a stimulus to mining enterprise as will place New Brunswick in the front ranks of the mining territories of America. Following in the wake of Woodville comes the news of a new bonanza, now known as the Malagash copper mine. Taking the Inter-Colonial railway at St. John or Moncton you proceed to the village of Wentworth, which overlooks the beautiful valley of the Wallace River, and from thence by the aid of equine locomotion, after a drive of some 25 miles, or thereabouts, you reach Malagash Point, Cumberland County, N.S., on the extreme edge of which are situated the numerous rich and valuable leads of copper, which have so lately attained such prominence in the mining circles of Nova Scotia, New Brunswick and Boston. This property was examined years ago, but for want of capital or pluck, remained undeveloped, when in the summer of 1879 Sheriff McLean, of Amherst, N.S., took out the right of search on same, had some samples taken therefrom and tested by an assayer in Philadelphia, which proved exceedingly rich. Shortly after, Sheriff McLean transferred his interests to his son Dr. McLean, who in May, 1880, took out renewal of right of search in his own name of the said property. He then afterwards gave a power of attorney and bond of the property to a friend who had been mixing up a little in mining matters, authorizing him to sell the said property on certain conditions, or form a development company to open and work the same in the most advantageous terms possible. Negotiations were opened up on several occasions, but fell through from want of interest on the part of capitalists approached. Nothing daunted, however, the holder of the power of attorney and bond in question renewed operations with parties in Boston, who were stimulated to take more interest in the same by the sale of the Dorchester mine. At this period, while said negotiations were pending, Mr. Lewis Carvell, of Hampton, N.B., well known to the people of the Dominion and the Maritime Provinces particularly, having associated with him Mr. Chas. H. Wilder, of Boston, and some prominent Boston capitalists, approached Dr. McLean with a view to the purchase of the Malagash mine. Mr. Carvell then succeeded in getting a distinct promise from Dr. McLean and the holder of the bond, that in the event of the Boston men then treating for the property not acting promptly, he should have the refusal of the same. This arrangement was finally consummated and Dr. McLean then entered into an agreement on certain terms and conditions with Mr. Carvell, and signed, sealed and delivered the same to him. During this period Mr. E.F. Couch had also approached Dr. McLean with a view to purchase of the property and had visited Malagash and returned to Moncton with a vivid impression of its wonderful richness. Having, however, failed to consummate his agreement with Dr. McLean, the property, as before stated, came into Mr. Carvell's possession. Anticipating no trouble in the matter, and believing he was dealing with men who were above suspicion, what was his astonishment to learn that on Saturday evening, the 3rd of December, Dr. McLean had sold the property again to Mr. Couch, transferred the same, and R.B. Smith, Esq., of Moncton, was dispatched to Halifax to place the documents on record in the Mines Office. Mr. Carvell, having had an intimation of what was going on, quietly procured a special train, left for Halifax, secured the services of Messrs. Rigby & Tupper on Monday morning, prepared a Bill in Equity, issued a writ and obtained from the Chief Justice an order for an injunction preventing the transfer from being recorded, and on Mr. Smith's entering the Mines Office to place his papers on record, he was confronted with the aforesaid injunction, which it is said, in the language of one of the modern poets, caused him To smile a sort of sickly smile. This unpleasant news was communicated to Mr. Couch in due season and a second special was chartered on Tuesday evening for Halifax, to fight the matter out, with Mr. Carvell and have the injunction dissolved, in which position the matter stands at present writing. The ultimate result, no doubt will be the sustaining of Mr. Carvell's position fully, public opinion being strong in his favor, as all his acts in connection with this matter bear the impress of honesty, integrity and truth. These are the facts concerning Malagash, within whose rock-bound bosom lies such a store of mineral wealth as will cause the pulse of the mining experts, stock brokers, and capitalists of mining circles to beat with a feverish velocity. Since Mr. Carvell and Mr. Wilder have taken hold of Malagash, explorations have been made, numberless samples obtained, each succeeding find rivalling if not excelling in richness its predecessor. Mr. Wilder's extensive knowledge of mines and minerals has found a valuable field for research and numerous assays have been obtained from the most reliable assayers and smelting works of Boston, ranging all the way from 15 to 30 per cent. of copper - former assays having also shown from 21 per cent to 70 per cent. of copper and carrying silver in exceedingly rich and paying quantities. The parties associated with Mr. Carvell and Mr. Wilder are convinced beyond the shadow of a doubt and before long such a hum will probably be heard in connection with Malagash as will give additional proof of the wonderful value of the mineral wealth of the Maritime Provinces. Mr. Wilder is becoming well and favorably known as a thorough mining expert and has gained the confidence and good will of a host of people in the Provinces, and by his extreme affability and courtesy, together with his desire to place matters in their true light, is rendering good service to the mining interests of Canada and the Lower Provinces particularly. His associate, Mr. James Piper of Boston, with him here at present, is delighted with his trip so far to the land of the Bluenoses and is making for himself numerous friends. It is stated by those who seem to be conversant with the facts that Mr. Wilder was largely instrumental in the preliminary movements which eventually placed the Woodville Copper property in Dorchester in its present prominent position. He is, therefore, to be congratulated on having been so largely instrumental in introducing American capital within our borders, and, further, has the best wishes of his many friends for his success with Malagash as well as his future operations, inasmuch as he has identified himself closely with our New Brunswick men, showing a disposition to share the loaf with them and not gobble up, so to speak, everything that comes within his reach, even though it should earn for him the high sounding title of King Copper. Moncton, N.B., Dec., 8,

Moncton Daily Times - Dec. 13, 1881 Truro Guardian: Mr. Edward F. Couch, of Newburyport, Mass., who has been engaged in prospecting mines of all kinds for the past sixteen years, and who has recently purchased and is now developing a valuable copper mine at Dorchester, N.B., is at present at the Grand Central Hotel, Truro. He has a large mining experience, and has invested a large amount of capital in mining enterprises. He will be pleased to see persons having mineral samples to exhibit. We understand Mr. Couch intends having a look at the coal seam recently discovered at Belmont."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Dec. 13, 1881 King Copper - Woodville Copper Mine, Dorchester, N.B., and the New Copper Bonanza at Malagash, Cumberland County, N.S. - (From an Occasional Correspondent). - Some weeks ago the mining world was electrified by the news of the sale of the Dorchester copper mine by Mr. E.F. Couch, of Newburyport, Mass., for the munificent sum of $270,000 to Boston capitalists, and the excitement and sensation in regard to the same are still intense. Mr. Revere, the manager of the mines on behalf of the Boston capitalists, is prosecuting the work vigorously and in a thorough and energetic manner exposing the different lodes of copper which seemingly day by day grow in richness and magnitude. This property will in all probability give employment to a large number of laborers, and in addition to circulating a large amount of money in Dorchester and vicinity will ultimately give such a stimulus to mining enterprise as shall place New Brunswick in the front ranks of the mining fields of America. Following in the wake of Woodville comes the news of a new bonanza now known as the Malagash Copper Mine. Taking the Intercolonial Railway from any principal point, St. John or Moncton, you proceed to the village of Wentworth, overlooking the beautiful valley of the Wallace River, and from thence by the use of equine locomotion after a drive of twenty-five miles or thereabouts you reach Malagash Point, Cumberland County, on the extreme edge of which is situated the numerous rich and valuable leads of copper which have so lately attained such prominence in the mining circles of Nova Scotia, New Brunswick and Boston. This copper ore was found years ago and tested and experimented with, but owing either to want of mining knowledge or pluck it laid dormant until the summer of 1879, when Sheriff McLean, of Amherst, N.S., was induced to take right of search and make an examination of the ground, and have some specimens therefrom tested by the Assayer in Philadelphia which proved exceedingly rich. Shortly after Sheriff McLean transferred his interests therein to his son, Dr. McLean, who in May, 1880, took out right of search in his own name of the property in question. He, Dr. McLean, then afterwards gave a power of attorney and bond of the property to a friend who had been dabbling somewhat in mining matters, authorizing him to sell the said property on certain conditions, or form a development company to open and work the same on the most advantageous terms possible. Negotiations were opened up on several occasions but fell through from want of interest on the part of capitalists approached. Nothing daunted however, the holder of attorney and bond in question, renewed operations with parties in Boston who were stimulated to take more interest in same by the sale of the Dorchester mine. At this period, while the said negotiations were pending, Mr. Lewis Carvell of Hampton, N.B., well known to the people of the Dominion, and the Provinces particularly, having associated with him, Mr. C.P. Wilder, of Boston, and some prominent Boston capitalists, approached Dr. McLean with a view to the purchase of the Malagash mine. Mr. Carvell than succeeded in getting a distinct promise from Dr. McLean and the holder of the bond that in event of the Boston men, then treating for the property, not acting promptly, he should have refusal of the same. This arrangement was finally consummated and Dr. McLean then entered into an agreement on certain terms and conditions with Mr. Carvell, and signed, sealed and delivered the same to him. Prior however, to this period Mr. E.F. Couch had also approached Dr. McLean with a view to purchase of the property and had visited Malagash and returned to Moncton with a vivid impression of its wonderful richness; but having failed to consummate his agreement with Dr. McLean the property as before came into Mr. Carvell's possession. Anticipating no trouble in the matter, and believing he was dealing with men who were above suspicion, what was his astonishment to learn, that on Saturday night, the 3rd of December, Dr. McLean had sold his property again to Mr. Couch, transferred the same, and R. Barry Smith, Esq., of Moncton, was despatched to Halifax to place the documents on record. Mr. Carvell, having had an intimation of what was going on, quietly procured a special, left for Halifax, and obtaining the services of Messrs. Rigby and Tupper, on Monday morning prepared a bill in Equity, issued a Writ and obtained from the Chief Justice an order for an injunction, preventing the transfer from being recorded, and on Mr. Smith's entering the Mines office, to record his papers, he was confronted with the said documents which, it is said, caused him in the words of the poet: To smile a sort of sickly smile, &c. The unpleasant news was communicated to Mr. Couch over the wires and a second special was chartered on Tuesday for Halifax to fight the matter out with Mr. Carvell and have the injunction dissolved, in which position the matter remains ar present writing. The ultimate result no doubt will be that Mr. Carvell's position will be sustained fully and public opinion is strong in favor of his position, which bears upon it the stamp of honesty, integrity and truth. These are the true facts concerning Malagash, within whose rock bound bosom lies such a store of mineral wealth as will cause the pulse of the mining experts, stockholders and capitalists of mining circles to beat with a feverish velocity. Since Mr. Carvell and Mr. Wilder have taken hold of Malagash explorations have been made, numberless samples obtained, each succeeding and rivalling if not exceeding in richness its predecessor. Mr. Wilder's extensive knowledge of mines and minerals have found a valuable field for research, and numerous assays have been obtained from the most reliable assayers and smelting works of Boston, ranging all the way from 10 to 30 per cent. of copper, and carrying silver in exceedingly rich and paying quantities. The parties associated with Messrs. Carvell and Wilder are convinced of the value of the property beyond the shadow of a doubt, and before long such a hum will be heard in connection with Malagash as will give additional proof of the wonderful value of the mineral wealth of the Maritime Provinces. Mr. Wilder is becoming well and favorably known as a thorough mining expert, and has gained the confidence and good will of a host of people in the Lower Provinces, and by his extreme affability and courtesy, together with his desire to place matters in their true light, is rendering good service to the mining interests of Canada, and the Lower Provinces particularly. His Associate, Mr. James M. Piper, of Boston, with him here at present, is delighted with his trip so far to the land of the blue noses and is making for himself numerous friends. It may not be generally known, but it is stated by those who seem to be conversant with the facts, that Mr. Wilder was largely instrumental in the preliminary movements which eventually placed the Woodville Copper property in Dorchester in its present prominent position. He is therefore to be congratulated on having been so largely instrumental in introducing American capital within our borders, and further has the best wishes of a number of friends for the present success with Malagash, and his future operations, inasmuch as he has identified himself closely with our New Brunswick men, showing a disposition to share the loaf with them, and not gobble up. so to speak, everything that comes within his reach, even though

URN: 0087 / IDX_Names: Dorchester Copper;

Chignecto Post - Nov. 3, 1881 Dorchester Copper Bonanza.- The conservative millionaires of the Corner have hardly yet recovered from the mental paralysis induced by Mr. Couch's raid in their midst, and his coolly picking up a fortune that had always been at their very feet. And if his first coup was not astounding enough, his Monte Christo prodigality afterwards, has almost appalied them into a fit of apoplexy. That Mr. Couch should unconcernedly fling down $45,000 of his $85,000 on other people seems akin to that madness that afflicted Heliogabalus, who spent his toothsome palate with the tongues of nightingales, &c. Mr. Couch on his part, who seems to despise the ways of naurers and screw-augers, only regards the large sums he pays for services rendered him, as liberal compensation. The Boston broker got $20,000 and the landowners, mining experts, lawyers, &c., have the balance. The effect of this discovery on the industrial development and wealth of Dorchester and the County generally can as yet only be surmised, but if the expectations of the owners are half realized, no such good fortune has befallen this County since 1st July, 1867, the birth of Confederation. It would be premature for months yet to say what the character of the works will be, or the number of men employed, but if the deposit is as extensive and valuable as the prospecting and analyses shew, no mining concern in the Maritime provinces will equal in character the extent of the operations. The employment of a thousand or even five hundred men will create a small city on the outskirts of Dorchester and have a reflex influence on the surrounding country, of a very beneficial kind, giving a market at our doors for every article that our farmers and manufacturers can produce. The consequent increase of business, wealth and prosperity, would be magical. The success of Mr. Couch suggests the enquiry, why need our energetic and intelligent young men be rushing off to encounter the dangers and risk of far off lands, when the more of our own country is known, the more apparent it is, we have boundless resources. BONANZA."

S.J. Daily Sun - Nov. 9, 1881 Dorchester. - Copper is still active. Mr. A.D.Richard, on Saturday, leased at Memramcook a large tract of land, rich in verdigris-stained rock."

Chignecto Post - Nov. 10, 1881 Mr. A.D. Richard has leased a large part of Memramcook with a view to prospecting for copper. Some rich outcrops have been found on this tract."

S.J. Daily Sun - Nov. 14, 1881 and Moncton Daily Times - Nov. 15, 1881Mr. E.F. Couch, who recently sold the Dorchester Copper Mine to Boston parties for a very large sum, returned on Saturday morning from Boston and proceeded to Moncton, accompanied by his father and mother, who propose to make their home in Moncton for the winter. Mr. Couch, senior, is himself a miner, and it is altogether likely that he will give his son the benefit of his extensive practical experience, in connexion with some other mining enterprises in which Mr. E.F. Couch will probably engage immediately. We understand that Mr. Charles Wilder, the mining expert, will also return to Moncton in the course of ten days; and it is quite possible that by the efforts of these gentlemen the mineral resources of Westmorland and Albert will be better known to the world than they have ever been. We are glad to know that the Dorchester mine is turning out well, and that the purchasers, who have had large interests in Lake Superior copper mines, are thoroughly satisfied with their venture. It is considered in Boston the best copper mine yet developed, the ore averaging thirty per cent. - Sun"

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Nov. 22, 1881 More Copper. - A Ride through Cumberland County, Nova Scotia. - The New Copper Mine at Malagash. - If there is anything particularly exasperating to an individual fond of quiet and repose, it is to be obliged to take a railway train at the unseemly hour of two o'clock in the morning. To go to bed and be called in season is only an aggravation; to sit up and wait is tedious beyond description. It was the fortune or misfortune of the writer, a few mornings since, in company with half a dozen friends to take the early morning train east from Moncton, bound for Cumberland County, Nova Scotia, and the site of a new copper mine. A four hours' ride brought us to the little village of Wentworth - or rather the Station of that name on the Intercolonial Railway - for hardly enough houses could be found to dignify the place with the name of village. At a little hotel, however, we procured conveyances and drivers and settled down for a twenty eight miles drive, our objective point being the low, rocky cape which runs out in to the Straits of Northumberland, and is known as Malagash. Our party consisted of Messrs. E.F. and A.C. Couch, and John D. Parsons, jr., of Newburyport, Mass., Charles Cloutman, of Boston, Dr. McLean, of Amherst and Dr. Chandler and Conductor Hillson of Moncton. The first part of our drive was down through the valley of the Cobequid Mountains, the scenery of which in the early morning is most beautiful. After leaving the valley we continued through a long stretch of dead and barren woodland, the thousands of branchless trunks telling the story of some scourge by fire. As we progressed we went through a fine farming country, the freshly turned soil showing great richness, and the stock cattle, telling of the prosperity of the farmers. We rode along the banks of Tatamagouche Bay for several miles. Here we beheld a scene calculated to stir the heart of a sportsman. In the waters of the bay were thousands of wild geese swimming about, and in every direction flocks of these fowl could be seen flying through the air. Several flew very near our carriages but unfortunately we had no gun with us, and perhaps this was fortunate for the geese, or some of them might have been badly frightened by the serenade we should have given them. We arrived at Malagash about noontime, and proceeded to look over the new copper mine. This is situated directly on the shore of the Bay, so that when the mine is developed, as we believe it soon will be, the ore can be laden directly into vessels, thus saving largely in expense of transportation. This property belongs to Dr. McLean, of Amherst, and Conductor Hillson, of Moncton. Beyond having several specimens assayed at Philadelphia, showing a very large per centage of copper, nothing has as yet been done towards developing the property. The surface indications are peculiarly rich. The formation is of sandstone, red marl slate and conglomerate, principally, and from it with the pick were taken several fine specimens of ore, which were brought to Moncton, and will be sent to Boston for assay. They are very rich in copper, and to all appearances contain large quantities of silver. The vein was located by Mr. Couch, and he is of the opinion that no mine of greater promise has ever been discovered in the Provinces, and that its favorable situation renders it doubly valuable. Unfortunately we had but a short time to spend at Malagash, although sufficient to convince all of the great worth of this property. Once more taking carriages, we had the experience of a fourteen mile drive in a fierce southerly storm, to Wallace, where a good supper and clean beds were provided at the hotel. At five o'clock the next morning we were again en route to Wentworth, where train was taken for Moncton, having been almost continuously on the go for two days and two nights. We arrived back at Moncton, wearied enough, but well satisfied with what we had seen."

Chignecto Post - Nov. 24, 1881 The copper-miners on Tuesday struck a new seam of sufficient richness to ensure the success of the mine even though nothing else should be found."

Chignecto Post - Nov. 24, 1881 About twenty men are employed getting out copper under the supervision of Mr. Revere. A boarding house is being erected by Mr. John Tidd and also a blacksmith shop."

S.J. Daily Sun - Nov. 30, 1881 and Moncton Daily Times - Dec. 1, 1881 Dorchester Copper Mines. - A despatch from Dorchester, N.B., relative to the valuable copper property at the head of the Bay of Fundy, which was recently sold to a party of Boston capitalists, says the vein has been traced for a distance of 8000 feet, and that forty slopes or drifts have been opened, and in every instance give excellent returns. The ore, of which very many assays have been made, yields from 20 to 60 per cent. in pure copper, the average running as high as 33 per cent. It is almost entirely free from baser metals, and is consequently very easy to treat. The location of the property is a favorable one, being but one mile from the Intercolonial Railway and but two from Dorchester harbor, so that the cost of transportation will not be heavy. Prof. Joseph Revere of the Revere Copper Works, and a thorough mining engineer, is the superintendent of the new mine, and he has already commenced the work of taking out ore, fully satisfied that his company hold a rich mine. Several buildings, including dwelling houses, are now in process of erection, and, by spring, a large force of miners will probably be at work. - Boston

S.J. Daily Sun - Oct. 1, 1881 Copper Mining at Dorchester. - For some months past prospecting for copper has been carried on quite extensively in the vicinity of Dorchester by Mr. Couch, an American gentleman, from Newburyport, which, if current reports be true has resulted in the discovery of very rich deposits. Mr. Couch has secured the mining right of six or seven farms through which the veins of copper run. He has already disposed, we hear, of several shares of the mine to a party of New York capitalists for the handsome sum of $140,000. Mr. Couch conducted his operations with great secrecy, being only known in the matter as a resident of Moncton. The vein is understood to run through the rising ground about a mile back from the Penitentiary hill, from which it is separated by a narrow valley. Other prospectors had been previously at work but found no paying quantities, though in one case they made quite a large excavation within a few feet of the vein that Mr. Couch has traced out. If reports are to be credited, the mine is likely to prove one of the best paying on this continent, and if so, there will be little difficulty in placing it in the market. The discovery of the vein is the most remarkable part of the story. It is said that the air in the vicinity is at times impregnated with a coppery odor, and that this at first attracted attention. Following up the clue, the vegetation on the hillside was found to be killed, caused by the trickling down of water strongly tinctured with verdigris. With such surface indications an experienced miner had little difficulty in striking copper deposits, though it was the work of months to follow the course of the vein, and determine its thickness, through the farms on both sides of where the strike was first made."

URN: 0087 / IDX_Names: Dorchester Copper;

Chignecto Post - Oct. 6, 1881 The Dorchester Bonanza.- Remarkable Discovery of Copper.- Unexpected Wealth.- Its Sale.- Future Operations.- Some ten years ago a party of American speculators became interested in certain outcrops of copper ore in the vicinity of Dorchester and having tested some of the specimens and being struck by their richness, they sunk various shallow test pits into the surface conglomerate and finding no paying quantities of ore finally became discouraged and came to the conclusion that the surface specimens were relics of the diluvial detritus or deposits from glaciers supposed to have been sliding around before man was created. They consequently quit operations and went away. About three years ago a practical miner, Mr. James Grant, who had gained experience in prospecting in Nova Scotia, happened to visit Dorchester and hearing of the previous operations went into prospecting on his own account and in a very quiet way, delved into the woods and hills pretty thoroughly and found the indications much better than he had any reason to expect. On sunny days the odor of verdigris in some small ravines on the hills he found so strong as to be quite offensive, and he noticed that the cattle would seek those spots to lie down in, as the flies found the smell of copper too strong for them to follow with comfort. Small streams too, quite black, he noticed oozing out from between boulders which killed the herbage wherever they flowed. Detached pieces of ore dropped by old glaciers he rightfully concluded would not have so general an effect, and having communicated his views to a couple of Moncton gentlemen the three went into it on equal shares with a view to developing whatever might be there. A Londonderry capitalist offered to put in $50,000 and enter as a fourth, but just then the Beliveau craze arose and the owners of land, where the copper lay, suspected there might be money in their lands, too, and refused to negotiate mining leases, or do any thing else. Thus the matter rested until a few months ago when Mr. Edward Couch, of Newburyport, Mass., appeared on the scene and infused new life into the enterprise. Mr. Couch bought out the right of Grant and his two partners and then devoted himself to obtaining control of the lands. By this time Beliveau Albertite had gone up and the faith of the farmer in the copper indications grew correspondingly less. Mr. Couch, therefore, without much difficulty, obtained leases from Wm. B. Chapman, Weldon Chapman, Ann Chapman, John S. Chapman, Geo. King, Wm. Turner, Geo. W. Chandler, Alfred Cole, Chas. Crossman, Patrick McGuire, Alpheus Palmer, and others, securing to himself mining rights over a large area of the rocky ridge extending northeastward from the penitentiary.

He then, with a few picked miners sworn to secrecy, began operations. On sinking pits through the conglomerate to the formation below he found the strata much disturbed, evidencing tremendous upheavals and shiftings of the earth's surface in the remote past. In one place the stratification is perpendicular as if a piece of the earth's crust has been stood upon edge and there, wedged in between two walls of sandstone, is the brown seam of copper, one which, if reports be true is as near pure copper as it can be. Men are kept on guard over this seam night and day, so that one has no chance of seeing for himself the dimensions of the seam. It is reported, however, that a company of capitalists are investing from $100,000 to $200,000 in the speculation with Mr. Couch, and Professor Merill, an eminent New England Geologist, sent here as an expert, by the Company, expressed himself as agreeably surprised at the results of his tests. Various members of Company have visited the vein during the last two months and Mr. Howe, a somewhat celebrated conveyancer from Boston, has been here during the past week overhauling the deeds and tracing out and making abstracts of the titles to the lands for the satisfaction of the Company before the bonds are finally signed. It appears more like a seam than a vein and occurs in the mill-stone grits - a most unusual situation for copper. The leading seam is said to be five feet thick. The parties interested are very uncommunicative, but they intend pushing operations on a large scale."

S.J. Daily Telegraph - Oct. 14, 1881The Dorchester Copper Mine. - It is believed that a sum of about $85,000 will presently be paid over for this mine, by wealthy capitalists. Part of the money will go to farmers, owners of the soil, in sums of from $1000, $2000, etc., and the balance to the promoters of the enterprise. If developed it will prove very advantageous to Dorchester and vicinity."

Chignecto Post - Oct. 20, 1881 Dorchester.- Oct. 10 - Messrs. Howe, Revere and Mooney, of Boston, are at the Dorchester Hotel. They represent the Copper Mine Company."

Chignecto Post - Oct. 20, 1881 The copper mine still excites great interest and the movements of the operators are still enshrouded in mystery. While it is generally understood that the contract for the sale to the Boston Company is closed, and that the figure is in the vicinity of a quarter of a million, still the title deeds are not all completed yet and pending that, the original secrecy is maintained."

Chignecto Post - Oct. 27, 1881 Dorchester Copper Mine business has come to a satisfactory head. Mr. E.F. Couch, who secured the leases in the beginning, received $85,000 on Thursday last from the Boston capitalists, for which he gives them the option of it for $190,000 more in six months, in all $275,000. Mr. Wells, who conducted the negotiations for the Americans, received a fee of $3,000 on Thursday. Mr. Revere, representing the Boston Co. has commenced to develope

Weekly Freeman - Oct. 29, 1881 The Dorchester copper mine has been purchased by Boston capitalists."

Moncton Daily Times - Apr. 1, 1882 Personal. - Mr. A.S. Couch, a mining engineer and expert, passed through New Glasgow last week en route for Cape Breton, where he is to inspect some coal areas, with a view of placing them in the New York

Chignecto Post - Aug. 10, 1882 Mr. William Patrick has a gang of men prospecting for copper on lands he has leased at Dorchester."

URN: 0087 / IDX_Names: Dorchester Copper;

Chignecto Post - Aug. 10, 1882 We have been shown a specimen of copper ore discovered by T.H. Prescott, on lands leased by him in this parish. Mr. Prescott intends to have the property prospected."

Chignecto Post - Aug. 17, 1882 Copper Mining at Dorchester.- Important Developments! - New Concentrating Works! - From our Reporter. - There have been rumors a float here for the past few days that Messrs. Howell and Patrick, who have been mining for copper in Woodville for the last three months had struck it very rich. There has been more and less excitement here about copper, ever since the late E.F. Couch sold his property in Woodville last fall to a Boston Company for $270,000. This property was worked part of the winter and abandoned, it was said, because of a scarcity of pay ore. This story was not credited by those well acquainted with the transaction; so public opinion is pretty well divided as to whether the Couch Mine is worth $270,000 or is not. As this mine of Messrs. Howell and Patrick's is in the neighborhood of the Couch Mine, I felt considerably interested to know whether they had been so successful as rumor said. To-day (Wednesday) I drove out to the mine to make a personal examination and ascertain the facts. These facts are so interesting to all those who wish progress to the mining industry, that I am confident they will be acceptable to the columns of the POST. I was afraid that I would have much difficulty in discovering the scene of operations: for mines, as you perhaps know, are generally located in the most inaccessible spots in the country. But while my perplexity was at its most dismal pitch, I described a new road to my left, nicely turnpiked. This looked so much like enterprise that I, at once, concluded this must be the way to the Copper Mine. Nor was I mistaken either; for I had not gone far along the road until I came to A new building, I drew reign before the door and soon had the pleasure of introducing myself to the proprietors, and acquainting them with the object of my visit. Mr. Patrick remarked that he had been requested by several newspaper men, since they began operating in Woodville, to give them information for publication, but that he had hitherto declined, for the reason that the public is not a good judge of work half done; and in most cases a prospector has enough to discourage him without an unfavorable, large and gratuitous public opinion pressing itself upon him at all times. But now as this mine is beyond the stage of a mere prospect and is producing tangible tons of ore of a valuable character, he had no longer any hesitation in permitting the public all information your reporter can convey and also allowing them the further enjoyment of any opinion they feel disposed to form. This mine is situated a short distance north-east of the Couch Mine on lands owned by Charles Crossman, Esq., and others. It has been worked for about three months, and consists of a shaft, two slopes and several trial pits. The shaft is down 25 feet perpendicularly and about 30 feet further on an incline. In the incline part of this shaft I was shewn a streak of bright glistening ore 17 inches wide, which Mr. Patrick informed me is called Copper Glance and yields from 50 per cent. to 78 per cent. of pure copper. Below this vein was another of hard grey rock, 18 inches wide, which upon close inspection shows a great quantity of thin white colored metal mixed through it. This yields 15 per cent. pure copper. We next visited the slope which is several hundred feet distant from this shaft. This slope is 114 ft. from the outcrop. Let us descend it. For 75 ft. in, the slope is very gentle, not more than 15ø, and on either side there is to be seen a vein of ore mostly carbonates from 3 in. to 2 ft. wide. At this point (75 ft. in) the slope takes a sudden dip to about 45ø or 50ø and the vein of carbonates disappears in the roof. Very carefully we descend for 15 ft., knowing that a misstep means a tumble to the bottom. At this point a great change is noticeable in the rocks. They appear metamorphosed and highly disturbed. No copper is seen between 75 and 90 ft. But at 90 ft. we strike a very fine vein of 6 ft. wide, dipping 50ø. In this is a well defined streak of Glance 20 inches thick, 20 per cent. copper and the remaining 4 ft. 4 inches yielding 12 per cent. Major H.F. Howell, who is Mr. W.A. Patrick's associate in this enterprise is an Englishman, but for the last five years a resident in Boston. He has a large experience in both silver and copper mining in the Western States and Mexico. Mr. Patrick is a young man, but has made a close study of mining and mineralogy for the last seven years. These men should be competent judges of a copper mine. Before closing my note book I asked Major Howell: Do you feel perfectly confident over the working expenses? He replied: Look at this ore dump! Here are 100 tons worth of $15 per ton on average. It all came out of that slope and is mere outcrop ore, still it pays the cost of sinking the slope. Do you see that perpendicular shaft we have just begun. That is to be our prominent working shaft for at least one year's mining. That shaft goes down 30 ft. and there strikes the 8 ft. vein. At that point levels are driven off (in ore) 200 ft. each way from bottom of shaft. From these levels, bords are driven up, and by them the ore is mined. The value of the ore mined in such an area, as this amount of work would open, is worth on the dump $75,000. The cost of putting up concentrating works, hoisting engine, pumps, and the labor of mining the ore is below $50,000. Thus you see there would be a profit in one year's work of $25,000. More extensive operations would give larger profits. You will perceive we have plenty of room to extend, for we own four miles along the line of the vein and at present operate only 400 ft. The best evidence I can give you of our confidence in its value is that we are preparing to work it ourselves. That is a large and expensive shaft we are beginning to sink; and Mr. Patrick starts to-morrow on a search for first class machinery for concentrating works. We are anxious to get these works up with as little delay as possible, for we want to make 200 tons of 60 per cent. concentrates to ship before navigation closes. After half an hour's further conversation on mines and mining in the Maritime Provinces, I bade these gentlemen good day, heartily wishing them that success which they confidently expect, and which such enterprise as theirs deserves. As my horse jogged Dorchesterward I tried to estimate the benefit the working of that mine would be to the people of Dorchester; and at the same time could not help lamenting how little our publicmen of wealth do to encourage such industries."

Chignecto Post - Aug. 17, 1882 The Mining Licences on Crown Lands will be offered for sale at the Crown Land Office, Fredericton, on the 30th Aug., for Westmorland, Restigouche, Gloucester, Northumberland and Kent."

Daily Telegraph - Dec. 8, 1882 and Weekly Transcript - Dec. 13, 1882 After More Copper. - Mr. William Mooney, of Boston, who is interested in minerals, has a party of men prospecting for copper in Westmorland. The scene of operations is known as Squirreltown, which is called quite a copper region."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Daily Sun - Feb. 2, 1882 Is the Dorchester Copper Deposit a Fissure Veinor Not? - We are informed by a gentleman who has knowledge of minerals that some time since he obtained a specimen of copper sulphide from the Dorchester mines. This piece of ore was attached to a fossil plant of the coal formation. There was also a piece of coal attached to the plant. From the occurrence of these facts our informant argues that the deposit, in all probability, is not in a fissure vein, these being, no doubt, formed under the influence of great heat, any carbon present would be oxidized. The difference between mineral veins and beds is this: True fissure veins are persistent in depth, while beds are merely local deposits and their

Chignecto Post - Feb. 9, 1882 A new twenty inch seam has been tapped at the copper mine."

Moncton Daily Times - Feb. 22, 1882 The Dorchester Copper Mine. - W.W. Wells, Esq., Barrister of Dorchester, is on a ten days trip to Boston on business in connection with the Copper Mining property at Dorchester."

Chignecto Post - Feb. 23, 1882 Dorchester Copper.- Mr. Revere, the mining engineer, placed in charge of the copper mine there writes us on the 19th, that the Boston capitalists have directed him to stop work, close operations, and return to Boston. Mr. Revere and his assistant, Mr. Howard, left Dorchester on Monday. If this be the end of what was considered a very promising source of wealth, the end cannot be more disappointing to the capitalists concerned, than to the people of

Chignecto Post - Feb. 23, 1882 and S.J. Globe - Feb. 25, 1882 and Moncton Daily Times - Feb. 25, 1882 There is a deadlock over the Dorchester Copper Mine. The managers, Messrs. Revere and Howard, acting on instructions received from headquarters in Boston, have closed up the mine and left for home on Monday afternoon. Late Monday night Couch telegraphed Wells to come to Boston with all speed. Mr. Wells left accordingly by Tuesday's express. He expects to be gone nearly two weeks. The Copper Mine men in closing the mine are supposed to be finessing with a view to forcing Couch into better terms. The shafts of the mine are closely secured."

S.J. Globe - Feb. 28, 1882 Mr. J.B. White, of the Moncton Yard, I.C.R., received a despatch this morning informing him of the death of his brother-in-law, Mr. E.F. Couch, which occurred at Newburyport, Mass. Mr. Couch has had considerable trouble of late in connection with the Dorchester copper mine. Death was caused by congestion of the lungs.- Moncton

S.J. Globe - Jan. 3, 1882 A Mining Squabble. - Moncton, N.B., Jan. 3. - Dr A.H. Chandler was arrested on a bailable capias here to- day by Deputy Sheriff Beckwith of Sackville. The arrest was made at the instance of Mr. E.F. Couch, of copper mine fame, for money alleged to be lent. The amount is said to be about eleven hundred dollars. The affair excites considerable interest in Moncton, and Dorchester as well. The Sheriff was severely criticised by Dr. Chandler's friends, on refusing to accept Lewis Carvell, Esq., as bail. The Doctor furnished the bail required, Doctor Baxter and a Dorchester gentleman becoming responsible. The writ was issued out of the Supreme Court, R. Barry Smith, Esq., acting as counsel for Mr. Couch, and Messrs. Emmerson and Read, of Dorchester, for Dr. Chandler. It is reported that several other members of the opposing syndicate (to the Couch party) will share the same fate at the hands of Sheriff Beckwith."

S.J. Globe - Jan. 4, 1882 and S.J. Daily Sun - Jan. 5, 1882 The Dorchester Copper Mine and Accompanying Lawsuits. - Messrs. E.H. Wilder and C.E. Foster, both of Boston, have been partners with Mr. E.F. Couch in the Dorchester Copper Mine, a portion of which was recently sold to Mr. Howe, of Boston. Mr. Wilder being unable, he claims, to obtain a settlement with Mr. Couch, applied for and procured an injunction restraining Mr. Couch from selling any more of the property or disposing of the proceeds of the late sale, as it was a partnership property. He also commenced a suit for dissolution of the partnership and for an account of the partnership dealings and the appointment of a receiver for the property. The injunction was served on Mr. Couch on Saturday, and on that evening Mr. W. was arrested on a bailable writ for $1,000. Dr. A.H. Chandler, as mentioned in the Globe, was arrested yesterday in the same way. Both gentlemen dispute the indebtedness. Between Dorchester and Malagash copper mine disputes there is some excitement in Westmorland. - Globe"

Moncton Daily Times - Jan. 5, 1882 A Further Chapter of Mining Matters. - We made reference in yesterday's issue to mining matters and to the legal proceedings that have been recently instituted. It appears that an injunction order was issued last week against Mr. Edward Couch, at the instance of Mr. Charles H. Wilder, who claims that under his agreement with Couch he is entitled to one third of the property at Dorchester and of the proceeds thereof. The injunction restrains Couch from using any of the money arising out of the sale of the Dorchester copper mine, or from transferring any of the mining property, a deed of which, has not yet been given to the Boston capitalists who have purchased it. The injunction also restrains the Bank of Nova Scotia from paying over to Mr. Couch any money there deposited to his credit. Since the service of the injunction order, which was granted by Judge Palmer, Mr. Couch has secreted himself (except on Sunday last) it is said fearing arrest; but from his retreat he appears to have caused the arrest of Messrs. Wilder and Chandler; the first for $1,000, and the other for $1,170. The nature of the claims on which these arrests have been made does not appear by the writs. Rumor says that it was for money lent, but Messrs. Wilder and Chandler say they never borrowed any money from Mr. Couch, and are wholly uninformed as to the nature of Mr. Couch's claim."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Globe - Jan. 5, 1882 The Copper Mine Suits. - Moncton, N.B., Jan. 5. - The mining trouble still continues to excite the public of Moncton and the bailable writs and civil processes that are being issued make our citizens ask what does this all mean? Deputies Beckwith and Sweeney are registered at the Phoenix hotel, And W.W. Wells, Esq., has arrived from Dorchester and is at the Phoenix also. The statement in the Times to the effect that Mr. Couch kept himself secreted since Sunday for fear of being arrested is said by Mr. Couch's friends to be false and that instead of Mr. C. being hid he was in Nova Scotia on business, in connection with another mine that he is about buying in that Province. Mr. Couch and friends also claim that they (the Couch party) will be able to establish their claims against both Wilder and Chandler. The Times is severely censured for its comments on the matter. The injunction on the Dorchester copper mine restrains Mr. Couch from making any further transfer of the mine, or using any of the proceeds that he has in his possession which he received as payment for the mine at Dorchester. Mr. R. Barry Smith, Couch's counsel, claims that the injunction was obtained by a suppression of material facts, and that it cannot stand. The legal fraternity are in their glory over the matter, especially the ones employed in the fight."

Chignecto Post - Jan. 5, 1882 Mining Sensations.- Injunctions.- Arrests.-Lawyers to the Front.- (our Moncton Correspondent.) - The air is full of rumors of war amongst the men of copper. Ordinary mortals speak with bated breath of the tens of thousands and hundreds of thousands of dollars that are the everyday topics of these superior beings. It is but fitting these great interests should be held by nothing less than Syndicates. There are, as yet two of these institutions, but the full returns are not all in. As Col. Seller's says: there's millions in it, and it is confidently expected the statistical returns will show a rapid increase. A little discolored sandstone to commence with; several assays, bonds, and leases, are the first capital. This constitutes the bottom floor. Then the speculation sets in and runs like a three weeks fever, culminating in bailable writs, injunction suits, and deputy sheriffs. I will not attempt to get at the truth of the struggles developed the past week between Mr. Wilder, leader of one Syndicate, and Mr. Couch, the other. Perhaps there is no truth in them. I will give merely the rumors: Mr. Wilder claims to be a partner with Mr. Couch in the Dorchester Copper Mine, and entitled to a half interest in the profits. Mr. Couch claims Mr. Wilder did not fulfill terms that would have enabled him to become such partner. Last week Mr. Wilder obtained an injunction order against Mr. Couch, restraining him from using the funds of the property. It was served on Bank of Nova Scotia agency, where Mr. Couch had a large sum deposited, but the latter had already withdrawn it. A bailable writ had also been issued against Mr. Couch for $100,000. The officers were on the train on Saturday going to Moncton. Mr. Couch was on the same train. Mr. Couch, however, jumped off near the crossing, and the officers continued their journey. Mr. Couch became invisible until twelve o'clock, midnight, when he pleasantly interviewed the officers, informing them he had no ill feeling towards them. Sunday he was promptly at his usual place of worship. Sunday night at twelve he again mysteriously disappeared; but presto! the next morning he was seen at the breakfast table at Lamy's, Amherst. This was the Wilder innings. We now come to the Couch. On Saturday night Messrs. Wilder, Chandler, and Lewis Carvell were going to St. John, when an officer tapped the former on the shoulder, informing them he had bailable processes against them for a large amount at the suit of Mr. Couch. The party turned about and spent the Sabbath at Moncton. Before Tuesday all hands got bail. Mr. Couch is expected back from Amherst to-day, when, no doubt, the conflict will thicken. Then on ye brave. I understand the lawyers are not unhappy. Copper may come, and copper may go, but the lawyers will smile on forever."

Daily Telegraph - Jan. 5, 1882 The Mining Troubles at Moncton. - Another view of the mining suits is thus given by a correspondent: Chas. H. Wilder, of Moncton, claims that he and Chas. C. Foster, of Boston, are partners with Mr. Couch in the Dorchester copper property. The former has filed a bill for the dissolution of partnership, and an account of the partnership dealings, and for a decree that Mr. Couch be ordered to pay him one third of the profits of the sale made last October. On Wednesday, 28th September last, Messrs. Allen & Chandler, on behalf of Emmerson & Read, of Dorchester (solicitors for Mr. Wilder in the suit), obtained an injunction from Judge Palmer restraining Couch from selling or disposing of any of the property, or appropriating to his own use any of the proceeds of the sale of the property, and this injunction was served on Couch on Saturday afternoon, 31 st ult. while on his way from Halifax. Afterwards papers were obtained against Mr. Wilder for a claim of $1,000, which was alleged was due to Couch. On Tuesday papers for the claim against Dr. Chandler were served. They deny any indebtedness and say that they intend to contest the suits brought against them."

Moncton Daily Times - Jan. 6, 1882 The Dorchester Copper Mine Affair. - The Sackville Post has Moncton correspondence pertaining to the troubles between Messrs. Couch, Wilder, Chandler and others in connection with the Dorchester copper mine. The correspondent appears to have mixed up some fun, a good deal that is incorrect, and a very little that is correct. The correspondent says Mr. Wilder claims a half interest in the Dorchester business. He really claims one third. The correspondent states that a bailable writ has been issued against Mr. Couch. Such is not the case. The only papers directed against Mr. Couch was the injunction order, which was served by Mr. Emmerson, the opposing attorney. The correspondent describes a scene in a railway train - officers of the law and Mr. Couch in the same car. This is spoiled by the fact that there were no officers on the train, and no arresting process, merely the serving of an injunction by Mr. Emmerson, as before stated, which was casually done in a railway car. The correspondent describes Messrs. Wilder, Chandler and Carvell as going to St. John when the former was arrested at the railway station, but they were on other business, and after being allowed to conclude that business, the party immediately proceeded down town and gave the necessary bail for Mr. Wilder, instead of the matter remaining open from Saturday till Tuesday. With the exception of these and a few other discrepancies, the letter is very readable. - The trouble, it was reported yesterday, is likely to be amicably arranged today."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Globe - Jan. 6, 1882 The Mining Troubles. - Moncton, Jan. 6. - The mining suits are still unsettled, and the excitement runs high. An attempt to arrange a settlement this morning proved be a failure. A meeting of counsel was held in the law office of R. Barry Smith, Esq., this morning. For the Wilder-Chandler party Messrs. Chandler and Emmerson appeared, and for Mr. Couch Messrs. R.B. Smith and W.W. Wells. It is said Mr. Smith made the following offer to Wilder, Chandler & Co.: That as Mr. Couch did not wantto be engaged in law suits with parties who would be unable to respond in costs to Couch, that he (Mr. Smith) would, on behalf of Couch, make a present to him (Wilder), providing Wilder would sign a paper to the effect that he never had any claim against Couch and that the present suit was bogus one, both in fact and in law, of one thousand dollars and square off all actions at law. This was not satisfactory, and the legal quorum dissolved to meet again in the classic shades of the Supreme Court. The Daily Times, in a plea of defence to what your correspondent stated yesterday convicts itself to-day by attempting to show that Mr. Couch drove out of town on Sunday last to evade the officers of the law, which is the opposite of the truth, as he left town to reach Amherst on Monday morning, so that he could reach his further destination on Tuesday at 10 o'clock, as per agreement."

S.J. Daily Sun - Jan. 9, 1882 The Mining Troubles. - Our Moncton correspondent writes under the date of 6th of January: The mining battle still continues and rages more fiercely than ever. To-day a settlement was sought to be arrived at by the counsel engaged on each side. The legal gentlemen met in Mr. Smith's office at first and then adjourned to Dr. Chandler's office. The barristers conferred a short time, but as Mr. Wilder insisted on Mr. Couch's admitting a partnership to exist between them, the conversation was of a brief duration, as Mr. Couch's counsel refused to listen to that proposition. About an hour after the lawyers separated Mr. Couch was arrested under a writ ne exeat regno, issued by order of Judge Palmer, and requiring Couch to give security in $12,000 that he would not leave the Province until allowed to do so by the Court. Mr. Couch says he will see the end of it if he has to spend his last cent to do so, and proposes to let the legality of this last proceeding be settled by a jury in an action for false imprisonment. He obtained bail in a few hours. Messrs. Smith and Wells, counsel for Couch, have taken the proper steps to set aside Mr. Couch's arrest and to dissolve the injunction. Mr. Chandler, of Allen & Chandler, Mr. Wilder's St. John counsel, has been here all day. Other writs are talked of, and the town is full of rumors, but as your correspondent can obtain noinformation of their intended course from either counsel, nothing definite can be stated. Notwithstanding all this, however, we are credibly informed that on Saturday night an amicable settlement was arrived at, and the mining world can once more breathe freely."

Moncton Daily Times - Jan. 13, 1882 The Couch-Wilder Case. - We omitted to mention afew days ago that the difficulty between Messrs. Couch and Wilder, in regard to the Dorchester copper mining property, had been settled with concessions

Moncton Daily Times - Jan. 17, 1882 Mr. Couch of copper mining fame, started for Massachusetts a few days ago. It is stated he intended returning in about ten days."

Daily Telegraph - Jan. 20, 1882 Dorchester. - Mr. John S. Chapman, who lives on a hill to the north of the penitentiary, while digging a well near his residence recently, struck a rich vein of copper ore. Copper appears to be lying around loose in this vicinity."

S.J. Globe - Jan. 28, 1882 Mining proprietors continue to arrest each other,and thus get their mines advertised in the courts and the newspapers. It is to be hoped that the dry goods dealers and grocers will not follow this example."

Chignecto Post - Mar. 2, 1882 Death of Mr. Couch.- The death of Mr. E.F. Couch, the discoverer of the copper mine at Dorchester, is announced. He died at home at Newburyport, Mass. Congestion of the lungs was the cause of death. He will be greatly missed in Moncton."

Chignecto Post - Mar. 2, 1882 and Moncton Daily Times - Mar. 3, 1882 It is not known what effect Mr. Couch's deathwill have on the copper mine. There are several thousand dollars which in April will be due to the farmers on his bonds for mining leases, and if the amounts are not paid the leases will be voided."

Moncton Daily Times - Mar. 3, 1882 Dorchester.- It is rumored that Thos. B. Cochrane has struck a lead which is likely to prove rich in silver and copper."

Chignecto Post - Mar. 16, 1882 and Daily Telegraph - Mar. 17, 1882 and S.J. Daily Sun - Mar. 17, 1892 and Moncton Daily Times - Mar. 17, 1882 Dorchester Copper Mine.- The settlement arranged for by Mr. Couch before he died has been carried out by his executors. It is understood his estate gets $100,000 in stock and the balance in cash. The Company, it is understood, tho' not entirely satisfied with the property, intends to spend $25,000 in developing it."

Weekly Transcript - Nov. 8, 1882 Dorchester. - Some of our copper miners have good prospects in view, it is said."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Nov. 14, 1882 The Couch Estate. - Letters of administration of the estate of the late E.F. Couch were granted to John W. Pike, of Newburyport, Mass., administrator of the estate Saturday. Some opposition was made by a few local creditors, but Judge Oulton considered Mr. Pike the proper party under all the circumstances. The bonds were fixed at $4,000. Mr. W.W. Mills appeared for himself as a creditor, Mr. Emmerson for E.T. Trites and C.H. Wilder, Mr. Knapp for Wm. Turner, and Mr. R. Barry Smith for Mr. Pike. - Transcript"

Moncton Daily Times - Nov. 27, 1882 The Colonial Copper Mining Company's Property. - The following are extracts taken from a circular recently issued, and are given without any guarantee as to the nature of the enterprise, of which we know nothing: This company owns the mining rights in 300 acres of land, situated in the Parish of Sackville, County of Westmorland, N.B., three miles from Dorchester, the county seat, the head of Chignecto Bay, and three miles from the Intercolonial Railway, thus enabling shipments to be easily made by rail or water to any part of the world. It is about 600 feet above the sea level and is underlaid with veins or blankets (technically so called), which layers, geologists claim, will be found to a depth below the level of the sea varying from 8 to 10 or more feet in thickness as they go down to depth. The property is immediately adjoining that purchased by a Syndicate of Boston gentlemen, in which openings at intervals for a mile have proved the continuity of rich ore bearing strata, which increase in thickness as they approach our property. Explorations on our property fully prove the existence of the same extensive ore bearing strata beneath its surface. Shaft No. 1 is 25 feet deep, with a drift running from the bottom the distance of 30 feet, showing well in ore; being probably the same ledge as the one worked by the Syndicate half a mile distant. Shaft No.2, 276 feet distant from shaft No. 1, is 55 feet deep. After cutting through three layers of low grade ore, it penetrates 6 to 8 feet into a fourth layer without cutting through it; this being the largest ore body yet found, and of great richness, some of it assaying as high as 58 per cent. copper and $20.70 silver per ton. No. 3 is an incline or tunnel 115 feet long, which when continued 40 feet further will strike Shaft No. 2 at a depth of 65 feet, and is in a ledge or vein six to seven feet thick of ore assaying 25 to 30 per cent. Assays of the ores made by different assayists from the various grades, run from 8 to 78 per cent copper, with silver in some cases from $20.00 to $25.78 per ton. The company is organized under the laws of Maine, with a capital stock of $500,000, divided into 100,000 shares, fully paid up, and unassessable, of a par value of $5.00 each. Of these, 20,000 shares are reserved for working capital, in addition to an amount of $20,000 in cash. Work is now being pushed as rapidly as possible upon the buildings for men and machinery necessary for the production of fifty tons of ore daily. The reports on the property, of Prof. J.H. Huntington and Joseph Revere, of Boston, and J.H. Ely, formerly of Nevada, but at present of New Mexico, and the assays of ore by W. French Smith and S.P. Sharples, State Assayers of Massachusetts, and A.

Goldsmith, of the New York Metallurgical Works, and of Prof. Richards, of Massachusetts Institute of Technology, can be

Chignecto Post - Oct. 26, 1882 Major Howell, of Boston, who has been successfully operating for copper on lands owned by Charles Crossman and others, at Dorchester, is negotiating for a sale of his mine to Mr. John Ely & Co., of New York."

Chignecto Post - Oct. 26, 1882 Mr. Amos W. Mooney, of Boston, has been in Dorchester the past week and has purchased some valuable properties there and instructed Mr. Chapman to put on ten men at once and develop it, which will be done."

Moncton Daily Times - Oct. 27, 1882 The Dorchester Copper Mines - Arrest of the Engineer. - (St. John Globe). - The mining enterprise of New Brunswick have heretofore been attended with a certain amount of litigation. The recent attempt to open the Dorchester copper mines seems to be no exception to the rule. It appears that Mr. W.A. Patrick (agent for the electric light) in times past was interested in some of the Dorchester mining properties. Through lack of means or other causes his interest lapsed, but the recent sale of the mining properties by Messrs. Chandler & Crossman, to a Boston syndicate, has given rise to a little excitement. Major Howell, the engineer of the syndicate, arrived in town on Tuesday evening to make purchases on behalf of the Company. Thursday Mr. Howell was arrested at the Dufferin Hotel by Deputy Sheriff Rankin, at the instance of Mr. W.A. Patrick, for a certain amount which Mr. H. entirely repudiates, and for which he claims to hold receipts. When arrested, Mr. Howell requested the Deputy Sheriff to call at the office of Mr. C.A. Stockton, which was done, and an arrangement was there made for his appearance. In the meantime Mr. H.R. Emmerson, of Dorchester, was telegraphed for and he arrived this morning, in company with Messrs. Geo. W. Chandler and S. Edgar Wilson, who agreed to enter into bonds in the sum of $15,000 for Major Howell's appearance in the Supreme court. This afternoon Mr. Emmerson applied to Judge Palmer for special bail."

Moncton Daily Times - Oct. 29, 1882 Dorchester Copper Mines. - The Dorchester Copper Mines Company, of which Major Howell is engineer and Mr. H.R. Emmerson is agent and solicitor, has commenced operations in the building line. About fifty men are already employed, and before a week it is expected that about 100 men will be on the payroll of the company. Mr. R.C. Donald, of Moncton, has the contract for the large boarding house now being erected, and plans and specifications have been prepared for the large pit house, soon to be built. The schr. Ethel Emmerson, Capt. Elias Tower, has been chartered to bring the machinery for the works from Boston. Other houses and buildings will shortly be erected. Mr. Joseph Revere, the consulting engineer, recently visited the mines, and was most favorably impressed with the prospects. Before many months elapse a force of 200 men will probably be employed, and the output of the mines is expected to be large. The company is composed of capitalists residing in Salem and Boston, and they are so much encouraged by the reports of the engineer, that they are preparing to carry on large operations during the winter. A ready market for the ore mined is already secured in Massachusetts and Swansea, and in the spring shipments will, it is expected, be made on a large scale. - Globe."

URN: 0087 / IDX_Names: Dorchester Copper;

Weekly Transcript - Dec. 5, 1883 Dorchester. - Joseph Revere, Esq., arrived here yesterday. Major Howell will remain for a few weeks after which Mr. Revere will take charge. The work of the company is progressing favorably. Mr. Donald has nearly completed the Boarding House and has the Pit House well underway. The machinery, engines, boilers, &c., necessary for the proper carrying on of the work this winter will be shipped from Boston in the schr. Ethel Emmerson which vessel is now on her way to that port with a load of coal. The company working the mine is called the Colonial Copper Mining Company of which Hon. Geo. H. Wheatland is President, Col. C. Canfield, Treasurer and the Board of Directors composed of Hon. Geo. H. Wheatland, W.H. Turner, Dr. Wm. Mack, Col. Canfield and Hon. Mr. Emory. The Company's office at present in Dorchester is in the office of H.R. Emmerson, who is Solicitor for the company in New Brunswick. They contemplate fitting up an office shortly in the shiretown. Mr. Revere holds the position of consulting engineer for the Company and he will have charge of the mining operations to be commenced on a large scale on the arrival and placing of the machinery. Major Howell was the first to work this mine, and he is to be congratulated on the discovery of what thus far has proved to be a valuable mine. The indications are that before six months have elapsed Dorchester will have developed into a full fledged mining town. The section of good working ore is proved to be ten feet in thickness and the full thickness is not yet known, the operations thus far not having gone through it. Mr. James Read, of Dorchester, has had charge of the stone foundations for the machinery buildings, etc., and Mr. R.C. Donald, of Moncton, has the supervision of the buildings. About sixty men find employment there already."

S.J. Daily Sun - Dec. 10, 1883 Copper Mining. - The Colonial Copper Mining Company (said a prominent stockholder to a Sun reporter the other day) will, in the near future, commence active operations at the copper mines near Dorchester. Already a boarding house, with accommodation for about one hundred men, has been erected, and a large pit house and engine room are in course of erection. Besides these buildings, there are being built an ore house, which is rapidly approaching completion. It is intended to build a concentrating mill at the mines, in which the process of separating the ore from the rock is gone through. Men are now engaged in getting the shaft in readiness, and in doing the mason work in connexion with the shaft. As soon as the schooner Ethel Emerson arrives from Boston with the machinery, running operations will be commenced, and it is expected that before the close of the year two hundred men will be at work in the mines. The copper ore when separated from the rock will be shipped to the United States by schooners, and already the company have received several large orders from the States, which it will take them some time to fill. Major Howell, of Boston, is manager of the mines, Mr. Joseph Revere is consulting engineer and Mr. Henry R. Emmerson, of Dorchester, is solicitor for the company."

Daily Times - Dec. 12, 1883 The Dorchester Copper Mines. - Our correspondent at Dorchester writes: Mr. J.W. Reeve, the manager of the new mine, returned from Boston today. The engine and machinery are en route for Dorchester by schooner."

S.J. Globe - Dec. 12, 1883 and Daily Times - Dec. 13, 1883 Dorchester Copper Mines. - The schooner Ethel Emmerson is to sail from Boston today for Dorchester, at which place she is to discharge a lot of machinery for the Dorchester Copper Mining Company. - St. John Globe."

Chignecto Post - Dec. 13, 1883 and Daily Times - Dec. 14, 1883 The new building at the copper mines are about completed. Joseph Revere arrived here from Boston yesterday, his office is over the post office."

Chignecto Post - Dec. 20, 1883 Dorchester.- a five-ton boiler for the coppermine was yesterday morning taken through the corner by a five-horse team, under the direction of Mr. Revere, who in a month will have the hoisting and pumping apparatus

Moncton Daily Times, Page 3 - Thursday, December 20, 1883 LOCAL & PROVINCIAL - Colonial Copper Mines - A Dorchester correspondent writes: The huge boiler of the Colonial Copper Works attracted considerable attention as it passed through the town to-day from the Works."

Weekly Transcript - Dec. 26, 1883 The Colonial Copper Mining Company. - The Transcript has been favored with a copy of the reports on the property of the Colonial Copper Mining Company, with the results of assays. The Company has a capital of $500,000 in 100,000 shares of $5 each. Hon. George Wheatland, of Salem, Mass., is President, William L. Candler, of Boston, Treasurer and Frank Q. Brown of Boston, Secretary. Their mining property of 300 acres, known as the Chandler-Crossman property, is situated some two and a half miles from Dorchester, and adjoins the Dorchester Copper Company's property, purchased by Boston capitalists. We subjoin some particulars in regard to the mine from the report of Mr. J.H. Ely who inspected it:- Water and timber are in abundance; facilities for working these mines could not be better; everything on the ground that a mining district would require to carry out a successful mining business; two and a half miles from a railroad and four miles from navigation; thirty five to forty feet of tide water; can load a thousand ton ship within four miles of these mines to point of shipment. Concentration works can be erected at a cost of from eight to ten thousand dollars, that will work fifty tons per day; to double this amount, or one hundred tons per day, would cost less in proportion. Mining, hauling, and concentration would not cost over three dollars and a half per ton. All the ores, including the low grades, will average eight per cent, which is less than I have tested. I had on average of three hundred pounds worked in New York. I took all classes of the ores, from one per cent up, together with a lot of barren rock, in order to show the formation. The working of this entire lot gave a result of 8 68/100 per cent of copper. Hoisting works and pumping machinery will be required to clear the mines from water before any great depth can be reached. Everything is very cheap in the country: labor from 75 cents to $1.50 per day; board and lodging, from $3.00 to $3.50 per week; wood, $2.00 per cord; coal, $2.00 per ton; lumber, from $7.00 to $10.00 per M. I am satisfied from my examination of these properties, and my personal knowledge of mines in New Mexico and Arizona, that these mines can be worked at a larger profit and at less expense than any copper properties in the West. The reports of a number of assays made from the various openings of different grades of richness show from 19 to 78 per cent of copper and a considerable percentage of silver in addition."

URN: 0087 / IDX_Names: Dorchester Copper;
Chignecto Post - Feb. 22, 1883 and Moncton Daily Times - Feb. 23, 1883 It has been rumored that copper has been found on the farm of Mr. A. Palmer, and also that the Couch mine will soon be reopened."

Chignecto Post - Feb. 22, 1883 It is stated that the injunction on the Couch copper mine has been withdrawn and that Revere will soon recommence operations."

Chignecto Post - Mar. 29, 1883 It is stated that the injunction on the Couch copper mine has been withdrawn and that Revere will soon recommence operations."

Chignecto Post - May 3, 1883 A correspondent writes to correct the statements in the press regarding the Dorchester copper mines. Except as one farm, that of Mr. Wm. Chapman, the outcrop of copper is all found in Sackville parish, notably the freeholds of Messrs. Geo. King, Alpheus Palmer, Chas. Crossman, Daniel Crossman, Geo. W. Crossman, and E. Babcock, therefore our correspondent says the mines ought to be known as the Sackville Copper Mines. Our correspondent says that Dorchester has received $9,000 for their rights, whereas Sackville has received $16,000, exclusive of sums paid within a few days. All the metals that have been taken to Boston to affect the sales have been taken from Mr. King's property, which is located in Sackville."

Chignecto Post - May 3, 1883 A sale has been affected of the Turner copper rights by Mr. Mooney to a Boston Company, and the latter set a number of men at work on Monday last."

Chignecto Post - May 3, 1883 Major Howell's company have purchased a large number of rights at Woodville, from Geo. W.

Chandler, (lands formerly owned by Robert and Benson Bowser), Chas. Crossman, Geo. Card, C.A. Fillmore, W.H. Bowser, B. Card, and Jas. Anderson. The only copper found at Woodville is on the Chandler land. Last year they drove in a level 50 feet and sank a shaft 40 feet. Major Howell is expected to return this month."

Chignecto Post - May 3, 1883 Mr. Mooney has purchased some rights in Fairfield and has paid Mr. Daniel Crossman $800; H. Fillmore, $350; Thos. Wry, $350. He has also secured the leases from Miles Card, James Wry, Jos. Wry, Wm. Wry, Alpheus Crossman, and Wm. Crossman, for the purpose of making explorations."

Moncton Daily Times - May 4, 1883 Copper in Westmorland. - Mr. Mooney of Boston, has been prospecting at Grand Ance and purchased rights from E. Babcock and others. He has also purchased rights in Fairfield, from Donald Crossman for $800, H. Fillmore $350, Thos. Wry $350, and also has leases from Miles Card, James Wry, Alpheus and Wm. Crossman and others, for purposes of exploration. - Major Howell's company have purchased a large number of rights at Woodville, from Geo. W. Chandler, (land formerly owned by Robert and Benson Bowser), Chas. Crossman, Geo. Card, C.A. Fillmore, W.H. Bowser, b. Card, and Jas. Anderson. The only copper found at Woodville is on the Chandler land. Last year they drove in a level of 50 feet and sunk a shaft 40 feet. Major Howell is expected to return this month. - Condensed from Post."

Weekly Transcript - Nov. 7, 1883 Dorchester.- Work at the Copper Mines is progressing with remarkable vigor. Almost 50 men areemployed. The large building now being erected under contract by Mr. R.C. Donald is being shingled. The plastering will be commenced this week and the building it is expected will be ready for occupancy by December 1st. The company working the mines has been organized in Salem, Mass., and are called The Colonial Copper Mining Company. It is rumored that work on the Couch Copper Mines is to be resumed at an early day by the Revere Syndicate."

Chignecto Post - Nov. 15, 1883 Mr. James Anderson is getting out the frame and lumber for the building to be erected for the Copper Mining Company at Woodville. The building is to be 100 feet long by 40 feet wide and four stories high."

Chignecto Post - Nov. 22, 1883 and Moncton Daily Times - Nov. 23, 1883 Major Howell has rented Mr. C.E. Knapp's house and now lives at Dorchester, superintending the works on the Chandler-Crossman copper properties."

Weekly Transcript - Nov. 28, 1883 Dorchester. - The Copper Mining industry is progressing. Mr. Joseph Revere is expected here as mining engineer for the new company. The mine now being working is not the Couch mine as is supposed by many. I will favor your readers with a full report of the operations next week."

URN: 0087 / IDX_Names: Dorchester Copper;

Chignecto Post - Nov. 29, 1883 Copper Mining at Dorchester.- Your reporter called on Major Howell, the affable engineer of the mine now being opened at Dorchester, and explained that the object of his visit was to obtain information regarding his copper property. Major Howell stated his mine is not the Couch Mine, nor are the two mines connected in any way. This mine is owned by the Colonial Copper Mining Company, which is composed of Maine and Massachusetts capitalists, the unsubscribed stock being $500,000. Reporter:- Is the Couch Mine still under the chancery injunctions? Major H.:- Don't know. They are doing nothing with the mine and it is said the Couch estate is still in the courts. The Couch Mine is located south-west of ours. Ours is above the road, on the Chandler-Crossman property and embraces over 300 acres, and was developed about a year ago by myself. Reporter.- You just happened to hit the right spot. Major H.- No I didn't, for things don't happen with miners. I followed up the surface outcrops, and then dug down till I struck the ore. Reporter.- You could see the edge of the seam then? Major H.- No. There is no seam like some mines. The ore lies in layers or blankets one above the other, of which we have found four so far. We struck the first 22 ft. below the surface. It is a low grade of ore. A little lower we struck the second blanket which is conglomerate about 2 1/2 ft. thick. Going further down, we struck a 2 ft. layer of calcspar, which is a crystallized carbonate of lime, and immediately below the calcspar is a 12 inch blanket of fine copper ore. The fourth blanket is down 60 ft. below the surface and, although we have pierced 8 ft. into it, we are not yet through it and do not know how deep it may go. This blanket is the profitable one and is composed of the grey sulphide of copper ore, as we call it, chalcocite, if you can spell the word. There are comparatively few mines of chalcocite and the silica contained in it keeps it in great demand among copper works, as in smelting it with lower grades of ore the silica acts as a flux for both and so facilitates the operation. One firm in Swansea, Wales, is anxious to contract for all the ore we can mine; while the other firms in Germany and in the United States will gladly take all we can give them. Do these blankets lie flat? No, they incline a little, the upper ones more than the lower. They probably then all converge, do they not, into one still larger seam? I don't know that they do. They may or may not, as you can't rely much on inferences. How do these copper layers form? These blankets are of water formation, that is they have been deposited under water in the early ages, and the lignite we find here has developed the ore, that is the way it acts. The formation is what is known as carboniferous, and there are traces of silver all through where we are working. The strata we are working in now yield from 20 to 25 per cent. of pure silver, and the silver develops more richly as we get lower. Some geologists think that this mine will develop into a silver mine before we get down much further; but whether it does or not, we are now getting out silver enough to pay for running the whole mine, so that all the copper will be clear profit. Do the blankets and other formations in your mine correspond with the Couch Mine? No, they do not correspond at all, strange to say. In the Couch mine they struck marl the first thing, and their copper was in conglomerate; we, on the other hand, have struck no marl, and our ore is, as I told you, the grey sulphide. What works are you putting up now? Well, besides our boarding house, which is now up and will accommodate about 100 men, we will put up an ore house 20 ft. by 34 ft., a shafting and engine house for the steel boiler and engine, besides which we will, in the spring, put in air compressors and air-drills, steam pumps, and finally the stamp mill and concentrator. What is the concentrator for? To reduce the copper to the sulphide ready for shipment to the smelting works. What is the value of the sulphide so concentrated? About $180.00 per ton. You ought to tell your Editor to go in and see the mine, and he will find one of the finest shafts to be seen this side of the Rocky Mountains. The waterproof curbing around the top of the shaft is composed of timber and Paris cement to a thickness of three feet and over, and extends down seven feet, below the frost, so that not a drop of surface water can enter the mine. Tell the Editor also to send me a

S.J. Daily News - Oct. 17, 1883 It is said that a Boston Syndicate has purchased a copper mine at Dorchester and will commence operations on a large scale at once."

Chignecto Post - Oct. 18, 1883 It is reported that Boston capitalists have purchased a copper mine here and will open it upon a large scale."

S.J. Globe - Oct. 19, 1883 and Daily Times - Oct. 23, 1883 Valuable Mining Interest. - It is stated Messrs. Chandler and Crossman receive $11,000 for their interest in the Dorchester Copper rights. The money has been paid over by Mr. H.R. Emmerson, the agent and Solicitor for the Boston Company of Capitalists."

S.J. Globe - Oct. 19, 1883 Major H.F. Howell arrived at Dorchester, Tuesday, in the interest of the Boston company of capitalists who have purchased from Geo. W. Chandler and Chas. Crossman the mining property - the ore from which has proved to be so very rich. Expensive machinery is to be erected and the work of mining is to be commenced on a large

Moncton Daily News - Oct. 23, 1883 and Weekly Transcript - Oct. 24, 1883 Dorchester. - Jos. Revere, Esq., mining engineer of Boston, well and favorably known in Dorchester is here looking after the new mines - work on which has commenced. Mr. Revere will return to Boston tonight. Mr. R.C. McDonald has received the contract for building the large boarding house at the mines - The foundation for pit house, engine house, etc. and for the large and heavy machinery will be commenced on Monday. The ground for boarding house is being chosen and stone for foundation quarried. A large crew of men will be at work next week. Messrs. Chandler and Crossman receive $11,000 for their interest in the Copper Mining rights. The money was paid over today by Mr. H.R. Emmerson, the agent and Solicitor for the Boston Company of

Chignecto Post - Oct. 25, 1883 Joseph Revere, Esq., mining engineer of Boston, was here last weekend looking after the new mines, work on which has been commenced. Mr. R.C. McDonald has received the contract for building the large boarding house at the mines. The foundation for pit house, engine house, etc., and for the large and heavy machinery have been commenced. The ground for the boarding house is being chosen and stone for the foundation quarried. A large crew of men are at work. Messrs. Geo. W. Chandler and Charles Crossman receive $11,000 for their interests in the Copper Mining rights. The money was paid over on Saturday."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Globe - Oct. 26, 1883 and Daily Telegraph - Oct. 27, 1883 The Dorchester Copper Mines. - Arrest of the Engineer. - The mining enterprise of New Brunswick have heretofore been attended with a certain amount of litigation. The recent attempt to open the Dorchester copper mines seems to be no exception to the rule. It appears that Mr. W.A. Patrick (agent for the electric light) in times past was interested in some of the Dorchester mining properties. Through lack of means or other causes his interest lapsed, but the recent sale of the mining properties of Messrs. Chandler & Crossman, to a Boston syndicate, has given rise to a little excitement. Major Howell, the engineer of the syndicate, arrived in town on Tuesday evening to make purchases on behalf of the Company. Yesterday Mr. Howell was arrested at the Dufferin Hotel by Deputy Sheriff Rankin, at the instance of Mr. W.A. Patrick, for a certain amount which Mr. H. entirely repudiates, and for which he claims to hold receipts. When arrested, Mr. Howell requested the Deputy Sheriff to call at the office of Mr. C.A. Stockton, which was done, and an arrangement was there made for his appearance. In the meantime, Mr. H.R. Emmerson, of Dorchester, was telegraphed for and he arrived this morning, in company with Messrs. Geo. W. Chandler and S. Edgar Wilson, who agreed to enter into bonds in the sum of $15,000 for Major Howell's appearance in the Supreme Court. This afternoon Mr. Emmerson applied to Judge Palmer for special bail."

S.J. Globe - Oct. 27, 1883 Dorchester Copper Mines. - The Dorchester Copper Mines Company, of which Major Howell is engineer and Mr. H.R. Emmerson is agent and solicitor, has commenced operations in the building line. About fifty men are already employed, and before a week it is expected that about 100 men will be on the payroll of the company. Mr. R.C. Donald, of Moncton, has the contract for the large boarding house now being erected, and plans and specifications have been prepared for the large pit house, soon to be built. The schr. Ethel Emmerson, Capt. Elias Tower, has been chartered to bring the machinery for the works from Boston. Other houses and buildings will shortly be erected. Mr. Joseph Revere, the consulting engineer, recently visited the mines, and was most favorably impressed with the prospects. Before many months elapse a force of 200 men will probably be employed, and the output of the mines is expected to be large. The company is composed of capitalists residing in Salem and Boston, and they are so much encouraged by the reports of the engineers that they are preparing to carry on large operations during the winter. A ready market for the ore mined is already secured in Massachusetts and Swansea, and in the spring shipments will, it is expected, be made on a large scale."

Weekly Transcript - Sep. 5, 1883 Dorchester. - Messrs. A. McKay, S.E. Wilson, Dr. Church, Capt. Upham, A.D. Richard and A.W. Chapman are the happy owners of a rich copper mine. We trust that our friends have struck a bonanza. At present we cannot give them away on the location."

Chignecto Post - Sep. 27, 1883 Dorchester.- Mining fever is again raging, but is chiefly confined to Dorchester speculators."

Weekly Transcript - Apr. 16, 1884 Dorchester - Mr. Jos. Revere returned from Bostonon Friday. He was accompanied by one of his brothers who came down on a short visit to see the country."

S.J. Globe - Aug. 5, 1884 and Moncton Daily Times - Aug. 6, 1884The Colonial Copper Company, Dorchester, has recently made several shipments of ore to Boston, which have given a good average return and are very satisfactory to the owners. The company have drifted some 300 feet from the shaft on the lower level and finds a continuous body of ore, with a large quantity of low grade ore, containing by assay 6 1/2 per cent. copper. For some five months the company have been having experiments made in concentration of their low grade ore without suffering too large a loss of metal and one that should not prove too expensive. Having succeeded in accomplishing both results to their entire satisfaction, they dispatched Colonel W.L. Candler down to the mine to make an examination of the property and also to estimate the quantity of low grade ore on the dump. Col. Candler has had many years experience in mining and mines. His report to the directors was very satisfactory, the company having ore enough for many years working, and he stated in very emphatic terms that the company had a very valuable property and would, if equipped with concentration machinery, pay largely. The low grade ores are practically inexhaustible. Upon Col. Candler's report, the company have decided to erect the necessary machinery for concentration. This will give an impetus to this industry and increase the shipments of ore, which will increase the value to $160 per ton. Sixteen tons of the low grade ore will be required to produce a ton of metal."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Dec. 17, 1884 Copper Mining. - The New York Electrical Review contains an interesting article on copper mines and the copper trade, an extract from which, given below, will be particularly interesting in this section. The Review says: The leading copper property of the East is that known as the Betts Cove mine, in Newfoundland. This mine produces very large quantities of low grade copper sulphurets which are shipped direct to Swansea. They employ some 600 miners and have their own church and schools. The Company are obliged to carry a very large stock of supplies, being cut off from the market several months of the year. The average value is $250,000. In buildings and plant over ground the values are estimated at one million. The ores are low grade 2 1/2 per cent to 3 1/2 per cent. Yet Mr. Ellerhausen, the manager and part owner, states that the large yield pays very handsome dividends. The Coxheath Mine, near Sydney, Cape Breton, is also copper sulphurets, carrying some silver. This mine is principally owned and controlled in Boston; the ores vary from 3 1/2 per cent to 27 per cent. A large amount of money has been expended in opening and developing this mine, and a large amount of ore raised, and it is understood that their market is Swansea. The Province of New Brunswick is also very rich in copper ores as other valuable minerals. The countiesof St. John, Kings, Albert and Westmorland, all have deposits of copper. The latter, however, is probably the richest, and covers a large area between Dorchester and Sackville. The ores of this district are chalcocyte or copper glance, and are found in the sand rock of the lower carboniferous formation. They lie in stratas, one above the other, varying in thickness from four to ten feet, and dip to the south-east. The ores assay from 2 1/2 per cent. to 76 per cent., but will average about 10 per cent. This district was hardly known four years since, but it is now being worked to a limited extent, and very successfully, and is the cheapest mining district known. Lumber, fuel, and living, are very low, and being at the head of Chignecto Bay, has water communication with the world, and by the Intercolonial Railway to any portion of the Dominion or the United States. The ores of these mines are sought for by smelters on account of the silica they contain, and are used by smelters in Swansea to mix with low grade sulphuret ores. The Colonial Copper Mining Company have erected substantial buildings and put in good machinery, and started some ten months since to develop their property with a view to determining, first what kind of plant was necessary to erect to work the ores successfully; second, to prove the quality of ore sufficient to warrant the erection of suitable plant; and their ten months' work has proved that the ore bodies are practically inexhaustible, and that the ores can be mixed, raised, crushed, and concentrated at less than two dollars per ton. New Brunswick will soon come to the front as the cheapest copper producing district on the continent. A little American capital would soon develop Westmorland county into a rich and prosperous mining county. Only 32 hours from New York by rail, capitalists can work these properties under their own supervision. The development of the Colonial Copper Mining Company's property, some facts in relation to which were given in the interesting sketch of Dorchester we published a few days ago, has created considerable stir in Dorchester and vicinity during the past season. The parties interested feel that they are the owners of a valuable property, and are making

S.J. Globe - Dec. 18, 1884 Copper Mines and the Copper Trade. - A late number of the New York Electrical Review contains valuable information for those interested in the copper mining industry. The article points out that the quantity of copper ore exhibited has developed very rapidly since the year 1880, when the total output of copper in the United States was estimated at 27,000 net tons. This year according to estimates made on the basis of the known output of a large number of mines for ten months, the production is likely to be 70,000 net tons. The enormous increase in the yield of the ore is owing to the working of a number of new mines, and the developing of old ones. The effect of this increased production has been a rapid lowering of prices not alone in the United States, but also abroad where the arrival of large quantities of ore, matte, black copper, and ingot, have effectively defeated any attempt to raise prices. It has also forced United States speculators to become exporters of copper in every form, from the ore to ingot, and has put them into a fierce competition in the open markets of the world with all the great copper producing countries of Europe, Africa, South America and Australia, which thus far have supplied them. The following reference is made to the mines in New Brunswick: The Province of New Brunswick is also very rich in copper ores as well as other valuable minerals. The counties of St. John, Kings, Albert and Westmorland, all have deposits of copper. The latter, however, is probably the richest, and covers a large area between Dorchester and Sackville. The ores of this district are chalcocyte or copper glance, and are found in the sand rock of the lower carboniferous formation. They lie in stratas, one above the other, varying in thickness from four to ten feet, and dip to the southeast. The ores assay from 2 1/2 per cent. to 76 per cent., but will average about 10 per cent. This district was hardly known four years since, but it is now being worked to a limited extent, and very successfully, and is the cheapest mining district known. Lumber, fuel, labor, and living, are very low, and being at the head of Chignecto Bay, has water communication with the world, and by the Intercolonial Railway to any portion of the Dominion of the United States. The ores of these mines are sought for by smelters on account of the silica they contain, and are used by smelters in Swansea to mix with low grade sulphuret ores. The Colonial Copper Mining Company have erected substantial buildings and have put in good machinery, and started some ten months since to develop their property with a view of determining first what kind of plant was necessary to erect to work the ores successfully; second to prove the quantity of ore sufficient to warrant the erection of suitable plant, and their ten month's work has proved that the ore bodies are practically inexhaustible, and that the ores can be mined, raised, crushed and concentrated at less than two dollars per ton. New Brunswick will soon come to the front as the cheapest copper producing district on the continent. A little American capital would soon develop Westmorland County into a rich and prosperous mining county. Only 32 hours from New York by rail. Capitalists can work these properties under their own supervision."

Moncton Daily Times - Jan. 11, 1884 Dorchester. - The lofty gallows-frame has been raised over the main shaft of the Colonial Copper mine. The blasting at the mine is done with dynamite fired by electricity. A. McB. Howard, D.M.E., oversees the mine at such times as Superintendent Revere is temporarily absent."

URN: 0087 / IDX_Names: Dorchester Copper;
Moncton Daily Transcript - Jan. 19, 1884 and Weekly Transcript - Jan. 16, 1884 The Mineral Wealth of Westmorland. - THECOLONIAL COPPER MINING COMPANY. - (corrected). – The majority of your readers would perhaps be interested in a sketch of the beginning and rise of an industry which now promises to realize the most sanguine expectations of those of our citizens who have from the discovery believed in the future of the copper mines, in the immediate vicinity of Dorchester. Some six years ago copper was discovered on the property of George King, and the discovery attracted the attention of several capitalists and scientific men. However, scientific men disagreed, and some of them decide that copper was not found in such formation. In consequence of the adverse reports, men having capital declined to take hold and develop any of the property, even when copper was found near surface. In 1878 Messrs. E.A. Record and E.T. Trites of Moncton, with Mr. David Grant, a practical miner, obtained bonds for the mineral rights of several properties for a length of some two miles. Then they bonded the whole to Messrs. Couch, Wilder and Foster, of Boston, who after satisfying themselves that copper was to be found in almost inexhaustible quantities, placed the property on the Boston market, where it was soon taken by a Syndicate of Boston capitalists at a very large price. These gentlemen had the option of working the properties for six months, and if they found the value could conclude the purchase; the test of six months proved the value of the property and the purchase was completed. Unfortunately, litigation soon followed, and this very valuable property has lain idle since that time. This has been a serious drawback to other properties, and delayed their development, capitalists and speculators waiting to see the result of working the syndicate property. The explorations upon this property were made under the supervision of Joseph W. Revere, M.E., and were as thorough as the time given in the option would permit; they demonstrated the fact that large bodies of glance copper or chalcocite existed, in veins lying in the sand rock at an angle varying from 15ø to 30ø, and showing fixed carbon wherever these veins were struck, thus proving that it was a water formation, and the ore would be found in the lower carboniferous strata. The ores are rich in copper and easily mixed and concentrated. In the spring of 1882, Major H.F. Howell came to Dorchester in the interests of parties in Boston, and finding that the property which had been represented as adjoining that purchased by the Boston Syndicate did not do so, but was separated by a block of some 300 acres, known as the Chandler-Crossman lots, he made up his mind that he would do nothing unless he could secure this property, (which he succeeded in doing), first becoming convinced from the workings on the property of the Boston company that the trend of the veins were in the direction of the Chandler-Crossman lots. In June he commenced work by driving an incline 115 feet in depth and also sinking a shaft 25 feet. The body of ore found in these two, from the difference in their depth, became proof in his mind that the ore laid in blankets or layers one above the other.

In order to test such opinion he determined to sink a vertical shaft in order to cross cut those vein, and by that means develope to such an extent as would determine the value of the property as a mining enterprise. Having determined upon the course, he at once adopted it, and started a double compartment shaft. We now have to quote from his report:- At the depth of 22 feet we struck red sandstone, impregnated with copper; this vein continued for a depth of 10 feet, but was of low grade, assaying not over 2% or 3%, below this a vein of conglomerate of 2 1/2 feet was struck, carrying a large per cent of copper; below this again a vein of chalcocite of some 16 inches. Soon after leaving this calc-spar of one foot in thickness, after going below the spar, the present vein was struck, the thickness of which is not yet determined, but is now from 8 to 10 feet. Without machinery or any appliances or building to continue the work, it was discontinued. The surface water had to be raised with tubs by a windlass and it was out of the question to continue. However, this exploration developed the fact that these veins were nearly horizontal, and lay one above the other; but to what depth can only be determined by continued sinking. It also became evident that the copper was in quantities sufficient to warrant the putting up of a large plant and substantial buildings to fully work this property to the best possible advantage, as the various openings on the property showed a sufficient quantity of rich ore to work a large force of miners for some years to come. The assays made of these ores range from 3% to 78%, the average yield of the rock from the working shaft being 8 1/2%, thus evidencing the great value of the property. There are other and important considerations to be thought of in placing an estimate of the value of such a property. Only three miles from tide waters, where ores can be cheaply freighted to any part of the world, where coal is very cheap, within 36 hours of the principal cities of the Atlantic coast, it is evident from all these that no western mines can compare with the mines of Westmorland County. The copper ores are not confined to the properties named, but continue for several miles to the north-east and from the developments made up to this time indicate larger veins or bodies of ores. In June, 1883, the extended bonds of Major Howell expired. Mr. Geo. W. Chandler was thoroughly satisfied of the value of this property and purchased the interest of Mr. Charles Crossman in the mining rights of the property. In the early part of September a party of capitalists visited Dorchester for the purpose of making a personal examination of the Chandler-Crossman property. The water was taken from the shaft, the miners set to work and two blasts were put in. The ore raised, sufficient to fill an ordinary kerosene barrel, was put into the barrel by these parties, sealed up and shipped to the Institute of Technology, Boston, where it was crushed and assayed by Professor Richards, showing 8 1/2% copper. This was the ore as it came from the pit, without any selection or dressing. Later in September, Mr. Chandler went to Boston and succeeded in a short time in selling the property to a syndicate of Salem and Boston gentlemen. The services of Major Howell were secured by the Syndicate and he was sent here with instructions to erect and complete such buildings as were necessary to begin the raising of ores this winter. The season was late to begin such work, but it was started and pushed. A few days after his arrival he had closed a contract with Mr. R.C. Donald, of Moncton, for the erection and completion of a boarding house to accommodate the large number of men who would of necessity be employed. Under the terms of the contract this building was to be completed by Dec. 1st 1883. The main building 26 x 40 feet with stone foundation under the whole, two storeys in height, an addition 20 x 25 feet also two storeys, with a cellar under the whole, the building to be painted and plastered in first-class style. Later the contract for the shaft house, engine house, outhouse and boiler house was made. When your readers are aware that the lands had to be cleared of a dense growth of timber, they will readily see that it was necessary to drive the work. At the pit there was a large amount of stone work which had to be completed before the frost set in or the entire buildings left until spring. Mr. James Reed, of Dorchester, with his usual energy, however, overcame all difficulties and completed the foundations before the cold weather set in. Your readers may be interested in a description of these buildings. The pit head has been timbered and finished with Portland cement from the top down 7 feet to the rock, to prevent surface water running into the shaft. The ore house is 25 x 20, and is placed on the former dump of the shaft. The main building, which includes the shaft house and engine house, is 34 x 55', and 37 feet high to the plates. This height was necessary as Major Howell intended that his gallows frames should be 37 feet in height. On the right of the frames is the space provided for the air compressing engine, and at the end of the building is the foundation for the steam hoisting engine. Next is the boiler house, 34 x 35 with brick stack in the corner. The last of November the Syndicate sold the property to The Colonial Copper Mining Company. Their staff of officers are made up of men of character and ability. After the organization of the Company, Major Howell who was suffering with rheumatism asked to be relieved from active work. His request was granted and Mr. Joseph W. Revere sent down to take charge. He has pushed the work vigorously, and in addition to the buildings already in process of erection has built a blacksmith shop 20 x 30, and a magazine 8 x 12. The machinery was shipped from Boston by the schooner Ethel Emmerson, Capt. Tower, arriving on Sunday, unloading on Monday, and on Thursday all the machinery, including the boiler, was safely landed at the mine where it is rapidly being placed in position. We understand that it is the intention of the Company to place in position in the spring a large air compressing engine capable of running three sets of drills, which will enable them to raise a very large amount of ore. Also to erect a stamp mill and concentration works, as they have demonstrated by trial that these ores can be easily concentrated. This being the fact these mines can be worked at a very large margin of profit. Should the weather not continue so intensely cold as at this writing, Mr. Revere expects to begin raising ore within ten days. The Company have a good staff here. Mr. Joseph Revere, M.E., in charge, Mr. Allan McBirney Howard, Clerk, Henry R. Emmerson, Solicitor for the Company, Luke McAllister, Mining Captain, and our genial Hibernian Friend Jimmy Connors, and his wife - the host and hostess of the Model Mining Boarding House. The equipment of the mine is first-class in every respect, and the success of the enterprise is assured. The question of large deposits of copper ore is no longer a debatable one, but a fact demonstrated beyond any question of a doubt. Mr. Chandler having sold the property and received his money, could not let the interest he had so long held pass entirely out of his hands, and has within a few days purchased a large block of the Company's stock, and we think Mr. C. was wise in doing so. Why should we allow all the profits arising from our great mineral wealth to be taken from the country? All should secure whatever amount of this Company's stock their means will allow, while the

Chignecto Post - Jan. 24, 1884 Major Howell has completed the opening of the Colonial Copper Mine and leaves next week for the United States via Montreal. Joseph Revere, Esq., will be the resident engineer and manager."

Chignecto Post - Jan. 24, 1884 The machinery in the Colonial Mine has been placed in position. Mining ore will be commenced in a few days."

Moncton Daily Transcript - Jan. 28, 1884 and Weekly Transcript - Jan. 30, 1884 Woodville Copper Mine - steam up (Dorchester Jan.26): The inhabitants of Woodville were startled from their slumbers at an early hour this morning by the steam whistle of the Colonial Copper Mine. This being the first time that the Company have had steam on at this mine it was impossible for the people of that quiet neighborhood to realise that they were at home. One man, we understand, intending to take the train at nine o'clock imagined that he had over slept himself and ran in the direction of the sound not waiting for his breakfast. The Company have to-day commenced pumping the water out of the mine and will commence raising ore on

Moncton Daily Transcript - Jul. 21, 1884 and Weekly Transcript - Jul. 23, 1884 and Chignecto Post - Jul. 24, 1884 Col. Candler, treasurer of the Copper Mining Co. arrived here (Dorchester) today. He is accompanied by two gentlemen also interested in the Copper Mines here."

Chignecto Post - Jun. 19, 1884 The Colonial Copper Mining Co. commenced shipping ore from their mine on Monday both by water and rail."

Moncton Daily Transcript - Jun. 23, 1884 The Colonial Copper Mines in Sackville parish and five miles from the centre of this village, and three from Dorchester Corner, are now being extensively and profitably worked. On visiting the Mines a few days ago we found the manager, Mr. Revere, who was at his office, kind and courteous, willing to give any information in connection with the Mines and showed us through all the buildings, which now consist of a shaft, engine and boiler house, an ore house, blacksmith shop, a large boarding house and manager's house and office. They have first class machinery for hoisting and pumping, and are now working the Mine day and night. The ore is rich and of a fine quality. Some of the finest specimens were taken out the day we were there that had ever been taken from the mine. The ore at present is classed Nos. 1 and 2 and shipped to the Boston market where it finds a ready sale. About five hundred dollars worth was shipped from Dorchester station the day we visited the mine."

Chignecto Post - Mar. 20, 1884 Dorchester.- Major Howell is expected on Thursday."

Chignecto Post - Mar. 20, 1884 The Colonial Copper Mine is petering out famously."

Chignecto Post - Mar. 27, 1884 A residence for the engineers is being erected at the Colonial Copper Mine. It was commenced a few days ago and is to be occupied next week. It is built on scientific principles and without the usual plaster

Chignecto Post - Mar. 27, 1884 Dorchester.- Major Howell, Manager of the Colonial Copper Mine, has taken up his residence at the Brunswick House."

URN: 0087 / IDX_Names: Dorchester Copper;
Weekly Transcript - May 7, 1884 Dorchester.- The house erected at the copper mineby Mr. Revere as a residence for himself and Mr. Howard, his assistant, is ready for habitation. The interior is finished in a peculiar style, being sheathed with cedar shingles laid diagonally. The large open old fashioned fire place is a novel feature of the building. The road to the copper mine, via Woodlawn, is in a frightful state."

Moncton Daily Transcript - May 22, 1884 ....Reports from the copper mine are very assuring as to the permanent success of the investment. Upon its success largely depends the advancement of Dorchester."

Weekly Transcript - May 28, 1884 Dorchester. - Mr. George King, well known as the pioneer of the copper mining enterprise here, has invested some of his surplus cash in a fruit tree nursery ..... Reports from the copper mine are very assuring as to the permanent success of the investment. Upon its success largely depends the advancement of Dorchester. Mr. J.W. Revere, manager of the copper mine, is absent in Sydney, C.B."

Moncton Daily Times - May 29, 1884 Fredericton. - Argument in the Couch Estate Case. - (Special to the Times.) - Fredericton, May 28. - John N. Pike, administrator, vs. Jannete J. Couch, was argued before the Chief Justice to-day, D.L. Hanington, Q.C., and W.W. Wells for plaintiff, and R. Barry Smith for defendant. This was an application to dissolve an injunction obtained by the plaintiff against the defendant, restraining her from conveying or interfering with certain real estate known as the Phoenix Hotel property in the town of Moncton; also real estate in King's County, and requiring her to account for the sum of four thousand dollars, all of which property was given to her by her husband during his life-time, and which the administrator of her husband's claims should be made assets of his estate. His Honor reserves judgment."

S.J. Globe - May 30, 1884 Equity Court. - Messrs. D.C. Hanington, Q.C., and W.W. Wells moved to dissolve an injunction granted in the suit of Couch vs. Pike, restraining the latter from selling or disposing of any of the property belonging to the estate of the late E.F. Couch, of which he is administrator. Mr. R.B. Smith appeared to oppose the application, but an arrangement was effected."

Moncton Daily Transcript - May 31, 1884 .... A large portion of the land on Beech Hill has been leased for prospecting purposes. The expectations are of finding rich deposits of copper ore."

S.J. Globe - Oct. 7, 1884 Dorchester, its Improvements and Copper Mines. -(from an occasional Correspondent). - This old town has awakened from its lethargy, and improvements are going on ...... We naturally ask why this improvement has been going on, and to what it is due. There is only one solution to this enquiry, and that is the development and working of the Copper mine, the large amount of money paid out by the Colonial Copper Mining Company every month to its employees having stimulated these various improvements. After continued working for the past nine months this mine has demonstrated its capacity to produce an unlimited quantity of ore, thereby making it a permanent industry. A short time since we drove out to the mine for the purpose of getting any new facts regarding the product, working, etc. We did not find Mr. Revere, the genial and affable manager, but were courteously received by his assistant, Mr. Howard, who kindly showed us the working of the mine, the ores being raised and the immense dump of low grade ores, which he informed us would pay very handsomely when crushed and concentrated. There is of this quality on this dump about 3000 tons, which by working, will yield from 4 per cent. to 7 per cent. copper. The west drift is now being worked and on a very fine vein of first class ore. Mr. Howard says that the face of the drift was fully ten foot. We saw a large dump of the ore from this drift and it had the appearance of being exceedingly rich in copper. When the company have placed their crushing and concentration machinery and put in power drills to increase their output to 100 tons per day it is claimed this mine will be one of the most valuable properties in the Province. The manager's house is very unique, and in the absence of Mr. Revere, Mr. Howard dispenses the hospitalities of the mansion. The copper property belonging to the Boston syndicate, and adjoining the Colonial mine, is a rich and valuable mine, and our people are anxious to see all difficulties settled and this rich mine placed upon a paying basis. Mr. Revere's visit to Boston is for the purpose of testing the best methods of concentrating these ores and superintending the construction of the necessary machinery. Mr. Howell has been for some months engaged in securing property on this lode or belt of ore, and having it mapped by the Provincial Land Surveyor, Mr. Chas. Palmer. Mr. W.C. Milner has secured about 6000 acres, and has found some of the finest copper yet discovered on the river. Mr. W. Hickman has caught the spirit and will, in the spring, develope some 200 acres to the north-west of the Colonial mine."

S.J. Daily Telegraph - Oct. 7, 1884 Copper Mining in Dorchester. - A correspondent writes: The Colonial Copper Mining Company of Dorchester are now employing 45 men. Since the company commenced operations with Mr. Joseph W. Revere as manager they have shipped large quantities of the finer grades of ore to Boston. In addition they have now on the dump $30,000 worth of the lower grades of material, yielding from 4 to 7 per cent of metal, and Mr. Revere is now in Boston selecting machinery to crush and concentrate the ore, besides several power drills to increase the output of the mine. The mine is now turning out the best quality of grey copper ore ever produced in this vicinity from the west drift, 100 feet level. It is estimated that the additional machinery which the company are about to purchase will cost $20,000, and will enable them to fully develop the immense copper deposit they are now working. All the ore now mined is raised by steam and the machinery employed is of the best quality. Dorchester is showing marked signs of prosperity at present, thanks to the amount of money which is being expended in wages for the miners."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Dec. 16, 1885 Dorchester County Court. - Andrew Wilson, for assault, has not been sentenced yet. Wilson is recognised as a man who appeared here at the sale of the Colonial Copper Mine last summer and claimed to represent the wealthy mining firm of A.S. Wilson & Co. of New York. The upset price of the mine had been fixed at $500 by the courts in the interest of the estates, but Wilson, who sauntered around in a non-chalant way in a wonderful stovepipe hat and Prince Albert coat, ran the property up two hundred dollars at a bid and it was finally knocked down to him at $1500. When asked for the required deposit of $500 Wilson said the money was on the noon express, and he would ask for a few minutes delay, pending its arrival. Elmer D. Howe, who was acting for the Boston company, objected to this, and before the hour of sale had expired, required the property to be sold over again, when it was knocked down to Howe at $510.00. If Wilson had been shrewd enough to drop it at $1200, he might have made $700 or so, clear. In court here, as the woman beater from a back street of Moncton, he lacks the distingue air which surrounded him on the former occasion when posing

Chignecto Post - Jan. 8, 1885 Mr. Howard of the Colonial Copper Mine returned from a short visit to Boston on Monday."

Daily Telegraph - Jan. 17, 1885 Gold Discovery. - The Colonial Copper Co. intend to ship this week ten tons of marl to Boston, to have the gold extracted from it, the previous half ton shipped having yielded at the rate of from $4 to $6 per ton. The deposit of marl is very extensive. It underlies the copper sandstone and is about thirty feet thick. Should gold be found disseminated through it, as the late experiments tend to prove, it will prove extremely profitable. - Chignecto Post."

Chignecto Post - Jul. 2, 1885 Dorchester.- Sale of the interests of the Couch Estate in Copper properties takes place Friday (to- morrow)."

Moncton Daily Transcript - Jul. 4, 1885 and Moncton Daily Times - Jul. 6, 1885 Dorchester - The Couch Mines were sold in front of the Court House to-day. Quite a series of protests, both verbal and written, were made, but the sale proceeded. The property was knocked down to Mr. A.J. Wilson, representing the well known firm of Wilson, Gardener & Co., of New York, but as Mr. Wilson desired a delay till the arrival of the noon express (about 20 minutes) before putting up his deposit of $500, the administrator's attorney refused to wait and ordered the property to be put up again, when Ebner P. Howe, and his agent, M.F. Dickenson, Jr., Esq., became the purchasers at $505. The price bid by Mr. Wilson was $1,450. Mr. Wilson retained Mr. B. Barry Smith, who was present, to procure an injunction to restrain conveyance to Howe.- Transcript."

S.J. Globe - Jul. 6, 1885 Sale of a Copper Mine. - The Couch Mines, in Dorchester, were sold on Friday. Quite a series of protests, both verbal and written, were made, but the sale proceeded. The property was knocked down to Mr. A.J. Wilson, representing the well known firm of Wilson, Gardener & Co., of New York, but as Mr. Wilson desired a delay till the arrival of the noon express (about 20 minutes) before putting up his deposit of $500, the administrator's attorney refused to wait and ordered the property to be put up again, when Ebner P.Howe, and his agent, M.F. Dickenson, Jr., Esq., became the purchasers at $505. The price bid by Mr. Wilson was $1,450. Mr. Wilson retained Mr. B. Barry Smith, who was present, to procure an injunction to restrain conveyance to Howe.- Transcript."

S. J. Daily Sun - Jul. 7, 1885 The Couch copper mines at Dorchester have been purchased by Ebner P. Howe and Mr. M.F. Dickinson for $505."

Moncton Daily Times - Jul. 29, 1885 Couch vs. Pike. - Judgement has been given in the case of Couch versus Pike, administrator of the estate of the late E.F. Couch, in the Supreme Court at Fredericton. The suit has been dismissed without costs on motion of Mr. Wells."

Chignecto Post - Jun. 18, 1885 and Moncton Daily Times - Jun. 19, 1885 Suspension of Work at Colonial Copper Mines.- On Tuesday, the miners were withdrawn from the pit and level of the Colonial Copper Mine at this place. A POST reporter called at the office of the Company to learn from its representative the nature of the trouble. Mr. Howard stated that he knew very little about the matter, except that he had received orders to cease working. He stated the pumps would be kept going to prevent the mine being flooded. He did not think this meant an abandonment of the property. On the contrary they had some 10,000 tons of low grade ore on hand, which the company intended putting through its contemplated concentrating works. He had heard, however, that the company had not succeeded in securing the necessary capital for that purpose. When the Couch property is sold, it was thought the two companies might join in the erection of concentrating works. The work of mining had not been prosecuted for some months; the men were at work running a drainage level."

Moncton Daily Transcript - Mar. 16, 1885 The Copper Mine Company are getting large quantities of fuel in the shape of wood and coal, which looks as if they meant business during the coming summer. The mine is being actively worked."

Moncton Daily Transcript - May 12, 1885 A rumor is current that the Copper Mining Company have completed the necessary arrangements and will shortly erect works to permit the concentration of the ores at the mines."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Transcript - Sep. 18, 1885 and Moncton Daily Times - Sep. 19, 1885 and Daily Telegraph - Sep. 18, 1885 and Weekly Transcript - Sep. 23, 1885 COPPER MINING. - Marquis F. Dickenson and Granville D. Braman of Boston, D.L. Hanington, M.G. Teed and A.N. Charters of Boston, gives notice of their intention to form the Westmorland Mining Company, with a capital of $50,000, in 100,000 shares of $5 each. The object of the company in the mining and reducing of copper, gold, silver and other ores and materials, with such thing as are incident to the attainment of that object. The office or chief place of business of the company is to be established in Dorchester - Telegraph."

Chignecto Post - Sep. 24, 1885 Dorchester.- M.F. Dickinson and G.D. Braman, of Boston, D.L. Hannington, M.G. Teed and A.N. Charters, of Dorchester, give notice of their intention to form the Westmorland Mining Company, with a capital of $500,000 in 100,000 shares of $5 each. The object of the company is the mining and reducing of copper, gold, silver and other ores and minerals. The office of the company is to be at Dorchester."

Chignecto Post - Apr. 14, 1887 and S.J. Daily Sun - Apr. 15, 1887 and S. J. Globe - Apr. 15, 1887 Major H.F. Howell, well known here as connected with the Dorchester copper mines died recently in New York city."

Moncton Daily Times - Jul. 30, 1887 The Dorchester Copper Mines do not appear to be realizing the expectations of the American capitalists who have sunk so much money in them. It is said by some that the ore is becoming difficult to find in paying quantities; by others that a rise in the market is awaited. I think there is truth in both versions."

Moncton Daily Transcript - Jun. 3, 1887 Dorchester - The copper mine here is completely closed, considerable money was lost by the promoters of the work, although some of our farmers profited thereby."

Chignecto Post - Mar. 10, 1887 and Moncton Daily Times - Mar. 11, 1887 Mr. Howard, manager of the Colonial Copper

Company has left to accept another position in the United States. With copper at its present low price, nothing will be done at present to develop the copper deposit at Dorchester."

S.J. Daily Sun. - Dec. 5, 1888 Copper Mines. - Arrangements have been made for the amalgamation of the Colonial and Westmorland Copper Mining companies and they will begin to operate the mines at Dorchester in the course of a few weeks. Mr. Revere and others are expected shortly from Boston and will take charge of the mines. The output it is said will be larger than ever before."

S.J. Globe - Jul. 13, 1888 The house and barns of Joshua Crossman, at the Copper mine, near Dorchester, were burned Wednesday night. Insured for $450."

Daily Telegraph - May 23, 1888 Dorchester. - It is reported that the copper mine is shortly to be reopened by an American company. This mine has been closed for some time."

Chignecto Post - May 24, 1888 It is understood that an American Company will shortly re-open and work the Couch Copper mine. This valuable property has been hung up by litigation for some years."

Moncton Daily Transcript - Nov. 9, 1888 W.C. Thomas, of New York, was in Dorchester last week to examine the Couch copper mines, which he contemplates purchasing."

Moncton Daily Transcript - Dec. 4, 1889 Dorchester Copper Mines.- Dorchester, Dec 4 -[Special] - Mr. Emery, of Boston, arrived last night at the Weldon House. He is interested financially in the copper mines here, and having the vim and the money is determined to push matters to a speedy issue."

Chignecto Post - May 2, 1889 Mr. A.W. Chapman, who returned last week from Boston, reports that the Couch Mining Co., have amalgamated with the Westmorland Mining Co., and that the copper mines here are to be reopened immediately by the new company."

Chignecto Post - Oct. 23, 1890 Accident at Dorchester Copper Mine. - On Saturday, Wm. Ross and Geo. F.W. Wry were working in the blacksmith shop attached to the Copper Mine works, when a spark from the fire dropped into a keg of powder standing near, exploding. Both the men are severely injured. Wry's clothes were torn off him by the force of the explosion and his condition is critical. Seven kegs of powder were in an adjoining closet close by, but fortunately were not affected."

URN: 0087 / IDX_Names: Dorchester Copper;
Moncton Daily Times - Apr. 4, 1898 Dorchester. - The engine house at the Colonial copper mines, three miles from here, blew down yesterday afternoon. It was a wooden building 80x40 and three stories high, and built with the corner posts, three in number, standing upon the other without any bracing timbers. The posts buckled and the roof came down directly over the foundation. It did little damage to the boilers, engine and pumps which were in the building. J.W. Bowser, who is in charge of the mines, notified the company some time ago that the building was likely to be blown down."

S.J. Globe - Sep. 27, 1898 and N.B. Reporter - Sep. 28, 1898 The property of the Colonial Copper Mining Co., at Woodhurst, near Dorchester, recently seized by Mrs. May J. Bowser, was sold by auction Monday and realized about $800."

Moncton Daily Times - Sep. 28, 1898 Dorchester. - The property of the Colonial Copper Mining Company, situated near Dorchester, was sold at public auction this afternoon. The property consists of ten acres of land and a quantity of mining plant and was sold under an execution to satisfy a $600 claim of Mrs. James Bowser, wages for remaining on the property in charge of the machinery. The mine and plant were bid in by W.C. Milner, of Sackville, for $700 and the boarding house by James Bowser for $5.00."

Moncton Daily Times - Aug. 4, 1899 Dorchester. - Mr. Edwards, secretary of the Intercolonial Copper Co., with family, has arrived here. Mr. Edwards is preparing to begin operations at the mines."

Moncton Daily Times - Aug. 12, 1899 Dorchester. - Mr. Edwards, secretary of the Intercolonial Copper Co., returned to Boston on Tuesday. It is understood that a party of Boston gentlemen connected with the Intercolonial Copper Co. will arrive here on Monday next."

Daily Times - Aug. 12, 1899 Dorchester. - Mr. Edwards, secretary of the Intercolonial Copper Co., returned to Boston on Tuesday. It is understood that a party of Boston gentlemen connected with the Intercolonial Copper Co. will arrive here on Monday next. The Intercolonial Copper Co. has closed a contract with Mr. John McSween, late underground manager at the Joggins mines, to drive a tunnel 6«x4«, with man holes and drain, from base of mine hill to their works, which when completed, will thoroughly and efficiently take off all water from their works. We understand that the contract price is $3,000 and the distance to be completed yet is 600 feet. The company have ordered a Rand Rock drill with engine and boiler, which will be put in place this week for the use of the contractor in the work of tunnelling. In the meantime Mr. McSween is pushing the work by hand drilling. This part of the work will be completed in two months. Mr. A.W. Chapman is local manager for the company of the work here and has a number of men taking out ore at the present time from surface cuts. A loop smelter will be erected in the near future capable of crushing and smelting 100 tons per day. The company has about 10,000 tons of ore out ready for treatment now - and we look for a busy place by December next."

Daily Times - Aug. 22, 1899 Dorchester, Aug. 21. - Ex-Governor Ladd, of Rhode Island, A. Meyers and T.J. Edwards, of Boston, are here in connection with the Intercolonial Copper Co."

Semi-Weekly Telegraph - Dec. 9, 1899 A Copper Mine. - Extensive Works Already Done Near Sackville. - Three Shafts Being Sunk and Several Tunnels Have Already Been Driven. - The Works are Being Completed and Men are Toiling Night and Day. - Sackville, Dec. 5. - An industry of considerable present interest and great future possibilities in close proximity to this town is found in the Intercolonial Copper Company's mines at Fairfield. About 50 men are now employed working night and day and a large quantity of ore has already been taken out. Tests of this by different assayers in the United States and elsewhere show that the prospects are good and the company are confident of success. A number of car loads of ore will shortly be shipped to Pictou for smelting and the result will be watched with interest. Much of the work being done so far is preliminary. Shafts are being sunk - one 28 feet, one 20 feet and one about 100 feet. Tunnels are being excavated - one is at present 50 feet long, one 100 feet, another 150 feet, while the main tunnel has already been excavated 250 feet and will be extended nearly 1000 feet, where it will strike the bottom of a shaft 100 feet below the surface. A number of new buildings have been erected during the summer and autumn. A new and handsome engine imported from Montreal has recently been placed in position, from which the steam drill, about 100 feet distant, is operated. A hoisting engine is also being placed at head of another shaft and the work will be prosecuted vigorously during the winter. Visitors to the mines are very cordially received by the general manager, A.W. Chipman, while the engineer, Mr. C.E. Lund, willingly gives any information at his disposal and the superintendent, Mr. John McSweene, is always on hand to promote the work. A telephone line connecting the works with Dorchester - about four miles distant - has recently been completed and a railway, to a smeltery at the I.C.R., two miles away, is proposed."

Gazette - Dec. 13, 1899 In Favor Of The Copper Company. - (Special to the Gazette). - Fredericton, N.B., Dec. 12. - Argument in the Dorchester Mining case was commenced at 3 o'clock yesterday afternoon before the Executive and Council and was concluded in the evening. This morning the Council announced their decision which is in favor of the Intercolonial Copper Company. This company, it is understood, are to be allowed to retain possession of the areas applied for by them which they are now working, and also the adjoining property in dispute. The order in Council giving the decision arrived at is now being prepared, Allan Chapman and R.A. Lawlor were counsel for the Intercolonial Copper Company."

URN: 0087 / IDX_Names: Dorchester Copper;

Daily Times - Jul. 8, 1899 Dorchester Copper Mine. - Now in a Fair Way of Being Developed. - Dorchester, July 7. - It is now understood that the Intercolonial Copper Co. near here will be operated in the near future. The capital stock of the company is said to be $250,000 each full paid and nonassessable. The officers are Herbert W. Ladd, (ex- Governor of Rhode Island), president; Henry S. Stevens, Pawtucket, R.I., vice-president; J.W. Philips, Providence, R.I., treasurer; T.J. Edwards, Boston, secretary. Forty nine per cent, or 122,500 shares of the capital stock is in the treasury to be sold for working capital. The directors are Hon. Herbert W. Ladd, of R.I., Hon. Henry A. Stearns, R.I., George W. Angles, Texas, Andrew A Meyer, Boston, and J.W. Phillips, R.I. Counsel: Hon. Robert W. Burbank, Providence, R.I. This company has acquired the property formerly owned by the Colonial Copper Co., including mines and buildings situated upon the top of the hill two and a half miles from the court house north east and one and a quarter from the I.C.R. with an abundance of wood and water near at hand. The company have also secured the mineral mining rights from the government covering five square miles. Eminent mining experts examined these properties before they were developed. Numerous shafts were sunk by the former owners, one to a depth of 125 feet with many extensive drifts and two tunnels were cut. Thousands of tons of rich ore were taken out and left on the dump when work was suspended on account of incompetent management, and the extremely low prices of copper at that time. The deposit appears in the blanket formation and the ores found are a greyish conglomerate carrying rich carbonate and sulphides of copper. The ores are easily mined and practically unlimited in quantity and said to indicate enormous value in the deposits. The manager states that five tons of the ore shipped to Swansea, England, yielded 12 7-8 per cent copper and $3 per ton silver. Other assays show 30« per cent copper with an average of 11.62 per per cent copper. With modern methods it is stated that there is sufficient ore on the dump to pay dividends on the entire capital stock on the completion of a smelter on the properties. A limited amount only of treasury stock will be sold at less than par. The vice president, treasurer and secretary of the company were here a few days this week and have arranged for the erection of buildings on the properties as soon as possible. It is anticipated that operation at these mines will be in full blast within a few weeks."

S.J. Daily Sun - Jun. 19, 1899 Analyze Very Rich. - Intercolonial Copper Company to work New Brunswick Mines. - (Boston Herald). - The Intercolonial Copper Company has just been organized in Boston for the purpose of developing copper mines in the parish of Sackville, N.B. Ex-Gov. Ladd of Rhode Island is president, the Hon. H.A. Stearns of the Union Wadding Co., Pawtucket, R.I., is vice president, and J.W. Phillips of Providence is treasurer. The company has acquired mineral rights to five square miles territory, including the old Colonial mining properties which were developed some 15 years ago, and abandoned because of the low price of copper. The company at that time sunk a shaft to the depth of 125 feet, and there is still remaining on the dump upward of 10,000 tons of ore which analyzes very rich."

Moncton Daily Times - Nov. 7, 1899 Dorchester, Nov. 6. - T.J. Edwards, secretary of the Intercolonial Copper Co., arrived here from Boston this evening."

Moncton Daily Times - Nov. 13, 1899 Dorchester, Nov. 10. - Mr. and Mrs. W.H. Putnam, of Donelston, Conn., who have been spending a few days at the hotel Windsor returned home today. Mr. Putnam is a broker and is interested in the Intercolonial Copper Co."

Moncton Daily Times - Nov. 16, 1899 A Mining Claim. - Rival claimants to the old Couch copper mining property at Dorchester were before Surveyor General Dunn and Attorney General White yesterday. Mr. Powell appeared for Mr. J.B. Forster, Mr. Teed for Mr. Howe and the Westmorland Mining Company, R.A. Lawlor and Mr. Dickenson, a Boston lawyer, for the Intercolonial Copper Co., and G.F. Gregory for Mr. Meyers. Judge Wells of Dorchester is a witness, he having been engaged as counsel for the late Mr. Couch."

Moncton Daily Times - Oct. 10, 1899 Dorchester, Oct. 9. - T.J. Edwards of Boston and Dr. George R. Borden, Providence, R.I., who are interested in the Intercolonial Copper Co., arrived here this evening."

Gazette - Oct. 25, 1899 A New Brunswick Industry. - Copper Mining Operation In Active Progress Near Dorchester, N.B. - That mineral wealth of all varieties is abundant in the province of New Brunswick is now almost an accepted fact. Westmorland county has been second to none in the richness of its deposits and copper has been found there for some years past. In April last a number of American capitalists became duly incorporated as the Intercolonial Copper Company with a capitalization of two million and a quarter dollars and have now actively engaged in mining operations in Westmorland county. Their property is situated about two and a half miles from Dorchester. It is reached by a good road and the best facilities for copper mining exist there. The company is well equipped with all necessary plant and machinery and about forty men are now obtaining employment there. Up to the present the development consists of ten shafts and drifts and three tunnels, the longest of which is 275 feet. The shafts are about twenty feet deep. The work is carried on day and night and it is expected that within the next twelve months between two and three hundred men will be employed there. The present output is about twenty tons per day, and already ten thousand tons have been mined and made ready for the smelter. It is the purpose of the management to erect a large smelter on the property and construct a tramway to connect with the I.C.R., thus obtaining facilities for shipment by rail or water. The officers of the company are: President - Hon. H.W. Ladd, ex-Governor of Rhode Island, Chairman of Board of R.I. State Capitol Commissioners. Vice-president - Hon. Henry A. Stearns, ex-Lieutenant Governor of Rhode Island, Vice president of Union Wadding Company, of Pawtucket, R.I. Treasurer - J.W. Phillips, Providence, R.I. Secretary - T.J. Edwards, Providence, R.I. Counsels - Hon. Robert W. Burbank, Providence, R.I., ex- Attorney General of Rhode Island; Hon. H.R. Emmerson, Premier of the Province of New Brunswick. Registrar - Federal Trust Co., Boston. Manager at Mine - Allan W. Chapman, Dorchester, N.B. The shares of the stock, ten dollars each, are fully paid up and non-assessable."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Oct. 27, 1899 Mr. Herbert W. Ladd, ex-governor of Rhode Island, and President of the Intercolonial Copper Mining Co., Dorchester, is at the Brunswick."

Moncton Daily Times - Sep. 8, 1899 John W. Patterson, Deputy land surveyor of Salisbury, is making a preliminary survey of land property of the Intercolonial Copper Co."

Moncton Daily Times - Sep. 16, 1899 Dorchester Copper Mine. - Mr. A.W. Chapman, barrister, under whose management work is being carried on at the copper mine at the shiretown, was in the city yesterday, and speaks very enthusiastically of the prospects of the company developing the Dorchester mining property. Mr. Chapman was accompanied by Mr. John McSween, who has a contract in connection with the construction of a tunnel."

Moncton Daily Times - Sep. 18, 1899 Copper Mining at Dorchester. - Representatives of New England capitalists arrived at Dorchester Saturday accompanied by an experienced mining expert who is to make an exhaustive examination of the copper bearing ledges in that neighborhood. If his report is as favorable as expected no time will be lost in the erection of a smelter. Mr. Allen Chapman was in the city Saturday securing a pumping plant for an experimental shaft that is now being sunk under the direction of local parties."

Daily Times - Sep. 21, 1899 Dorchester Copper Mines. - Messrs. W.R. Arnold and David Sherwood, of Providence, R.I., who have recently been in Dorchester in connection with the copper mines being reopened at that place have returned home. Mr. Arnold is a principal owner of the Valley Worsted Mills at Providence, and Mr. Sherwood controls the largest ice business in Rhode Island. They are both interested in the Dorchester mine and made a thorough inspection of it. They consider the mine a valuable one and account for its past failures by bad management, antiquated methods and poor markets. For fifteen years the works have been idle, but by the early summer of 1900 work will be again in full swing. Instead of sinking shafts into the mine, the company is boring a tunnel 100 feet deep into the side of the hill which contains the copper. The water will be drained off easily and the ore will be brought to the smelters by an electric tramway. This tunnel will be finished in a week or two, but mining will not be begun this year. The tests of the ore have shown that 1.50 is the poorest percentage of copper, 33.35 the best, and 11.62 per cent, the average deposit, which is enough, they say, to pay a handsome dividend. Upwards of $125,000 will be invested by the company in new machinery and buildings. The president of the company is Herbert W. Ladd, ex-Governor of Rhode Island, and the vice president Mr. H.A. Stearns, who was also at one time Governor of the same state. The offices of the company are at 26 Equitable Building, Boston, and 308 Industrial Trust building, Providence."

Daily Times - Sep. 26, 1899 Dorchester Copper Mine. - Favorable Reports of the Richness of the Ore. - (Special correspondence of the Times). - Dorchester, Sept. 25. - Favorable reports of the richness of the ore in the Intercolonial copper mine and extensive operating of the mine in the near future have reached Dorchester. Fuller, Tilton & Company, bankers of Boston, offer for subscriptions at $3.50 per share, 20,000 shares treasury stock of the company, capital stock $2,500,000. Shares par value $10 each full paid and non-assessable. Twenty thousand treasury shares will be sold at $3.50 per share, a recent rise of $1.00 per share, after which the price will be advanced to $5 per share and thereafter to par, $10 per share. The officers of the company now are, Hon. H.W. Ladd, R.I., president; J.W. Phillips, R.I., treasurer; T.J. Edwards, R.I., secretary; Hon. R.W. Burbank, R.I., and Hon. H.R. Emmerson, Dorchester, counsel; Federal Trust Co., Boston, Registrar; A.W. Chapman, Dorchester, manager at the mine. Some $200,000 has already been subscribed for stock by New England capitalists, and the owners have expressed a belief that this mine is to become one of the greatest producers in the world. In addition to previous reports from assayists of the ore, which show the wonderful richness of the property when contrasted with other mines. Mr. L.S. Griswold, mining expert, who recently examined the mine, says of the property: The ore bearing formation has been prospected for about 450 yards. The mine is situated in a stratified body of sand stone and conglomerate, belonging to the carboniferous age. The richest ore consists of coal seams impregnated and replaced by copper. A sack of this gave an assay of 20 72-100 per cent copper. The sandstone and conglomerate adjacent to the coal is commonly good ore and samples of them yielded 18 62-100 per cent of copper and the sandstone gave 11 66-100 per cent. The highly siliceous character of the ore renders it favorable to smelt down to a low per cent and perhaps ores even lower than 3 per cent can be utilized. Mr. A.W. Wood, of Fulton, Tilton & Co., who visited the mine in August, pronounces the ore from samples of his own selection, the best he has ever seen. The natural conditions are perhaps unequalled at any copper mine in America. The best miners are employed at $1.50 per day, laborers $1.00, wood delivered at mine, $1.35 per cord, coal $1.56 per ton. Mine timbers and general supplies can be obtained at low prices. The cost of mining is believed to be one third that of Western mines. The property is situated exactly two miles from the main line of the I.C.R., about the same distance from tide water and 1000 feet above the sea level. The company has ordered the most efficient mining machinery known and is preparing plans of a reduction plant which will be placed at the line of the I.C.R., where the ore will be brought from the mine by a gravitation railway, to be smelted. Two hundred feet of the tunnel to underwater the mine has been driven and the contractors are working night and day shifts to expedite the work. It is authentically stated that the company has purchased from John B. Forster the valuable property, formerly owned by the late W.J. Gilbert, Esq., known as the Willow Farm upon which a smelter, costing some $100,000, will be placed. The farm will also be used in connection with the operating of the mining property."

St. Croix Courier - Sep. 28, 1899 It is probable that the copper deposits near Dorchester, N.B., will be developed by American capitalists next year."

URN: 0087 / IDX_Names: Dorchester Copper;

Daily Times - Feb. 2, 1900 Dorchester Copper. - Mining Man Says the Ore is the Richest He Has Ever Seen. - (Special correspondence of the Times). - Dorchester, Feb. 1 - Mr. T.J. Edwards, secretary of the Intercolonial Copper Company, and Charles A. Couch, of Boston, are at the Hotel Windsor. Mr. Couch was interested in opening the copper mine here, now known as the Westmorland mining property, some eighteen years ago. Since that date he has been engaged in mining in a number of the western states. He says the ore from the copper mines here is the richest that he has ever seen."

S.J. Daily Sun - Feb. 3, 1900 A Dorchester letter to the Moncton Times says:'T.J. Edwards, secretary of the Intercolonial Copper Co., and Charles A. Couch of Boston are at the Hotel Windsor. Mr. Couch was interested in opening the copper mine here, now known as the Westmorland mining property, some 18 years ago. Since that date he has been engaged in mining in a number of the western states. He says the ore from the copper mines here is the richest that he has ever seen.'"

Moncton Daily Times - Jan. 3, 1900 Another Westmorland Copper Mine. - Dorchester, Dec. 31. - Just at present Dorchester seems on the eve of becoming a prosperous mining centre. The Intercolonial mine, at Fairview, is in full blast; and more, it is understood since the decision by the surveyor general gives the old Westmorland Mining Company the mineral right to a large section of the copper area, that company will immediately commence mining operations. J.B. Forster, ex-warden of the Maritime Penitentiary, has been appointed local manager."

Moncton Daily Times - Jun. 15, 1900 Dorchester. - Mr. A.G. Beckwith, C.E., of Fredericton, is in Dorchester preparing a plan of the Intercolonial copper mines. The plan will be for the use of the stockholders."

Moncton Daily Times - Jun. 24, 1900 A Mining Appointment. - Dorchester, June 21. - Mr. Edward Doyle, formerly of Albion Mines, Pictou, N.S., who has spent five years or more at Joggins coal mines engineering, has been appointed underground manager and supervising engineer at the Intercolonial copper mine near Dorchester. He is an active young man and well qualified for the position."

Moncton Daily Times - Mar. 14, 1900 Dorchester, March 12. - The Intercolonial Copper Company of Dorchester is shipping ore to the smelter at Pictou. It is the intention to get returns of copper from sixty tons of average ore."

Moncton Daily Times - May 3-19?, 1900 Thomas J. Nickerson, charged with receiving stolen goods was put under bail to appear at September circuit court, at which sitting Justice Vanwart is assigned. The sureties for Nickerson are himself $800.00, and A.W. Chapman and M.G. Teed $400.00 each. Nickerson, who is looking well and in good spirits, has returned to his position as assistant engineer at the Intercolonial copper mine."

St. Croix Courier - Aug. 1, 1901 The Intercolonial Copper Company, of Dorchester, N.B., are making considerable progress in getting ready for smelting of copper, at their works, and the prospects are that a very important industry will be in operation there at an early date."

S.J. Star - Aug. 20, 1901 Intercolonial Copper Mines. - Sixty Men Now Employed - Work Goes On Day and Night. - (Moncton Transcript). - A picnic party from Sackville visited the copper mines of the Intercolonial Copper Co. on Saturday. Very extensive work is being done, crushing and preparing the copper for the market. Already a quarter of a million of dollars has been spent for work in mining, erecting buildings, procuring machinery and in sending specimens of the rock to different parts of the world for the purpose of testing its value, and from all parts the most gratifying reports are received of copper of a high grade. There are at present about 60 men employed and the mine is worked day and night by three gangs of men of eight hours each. The drilling is done by steam power, which does work equal to 18 men. It is expected that the machinery will be in place and preparations completed in three weeks' time for crushing the rock, separating the copper and preparing it for market. When that work is commenced it will require a large increase in the number of men, the company expecting in the near future to give employment to 200."

S.J. Daily Sun - Aug. 20, 1901 Sackville, Aug. 19. - A picnic party visited the copper mine on Saturday. Among the visitors were F.A. Dixon and wife, James Young and wife of Boston, John T. Carter and F.W. Hart."

S.J. Daily Sun - Aug. 21, 1901 Sackville, Aug. 20. - F.T. McNamara, who is employed at the copper mine, fell from a horse on Sunday and broke his left arm."

S.J. Star - Dec. 9, 1901 Prof. Carmichael, of Boston; J.M. Phillips of Providence, R.I., and C.P. Backus and Henry McEwan, of Danielson, Conn., who have been visiting the works of the Intercolonial Copper Company, at Dorchester, Westmorland county, passed through the city on Saturday. They report that the works are now being operated commercially and the extraction of the copper from the ore is very complete."

S.J. Daily Sun - Feb. 16, 1901 Boston (Feb. 4). - Leroy B. Pease, formerly a newspaper editor, was arrested last night at his home in Chelsea, charged with the larceny of 500 shares of the Intercolonial copper mines at Dorchester, N.B., from Willard S. Allen, clerk of the East Boston police court. The stock was taken in April, 1900, and was then worth $1000. The alleged larceny occurred in connection with a business transaction."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Jul. 5, 1901 and S.J. Daily Sun - Jul. 6, 1901 and St. John Star - Jul. 8, 1901 Dorchester Copper Mines. - Heavy engines and machinery are still arriving for the Intercolonial copper mines at Dorchester. It is expected that the preparations for smelting, etc., will be completed about the end of August."

Weekly Record - Fri., Jul. 26, 1901 The Intercolonial Copper Company, of Dorchester,N.B., are making considerable progress in getting ready, for smelting copper at their works, and the prospects are that a very important industry will be in operation there at an early day. This company have spent a very large amount of money in development and placing of machinery on this mine, and it is to be hoped their efforts will be thoroughly successful."

St. John Star - Jul. 30, 1901 A Dorchester letter says a rich seam of copper ore was discovered on the main highway near Woodville, where a bridge was being put in. The Intercolonial Copper Co. are pushing work on their areas and striking new

Moncton Daily Transcript, Page 3 Tuesday, July 30, 1901 THE INTERCOLONIAL COPPER MINE - The Intercolonial Copper Company expects to begin the manufacture of copper from the ore at this mining plant, three miles this side of Dorchester. The company is composed of some American millionaires. Allan Chapman is manager."

St. John Star - May 24, 1901 It is expected that the Intercolonial copper mine machinery at Dorchester, for extracting the copper, will be ready some time in June. The buildings are large and the equipment for extracting the copper is said to be the most modern and efficient."

St. John Star - Nov. 7, 1901 The mill at the Intercolonial Copper Co., at Dorchester, is now in operation and the pay roll averages $500 per week. The quality of the copper produced is said to be excellent and it finds a ready market."

URN: 0087 / IDX_Names: Dorchester Copper;

Daily Sun - Nov. 7, 1901 Copper Deposits. - Big Money Being Expended at Dorchester, N.B. - By The Intercolonial Copper Company - The System of Treating the Ore. - People here have but an inadequate idea of the amount of money expended at Dorchester by the Intercolonial Copper Company, who acquired the property which they propose to develop in May, 1899. The deposits were located many years ago by prospectors, and were at one time owned by Henry Whitney of Boston and others. That was twenty years ago. This new company, which is composed almost entirely of Rhode Island capitalists, determined as soon as they obtained the property to develop it. Work was begun soon after and it has been carried on with vigor and effectiveness till the present time. In the vicinity of $300,000 has been expended on underground and surface work. The most important piece of engineering work was the construction of a drainage tunnel which intersects the old work, done years ago at a depth of 125 feet and completely drains the mine. The tunnel is 1,200 feet long and was constructed through solid rock its entire length. It was a highly successful feat to run this tunnel so far and strike the old shaft. A reservoir has been built at the mouth of the tunnel in which all the drainage is collected and carried by gravity to the mill reduction works, 1,000 feet from the tunnel. The water is used for steam purposes, and under pressure as a means of emptying the large leaching vats. They are able to empty one of these vats containing 50 tons of spent or exhausted ore. The mill is situated at the intersection of two ravines, which gives the company ample opportunity to flush the ore. The plant consists of three buildings. The first contains the boilers, an engine of 200 horse power and two dynamos. In it also are a Corliss engine and the crushing, rolling and elevating machinery. Under another roof connected with the same building is a battery of roasters. This is 40x80 feet, and there is an engine for driving the roasters. The leaching building is 100x30 feet, and the electrolytic building measures 40x60 feet. The system of treating the ore has some features which are patented and novel. They were devised and instituted by Dr. Henry Carmichael of Boston, an eminent chemist and metallurgist. A tramway has been built from the mine to the mill, over which the ore is carried automatically in steel cars holding one ton each. It is dumped into the mill hopper. The equipment of the mill consists of a hundred horse power Corliss engine built by the James Cooper Co.of Montreal, which drives the crusher and rolls, which are ponderous machines of a capacity respectively of 500 and 250 tons. They were built by the Geo. V. Cresson Co. of Philadelphia, and are the finest types of machines of the kind in use. The ore after being crushed is carried by a series of chain buckets to an elevated tower, where it is automatically screened and carried by a belt conveyor for even distribution through a large ore bin, which holds 200 tons. From this bin it is fed automatically into a battery of roasters. These were built in St. John by the Messrs. Fleming, and are patented by Dr. Carmichael, from whose drawings they were made. They are unique. There are fifteen in the series, and it is expected they will show a capacity of 20 tons daily each. The ore slowly passes through the roasters, which revolve over an intensely heated furnace, and in roasting the sulphur is completely expelled from the ore. In this process the ore changes from dull gray to a reddish bronze color, and when roasted is ready for the leaching vats, to which it is carried automatically. These vats are large lead lined wooden vats, built in terrace one above the other, thus permitting circulation through each. Each one holds 50 tons of crushed and roasted ore. The sulphuric acid in solution is introduced into these vats under pressure by powerful pumps. Provision is made for the circulation of the acid liquor through the pulp, and the practice shows that the operation of the acid completely takes out all the copper in the ore. The copper solution is drawn by gravity from the vats into a large storage tank, from which it is finally withdrawn into the battery cells in the last department of the plant. These cells are a series of wooden lead lined boxes, each holding 100 lead plates two and a half feet square, which, suspended in the liquor from copper rods to which the plates are soldered, and which carry away the electric current producing the disposition of the copper on the plates. Each alternate plate is a positive and negative plate, one receiving the deposit of copper, the other imparting the electric current to the liquor. These cells are connected by rubber tubing, through which the solution freely circulates. The present equipment makes the exposure to the current of the solution on about 4,500 square feet of surface on the plates, so that it will readily be seen the great amount of copper that can be quickly collected on the plates. The present plant is expected to produce about three tons of electrolyte copper daily. A feature of the work is the emptying of the large vats. It is done by hydraulic pressure. The contents of a vat, 50 tons of ore, are carried out by this means in twenty minutes, and only one man is required for the direction of the hose. There are 50 men employed by the company, and the mill will be run day and night continuously. Prof. L.S. Griswold, A.I.M.E., of Boston, is in charge, and Allen W. Chapman is the local manager. Mr. Phillips told a Sun reporter who met him at the Royal yesterday that the company were well satisfied with the way things were going. In Mr. Chapman, he said, they had an efficient manager. The enterprise, Mr. Phillips says, bids fair to become one of the most important industries in the province. The pay roll now averages $500 a week. It has been ascertained that there is a market for the metal sufficient to take the product of this and even greater mill in the manufacturing cities of the provinces. Readers of the Sun will be interested in knowing something of the gentlemen who are at the head of this company. The president is Darius L. Goff of Pawtucket, R.I., who is a prominent and wealthy manufacturer. The vice-president is Hon. H.A. Stearns, ex-lieutenant governor of Rhode Island. Mr. Stearns is president of the Dominion Wadding Co. of Montreal. The directors include Walter Callendar, the president of the Callendar, McCauslin & Troop Co. of Providence; Walter S. Ballow, president of the Bannigan Rubber Co., Providence; A.A. Farwell, a retired wood manufacturer of Providence; Moses G. Leonard, the president of the Putnam Water Co, of Putnam, Conn.; John A. Paine, of Donaldson, Conn., a prominent lumber merchant. All these gentlemen have visited the works and are highly delighted with the prospects. J.W. Phillips of Providence, accompanied by Mrs. Phillips, passed through the city on his way home from Dorchester. Mr. Phillips had with him a number of the copper plates manufactured in the mill. It is the intention of the company to present some of these plates to the local government

St. John Star - Nov. 15, 1901 The Intercolonial Copper company, Dorchester, are putting in a new sulphur burner for the manufacture of sulphuric acid and hope to have it in operation at the beginning of next week."

St. John Star - Oct. 5, 1901 and Weekly Record - Fri., Oct. 11, 1901 The International Copper Company at Dorchester expect to have their reproduction works in full swing in the course of a few days. The plant is nearly completed."

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Daily Sun - Oct. 31, 1901 and S.J. Daily Sun - Nov. 2, 1901 Sackville. - The Intercolonial Copper Co., whose mines are between here and Dorchester, have put their crusher mining. It is estimated that the company has about $800,000 worth of ore ready."

N.B. Reporter - Apr. 2, 1902 An interesting and valuable discovery in connection with the Intercolonial Copper Company's mine at Dorchester has been proved in the most recent workings, which is that the ore carries also a payable percentage of gold and silver. The secretary of this company who passed through St. John yesterday on his way to Providence, R.I., to consult the president, had in his possession samples showing the quantity of each valuable metal procured from a ton of ore. The proportion, it is understood, amounts to more than $4 worth of gold and $9 worth of silver in ten tons, but these proportions may vary when greater quantities are assayed."

Weekly Record - Fri., Aug. 1, 1902 Industrial Advocate.- Affairs at the Intercolonial copper mine, between Sackville and Dorchester, N.B. are proceeding very satisfactory - more so in fact, than ever before. The new bearings of the roaster, which were made in St. John, N.B. are answering the purpose so well that the company propose to use them exclusively in the future. Twenty-five miners are constantly at work getting out ore, which is used as fast as it comes from the mine. This ore contains from 3 1/2 to 5 per cent copper - averaging about 80 lbs. to the ton. The copper has proved by the most careful chemical tests to contain but one tenth of one per cent. of impurity and has been drawn out into wire one thousandth of an inch in diameter. The company claims to be the only one in Canada that carries on in one place and under one management the various processes of mining, milling and refining copper. Large expenditures of money on new buildings and new machinery are in contemplation for the approaching season. The company has bought out the Westmorland Mining Co., whose property adjoins that of the Intercolonial Co., so that it now holds under an eighty years lease three square miles under prospecting license, and owns 300 acres in fee simple. If the company fails, therefore, it will not be for lack of mining territory."

N.B. Reporter - Feb. 26, 1902 It is reported that the Intercolonial Copper Co., operating at Dorchester will further enlarge its plant by the expenditure of $10,000."

Daily Sun - Feb. 1, 1902 Intercolonial Copper Co. - J.W. Phillips of Providence, R.I., the treasurer of the Intercolonial Copper Co., whose mines and mill are at Dorchester, is in town a guest at the Royal. As Mr. Phillips has spent some days at Dorchester, a Sun reporter called upon him and was given a cordial reception. Mr. Phillips says the cold weather has interfered somewhat with their operations. The mill is running on a limited capacity on this account, the ore being in bad condition. It may be necessary to introduce a drying apparatus to dry the ore before it is used. Complete runs of 300 tons of ore have been made, and deposited on the plates, and one of the plates produced is now on exhibition in T. McAvity & Sons, King street. The success of the system has been fully demonstrated. The recovery of the metal from the rock is 96 per cent. The company have 100 tons of ore in the bins. When crushed it runs 2 1-2 per cent of copper. The ore is leached by sulphuric acid and the copper recovered by electrolysis in sheets. The company are also making cement copper, and have furnaces for converting it into ingots. Mr. Phillips, who is now on his way home, will again visit Dorchester within a few days. He says the management, now that they have the mill in operation, see the necessity of having one of the head men pay frequent visits to the scene of their operations."

Weekly Record - Fri., Feb. 21, 1902 It is reported from Dorchester that the International Copper Co., operating at that place will further enlarge its plant by the expenditure of $100,000."

Daily Sun - Jan. 21, 1902 Dorchester, Jan. 17. - Dr. Carmichael of Boston is in Dorchester on business connected with the copper mine. The work in the mine which was suspended for a few days for some adjustment of machinery, is again running smoothly."

Weekly Record - Fri., Jul. 11, 1902 A large number of the New England and other stockholders in the Intercolonial Copper Mine at Dorchester, N.B., have arranged for an excursion from Boston to Dorchester via the Eastern S.S. Company and the I.C.R. on or about July 21st and 22nd and will no doubt enjoy their trip to the Province, and no doubt return to Uncle Sam's domain with the satisfactory knowledge that all the wealth in the world is not wholly on that side of the fence."

Weekly Record - Fri., Jul. 11, 1902 The work of mining and producing copper at the Intercolonial Copper Mine, Dorchester, N.B., is proceeding regularly, and the owners of the mine are much elated over the promising prospects for the future - The plant and machinery of the company is one of the finest in Canada. The copper is produced by what is known as the

URN: 0087 / IDX_Names: Dorchester Copper;

S.J. Star - Jul. 22, 1902 New Brunswick Copper. - Satisfactory Progress Made by the Company at Dorchester. - (Industrial Advocate, Halifax). - Affairs at the Intercolonial copper mine, between Sackville and Dorchester, N.B., are proceeding very satisfactory - more so, in fact, than ever before. The new bearings of the roasters, which were made at St. John, N.B., are answering the purpose so well that the company propose to use them exclusively in the future. Twenty-five miners are constantly at work getting out ore, which is used as fast as it comes from the mine. This ore contains from 3 1-2 to 3 per cent copper - averaging about 80 pounds to the ton. The copper has been proved by the most careful chemical tests to contain but one tenth of one per cent of impurity and has been drawn out into wire one-thousandth of an inch in diameter. The company claims to be the only concern in Canada that carries on in one place and under one management the various processes of mining, milling and refining copper. Large expenditures of money on new buildings and new machinery are in contemplation for the approaching season. The company has bought out the Westmorland Mining Co., whose property adjoins that of the Intercolonial Co., so that it now holds under an eighty years lease three square miles of land, has fifteen square miles under prospecting license, and owns 300 acres in fee simple. If the company fails, therefore, it will not be for lack of mining territory. The Advocate has had laid upon its desks samples of the electrolytic copper as it is detached from the lead plates in the precipitating tanks and from all appearances the metal looks to be very pure and almost ready for the consumer. We have received a very neat booklet descriptive of the company's plant which is very interesting. We believe that the Intercolonial Copper Co. has an inviting future before it."

S.J. Star - Jul. 22, 1902 and Daily Sun - Jul. 23, 1902 Dorchester. - Arrival of American Intercolonial Copper Co. Shareholders. - (Special to the Sun). - Dorchester, July 22. - About forty of the stockholders of the Intercolonial copper mines, situated at this place, arrived in a special car of the C.P.R. express this evening from the United States. They were accompanied by their wives. The company will thoroughly inspect the mines and the reduction plant, which is at work every day. They will leave for Sydney and other points of interest in the provinces tomorrow evening before returning to their own country. They express themselves as delighted with the country and especially the weather conditions."

Daily Sun - Jul. 25, 1902 Intercolonial Copper Co. - The Company's Works Visited by Stockholders and Their Friends. - A special party sailed from Boston on Monday last to visit the mines of the Intercolonial Copper Co., at Dorchester, N.B. The party consisted of shareholders and their friends, and was conducted by O.W. Burch of Providence, R.I. The party left St. John at noon on Tuesday and reached Dorchester at 4 o'clock. The next day was spent in visiting the works, that had been considerably increased in value during the past few years. Since the present company has secured the property fully $100,000 has been expended in underground development alone, a drainage tunnel of 1,500 feet being completed. The plant is of a designed capacity of 200 tons daily. It is expected that the capacity will be largely increased in the near future. The party include, beside W.O. Burch, the promoter of the trip, Hon. M.A. Shumway, judge of the supreme court of Connecticut, and wife; F.A. Jacobs, a candidate for state senator, of Danielson, Conn.; Mrs. Jacobs and Miss Alice Jacobs; F.T. Preston and wife, Danielston, Conn.; A.D. Putnam and wife and Miss Sarah and Miss Daisy Putnam of Danielson, Conn.; Walter H. Stearns, son of ex-Governor Stearns of Rhode Island; F.A. Cranston and wife; Rev. F.J. Goodwin of Pawtucket, R.I.; Geo. Crawford, Pawtucket; F.J. Powers and Darius L. Goff, president of the company, Pawtucket, R.I.; W.H. Peters, Pawtucket; M.J. Gallagher, Pawtucket; R.H. Carver, M.D., of Providence; H.C. Barnes, Miss Florence E. Potter and Mrs. A.M. Austen."

N.B. Reporter - Jul. 30, 1902 A party of forty comprising American stockholders and friends visited the Intercolonial Copper Company's mines at Dorchester last week. They were much pleased with the condition and prospects of the mines. There is unlimited quantities of copper ore of superior quality. Work is being carried rapidly forward, the copper being extracted by electricity."

S.J. Star - Jun. 2, 1902 Martin McDougall, a miner in the employ of the Intercolonial Copper Co., was very seriously, if not fatally injured, here this morning by the explosion of a dynamite cartridge. It seems that the cartridge did not readily adjust itself and the miner tapped it harder than he should have done, with the result named. His jaw was terribly shattered and his tongue is badly lacerated. He is now resting easy. The doctor thinks that he has a good chance for recovery. His fellow workmen escaped without injury."

Daily Sun - Mar. 11, 1902 J.W. Phillips, of the Intercolonial Copper Co., of Dorchester, left for Boston yesterday, taking with him, for the inspection of capitalists, a number of 36 pound copper ingots, the result of the first steaming up in the new

Weekly Record - Fri., Mar. 28, 1902 Work at the copper mine between Sackville and Dorchester, says the Sackville Post, is progressing very satisfactorily. Twenty-five miners are currently at work getting out ore, which is used as fast as it comes from the mine. This ore contains from 3 1/2 to 5 per cent copper - averaging about 80 lbs. to the ton. The copper has proved by the most careful chemical tests to contain but one tenth of one per cent. of impurity. Large expenditures of money on new machinery and buildings is contemplated during the coming season. More land adjoining has been purchased and the outlook for this enterprising firm is very bright."

S.J. Daily Sun - May 21, 1902 Allan W. Chapman, manager for the Intercolonial Copper Company, at their works, Dorchester, is in town, a guest at the Victoria. Mr. Chapman reports that everything indicates that the company's operations will result in great success."

URN: 0087 / IDX_Names: Dorchester Copper;
S.J. Daily Sun - May 23, 1902 Important Industry. - How Pure Electrolytic Copper is Obtained. - Some facts About The Mine and Plant of the Intercolonial Copper Company Near Dorchester, New Brunswick. - (Sackville Tribune, 22nd.) - Within six miles of Sackville and three of Dorchester are situated the mines and mills of the Intercolonial Copper Co. The property, which is now owned by this company, was operated about 14 years ago by Major Howell, but owing to the low price of copper, and the expensive mode of treatment at that time, work was suspended. All the ore had to be shipped to Swansea, Wales, and each pound of copper cost 12 cents, which amount was 5 of 6 cents in excess of its market value. Today by means of the new process, the present company are able to mine and mill and place their product ready for shipment as pure electrolytic copper at a cost of about five cents per pond, while the market price of the metal is about 15 cents. In 1889 Allen W. Chapman, the courteous and obliging manager, interested capitalists in the development of the mine, and the International Copper Company was then organized. They acquired their rights from the provincial government, which is at present rendering every assistance possible, and is greatly interested in the success of the undertaking. The company have purchased from the Westmorland Mining Company all its rights, composed of one square mile to the southwest of the Intercolonial Company's plant, so that today the above company own by lease for 80 years from the provincial government three square miles and a prospecting license over 15 square miles, together with 300 acres in fee simple, and have on the same mills, power stations, barns, dwelling houses and other necessary buildings. The mine is divided into two parts - the old works, which have been made available through the completion of a drainage tunnel, and the newer workings of this company. Shafts 2 and 3 are connected by a tunnel, and it is purposed to connect numbers 1 and 3 shafts in the same way. The drainage tunnel, which is 825 feet long, has as its mouth a tunnel house, under which is a great cistern, into which flows all the water from the mine. The plant, which is situated 56 feet lower than the tunnel, is equipped with water from this source. The copper deposits have been determined to consist of a series of massive and stone beds of great area, depth and permanency. All carry copper throughout, with certain layers strongly impregnated. The better layers of ore are easily separated from the poorer rock. The veins, which are 4« to 7« feet in thickness, lie one upon the other and have a dip of 15 degrees. Five distinct veins or strata have already been gone through. Much of the rock yields an average of 2« per cent of copper, and with a little care on the part of the workmen, 3« to 4 per cent can be obtained. Several of the Lake Michigan copper mines run from seven tenths of one per cent to two and five eighths per cent, so it will be seen that the ore of the Intercolonial mine is very rich. Thirty miners are employed are employed by the company and the output of good copper ore averages about 75 tons per day. The machinery of the mill consists of three compressed air drills, one power station, air compressor attachments, hoisting gear, etc. At the mill there are one set of Buchanan crushers and rollers, an elevator, Jeffrey screen, double compound and Corliss engines of 250 h.p. and 156 h.p. respectively, two large low voltage heavy amperage electric generators of the Holtzer Cabot make with exciter, 250 h.p. boilers with pumps, excelsior hoisters and attachments, one ball bearing Leonard engine, 15 roasters and drums, sulphur burner, four one hundred ton leaching vats, one large storage vat, two ten thousand gallon mixing tanks, three scrap iron tanks, 24 electric cells with 1,200 plates for the deposition of the copper, two cupola furnaces for melting, with all necessary machinery to properly carry on this work. The arrangement is such that the ore is conducted to the hopper of the crusher by belts and thrown or deposited into it, and so automatically arranged is everything that from the face of the veins or deposits to the shipping of the plates it is not handled by man. The ore is first crushed and ground by the action of the crusher and rollers. It is then carried by a series of elevators to the top of the building, where the ore passes through the Jeffrey screen. It then descends and enters numerous revolving roasters which are kept red hot. By this means the sulphur of the ore is got clear of and the iron is oxidized. The powdered and burnt ore is next carried by a chain conveyor to the leaching vats, where sulphuric acid is added. The acid dissolves out the copper from the powder, forming a blue solution known as copper sulphate. This liquid is carried by means of lead pipes to a large storage vat, whence it enters the cells, through which a strong electric current is passed and the copper is deposited at the rate of one pound per square foot per 24 hours on lead sheets suspended in the liquid. The copper so deposited is taken off the lead plates and is then ready for shipment. The whole process and the machinery with which it is carried on are entirely new, and so far the work has been largely experimental. But this stage is now past, and there is no doubt but that the most sanguine dreams of the company will be realized. the copper obtained is 999-1000 pure, and is so wonderfully tenacious and ductile that it has been drawn out into a wire one thousand feet long having a diameter

of one-thousandth of an inch and wound on a spool. Just now the company are adding 2,200 square feet of playing surface. This improvement was necessitated by the fact that the mill will produce more solution than three times the amount of the present plating surface. Other additions costing in the vicinity of $10,000 are being put in, and in the course of a few weeks the mills will be running night and day. The results of so great an industry as this promises to be will be very important indeed. Westmorland county now has the honor of being the first place in Canada in which copper is both mined and refined, and in a few years at most we trust that the maritime provinces will obtain all necessary copper from this source. This will mean that instead of the 70 or 80 men now employed there will be perhaps 300 at work for the company."

Weekly Record - Fri., Oct. 31, 1902 Now that the plant is in good running order the Intercolonial Copper Co., owing to the accessibility of the ore and the inexpensive nature of the reduction processes employed expect to be able to turn out pure copper for less than four cents a pound, more cheaply, in all probability, than it can be produced anywhere in the world. The cost of manufacture at the celebrated Michigan mines is much enhanced by the great depth in the earth at which the ore is found and at many of these mines the metal cannot be manufactured for less than twelve cents per pound. In richness of ore, the mine of the Intercolonial Copper Co. has much the advantage of the older and far more famous mines, its ore averaging 3 1/2 per cent. of pure metal, as against 2 1/2 for the Michigan ores. Some of the New Brunswick ore runs as high as 54 per cent, but unfortunately ore of this richness has so far been found in small pockets. The Intercolonial Copper Co. claims that its plant, considered as a whole especially as regards the electrolytic methods employed stands without a rival in the world. There would seem to be a bright future before this Westmorland County company."

Weekly Record - Fri., Apr. 10, 1903 The Copper Company, of Dorchester, N.B., has sent a delegation to Ottawa for the purpose of having the company placed in the same position as the Dominion Steel Company as far as receiving government aid is concerned, viz to receive a bounty from the government."

URN: 0087 / IDX_Names: Dorchester Copper;

Weekly Record - Fri., Jan. 9, 1903 Allen W. Chapman, local manager of the Intercolonial Copper Company at Dorchester, N.B. returned recently from Providence, R.I., where he had been attending a meeting of the shareholders of that company which was held on December 23rd. This meeting expressed its entire satisfaction with what had so far been done, and unanimously resolved to prosecute its metallurgical operation more vigorously than ever. To the mining plant there are to be made further addition of machinery, in the shape of roasters, rolls, screens, driers and elevators. The number of the electrolytic cells will be very largely augmented and it is anticipated that before the end of the current year 300 tons at least of ore will be handled daily. Copper has recently risen to twelve cents a pound, and, should this price continue, the gross receipts of the company would be about $1,800 per day, that is considerably over half a million dollars annually from which could be paid a very handsome dividend on the money expended."

Weekly Record - Fri., Oct. 23, 1903 The Intercolonial copper works at Dorchester have resumed work."

North Shore Leader - Sep. 28, 1906 Work is being done at the Intercolonial Copper Mine, near Dorchester. The Company is taking out a few thousand tons of ore and shipping it to New York for treatment by what is known as the Laist process. The ore at the Dorchester mine is said to contain values equal to any in North America in copper and silver, but the difficulty is to extract the metal, inasmuch as the ore contains so large a proportion of silica. Thus the treatment by fire is practically out of the question except in the very rich ore, but the great mass of the ore run of the mine averages from three to five per cent and may be converted by the leaching process, which the management hope to adopt at the mine during the coming year. It is expected that from twenty to twenty-five men will be employed at the mine this winter, and if the Laist process is found to be successful, the work in the mill will be commenced and more men added."

Kings County Record - May 21, 1909 Big Mining Deal. - A mining deal which is of considerable concern to entire eastern Canada, has just been consummated and the basis of the agreement is as follows: - This information emanates from a very responsible authority, namely, Mr. James A. Stairs, President of the Maritime Exploration Co. Ltd., New Glasgow, N.S. and the following facts will doubtless be of great interest to all acquainted with the big Westmorland Mine property, and in fact to all who are interested in the development of such valuable holdings as this. The original owners of the Westmorland Mine paid $125,000 cash for the property and did some considerable work in developing same. The lease of this property which has been secured by the Maritime Exploration Co. Ltd., of New Glasgow, is for a period of five years, and also permits a renewal for five years with the additional privilege of first option of purchase. The intention of the present lease holders is to begin operations at once and ship ore to smelters. This shipping will be a most feasible undertaking, as the mine itself is within very easy access of both water and rail transportation facilities. On the site of the mine, which is situated at Dorchester, N.B., there is at the present time a large boarding house fitted to accommodate fifty men, a well equipped blacksmith shop containing mining tools, and all the necessary implements. The mine itself has been developed to some considerable extent. There is over a mile of tunnels and shafts in copper ore assaying from 2 to 30% copper and 2 to 3 oz. of silver to the ton, and up to the present time it has been estimated that there has been over 200,000 tons of this copper ore blocked out. This has been pronounced by large copper people to be the best mine in the Maritime provinces, and the probabilities are such as to commend the immediate operation of this property to the very best copper men in the country. The Maritime Exploration Co. which has undertaken the operation of this property has as its directorate: - James A. Stairs, New Glasgow, President; Mayor McColl, of New Glasgow, secretary-treasurer; John U. Ross, K.C., of Pictou; D.P. Brown, New Glasgow, and John D. McDonald, Pictou."

URN: 0087 / IDX_Names: Dorchester Copper;

Moncton Daily Times - Apr. 1, 1910 Dorchester Copper Mine Leased To New York Syndicate. (Boston Journal of Commerce). - The Maritime Exploration Company has leased its Westmorland mine, at Dorchester, N.B., to a New York syndicate headed by Messrs. L. Vogelstein and Co., the well known copper selling agency. The syndicate has had two engineers on the property since last September, making diamond drill tests to prove up the property. Mr. Louis N. Fuller, general manager of the Maritime company, inspected the Westmorland last week and has made the following report: 'The Westmorland mine is located about one mile from the main line of the Intercolonial Railway Company, Dorchester, N.B., and about two miles from the Dominion Government's pier. There are about 136 acres. There are about 26 different openings, some of which are about 150 feet in depth. The ore outcrops for a distance of 4,000 feet along the ridge of the hill and the first drill hole was sunk by the engineer of the syndicate to a depth of 800 feet, where good indications were found. The drill has since been moved to within 500 feet of the outcrop, directly back of the tunnels, and the second drill hole is now being installed by a force of ten men working double shift. 'A pipe line to carry water to the drill was laid for a distance of 4,000 feet, and I understand that the drill is now in the conglomerate formation with every indication of tapping the copper-bearing strata at about 200 feet. A general analysis of ore taken from the mine was made by Mr. C.L. Constant, of the well known firm of Constant & Hertzig, 42 Broadway, New York, in a report made to the Intercolonial Copper Company, which property adjoins the Westmorland, was as follows: Silica 64.4, alumina 13.8, ferrous oxide 2.4, lime 8.8, magnesia 4.2, copper 4.9. A concentrating test made on a James table at Ricketts & Bank's plant at Waverly, N.J., showed a saving of 75 to 80 per cent. It is estimated that about three millions of tons, averaging 4 per cent copper, is in sight. Numerous assays of this ore have shown 1 to 3 ounces in silver. 'The ore is a chalcocite of copper contained in a conglomerate of sandstone. When the present diamond drill operations have been completed it is the intention of the syndicate to either erect a concentrating mill on the property or ship the ore by water to the Atlantic coast smelters. I believe from present drill tests and also from reports made, that there is at least 10,000,000 tons of ore in Westmorland, from which we should realize a net profit of at least $3 a ton. 'When the Vogelstein syndicate has determined the value of Westmorland, a company with a capital of $6,000,000 will be organized from which the Maritime Exploration Company is to receive $500,000 in stock in payment for its lease on the Westmorland property. The option has until September 22 next to run. If the Maritime company receives this payment I firmly believe that the Maritime stock is worth par $4.00. 'I also visited the property of the Intercolonial Copper Company, which adjoins the Westmorland, and for which the Maritime company is now negotiating the purchase of. The properties of the Intercolonial are among the most extensive surveyed mineral areas in the Provinces. The company owns in fee about 200 acres of land, and under an eight year lease from the crown lands department of New Brunswick also holds an additional 1,100 acres in Dorchester on the main line of the Intercolonial Railway. It is the pinion on mining engineers that the supply of ore is practically inexhaustible, and this is officially confirmed by the Dominion government. 'Facilities for economic mining are truly remarkable. Over $300,000 has already been spent on this property. the formation has been explored vertically by many different shafts, at a considerable depth, and lateral work of over 6,000 feet of drifting and crosscutting has been done. In all localities of the mine good ore has been found, it being evident that this great ridge of sandstone throughout its length, breadth and depth is of the same character and is everywhere impregnated with copper. 'Some of the chalcocite or copper glance is found in extensive masses running as high as 79 per cent. In the main, however, it is disseminated as minute grains in the sandstone and conglomerate formations and averages 3 to 4 per cent copper contents. The underground workings of the Intercolonial aggregate something like a mile and a half. A branch tunnel 1,250 feet long completely drains the mine. Its outflow is carried to a reservoir at the entrance to the tunnel, and is thereby carried to the mill, forming a constant and adequate supply of water under pressure. Three shafts are down 30, 40 and 125 feet respectively, two tunnels driven, 400 and 1,400 feet and various drifts and crosscuts. The major plant comprises two Ingersoll-Sal.?.. air drilling plants and an equipment of Ingersoll drill, four boilers, two 125 h.p., one 75 h.p., and one 40 h.p.; double drum hoisting engine, one Barr & Knowles steam pump, etc. At the reduction works are two mills, 42x80 and 110x60 feet respectively. The electrolytic building is 60x30 feet. The power is generated from two large boilers of 250 h.p. capacity. The electric outfit is modern. One large engine is utilized for driving the electric plant for lighting. A Laurie-Corliss engine supplies power for screens, crushers, rolls, elevators and conveyors. The storage bins have 175 tons capacity each. 'In conclusion I should say that I am very well satisfied with the work that has been done on the Westmorland and believe that this mine alone will return to Maritime stockholders a substantial dividend in the near future. The Maritime Company has operations on several other good mining properties in eastern Canada.' Maritime stock was listed on the Boston Curb March 3 and the price has advanced from 25c. to 42c, closing last Thursday at 37c."

Granite Town Greetings - Apr. 13, 1910 Copper Development at Dorchester. - Favorable reports continue to come from the Maritime Exploration Westmorland property at Dorchester, N.B. The drill has been moved 500 feet nearer the outcrop and drilling will continue until 800 feet is reached, where it is expected to reach a large body of ore. There is nearly a mile of tunnels on the property. Samples of ore average more than 4 per cent. of copper. There are reported to be several million tons of good concentrating ore on this property. The mine is less than a mile from the railroad, and with modern mining methods it is figured that a net profit of $4.00 per ton from operations may be shown. It is the intention of the company to start drill work on the copper and gold property, located at Six Mile Brook, N.S., assays from which shows $24 in copper and $6.00 in gold to the ton. The Maritime Company has options on other mining properties in New Brunswick and Nova Scotia on which negotiations, it is reported, are now being carried on with New York interests with a view of sale. A syndicate headed by L. Vogelstein and Co., and which includes well-known Boston mining interests, is reported to have a bonded option on the Westmorland Copper Mining property located at Dorchester. The Maritime shares were listed on the Boston Club on March 3rd last. The initial price was 25 cents, and yesterday the shares sold at 31 cents. The company is capitalized for $500,000, or 500,000 par value $1."

URN: 0087 / 0030 / 0126 / IDX_Names: Dorchester Copper; Teahan Mine; Nigadoo;

S.J. Daily Sun - Oct. 28, 1881 The Mining fever is raging in our Province - or, rather the fever for forming mining companies, for although there are many companies there is not much mining. There can be little doubt that our Province is rich in mineral wealth, but it is unfortunate that up to the present time the persistent expenditure of capital in development, which has made Colorado and other notable mining countries conspicuous among the mineral regions of the world, has been unknown amongst us. The recent find of copper at Dorchester will, we hope, prove an exception to the rule. It is alleged that the Boston parties who have purchased the property from Mr. Couch at a very high figure, intend to work their copper mine. Most purchasers of mines express a similar intention. If the Dorchester mine is all that it is represented it is (to use the language of Mr. Wilder, the mining expert who has been helping the sale) the greatest copper mine in the world; and if it be properly worked and turn out satisfactorily, it may lead to an extraordinary development of our mineral resources. If, on the other hand, the affair should prove only a speculation for the Mining Exchange of Boston, a shuttlecock for the amusement and profit of Boston stock brokers; if it should fall far short of the representations made in connexion with the sale, the transaction will prove a great blow to the mining interests of the Province. Meantime, of course, a good deal of cash has been distributed in Westmorland county - probably $30,000 - and Mr. Couch has made a large amount of money. We hope the most sanguine hopes of all concerned may be realized. Then we hear of the silver mines of Bathurst. Ofthe richness of the ore found on the Nigadoo there can be no doubt. As regards the quantity, nothing definite isyet known. Albert, too, is turning out silver; and the end is not yet. Doubtless, a thorough search for mineral deposits would produce satisfactory results. It is well, however, for people not to lose their heads in their efforts to find a short cut to wealth. Mining fevers have raged before, and we shall have them again. Every aid should be extended to those who seek the legitimate development of our mining industries, and it is desirable that movements connected with our mining enterprises should be of such a character that all who have the interests of the Province at heart may render active assistance in carrying them forward to a satisfactory consummation."

URN: 0087 / 0662 / IDX_Names: Dorchester Copper; Vernon Mine;

Weekly Record - Fri., Nov. 28, 1902 New Brunswick's Mineral Prospects. - It is pleasing to note among other signs of business progress in New Brunswick such as our winter port business, lumber and pulp prospects, agricultural and dairy work, that there is a firm yet decided growth in the mining field, which while not generally known by the public, is nevertheless marked and progressive. The large developments of the Intercolonial Copper Co. at Dorchester, where fully $400,000 in cash has been expended in opening and developing the rich copper deposits there, is very satisfactory, and this mine is now actually producing between one and two tons of pure copper weekly, and bids fair to largely increase this output, in the near future. At the Vernon copper mine so called, in St. John county, vigorous development is going on, and the quality and quantity of paying ore at this point, is now beyond doubt, so it is reliably stated, and in a short time we shall see the smelters producing copper there in large and paying quantity. The company developing this area is meeting with gratifying success in disposing of its first development stock. Before long we will see coal mined on"

S.J. Star - Sep. 13, 1902 New Brunswick Copper. - T. McAvity & Sons Will Make Ingots and Test It. - Down in the foundry of T. McAvity & Sons, Water street, may be seen 9,000 pounds of pure sheet copper from the works of the Intercolonial Copper Co. at Dorchester. It will be converted into ingots and tested by the St. John firm, who, if it works all right and can be produced cheap enough, can handle the entire output of the present capacity of the works. This copper ought to be exceptionally pure, for it is what is termed electrolytic copper, being separated from the pulverized ore in solution and gathered by electric process upon a very thin sheet of pure copper, hung over the vat for that purpose. These thin sheets are quickly covered to a considerable thickness by the deposit, and the next step is to convert them into the ingots of commerce. McAvity & Sons now have to import their ingot copper, and if the Dorchester article can be utilized to the mutual advantage of the firm and the copper company it will be another case of a natural product of the province being converted into manufactured gods at home, which is the sort of thing that makes for progress. The experiment will therefore be watched with a great deal of interest. The process utilized by the Intercolonial Cooper Co. in separating and gathering the metal differs somewhat from that in use in the United States, and a number of Americans interested in such matters have visited the works near Dorchester, where the plant is being enlarged to carry on operations on a larger scale. -- (Moncton Transcript) - Wm. Alperson, managing director of the Maritime Copper and Reduction Co., returned yesterday from a visit to the company's mine at Albert Co. He is delighted with the prospects of the mine. The carload of ore shipped by the Maritime Copper and Reduction Co., to the American Smelting and Refining Co., has been reported on, and Mr. Alperson expresses himself delighted with the assay made by Ledoux & Co. He says the carload lot of ore was assayed in three bundles, the first showing per ton 22.94 per cent copper, $3.00 gold and $4.00 silver. The second yielded 8.54 per cent copper, $4.30 gold and $2.80 silver, while the third showed 4.08 per cent copper, $4.30 gold and $3.00 silver."

URN: 0087 / 0688 / Y1 / L3 / IDX_Names: Dorchester Copper; Gold Mine Gully; Salt Springs Salt; Beliveau Albertite and Oil / Gas;

S.J. Daily Sun - Oct. 16, 1880 Mining Notes. - Work is still being carried on at the Woodville Copper Mine near Dorchester, in hope of getting to main lead or large enough quantity of metal to prove capable of working permanently and shipping or manufacturing on the ground. The Beliveau Albertite Co. still carry on work,notwithstanding the changes and grumbling of impatient stockholders. It is understood Mr. Byers of Albert Mines fame has visited this mine on a tour of inspection, and though his views are not made public it is thought by outsiders they are generally favorable to its ultimately becoming a success. The discovery of a large body of what is supposed to be silver bearing ore in Albert County, on the Hopper Farm, and bonding of the same by Dr. Goodfellow, of Sussex, and associates for a large amount, causes considerable speculation. What will be the ultimate result is as yet unknown, but no doubt the lessees see millions in it. It is understood that a Dr. Parker of Boston,either by himself or with other associates, has purchased the Salt Springs at or near Campbell Settlement, Kings Co. It is understood they intend developing them on a large scale, and also intend boring so as to get at rock salt if possible that probably underlies that locality. Nova Scotia gold...... ..... A fine vein of Galena ore, containing lead,silver and gold in good quantity, exists at Hammond River, N.B., and is at present leased by some gentlemen in Albert County, N.B. They have bonded the same to a party from Westmorland County, who is now in negotiation with some reliable Boston capitalists for the purchase for the same. A mining expert is shortly to arrive for examination of the property. It is said it is one of the finest ore-producing veins in the Province and will undoubtedly prove very rich if properly developed. If not sold within a reasonable time steps will be taken to form a local company for development of the same."

URN: 0087 / 2038 / E2 / IDX_Names: Dorchester Copper; Grand Anse Copper; Oil and Gas - Kings Co.;

Moncton Daily Times - Oct. 27, 1882 Mining Items. - Major Howell, of Boston, who has been successfully operating for copper on lands owned by Charles Crossman and others, at Dorchester, is negotiating for a sale of his mine to Mr. John Ely & Co., of New York. Mr. Amos A. Mooney, of Boston, has been in Dorchester the past week and has purchased some valuable properties there and instructed Mr. Chapman to put on ten men at once and develop it, which will be done. Messrs. Richard and Chapman have sold part of their Babcock property at Grand Aunce, to Mr. W.H. Tower, of Boston, for a good figure, and work is being prosecuted rapidly. They have now one shaft sunk adistance of about forty feet, where they find a high order of copper ore, and one incline, all of which shows a good average. Mr. Rufus S. Merrill, also of Boston, has takenup considerable land near St. Joseph's, Dorchester, for the purpose of boring for oil. There are several wells bored and in one, at the distance of thirteen hundred feet, the men broke their drill, and have experienced no little difficulty in getting it out. Mr. Merrill has obtained the services of a Bradford gentleman, and they hope in a short time to either drill through the old drill or get it out. Last Friday they unfortunately lost their pump with five hundred feet of rope attached, which will delay them considerably; though in spite of thirteen hundred feet of water, a heavy iron drill and pump and rope, they manage to get about thirty gallons of lubricating oil per day, which flows at the surface. Mr. Merrill has returned to Boston for the purpose of forming a company and obtaining machinery and will return in a week's time. - Post."

URN: 0087 / A2 / IDX_Names: Dorchester Copper; Albert / Kings County Oil Shales;

Moncton Daily Times - Apr. 18, 1900 Baltimore Coal Co. - J.M. Sween, late of the Intercolonial copper mines at Dorchester, has been engaged as manager of the Baltimore Coal and Railway Co. and takes charge tomorrow morning. Mr. Sween holds a Nova Scotia government mining certificate and has had extensive experience not only in coal throughout that province but also in metal mining. The Baltimore Coal Co. are very fortunate to secure this gentleman's services. It is understood that two tunnels 300 feet long, will be commenced at once in order to get below the action of the atmosphere, thereby affording an opportunity to open the works on an extensive scale."

St. Croix Courier - Mar. 12, 1953 Buchanan Hopes For Successful Industry. - 30,000 Mine Claims Expected By Summer. - The Bathurst ore find has so stimulated interest in New Brunswick minerals that instead of having to hire prospectors and drill prospects at its own expense, the government is now scarcely able to cope with the demand for prospectors' licenses and the recording of claims. Hon. Norman B. Buchanan, M.C. minister of lands and mines, said in a luncheon address to the Prospectors and Developers Association at its 21st annual meeting in Toronto Tuesday, March 10. Record Rush. - Thousands of claims have recorded in the current rush and by early summer it is expected that the total will reach twenty-five or thirty thousand. 'This is certainly a record rush for New Brunswick and may be a record for any province,' the minister said. 'Many of these claims are based on pure speculation and have little relation to a systematic and productive search for minerals. We do not wish to dampen optimism nor do we wish to be held responsible for encouraging false hopes. Our hope is for the development of a successful and prosperous mining industry which will take its place in the economy of New Brunswick.' In Toronto the minister also attended the sixth annual meeting of the Geological Association of Canada. The two major conventions of interest to mining were held at the Royal York March 8-11. New Brunswick's secretary-treasurer, Hon. D.D. Patterson, also was a guest at the meetings and on Wednesday night spoke briefly introducing the federal mines minister, Hon. George Prudham. Buchanan's Address. - The text of Mr. Buchanan's address was as follows on the topic, 'Mining - New Brunswick's Business': 'You may expect me to speak on the policy of the Government of New Brunswick concerning prospecting and mining development. But if you will imagine yourselves in my place, you will realize that this is hardly the time for any serious statement of policy. Your sudden interest in New Brunswick has raised many problems which we must work out together. We confidently expect your co- operation in this and do not anticipate any serious difficulty. In the long run, a healthy and prosperous mining industry will be good for you and for New Brunswick. 'Today I am only going to try to give you a bit of background that may help you to understand our attitude toward mining as a business in New Brunswick. 'Mining is one of New Brunswick's oldest industries. When Toronto was an Indian Village and 150 years before York was made the capital of Upper Canada, coal was being mined in New Brunswick for the first time in North America. The story is that Charles La Tour got help from Boston in 1643 in his struggle against his rival in the fur trade, Charnisay. After his friends had relieved the seige of his fort and driven Charnisay away, they sailed up the St. John River into Grand Lake and took on a cargo of coal. 'This export business has been going on for several years and coal mining has been New Brunswick's largest mining industry ever since that time. Methods have been changing and now several of the largest walking draglines are used in stripping the overburden from above the coal. Current production is worth about $5,000,000 a year. 'New Brunswick can also claim a first in oil. When the first wells were being drilled in Pennsylvania in 1859, several wells were also being drilled in New Brunswick. These yielded only small quantities of oil and development was discouraged by lack of market which caused the price to be as low as 49 cents a barrel. This industry has been operated on a small scale with the associated natural gas marketed in Moncton. It is not for me to talk to you about the chances of large scale developments but we can still hope. 'Another interesting early development was in iron and steel. Iron ore was discovered at Woodstock on the St. John River about 1836. This was mined and smelted with charcoal made from the trees of the area, which was heavily wooded. Limestone was obtained nearby. One of the products was mail plating used in the construction of gunboats for the British Navy. It is reported that, in tests, all other plates were shattered by the heavy ordnance designed by Sir William Armstrong but the New Brunswick plates were only slightly dented by a 230-pound shot from the Armstrong gun. Prospecting and Mining. - 'The records of prospecting and mining in New Brunswick contain many other interesting and intriguing items. There is the story of the 'Giberson Gold' which has grown with the telling and retelling. Then there is the story of thecopper mine near Dorchester where the copper was deposited by electroplating on lead. But these stories are part of our history and you are interested in the present and future. 'The hard facts are that although we have had many prospects in New Brunswick we have had too few successful mines. You may have read the summary concerning our mineral resources in the Canada Year Book of 1951. Coal, gypsum, petroleum and natural gas are mentioned and the quantities given. Since that time a cement plant has been added but mining accounts for only about three per cent of the total value of production bu our industries. Depression Effort. - 'During the depression and prior to World War II an attempt was made to encourage prospecting and provide useful training and employment for young men. The federal and provincial governments co- operated in a youth-training program. As many as nine prospecting parties were in the field at one time, each consisting of an experienced prospector and six trainees. 'Reports and records of their findings were turned in to the Department of Lands and Mines but no mines resulted from this effort. 'In spite of these discouraging results and lack of outside interest, efforts to discover and develop mineral resources were continued. These were assisted by an aerial photographic survey made in 1944 and 1945 and large scale maps were compiled from these photographs. An air-borne magnetometer survey of about one quarter of the area of the Province was made in 1951 by the federal Department of Mines and Technical Surveys. Seven of the magnetic maps out of about 30 involved in the area covered by this survey have been published and released and we have been told that others will be available in the near future. Present Situation. - 'During the past year, the attitude toward prospecting in New Brunswick has swung from extreme pessimism to extreme optimism. This has apparently been caused by reports of the discovery of a large body of ore in an area where the existence of smaller bodies has been known for many years. Instead of having to hire prospectors and drill prospects at government expense, we now find ourselves scarcely able to cope with the demand for prospectors' licenses and the recording of claims. During the present rush many thousands of claims have been recorded and at the present rate, it is anticipated that the total will be between 25,000 and 30,000 by early summer. This is certainly a record rush for New Brunswick and may be a record for any province. (That might make an interesting subject for an argument but we have been too busy to stir it up.) 'Many of these claims are based on pure speculation and have little relation to a systematic and productive search for minerals. We do not wish to dampen the optimism nor do we wish to be held responsible for encouraging false hopes. Our hope is for the development of a successful and prosperous mining industry which will take its place in the economy of New Brunswick. 'When you come to New Brunswick, if you have not already been there, you will find that only about 10 per cent of the land is cultivated and more than 80 per cent is covered with forests. The business of forestry and the manufacture of forest products is the foundation of our economy. The products of agriculture amount to less than half those of forestry in value and fishing less than one-quarter. Mining at the present time falls far below the others. 'We recognize the importance and advantages of a better balanced economy but it would be poor business to develop our mining at the expense of our forestry. You will understand our anxiety about the danger of forest fires in the present situation. Experience has proven that in spite of ordinary precautions, people cause fires including forest fires. We are, therefore, appealing to you for cooperation in organizing the necessary safeguards to prevent, not only the destruction of our forests, but also the very valuable loss of life and other property. Outlook For Mining. - 'In spite of this background it is difficult for us to avoid being infected with the spirit of optimism prevailing at the present time. Reports of recent discoveries have given us high hopes for the rapid development of a base metals industry. We are also confident that modern methods of prospecting and development and the renewed interest in New Brunswick will lead to the discovery of other mineral bodies of commercial size. You may be sure that the Government of New Brunswick will do what it can to encourage private enterprise in the development of mining industries without neglecting our responsibilities for the interests

URN: 0087 / GEOL / IDX_Names: Dorchester Copper; Geology - General;

Chignecto Post - Jun. 5, 1884 The Geological Survey.- Explorations of Mr. Ells in Westmorland.- Coal Prospects.- Copper Developments.-Albertite.- Albert Shale Rocks.- Mr. Ells, of The Geological Survey of Canada, arrived in Sackville last week and has since been engaged in examining rocks in this vicinity. He was waited upon by a POST reporter yesterday and asked what his movements were. He said that Mr. Wood, M.P., had requested that an exploration be made of this district to ascertain the probability of the existence of workable coal in this county and he had been directed to examine the district. After leaving here, he would proceed to Cumberland to explore the country north of Spring Hill, and from there he intended to go to Londonderry, between which places he would spend the next three months. Reporter: Are there any members of the Geological Survey with you? Mr. Ells: Yes. Two assistants, Mr. Barlow and Mr. Giroux. R: What is the nature of your explorations in Spring Hill? Mr. E: I propose to examine the country with a view of determining the advisability of boring to ascertain the direction - east or west - of the Spring Hill coal fields, a matter that has puzzled coal prospectors, and also the general construction of the Spring Hill basin. R: Have you seen any developments of coal in Westmorland? Mr. E: Yes, but I have not seen any productive coal measures here. The rocks in Sackville show presumably the upper carboniferous - or rocks above productive measures; the intermediate strata containing productive seams are totally wanting, so far as known. R: Seams of coal have been found in Westmorland and on Aboushagan River? Mr. E: Yes, but only a few inches in thickness so far as known. The same seams - I think they are all one - I have met with over an area of hundreds of miles in New Brunswick - everywhere in a class of rocks that absolutely forbids the hope of any seam of considerable thickness being found. It is a common idea that coal increases in thickness from surface. Nothing is more delusive. The seams, at least so far as found in this Province, are pretty continuous and uniform in character, having a thickness varying in different districts from eight to twenty-two inches. R: Then there are no productive coals in this county. Mr. E: None, in all probability.R: Have you examined the copper formation? Mr. E: Two years ago, I was asked to examine the cliff at Dorchester, on which Mr. Couch had some openings. The copper prospects looked very well indeed. R: Is it an extensive deposit? Mr. E: Its extent has to be determined by actual prospecting or mining, and its existence cannot be inferred at other places because the same class of rocks exist elsewhere. The ore occurs both as the carbonate and grey copper ore or glance and is valuable. Its existence is accounted for in this way: The copper in solution is acted upon by the organic matter of the plant beds and is thereby precipitated. Whence the copper was derived is not yet definitely known, but the conditions are not such as apparently exist over large areas. Copper in a similar"

Progress - Jun. 2, 1894 Dreaming About Gold and Put Their Money in a Holein the Ground. - The truth about Mining Ventures at Dorchester - How the Fever is Kept up - A Scheme at Present on Foot to Float Stock and Raise Money. - Dorchester, the shiretown of Westmorland County is noted for its quietness. It possesses one of the finest cemeterys to be found any where. Its people are justly proud of it. Mark Twain tells us the people of Bermuda base their pride on their onion, it is their symbol of excellence. A Bermuda father, he tells us, in sending a son forth in the battle of life, councils him to be an onion . A friend, in praising another, bankrupts applause when he says he was an onion . In a like manner the influence of Dorchester's cemetery permeates the whole community; quiet reigns, a Dorchester man never laughs, they all wear funereal visages. The influence shows itself in another direction, their fondness shows itself in another direction, their fondness for digging; having nobody to plant, it takes the form of digging for buried treasure. An old resident who knows most everything, particularly matters of ancient history; tells me, however, this characteristic is due to the influence of a man who died in A.D. 1802. This man was known to everybody as Uncle Billy (I have forgotten his other name). Uncle Billy was the seventh son of the seventh son, and he dreamed three times of buried treasure, but failed to locate it, or to specify its kind. He intended to have dreamed it all out later, but dying suddenly he left nothing behind to show whether it was bullion, gold in its natural state, copper or albertite coal. About fifteen years ago an old lady at Jolicure dreamed three times of buried treasure thereabouts, and a few days afterwards a cow in crossing a field put her leg down a hole; the owner of the cow upon investigation, found a peculiar shaped hole filled nearly full with earth of a different kind from the surrounding earth. It was at once concluded Capt. Kidd had been around there burying treasure. A strong company was formed and excavation continued for two summers, when at the depth of 150 feet hard pan was struck and the work discontinued. It then turned out that the old lady was not a seventh daughter after all, hence the disappointment. She was just an ordinary old lady and dreamed the same as other folk. I have visited the spot and like everyone for miles around, have viewed the hole. It is as nice a hole for the money as can be found anywhere. Dorchester's oracle was not responsible for this failure, it was hardly to be expected he was going to dream treasure for the Jolicurians. Before proceeding I must say the Jolicure hole is one of the institutions of the place, some visitors however, have not shown an appreciation of it, they remind me of Mark Twain's story of the blue-jays finding a knot-hole in the roof of an old building and starting in to fill it up with acorns. After working for hours, and from time to time looking down the hole to note their progress they got mad and went to work to fill that hole or die. After three days hard labor one of the jays happened to look in at the window and discovered they had been firing acorns on the floor all the time. The joke on them was so good that the birds from all parts came to look down that hole and laugh. They all appreciated it except an owl from Nova Scotia who took it in on his way to the Yosemite Valley, he said he saw nothing funny about it, he could show better knot holes in Pugwash, N.S. Returning to Dorchester, the people here occupy the most of their time discovering mines. It is considered a dull day when a mine is not discovered. I came nearly being a mine owner myself last fall. A local company were taking up a property and offered to let me in on the ground floor as they called it for $700. Being out of funds I had to let it slip me. How true the words There is a tide in the affairs of men, etc., etc. A number of years ago Albertite coal cropped outat Beliveau Village, Dorchester, and a strong company was formed and spent a lot of money to procure a few pounds of it. Later copper cropped up in the vicinity of Dorchester and an American company and a local syndicate vied with each other for its possession. They went chasing each other around with special trains and finally the American company got the copper properties, thus securing another of what should be a Canadian heritage. The Americans built some fine buildings, put up a mill and took four kerosene casks of ore away with them. The latest developments are, as you of course know, the gold mines of Memramcook, Gouldville and other points in this parish: the discovery that gold existed here was made by a medical gentleman an adept in the manipulation of the hazel rod. He had been prodding around Nova Scotia and other parts of New Brunswick with indifferent success, and finally he ran against this conglomerate . It is stated the pay dirt was formerly used for ballast on the I.C.R. and that the electricity generated on the wheels and friction took up the precious metal and adhered it to the wheels and that a wheel scraper in the car shop at Moncton had been secretly scraping it off and growing rich. The beauty about these mines is, that the gold runs all alike through the conglomerate, thereby assuring one of a steady output and none of that uncertainty experienced in placer mining and nugget out- crop. Mr. J.B. Neilly of Halifax is the chief promoter of the property at Memramcook and is now making a tour of New Brunswick accompanied by an ex-M.P.P. who is an interesting talker but at present out of a political job. They are disposing of shares, it being their idea that when you have a good thing you should pass it around for the general good. Joe Gould, an Acadian resident of Gouldville, called on me the other day and after getting the loan of a dime wherewith to buy Havelock water , intimated that on his next visit to town he was going to put me on to a gold mine. He had had a dream, he only wanted to have another dream at it before telling me about it. If any of your readers want to go into the gold business come to Dorchester. It is enjoyable, refreshing and exhilarating employment. Joe Gould says the Gouldville party last year had a perfect round of picnics and that the vicinity of the mine where they had the old Frenchman digging, is strewn with the exterior covering of Buchanan enough he says to patch a sheol a mile. Joe uses the revised

Daily Sun - Mar. 26, 1891 Legislature. - The Government Mining Bill Adopted With an Amendment. - Fredericton, March 25. - … In the unavoidable absence of Hon. Mr. Tweedie, Hon. Mr. Blair committed the bill relating to mines and minerals. Hon. Mr. Blair said the bill would largely speak for itself. The government had given considerable attention to the matter and had made themselves familiar with the mining laws of Nova Scotia, P.E. Island, Quebec, Ontario and British Columbia. The present bill embodied the best provisions of all these laws and he thought it would be found very complete and calculated to put those engaged or interested in mining on a better footing than at present. Scientific men were of the opinion that the mining capabilities of this province were very great, and the present bill would facilitate and protect those interested in the business of mining. Under the bill the management would be placed in the department of the surveyor general and it was not intended that the law would entail any charge on the public treasury. Mr. Hanington asked if the bill would protect the rights of those who had purchased mines and minerals and given large values for the same, believing that the properties of the soil had a right to give a title. In this connection he made a special reference to the Dorchester copper mines. Hon. Mr. Blair said the matter referred to would have attention while the bill was under consideration. After supper the bill was further considered and the 137 sections were passed with a few slight amendments. Mr. Hanington moved the following as section 138: That in any case of granted lands where the owner of the soil or the assignee of such owner, who has gone to the expense in the purchase as he believed of mining rights, and interests therein, where explorations have been made or mining operations commenced, before the passing of this act no lease or grant of mines or minerals under said lands shall be made to any person other than such owner or assignee has been notified of any application therefor, and thereupon the surveyor general shall examine into the matter and premises, and such action shall be taken therein as shall under the circumstances be just, so as substantially to protect such owner or assignee; provided, however, that any such owner or assignee shall pay the like royalties as other lessees and otherwise conform to the provisions of this act reasonably applicable to such cases. Hon. Mr. Blair moved the following as an amendment, which was carried: In respect of granted lands wherein the owner of such lands (or the assignee of such owner who has gone to expense in the purchase as he believed of mining rights or interests), has made explorations or actually commenced mining operations before the passing of this act, no lease or licence shall be made under this act to any person other than such owner or assignee, until such owner or assignee has had notice of application having been made therefor, which notice may be sufficiently given by publication thereof by the surveyor general for thirty days in the Royal Gazette, or in such manner as the surveyor general may direct, and thereafter the governor-in-council shall examine into the matter and shall take such action as in his discretion shall seem best, taking into account the circumstances of each case; provided, however, that any such owner or assignee shall be subject to the payment of all royalties and to the other provisions of the act, so far as the same are applicable to his case. The bill as amended was agreed to. Hon. Mr. Pugsley introduced a bill amending the law relating to rates and taxes. The house adjourned at 11 o'clock."

Gazette - Nov. 16, 1899 A Mining Case Protest. - Special to the Gazette. - Fredericton, N.B., Nov. 15 - Surveyor General Dunn is here today hearing a protest made by Andrew Meyer of Boston, John B. Foster of Dorchester and Elmer Howe of Boston and the Westmorland Mining Co., against granting atwenty year lease of certain mining areas located at Dorchester to the Intercolonial Copper Mining Co.Geo. F. Gregory appears for Mr. Meyer, H.A. Powell for Mr. Foster, Dr. Pugsley for for Mr. Howe and M.G. Teed for the Westmorland Mining Co. R.A. Lawlor, of Chatham and A.W. Chapman of Dorchester appear for the Intercolonial Copper Co. Attorney General White is present as legal adviser to the surveyor general. Hon. H.W. Ladd, president of the Intercolonial Copper Co., J.W. Phillips, treasurer, T.J. Edwards sec'y, and J.W. Dickenson barrister, all of Boston are here watching the case, the last named gentleman appearing on behalf of the Westmorland Mining Co. It appears that last spring the newly organized Intercolonial Co. made application for a lease of some copper areas at Dorchester which the other company claims already belongs to them. They obtained the mining rights some years ago from the land owners but never received a license from the government. The Intercolonial Co. are applying for five square miles which includes a portion of the land purchased by the Westmorland Co. and the latter are kicking against the government granting the lease. The hearing will likely occupy all day."

Moncton Daily Times - Jul. 26, 1880 Shipment of Stone for Boston. - The schooner Stella R. cleared from the Stevens Quarries, Mary's Point, A. Co., on Saturday, with about 100 tons of building stone for Boston. S.J. Daily Sun - Jul. 28, 1880 Mining Notes. - American capitalists, under the energetic direction of Mr. Couch, of Newburyport, Mass., are about taking active steps to develop the copper mine at Woodville, near Dorchester. Should trial shafts prove the property to be as valuable as is anticipated, the original owners will doubtless make a handsome sale of the same. The escape of gas on the level and shafts of the Beliveau, Albert County, is something marvelous, having increased lately very rapidly. The level is now within ten or twelve feet of the supposed locality of the bore holes, and the growing conviction in the minds of those interested is that Albertite is close at hand. Should it prove so, it would be of immense value to that part of the country. The discovery of a valuable bed of copper was reported some time ago by parties on the Gulf Shore near Malagash, N.S. Sheriff McLean, of Amherst, N.S., is said to be personally interested in the same. Nova Scotia lead, Nova Scotia gold (N.B.

URN: 0125 / IDX_Names: Beresford Copper;

Moncton Daily Transcript - Jul. 14, 1891 and Moncton Daily Times - Jul. 15, 1891 and St. Croix Courier - Jul. 23, 1891 and Chignecto Post - Jul. 23, 1891 New Brunswick Minerals. - FREDERICTON, July 14, - Edward Jack has returned to town from the Nepisiguit, Gloucester county, bringing with him a twenty-pound block of almost pure copper from a mine discovered by him in that locality. Mr. Jack also discovered a rich vein of silver with traces of gold in places. The discovery has caused much excitement in that section. Mr. Jack says it is the best prospect for mineral in the province."

URN: 0126 / IDX_Names: Nigadoo;

S.J. Daily Sun - Nov. 3, 1881 The Nigadoo Silver Mines. - Says A Bathurst correspondent (Nov. 1):- R.R. Call, Newcastle, President of the Gloucester Silver Mining Company, accompanied by Edward Jack, of Fredericton, started from Bathurst for the mines this morning. Robert Ellis, of Bathurst, Crown Land Surveyor, went with them. They intend spending two or three days on the Nigadoo, and Mr. Jack, who has a good knowledge of geology and mining, will make an examination of the lode and character of the ore deposits, etc."

S.J. Daily Sun - Nov. 14, 1881 The Gloucester Silver Mines. - The work of sinking shafts and developing the Silver Mines on the Nigadoo, Gloucester Co., is still carried on, although it has been somewhat curtailed owing to the difficulties which attend operations of that kind in the winter season. It was at one time supposed the two companies were going to amalgamate and operate together, but from all we can learn this has not yet been effected. The Nigadoo Mining Co. have reduced the number of men at work in their mine to three, besides the cook and manager. They have their shaft sunk now to a depth of nearly 50 feet, following the descent of the vein. For 35 feet or there about the dip of the vein is nearly perpendicular; below that depth it inclines to the south at an angle of 75 degrees with the horizon. The vein walls are still well defined and maintain the same width apart as at the surface, which is about 8 feet, and are coated with steatitic, putty-like mineral peculiar to them. The vein- stone, or rock filling the vein, likewise preserves the same character as at the surface; that is to say, it consists of a greenish magnesian limestone; and the quantity of ore embedded in it does not appear to have increased or diminished to any appreciable extent at the above depth. It is contemplated to sink this shaft 10 to 15 feet further, and then drift a tunnel towards the east, under the river, where it is expected they may meet with a greater quantity of ore, as the indications are very good on the river's bank, and it is supposed there may be what is called a chimney of ore there. The Gloucester Mining Company have temporarily suspended operations. Their property is on a branch of the Nigadoo River, about three-fourths of a mile west of that of the Nigadoo Mining Company. Good indications of ore were seen in the bed of this stream, and the Company diverted the water into a new channel and commenced sinking a shaft. As far as they went down, which was only to the depth of a few feet, the ore held out in fair quantities, but when the fall freshets set in the labor of keeping out the water became too great, so they concluded to give up work for a time. At this mine the ore appears in fully greater quantities than in that of the other Company, but there does not, however, seem to be any well-defined vain. No vein-walls are apparent and the deposit looks more like a bed of ore than a lode. But as the geological formation in which these mines are found is evidently of considerable thickness in this neighborhood, it is possible the veins may not appear on the surface in all places. It was at first supposed the two mines were in the same vein, but this is now regarded as very doubtful, and is, indeed, hardly possible, unless there has been a great dislocation of the strata in the intervening space. It is more likely that there are a number of irregular veins or beds of ore in the vicinity of these mines, as outcroppings of galena and iron pyrites have been seen in several places on the Nigadoo. Before an opinion can be expressed regarding the extent and character of these deposits, however, there should be a proper scientific survey made of the district in which they occur, and the veins or beds opened up in several places and shafts sunk to the depth of a few hundred feet. There are many reasons for supposing these mines to be valuable. They are found in the Quebec Group of rocks - a formation which is highly metalliferous. They occur near the northwestern limit of this group or belt, which is here some 10 or 12 miles in width, and in section where the strata, as already remarked, may be of considerable thickness. Veins traversing these rocks and occupying fissures in them are, in all probability, pretty deep, and, in general, the quantity as well as the quality of the ore may be expected to improve as they descend. The association of the different kinds of metals and minerals found in these deposits, too, is such as would reasonably lead to the hope of their being productive."

Fredericton Capital - Oct. 6, 1881 The Gloucester Silver Mining Company.- We have received from Hon. Mr. Adams, a copy of the prospectus of the above company, the property of which is situated on the Nigadoo River, in Gloucester County, about sixteen miles from the town of Bathurst, and six miles from the Intercolonial railway, with both of which it is connected by tolerably good roads, sufficient for the transport or ore at any season. The capital of the company is $250,000, divided into 50,000 shares of $5.00 each. It has secured a title of a tract of 640 acres of land, lying in the Quebec Group, which is the great metaliferous formation of North America. The general office of the company is at Bathurst, and a remunerative business is anticipated by the shareholders."

Moncton Daily Times - Oct. 6, 1881 Silver Mining. - Nigadoo mines are still booming. Good specimens of ore have been taken out lately, and there are good indications of striking a rich pocket soon."

Chignecto Post - Sep. 1, 1881 The silver mines in Gloucester Co. appear to have struck it rich. Bathurst advices to the SUN, yesterday, say that the latest reports from Nigadoo Silver Mines are very encouraging. The shaft has been deepened during the past week and the vein of galena is getting larger and richer. The stockholders are very much elated at their prospects. Samples are being prepared for the Halifax Exhibition.- St. John Sun, Sept. 6th."

S.J. Daily Sun - Sep. 2, 1881 and Morning Freeman - Sep. 10, 1882 New Mining Company. - William A. Hickman and JohnSadler, of Chatham, Samuel Adams, of Leadville, Colorado, Robert R. Call, of Newcastle, John J. Adams, of New York City, Edward J. Hickson and John Ellis, of Bathurst, James Hickson and Rev. Edward Hickson of St. John, have filed in the office of the Provincial Secretary a memorandum of association for the incorporation of a company to be styled the Gloucester Silver Mining Company. The object of the Company is the digging, raising and mining of silver and other ores and minerals, and the crushing and smelting thereof, with such other things as are incident to the attainment of that object, with a capital of $250,000, to be divided into 50,000 shares of $5 each. The office or principal place of business is to be at Bathurst. An organization meeting has been called for Saturday, the 10th inst., at the Wilbur House, Bathurst."

URN: 0126 / IDX_Names: Nigadoo;

Weekly Freeman - Sep. 3, 1881 The Bathurst Mines. - We learn that a number of gentlemen interested in mines in Gloucester met in Chatham yesterday, and formed themselves into a company for working one of the Bathurst mines. The company is to be stocked for $250,000 in shares of $5 each. Stock will be issued in a few days, when, we presume, now that the mining fever is at its height, numbers of our young men will embrace the opportunity then open to them to place their earnings to account. We wish all concerned very good luck in the enterprise. - Chatham Star, Aug. 27th."

S.J. Daily Telegraph - Sep. 12, 1881 A Silver Mining Co. Organized. - A meeting of the Gloucester Silver Mining Company was held on Saturday at Wilbur House, Bathurst. The officers elected are as follows:- R.R. Call, president; John Sadler, vice- president; John Sivewright, secretary; William Hickson, treasurer, and Samuel Adams (Leadville), general manager. The assays, it is said, have inspired the company with the most sanguine anticipation of success. - Globe."

S.J. Daily Sun - Sep. 12, 1881 A meeting of the Gloucester Silver Mining Company was held on Saturday at the Wilbur House, Bathurst. The officers elected are as follows:- R.R. Call, president; John Sadler, vice president; John Sivewright, secretary; William Hickson, treasurer, and Samual Adams (Leadville), general manager."

Moncton Daily Times - Sep. 12, 1881 Organization of the Second Silver Mining Company in Gloucester. - Bathurst, N.B., Sept. 10. - A meeting of the Gloucester Silver Mining Company was held today at the Wilbur House. The officers are as follows: R.R. Call, president; John Sadler, vice-president; John Sivewright, secretary; William Hickson, treasurer, and Samuel Adams (Leadville), general manager. The assays, it is said, have inspired the company with the most sanguine

S.J. Daily Sun - Sep. 20, 1881 The Gloucester Silver Mine. - The Gloucester Silver Mining Co. advertise in the Sun a sale of 5,000 shares of their stock at $3 per share, the par value being $5 per share. The proceeds of this sale, we understand, are to be applied to the work of development. The capital of the Company is $250,000. The Directors are all responsible men. R.R. Call, Esq., of Newcastle, is President and John Sivewright, Esq., of Bathurst, Secretary. A correspondent of the Sun (not connected with the company) has visited the property of the Company and writes as follows:- Bathurst, Sept. 17. - I have just returned from a visit to the Gloucester Silver and Lead Mines, situated on the Nigadoo River, about sixteen miles from Bathurst, and hasten to send you a note about them. They are easily reached by roads running through Dunlop, Dumfries and Robertville settlements, over which a wagon can be driven to within half a mile of the mines. They are not located on the main Nigadoo, but on two branches which empty into it from the south side of Robertville. The geology of that section is quite interesting. The country rock is a chloritic or talcose slate, with a strike of about north 60 degrees east, and a high dip to the south. The ore occurs in a fissure vein traversing the rocks in a nearly east and west direction, and intersecting the strata at a pretty wide angle. The vein is about eight feet wide and descends nearly perpendicularly. Its length is unknown, but it has been traced a distance of more than a mile along and between the two streams above mentioned. A shaft has been sunk to a depth of 25 feet and shows the vein to have well defined walls. The ore is embedded in a gangue of quartz and calcite, but the vein-stone, wherever it has been opened up so far, consists largely of an amorphous calcareous rock which has a greenish or chloritic cast and through which the galena and blende often runs in masses of various sizes and shapes. I will send you some specimens and a more detailed description of the lode in a few days. Active operations are about to be carried on under the charge of Mr. W.H. Seccombe, an English practical miner. Twelve or fifteen men are at work now, and I was informed a night crew would be put on shortly."

Moncton Daily Times - Feb. 7, 1882 The Silver Boom. - The fortunate owners of the Elm Tree Brook silver mine met at Newcastle, on Saturday, and organized themselves into a joint-stock company. They dropped the title of Bay de Chaleur, which they had chosen at a previous meeting, and will be incorporated as the Elm Tree Silver Mining Company. The capital was placed at $500,000, as it was the opinion of the meeting that the richness of the deposit, so far as it has been opened up, warrants as large a figure as a half a million. The stock will be divided into shares of $5 each. The sale of 25,000 shares, at not less than two dollars each, for the purpose of raising funds to develop and work the mine, was authorized, and the rest of the stock was divided among the owners. The following gentlemen were elected Directors: R.R. Call, Wm. Muirhead, Jr., John Sadler, John Ellis, W.R. Payne, John Adams (New York), and W.A. Hickman. The Directors subsequently chose the following officers: R.R. Call, president; Wm. Muirhead, Jr., vice-president; R.A. Lawlor, Secretary; W.A. Hickson, Treasurer. The specimens of ore that have been assayed have yielded from $100 to $250 in silver and lead to the ton, the assays having been made by United States Government officials. This is rich enough to suit anybody, and the only thing which remains to be done to ascertain the value of the property, is to trace the vein and test the quantity of the ore at different places. This will be done in the spring."

Moncton Daily Times - Jan. 18, 1882 The mining boom continues in Gloucester. On Saturday the owners of the new find on Elm Tree Brook met at Newcastle and organized themselves into a company. The stock was placed at $360,000, nominally, of which $320,000 was divided equally among the eight owners, as paid-up stock, $32,000 each. This property has cost them, so far, about $8,500. Eight thousand shares ($40,000) of the stock will be offered for sale for the purpose of procuring working capital. This is expected to be sufficient, as the vein may be readily worked without any expenditure for development at all, only the requisite plant being needed. The same gentlemen are understood to have discovered one or two other equally promising outcrops in the same region, and they have the right to locate three more square miles."

Weekly Freeman - Jan. 21, 1882 The Elm Tree Silver Mine, Co. Gloucester, is said to be even richer than was supposed. Its proprietors now value it at $400,000. It is said that several valuable copper mines have been discovered lately about the head of the Bay of Fundy. The surface indicates rich copper. Mines in many parts of this Province have proved elusive."

Royal Gazette - Jul. 26, 1882 Notice. A meeting of the Directors and Shareholders of The Nigadoo Silver Mining Company will be held at the Office of K.F. Burns, Esquire, Bathurst, on Wednesday, August 2nd, at 9 o'clock, A.M. Edward Hickson, Secretary. Bathurst, July 18, 1882."

S.J. Daily Sun - Nov. 3, 1882 New Brunswick Silver Mines. - Operations and Prospects in the Northern Counties - The Elm Tree, Nigadoo and Gloucester Mines - Gold Hunting on the Little South West. - Interview with Major R.R. Call. - This week, Major R.R. Call, of Newcastle, has been in the city on business connected with the Elm Tree silver mine in Gloucester County, in which he is largely interested. On Wednesday evening he was waylaid by the interviewer of the Sun, with the following result:- Rep. - You are largely implicated in mining enterprises on the North Shore, I believe? Mr. Call. - Yes, I have had considerable to do with several concerns of the kind. Just at present I am devoting particular attention to the Elm Tree Mine, and on the fate of that hangs the destiny of all the silver mines on the North Shore. Rep. - Perhaps you would condescend, in your capacity of the North Shore Bonanza Monarch, to enlighten readers of the Sun with a brief sketch of the mining enterprises of that locality? Mr. C. - Most certainly, although in regard to the euphonious title you have conferred upon me, the nomination is respectfully but firmly declined. The Nigadoo silver mine, on the Nigadoo Stream which empties into Bay Chaleur, was the first mine prospected on the North Shore, but as the Elm Tree mine just now has the prominence of all others, I will describe what we have done there first. The vein is situated on the Elm Tree River, crosses it diagonally, and has been traced for a distance of two and a half miles, so that the supply of ore is practically limitless; the only question is as to the quality of the ore and the readiness with which it can be raised to the surface. From the point where we started to sink the shaft, on a high bank overlooking the river, we have followed the course of the vein for fully a mile further up stream, and about one and a half miles down river. The shaft we have been sinking strikes the vein at an angle of about 45 degrees. Two crews of men, one by day and the other by night, have been employed digging during the season, and the shaft has been sunk to a depth of 38 feet. As the workmen approach the footwall the ore becomes richer and the indications are much more favorable. The vein, as you know, is enclosed within walls and these walls are as smooth as the plastered wall of this room, the body of ore lying there separate and distinct from the rock of the country. Just now, in consequence of having tapped a water vein, the water keeps pouring into the shaft at the rate of 1200 gallons per hour, and the pump at present employed only lifts 1,300 gallons per hour at high pressure. I have just completed the purchase from Messrs. Wisdom & Fish of a Knowles steam pump, which has a capacity, running at three-quarters speed, of 5,000 gallons per hour. Rep. - What are the chief features and apparent extent of the mine? Mr. C. - Well, as I have stated, we have traced the vein a distance of 2 1/2 miles along the river, and the specimens unearthed at various points are precisely similar. The vein has an average width of six feet, but, for working purposes, is practically much wider than that, from the diagonal direction in which it is pierced by the shaft. For half the distance down, the shaft is 11 feet by 7 feet, but when we reached the solid rock we reduced its dimensions to 8 feet by 6 feet. The bottom of the vein will, in the opinion of Prof. Bartlett, State Assayer of Maine, never be reached, and the supply of ore is inexhaustible. The mine is well located, being a short distance below a splendid water power, within four or five miles of the Intercolonial station at Petit Rocher, and only four miles distant from the Bay. The rock, however, is difficult to work and all the ore has to be raised by blasting. Sometimes as much as 10 tubs of ore will be dislodged by a single blast, while at other times scarcely as much as a man can lift is raised. Detached lumps of first-class ore are frequently raised weighing from 80 to 150 lbs., and the results continue to look more and more favorable as the shaft descends. Rep. - Do you not anticipate serious trouble from the water? Mr. C. - No, I think there is very little danger of that. The water does not appear to be in the vein itself or even between it and the adjacent soil, but rather in the natural rocks of the surrounding country. I forgot to mention that between the vein, which is composed of silver, lead and a sprinkling of gold, and the contiguous country rock there is a substance called kaolin, which mineralogists affirm to have been produced by the friction of the ore vein with the natural rock. From this kaolin a species of china-ware is manufactured. Rep. - What is the value of the ore? Mr. C. - The value of anything is the difference between its cost of production and its market or contract value, from an industrial standpoint, and a definite answer to such a conundrum is impossible. The preliminary expenses involved in the development of a mine of this character are considerable and the result is not always adequate to balance disbursements. An average ton of the crude material is estimated by Prof. B. to be worth $15 while occasionally a ton of pure galena will be raised worth $200 or $250. There is all the way from $2 to $10 worth of gold in a ton of ore and it is estimated, if the indications continue to improve at the present rate, that the mine can be worked profitably for the gold it contains alone. Rep. - Are there any other veins of a similar character in the vicinity? Mr. C. - Well, we have had - Rep. - Who are we? Mr. C. - The directors of the Elm Tree Mining Co., are, John Sadler, Wm. Muirhead, jr., Wm. A. Hickson, of Chatham; John Ellis, W.R. Payne, of Bathurst; John J. Adams and Thos. D. Adams, of New York, and yours truly, R.R. Call, of Newcastle. We had, I was about to say, a number of men employed in locating different mines the past summer, exploring and prospecting, etc., but they did not discover anything better than the original find; so we bought up two more miles of land adjacent to the Elm Tree and surrounding it, which we shall develop more fully in the future should the latter prove a bonanza. Rep. - What are your plans in respect to the development of the mine? Mr. C. The capital stock of the concern is $500,000, and for the immediate purposes of experiment we decided at our first meeting to allot 20,000 shares of $5 each, as treasury stock, to be sold for $2 per share. Stockholders cannot sell any of their stock except this treasury stock, and the proceeds of that must be applied to the development of the mine. This would give us $40,000 with which to carry on the work, but as a matter of fact we have not sold many shares yet - only just sufficient to work the mine - as we believe we have a good thing and do not want to sell more than what is absolutely required. What we propose doing is to erect works for crushing ore as fast as raised and then concentrating it by the application of water. By a continuous process of reduction, we shall bring the mineral within one-tenth of its former bulk, so that ten tons worth $15 each will become one ton worth $150, the labor being cheaply performed at the mines and an immense saving being effected in the freight to the United States where we expect to have our chief market. The best works for smelting and working the material of a mine such as ours is at Newark, N.J., and we shall probably send most of our concentrated ore to that place. Silver is a cash article, and, after deducting the percentage of smelting, we will have a very respectable margin of profit. The gold and lead will be separate from the ore and treated likewise. We have no fears for the quantity of ore we shall be able to produce and have the best reasons for entertaining sanguine feelings as to the quality of the same. Very little water power is required to run the concentrating machinery, and that power we can obtain from the falls a few yards above the mine. The cost of production will be quite light. Labor is cheap and plentiful. We pay our present force $1 per day and they find themselves and live in a shanty or rocker-house, a few yards from the mouth of the pit. We have a building over the shaft 23x15 feet, which contains a blacksmith's forge, the pumping apparatus, hoisting gear, etc. Other Properties. - Rep. - How about other silver mines in your locality? Mr. C. - I am not so well posted in regard to them, from the fact that I am not so deeply interested in them as in the Elm Tree and also because the latter is the only mine that is now in active operation. The others are awaiting the result of our experiments and should they turn out favorably, no doubt they will all fall in line, and there will be a genuine boom in mining circles at the North Shore. The Nigadoo, which was the first mine discovered, has suspended operations, the managers having resolved to abide by the verdict of the Elm Tree. The Nigadoo Company includes some good names who will not let the enterprise drop without a fair trial, such as, Kennedy F. Burns, M.P., Bathurst, president; Rev. Edward Hickson and John H. Harding, St. John, James Hickson and the Messrs. Ellis of Bathurst. It is believed they have a good property; they will have to blast deeper down than they contemplated when they commenced. The Nigadoo mine is situated on the Nigadoo River about 9 miles from the Elm Tree mine. It's capital stock, I believe, is $150,000. It is thought that the Nigadoo find is not so much a regular vein, similar to that of the Elm Tree, as a pocket, or detached deposit, which while not so extensive as a vein is liable to be very rich in places, as in the case of the Silver Islet Mine of Lake Superior. The Nigadoo mine is 8 miles from the Bay and is situated on a species of peninsula formed by the river and one of its branches. There is a good stream of water which can be utilized if necessary and the situation of the mine, with the formation of the rock adjoining, is highly prepossessing. The ore is very similar to that of the Elm Tree with the exception that it contains no traces of gold so far as is yet observed. Some very fine specimens have been turned out. Additional outlay is required to develop its true character. The lands held by the company comprise 100 acres. Located around the Nigadoo mine is the property of the Gloucester Mining Co., 640 acres in extent, which was prospected by the present Elm Tree incumbents and Messrs. Edward & James Hickson, before the latter mine was discovered. No work is being performed on this mine, awaiting the outcome of the Elm Tree enterprise. Samples have been tested, however, that were shown to be very rich in silver and lead. This property, bordering on all the boundaries of the Nigadoo, is necessarily located on both sides of the stream. In case the Nigadoo pans out well, immediate steps will be taken to develope the Gloucester property. ....Gold Hunting on the Little Southwest. - Rep. - This, then, comprises the condition and prospects of mining operations on the North Shore at present? Mr. C. - Yes, with one important addendum. Messrs. Allan Ritchie, Robert Ritchie and James Brown, of Newcastle, have again obtained the right to locate several miles in the county of Northumberland. They have had parties prospecting for gold on the Little Southwest the past year, and have obtained several promising samples, though whether the supply will warrant seriousattention has not yet been made manifest. After purchasing Crown Lands for mining purposes, the parties have one year to locate their mine from the date of sale. These gentlemen have shown their faith in the discoveries made by buying up these lands for a second term, which gives them another year to prospect. The way in which the deposit was discovered was very singular. Frequently logs coming down the river run upon or are jammed among the bars and rocks with the result that large fragments of rocks, etc., frequently adhere to their extremities and require careful attention on the part of the millmen. In this case a large lump of beautiful gold quartz was discovered by a workman at Ritchie's mill, imbedded in the end of a log. The conclusion was at once formed that there must be a rich deposit of gold-bearing quartz somewhere between where the log was cut on the river and the head of tide. This was a year ago last August, and since then several quartz formations have been found. It is now believed, however, that the chief deposit must be located further upstream. Since the mining fever broke out on the north shore, everybody has been carried away with it (myself among the number) and a reasonable conclusion is that the attention given to the subject will at least bring about a more general knowledge of the mining facilities of the Province than has heretofore existed. Samples produced from all parts of the three counties, Restigouche, Gloucester, Northumberland, show the presence of silver to be quite general, and its location in paying quantities is now the chief aim of the explorers. The ElmTree Company have a gold mine located in Restigouche which exhibits very favorable symptoms. Major Call was

URN: 0126 / LEGI / IDX_Names: Nigadoo; Legislation, etc.;

Royal Gazette - Jul. 20, 1881 Government Notice. Under Chapter 98 of the Consolidated Statutes. These are to certify, that James Hickson, of Bathurst, in the County of Gloucester, Edward Hickson, of Carleton, in the City and County of Saint John, Robert Ellis, of Bathurst, in the County of Gloucester, John Ellis, ofBathurst in the County of Gloucester, and John Henry Harding, of the City of Saint John, in the City and County of Saint John, in the Province of New Brunswick, have filed in the Office of the Provincial Secretary a Memorandum of Association for the incorporation of a Company to be styled The Nigadoo Silver Mining Company; the object of the Company is the digging, raising and mining of Silver and other Ores and Minerals, and the crushing and smelting thereof, with such other things asare incident to the attainment of that object, with a capital of one hundred and fifty thousand dollars ($150,000), to be divided into thirty thousand shares of five dollars each, and stating that the Office or principal place of business is to be at Bathurst, in the County of Gloucester. Dated at Fredericton the 9th day of July, A.D. 1881 Wm. Wedderburn. The above Memorandum of Association } is filed by

Order of Council of date the} 9th day of July, A.D. 1881 } Wm. Wedderburn, Provincial Secretary."

Royal Gazette - Sep. 7, 1881 Public Notice. The undersigned subscribers to the Memorandum of Association of the Gloucester Silver Mining Company, hereby give notice, that a meeting of the said Corporation will be held at the Wilbur House, Bathurst, in the County of Gloucester, in the Province of New Brunswick, on Saturday the 10th day of September next, at 10 o'clock in the forenoon, for the purposes of organizing the said Corporation pursuant to Section 13 of Chapter 98 of the Consolidated Statutes of New Brunswick. Dated at Bathurst the 26 th day of August, A.D. 1881. W.A. Hickson, John Sadler, Samuel Adams, R.R. Call, John J. Adams, Edward Hickson, John Ellis."

URN: 0126 / Z2 / IDX_Names: Nigadoo; Sandstone, Building Stone, Monument Stone, etc.;

S.J. Daily Sun - Nov. 5, 1881 Gloucester County. - .... And, then, there is the mineral wealth of the County. Attention has been drawn to the County recently by the discovery of a deposit of silver. Of the quality of the Nigadoo ore there can be no doubt; its richness has been attested by assays worked out both in England and the States. Some ofthe specimens which were tested, picked up at a venture and without the intention at the time of submitting them to chemical experts, revealed an extraordinary yield of the precious metals. On that point there is no room for controversy. The only matter in doubt is the extent of the deposit. That it is very large is the opinion of many familiar with the details, but this is a point which only a liberal development of the property can settle. The Nigadoo vein is owned by two companies - the Nigadoo company proper, and the Gloucester company. Some work has been done by both companies, and thus far everything is encouraging. The Gloucester company are so hopeful that they have refused to sell their stock, having adopted a resolution to lock it up for the present. The finding of valuable mineral in Gloucester, however, is not a thing of yesterday. The existence of large deposits of copper has long been known. The grindstones of Gloucester, too, have been famous for a generation. There are many other facts in connexion with the County's resources which might be stated did space permit. It is sufficient to say, in concluding, that few counties in Canada possess greater natural resources and advantages, and the present outlook points to a great development in those industries on which the prosperity of the County rests."

URN: 0144 / 0275 / 0045 / 0368 / X1 / IDX_Names: Brunswick # 6; Woodstock Fe; Burnthill Tugsten; Keymet; Grand Lake Coal;

St. Croix Courier - Mar. 3, 1955 Mining Picture.... - The established mining industry reached a record production in 1954 with the value of products estimated at $12,600,000. These were all nonmetallics. Coal was the most important with a record production of more than 784,000 tons and a value of 6 1/4 million dollars. Although progress might be considered to be slow in the development of base metal deposits already discovered, it must be realized that work of this magnitude takes a long time. Actually the rate of progress in New Brunswick has been exceptionally rapid. Going Ahead. - Work is going ahead on the development of base metal deposits already discovered and in prospecting and proving up other deposits. You will remember that the surface installationsat the Keymet Mine were destroyed by fire last March, just a few days before the official opening was to have taken place. The company proceeded to rebuild their installations immediately and as a result of efficient and rapid reconstruction the mine commenced operation in October of 1954. The first lead-zinc concentrates in the history of New Brunswick were then produced.Late in 1953 work was resumed at the Burnt Hill tungsten mines, a property which had lain dormant since 1917. A number of buildings and crushing and grinding plants have been constructed and production of tungsten concentrates was begun in the early fall of 1954. Preliminary Shaft. - On the Anacon property of Brunswick Mining and Smelting Corporation Limited a preliminary shaft was completed to a depth of 412 feet. Levels will be developed from this shaft at depths of 200 and 300 feet. Plans call for a much larger production shaft to a depth of 1,850 feet in the initial stages and possibly to 4,200 feet. Ore from this first shaft together with that from the open cut operation at the Austin Brook property will be taken to the company's pilot mill which was completed some two months ago. The pilot mill represents an expenditure of more than one- third of a million dollars and will treat 150 tons of oreper day. It is designed to test the ore in preparation for full-scale production. The present plan is to erect a 4,000 ton concentrator following completion of testing work in the pilot mill.At the New Larder 'U' property a similar shaft is being put down and has reached a depth of 360 feet. Plans call for a depth of 1,500 feet. During 1954 the major discovery was the high- grade lead-zinc-silver-copper deposit found some 32 miles northwest of Newcastle by the American Metal CompanyLimited. This is the third very large lead-zinc-silver- copper ore body that has been discovered and proven in two years. Shallow shafts are being put down preliminary to actual mining operations. This company has a fine record of achievement with a background of successful operations and we may expect this mine to be developed and put into operation as rapidly as reasonable possible.Manganese. - At Jacksonville near Woodstock surface exploration followed by drilling has outlined a reported 150,000,000 tons of iron-manganese ore. A great deal of metallurgical research has been performed on this material. Exploration for base metals continued on a broad scale throughout many parts of the province. This work consisted of routine prospecting, trenching, diamond drilling and geochemical and geophysical surveys. It is of interest that much geophysical work was done from the air using conventional aircraft and helicopters. During the year, 18,725 mining claims were staked. These added to the claims from the previous year gave a total of some 40,000 claims in effect as of the first of 1955. As a matter of comparison, it may be noted that 593 claims were in effect in 1950. For the last five months of 1954, the average number of claims recorded per month was 2,023. The sudden increase of work involved in recording and processing these claims has made necessary the expansion of the office staff of the mines branch of the Department of Lands and Mines. Two visual records systems have been set up which makes it possible to find the records respecting any of the 40,000 claims in two or three minutes. This has been a great assistance to those requesting information concerning claims and has been done in one recording office with a small staff. It may be of interest to note that the province of Ontario operates 13 recording offices and the total number of claims handled in January was 3,421. Plan Amended. - In anticipation of the development of the mining industry, the plan of organization of the mines branch has been amended to provide for a Mineral Lands Division, a Mine Inspection and Engineering Division, a Geological Division, a Mine Assessment and a Bathurst Office. This organization is considered adequate to cope with the situation for the time being and the creation of a Department of Mines is not considered justified at the present time. Not all of these positions have been filled but in November, Mr. H.N. Currie was named Chief of the Mine Inspection and Engineering Division. Mr. Currie is a former Maritimer and a graduate mining engineer. In this capacity he has worked 12 years in metal mines, two years with the Nova Scotia Department of Mines and for the past three years has been resident engineer and inspector with the British Columbia Department of Mines. New Code. - He has drafted a code of regulations governing the operation of mines and safety precautions and comments are being invited from those in charge of such operations. This code when completed will be submitted to the Lieutenant Governor in Council for approval. It should be noted that the Mines Branch has moved its offices from the Forestry and Geology Building at the University of New Brunswick and is now housed in the former Dominion Entomological Building next to the Bonar Law Bennett Library on the university campus. It is my opinion that we are most fortunate to be able to co-ordinate the efforts of mining exploration and forest industries under one authority, and most particularly with the thoroughly competent and experienced guidance of our present deputy minister, Mr. W.W.

Carleton Sentinel - Aug. 28, 1925 Our Mines and Minerals. - Dr. Alcock of the Geological Survey, Ottawa, was here from Saturday toTuesday. He spent most of his time in the mines of Dominion No. 1 and the Cobbler-Sexton. The result of his investigation will be filed with the department. Many thousands of dollars have been spent in preliminary work in these mines, in sinking shafts and building tunnels. The assays have shown an abundance of high grade ore, chiefly copper, but capitalists have never been sufficiently interested to follow up the preliminary work. Dr. Alcock also visited the Woodstock Creamery to see the collection of polished stones gathered by Mr. George Ransom at the Island Park Beach. He wasparticularly impressed with the Horse Shoe Mine and took samples of ore from it. Dr. Alcock promised to visit the Iron Works at Upper Woodstock in the near future. Messrs. Frank McClement and E.L. Greer were the guides for Dr. Alcock and furnished him with maps, assays, etc., relating to the mines in Carleton County."

URN: 0261 / IDX_Names: Biggar Ridge Gold;
Weekly Record - Fri. Jun. 20, 1891 A rich lead of silver ore has been found near Beaufort, Carleton Co. The matter is being kept very quiet, but prospecting with good results is going on."

Moncton Daily Transcript - Jun. 24, 1891 A rich lead of silver ore has been found near Beaufort, Carleton Co. The matter is being kept very quiet, but prospecting, with good results is going on."

St. Andrews Beacon - Jun. 25, 1891 A rich lead of silver ore has been found near Beaufort, Carleton County."

Carleton Sentinel - Sep. 19, 1891 A gold mine has lately been discovered by Mr. John Huggard of Biggar Ridge, a gentleman well versed in mineralogy, who has been prospecting for some time in the vicinity; the mine is located near Beaver Brook on Biggar Ridge, and is being opened up by a company of shareholders, namely, John Huggard, Thos. Sommerville, B.R., and John McIntosh of Glassville, who believe, with others, that when the mine becomes more extensively developed it will yield very rich profits in gold and other minerals, which we hope will be the case, as we believe it will be of inestimable value to the surrounding country."

Carleton Sentinel - Jul. 21, 1894 Tobique. - Mr. Bailey, not the professor, but a practical geologist nevertheless, has been prospecting for several days around the neighboring streams. - His opinion is that gold bearing rock abounds, but is covered up by other strata that will require considerable time and money to get through."

Woodstock Dispatch - Jul. 12, 1899 George Bailey, Beaufort, writes to the Dispatch, stating that he can show veins of quartz rock from 2 to 16 feet wide, copper, lead, silver and gold, in the Tobique district. He claims there is no need of going to Alaska or B.C. when the same formation exists in N.B. He will show anyone, who means business the richness of the

URN: 0261 / IDX_Names: Biggar Ridge Gold;
Weekly Record - Fri., Dec. 27, 1901 The gold mine at Biggar Ridge, Victoria county, N.B., owned by Miller, McPhail & Brown, is a promising property. The contractor for the preliminary work is reported as saying the steam drill has reached a depth of 70 feet. At 28 feet, gold in the leaf form had been struck; it has a dark yellow cast, is as thin as fine writing paper, and pliable as lead. At 60 feet the same kind of metal was found, only a brighter yellow, and the later is found continually. About $800 has been expended."

St. John Star - Feb. 9, 1901 Gold in Carleton Co. - (Victoria Co. News). - W.J. Miller, of Muniac, is going to develop 'Prof.' George Bailey's gold mine at Biggar Ridge. He has now a dozen men at work erecting buildings at the place and will, it is understood, put in mining machinery. Recent assays have shown the ore to be worth $40 per ton in silver and copper. It is just within the bounds of possibility that this may develop into a Klondyke on a somewhat reduced scale. There is much mineral in evidence in that section of the country and doubtless some of it can be worked to profit."

Woodstock Dispatch - Mar. 6, 1901 Mining News. - George Bailey of Beaufort, who has spent many years in the study of geology and also recently put in four years on the Tobique in search of the famous Giberson gold, has for the past twelve months been working on Biggar Ridge in Carleton County, looking for mineral deposits. He has located a vein of metal bearing quartz thirty feet wide and he does not know how deep, running North East and South West. It assays $16.80 to the ton and Mr. Bailey says that with a crusher and smelter costing $15,000 this vein could be worked to pay. J.W. Miller and

George McPhail of Muniac have been furnishing the money for his work at Biggar Ridge and they have given him authority to go ahead and follow the vein down to a depth of twenty-five feet. The metals he has found in the vein are copper, lead and silver and he has every reason to believe that there is gold below. Mr. Bailey studied chemistry, mineralogy and geology with Dr. W.F. Best of St. John and he brings to his work a competent knowledge of his profession. It is earnestly to be hoped that he is on the eve of a rich find, and that in the near future Bristol will be the shipping port of a large and paying mining operation. Mr. Bailey says that with one more summer's work on the Tobique he can locate the Giberson gold."

Woodstock Dispatch - Dec. 31, 1902 or 1903 Biggar Ridge. - Geo. Bailey the mine prospector again shows his smiling countenance among his many friends here."

URN: 0261 / C1 / IDX_Names: Biggar Ridge Gold; Tobique/ Giberson Gold;
Woodstock Dispatch - Dec. 1, 1897 The Giberson Mine. - Up River People Doubt ThisStory. - A story has been going the rounds of the papers to the effect that the lost Giberson mine on the Tobique has been discovered. An account of the discovery appears to have been telegraphed to a Bangor paper, from Fort Fairfield, and to have been copied by our own papers. In this report it is stated that nearly a score of years ago one Giberson was a lumberman on the St. John river. He explored his own tracts, and after he had bought some land in the Tobique region, which is not far from the eastern Maine border, he went over the tract carefully in order to locate the streams and the nest growth. It was while he was engaged in this task that he discovered the gold mine that his reports made famous in that section. Giberson was alone on his exploring trip, but he mined enough at the spot to discover that the deposits were rich and extensive. He brought out a bag full of samples that he collected over quite a wide radius. These he carried to St. John and had them tested by experts. The ore was pronounced rich enough to return large profits to anyone who chose to mine it. In fact the assayists were enthusiastic over the quality of the specimens that so Giberson assured them, were not culled, but had just as he had picked them up. For, he explained, he was as anxious as anyone else to know exactly the right of the matter. He proposed to operate the mines himself, and he did not want to start out under any misapprehension. With the earnest assurance of assayists behind him, Giberson hurried off up the river with supplies intending to start right in and work his new property. But in his haste to reach the place he rode on a train loaded with fresh arrivals from the old country, and from them caught emigrant fever so-called. He was put ashore, and in a few days died without disclosing the secret of the location of the mine to any one. The story goes on that in spite of all effortsthe lost mine could not be placed. But, says the Fort correspondent, one George Bailey has come to town with valuable specimens, and with the assurance that he has made the long expected find. After prospecting Mr. Bailey's final discovery of the mine was made in a rather singular fashion. He had shot a duck near a small pond, and in dressing the fowl for his dinner he discovered in the crop some unmistakeable traces of gold. He resolved to hunt that particular section over more carefully than he had done. In fact, he went all over the ground again, and at last came across the work that unfortunate Giberson has accomplished in getting out his samples. As soon as Bailey was certain of his final he came out to Fort Fairfield and made preparations to spend the winter at the mine. He went in last week with supplies for several months and took a companion with him. They do not expect to do much in the way of mining this winter, but will crack off what ore they can and will endeavour to locate leads and otherwise to prepare for active operations in the spring. Along with his other supplies Bailey took a liberal stock of dynamite, and proposes to open the ledge in every direction so as to get at the heart of the deposit and to ascertain its extent. Here is the story as it appears, it being only necessary to add that according to the account, Bailey who is spoked of as a practical geologist, has received mining claims from the government. A Dispatch representative was in Andover last week. He heard a good deal of talk over the supposed find, but the general impression was that it would not turn out to be Giberson's lost mine. There is faith in this lost mine, many old residents remembering the incident, substantially correct, as it appears in the above extract."

URN: 0261 / C1 / IDX_Names: Biggar Ridge Gold; Tobique/ Giberson Gold;
Richibucto Review - Dec. 2, 1897 Gold on Tobique. - The Lost Giberson Mine Discovered by One Bailey. - Fort Fairfield, Nov. 22. - George Bailey has returned to town with specimens of gold ore that he claims were taken from the famous lost Giberson Mine. For months Bailey has been searching for this place.The mine has for years been partly a well established fact and partly a myth. Now Bailey's return seems to establish the fact that Giberson really told the truth. Under these circumstances Fort Fairfield and the Tobique region near by in the province is having a little Klondyke excitement of its own. Nearly a score of years ago one Giberson was a lumberman on the St. John river. He explored his own tracts, and after he had bought some land in the Tobique region, which is not far from the eastern Maine border, he went over the tract carefully in order to locate the streams and the nest growth. It was while he was engaged in this task that he discovered the gold mine that his reports made famous in that section. Giberson was alone on his exploring trip, but he mined enough at the spot to discover that the deposits were rich and extensive. He brought out a bag full of samples that he collected over quite a wide radius. These he carried to St. John and had them tested by experts. The ore was pronounced rich enough to return large profits to anyone who chose to mine it. In fact the assayists were enthusiastic over the quality of the specimens that so Giberson assured them, were not culled, but had just as he had picked them up. For, he explained, he was as anxious as anyone else to know exactly the right of the matter. He proposed to operate the mines himself, and he did not want to start out under any misapprehension. With the earnest assurance of assayists behind him, Giberson hurried off up the river with supplies intending to start right in and work his new property. But in his haste to reach the place he rode on a train loaded with fresh arrivals from the old country, and from them caught emigrant fever so-called. He was put ashore, and in a few days died without disclosing the secret of the location of the mine to any one. Within a month from the time of his death dozens of parties went into the wood and searched carefully for the Giberson mine. But the tract is a broad one and it is pretty certain that few of those who hunted knew much about geology or about locating gold mines. Some of them brought

out some ore, but no one ever succeeded in finding the real deposit that Giberson described to the few he had taken into his confidence. Mr. Bailey is a practical geologist, not exactly a scientific one, but a natural one who has in the past found many valuable deposits in the region along the St. John. For some time now he has been diligently searching for the lost mine. It was slow and tantalizing work, for the deposits had been most cunningly hidden away by nature. Mr. Bailey's final discovery of the mine was made in a rather singular fashion. He had shot a duck near a small pond, and in dressing the fowl for his dinner he discovered in the crop some unmistakeable traces of gold. He resolved to hunt that particular section over more carefully than he had done. In fact, he went all over the ground again, and at last came across the work that unfortunate Giberson has accomplished in getting out his samples. As soon as Bailey was certain of his final he came out to Fort Fairfield and made preparations to spend the winter at the mine. He went in last week with supplies for several months and took a companion with him. They do not expect to do much in the way of mining this winter, but will crack off what ore they can and will endeavour to locate leads and otherwise to prepare for active operations in the spring. Along with his other supplies Bailey took a liberal stock of dynamite, and proposes to open the ledge in every direction so as to get at the heart of the deposit and to ascertain its extent. He has obtained control of the tract by purchasing from the Canadian Government the mining rights as the law of that country provides. Mr. Bailey when he went in had not decided whether he would come out again this winter or not, and so it may chance that no news will come from the lost mine until spring. But under the circumstances every one in this region is keeping his eye on the Tobique Klondyke."

URN: 0261 / C1 / IDX_Names: Biggar Ridge Gold; Tobique/ Giberson Gold;

Daily Sun - Nov. 25, 1897 Gold On Tobique. - The Lost Giberson Mine Discovered by One Bailey. - Will the Tobique Startle the World With a Klondyke? - Fort Fairfield, Nov. 22. - George Bailey has returned to town with specimens of gold ore that he claims were taken from the famous lost Giberson mine. For months Bailey has been searching for this place. The mine has for years been partly a well established fact and partly a myth. Now Bailey's return seems to establish the fact that Giberson really told the truth. Under these circumstances Fort Fairfield and the Tobique region near by in the province is having a little Klondyke excitement of its own. Nearly a score of years ago one Giberson was a lumberman on the St. John river. He explored his own tracts, and after he had bought some land in the Tobique region, which is not far from the eastern Maine border, he went over the tract carefully in order to locate the streams and the nest growth. It was while he was engaged in this task that he discovered the gold mine that his reports made famous in that section. Giberson was alone on his exploring trip, but he mined enough at the spot to discover that the deposits were rich and extensive. He brought out a bag full of samples that he collected over quite a wide radius. These he carried to St. John and had them tested by experts. The ore was pronounced rich enough to return large profits to anyone who chose to mine it. In fact the assayists were enthusiastic over the quality of the specimens that so Giberson assured them, were not culled, but had just as he had picked them up. For, he explained, he was as anxious as anyone else to know exactly the right of the matter. He proposed to operate the mines himself, and he did not want to start out under any misapprehension. With the earnest assurance of assayists behind him, Giberson hurried off up the river with supplies intending to start right in and work his new property. But in his haste to reach the place he rode on a train loaded with fresh arrivals from the old country, and from them caught emigrant fever so-called. He was put ashore, and in a few days died without disclosing the secret of the location of the mine to any one. Within a month from the time of his death dozens of parties went into the woods and searched carefully for the Giberson mine. But the tract is a broad one and it is pretty certain that few of those who hunted knew much about geology or about locating gold mines. Some of them brought out some ore, but no one ever succeeded in finding the real deposit that Giberson had described to the few he had taken into his confidence. Mr. Bailey is a practical geologist, not exactly a scientific one, but a natural one, who has in the past found many valuable deposits in the region along the St. John. For some time now he has been diligently searching for the lost mine. It was slow and tantalizing work, for the deposits had been most cunningly hidden away by nature. Mr. Bailey's final discovery of the mine was made in a rather singular fashion. He had shot a duck near a small pond, and in dressing the fowl for his dinner he discovered in the crop some unmistakeable traces of gold. He resolved to hunt that particular section over more carefully than he had done. In fact, he went all over the ground again, and at last came across the work that unfortunate Giberson had accomplished in getting out his samples. As soon as Bailey was certain of his final he came out to Fort Fairfield and made preparations to spend the winter at the mine. He went in last week with supplies for several months and took a companion with him. They do not expect to do much in the way of mining this winter, but will crack off what ore they can and will endeavour to locate leads and otherwise to prepare for active operations in the spring. Daily Sun - Jan. 3, 1898 Gold Fever is Genuine. - Fort Fairfield Excited Over Discoveries Near New Brunswick Border - It Is Supposed to Be the Old Giberson Find. - (Bangor Commercial). - The Tobique River Klondyke, which, as recently described in the Commercial, has created so much excitement in northern Aroostook, is uppermost in public discussion in Fort Fairfield. The fever is spreading like wildfire, and people who two weeks ago would turn up their noses and laugh at the prospectors are now fitting out for a trip over the mountains to the scene of operations. There is no longer a doubt in anybody's mind but that gold is there and in sufficient quantities to make it pay for the digging. Several discoveries have been made lately that excite the people. John Stewart of Andover, N.B., only six miles from Fort Fairfield, claims that he has located a solid ledge of mineral deposit that measures 280 feet across, and that he has traced it back a distance of half a mile. He has sent several barrels of the ore to United States and Canada for analysis, and as a result two of the chemists have given encouragement. From Ottawa he received the news that his claim would pay for the working in both copper and gold, and from St. John parties received the following figures: This test was made from a barrel of the ore: Copper, $23.40 to the ton, Gold, $5.77 to the ton, Nickel, $3.80 to the ton, Silver, $6.40 to the ton, with a small amount of platinum and iron. The chemist in his letter asked Mr. Stewart tomeet him at Andover the following Monday, when he would go with him to the scene of his operations, but Stewart refuses to take anybody into his secret, and will procure a diamond drill which the provincial government furnishes and will work his claim unaided by outsiders. The has caused some excitement and sent several new prospectors over the route. But this is not all. Prof. Geo. Bailey, a scientific geologist of Fort Fairfield, spent twelve years in prospecting for the Giberson mine, so called, and is satisfied that he has located a paying claim. Several prominent Fort Fairfield citizens are in a position to show quantities of the stone, and a number of strange men, who appear to be mining experts, are in town, and its supposed that Stewart's shipments of ore have sent them here from other states. Bailey for the past dozen years has been looked upon as a sort of crank on the mining subject, but two years ago, when one of the Hopkins brothers in his market was sold a brace of ducks that had a dollar and sixty cents worth of gold in their crops, it made folks think he was not quite so cranky after all, and as a result several parties have been prospecting near the country where the ducks came from ever since, and some good looking quartz are found. ... George E. Bartlett, of G.E. Bartlett & Co., with Dr. Frank Whitehouse and Delbert Stevens, have personally experimented with specimens brought from some of Bailey's claims, and are satisfied that both gold and copper is there, and in sufficient quantities to guarantee that the claims will be worked. These are all responsible men. Bailey with two men has returned with ammunition and provisions to the scene of operations. A gentleman who holds claims in Cape Town, South Africa, has appeared in town, and although he does not say much, it is supposed that he is here for no other reason than to develop some of the discoveries made by Bailey during the past twelve years. The gentleman claims that he has lately arrived here from the gold regions of Mexico. He is satisfied that the gold is here, although he says it may be very deep in the earth. Dr. R.H. Perkins, Mell Bennett and several other gentlemen are interested in another claim. They say that their claim is a white quartz, three small veins, that shows free gold. Fifty years ago, George Giberson, a lumberman, found a very rich deposit of gold while in search of timber somewhere on the Tobique. He went to St. John, where considerable excitement was caused by his find, but on his return he was taken with the emigrant fever and died. Many people believe that some of the new discoveries are near the Giberson lumber works. The Tobique country is on the same range of mountains as those in Nova Scotia, where the gold mines have been in successful operation for twenty years. It has a wonderful variety of mineral deposits. Coal is found along its banks in several places. It has an endless supply of the best quality of fire clay, and its mountains of plaster are said to be of sufficient size to furnish all America with plaster for all time."

URN: 0275 / IDX_Names: Woodstock Fe;

Eastport Sentinel - Feb. 5, 1825 Iron. - A company is now forming in Boston, whose object will surprise some of our readers; - it is to establish immense iron works in the State of Maine. The iron ore is to be brought from Nova Scotia; the spot on which the furnaces are to be erected is in the vicinity of forests, where wood, proper for making the best charcoal is to be obtained in any quantity, at a rate exceeding low. With these advantages, nothing can compete with this company. The capital is $200,000. This project, we believe originated with a Mr. J.B. Quinby, a scientific chemist and a good practical Iron master, who, in an exploring tour, through Nova Scotia and New Brunswick during the last summer, made such discoveries as enabled him to plan the scheme of which we are speaking. - N.Y. Albion."

Royal Gazette - Aug. 25, 1847Notice. By virtue of an Act passed in the tenth year of the Reign of Queen Victoria, entitled, An Act to Incorporate The York and Carleton Mining Company, I do, as one of the members of the said company, by virtue of the said Act, hereby call the first Meeting of the said Corporation, to be held at Welch's Hotel, in Fredericton, in the county of York, on Wednesday the fifteenth day of September next, at ten o'clock, a.m. - Dated 21st August, A.D. 1847.

N.B. Courier - Jul. 31, 1847 and Weekly Observer - Aug. 3, 1847 and Nova Scotian - Aug. 9, 1847 Internal Resources of New Brunswick. - We are happy to find, in the Woodstock Telegraph of Saturday last, that some of the vast resources of the county of Carleton are about to be developed. Messrs. Stevens & Son, Mr. Harris, of the firm of Harris & Allan, of St. John, and a Mr. Smith, from the same place, were in Woodstock on the first of the week, with some of whom we had a short conversation. We ascertained that they had been examining the large bed of iron ore in Jacksontown; and we have reason to believe that operations on an extensive scale will soon be commenced at that place. Mr. Harris mentioned that specimens of the ore had been analyzed, which proved it to be of a very superior quality."

URN: 0275 / IDX_Names: Woodstock Fe;

Royal Gazette - May 12, 1847 CAP. LXXIII. - An Act to Incorporate the York And Carleton Mining Company. Passed 14th April 1847. Whereas the efficient opening and working of Mines in the counties of York and Carleton will be highly advantageous to the Province; And whereas the amount of capital necessary to be invested in such an undertaking renders it essential that the company engaged therein should be incorporated; I. Be it therefore enacted by the Lieutenant Governor, Legislative Council and Assembly, That Lemuel Allan Wilmot, James Tibbits, Robert D. Wilmot, William Stevens, and Charles Fisher, their associates, successors, and assigns, shall be and they are hereby erected into a Company, and declared to be a Body Politic and Corporate, by the name of The York and Carleton Mining Company, and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of opening and working of Mines in the Counties of York and Carleton, and establishing all necessary works therewith connected, and for the convenient carrying on and managing the same. II. And be it enacted, That the first meeting of the said Corporation shall be held in Fredericton, in the county of York, and shall be called by any one member of the said company, by giving at least twenty day's notice in the Royal Gazette published in this Province previous to such meeting. III. And be it enacted, That the Capital Stock of the said Corporation shall consist of the sum of thirty thousand pounds, to be paid in such money as shall at the time of the several payments hereinafter expressed to be legal tender in this Province, fifteen per centum of the said Capital Stock to be paid in before the said Corporation shall be entitled to purchase any property, real or personal, or incur any debts, and the remainder of the said Stock to be paid at such time and times, and in such part or portions as the business of the Company shall from time to time require, the whole amount of such Capital Stock to be divided into twelve hundred shares of twenty five pounds each. IV. And be it enacted, That the Joint Stock and Property of the Company shall alone in the first instance be responsible for the debts and engagements of the said company; and that no creditors, or person or persons having any demand against the said company, for or on account of any dealings with the said Company, shall have recourse against the separate property of any shareholder on account thereof, except in the case of deficiency, or where the Joint Stock of the said Company shall fall short of or not be equal to the payment of any debt, due or demand against the same, that then and in such case the goods and chattells, lands and tenements of each shareholder, shall and may be levied upon and seized respectively to satisfy such debt or demand to the extent of double the amount of the share or shares or interest of such shareholder in the Joint Stock of the said Company, but no more; and that such double the amount, or so much as may be necessary to satisfy such debt, due, or demand, shall and may be levied and seized by process of execution in the same suit in which such debt, due or demand may be recovered against the said Company. V. And be it enacted, That each and every shareholder in the said Corporation shall be held liable to the said Company for each and every call or assessment made, (not however to exceed the amount the Stock so subscribed for), for the purpose of enabling the said company to pay the debts and engagements of the said Corporation, or to carry on the operations for which the said Company is incorporated, and shall and may be sued for by the said Corporation, and recovered in any Court of Record within the Province. VI. And be it enacted, That so soon as the said Capital Stock shall have been paid in and expended for the purposes of this Corporation, it shall and may be lawful for the said stockholders, at any general meeting to be for that purpose called to increase the said Capital Stock from time to time, in such sums as they may deem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power from time to time to assess such increase upon the original number of shares, or to increase the Capital by both assessments upon and increase of shares. VII. And be it enacted, That the said Company shall have the power to levy and collect assessments upon the shares from time to time, of such sums of money as may be deemed necessary for carrying on the business of the said Company, and whenever any assessment shall be made by the stockholders of the Company, it shall be the duty of the Treasurer to give notice thereof in a Newspaper printed and published in this Province, and also in the Royal Gazette, requiring payment of the same within thirty days; and if any stockholder shall neglect or refuse to pay the Treasurer the amount of such assessment upon his shares at the time prescribed, it shall be the duty of the Treasurer to advertise all such delinquent shares for sale at public auction, giving at least thirty day's notice of the time and place of such sale; and all shares upon which the assessment and interest due on each share, and the expense of advertising and selling, the residue, (if any) shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser. Provided always, that no assessment shall be made except by a vote of the stockholders, and a majority of all the shares. VIII. And be it enacted, That unless fifteen per centum of the said Capital Stock shall be actually paid in for the purposes of the said Corporation, and a certificate of such payment made and verified under oath by the Directors of the said Corporation, or a majority of them, (which oath any Justice of the Peace is hereby authorized to administer), shall be filed in the Office of the Secretary of the Province before the expiration of three years after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said three years."

S. J. Chronicle - Nov. 5, 1847 Mining Company.- It will be perceived from our advertising columns that this company are making preparations to commence operations upon a large scale as early as practicable. They have purchased we understand, a site at Hardscrabble which is said to be well adapted for the construction of a Rail Road, or turnpike, as may be deemed advisable; thus affording every facility for a speedy transit of the ore to the foundry. We shall refer to the

N.B. Reporter - Oct. 22, 1847 and Weekly Observer - Oct. 26, 1847 The Individuals who have connected themselves with the Mining operations in the vicinity of Woodstock, are now sanguine of success. Mr. Stevens, Junior, is on the spot at present, and employed in making final arrangements for an early commencement in Spring. - Fredericton Reporter."

N.B. Courier - Oct. 30, 1847 and S. J. Chronicle - Nov. 5, 1847 At a meeting of the Stockholders of the York andCarleton Mining Company, held at Fredericton on the 20th of October inst., the following gentlemen were elected Directors:- James Moran, John Owens, James Smith, William Stevens, Thomas Vaughan, Henry Vaughan, Thomas Allen, and James Harris. And at a subsequent meeting of the Directors, Mr. James Harris was chosen President, Mr. Thomas Vaughan, Secretary, and Mr. James Smith, Treasurer."

URN: 0275 / IDX_Names: Woodstock Fe;

S.J. Daily Telegraph - Oct. 30, 1847 and Royal Gazette - Nov. 24, 1847 ADVERTISEMENT: Public Notice. York & Carleton Mining Company. -- The first installment of Fifteen per cent. on the Capital stock of the York and Carleton Mining Company, having been duly called in, is required to be paid to the Treasurer, in St. John, on or before the first day of December next, in pursuance of the Act of Incorporation. By order. James Harris, President. Thos. Vaughan, Secretary. James Smith, Treasurer. 27th October, 1847"

N.B. Courier - Apr. 14, 1848 and St. Andrews Standard - Apr. 18, 1849 York and Carleton Mining Company.- A quantity ofpig, the produce of this Company was recently sent to Boston where it was converted into malleable iron in the form of bars. The statement there made of its excellent qualities is of the most gratifying character, and has 5 far more than realized the expectations of the enterprising projectors of this useful and important Association, while several blacksmiths in this City, who have tested these qualities on their own anvils, fully corroborate these welcome statements. We have before us a letter from Professor Jackson of Boston, ""U.S. Geologist and Assayer in the State of Massachusetts"", addressed to one of the Company, and whereto as a writer describes the Woodstock ore as Red Hematite, containing a mixture of Oxide of Manganese and what is especially well adapted to the production of forge iron and steel, the manganese being useful in the manufacture of these."" In the same communication, the learned Professor furnishes the following results of a careful analysis: Silica 17.80 Carbonate of Lime 4.00 Alumina 2.16 PerOxide of Iron 52.50 Oxide of Manganese 18.90 Water 5.70 – 100.00 Upwards of œ20,000 have been expended by the Company upon their Works at Woodstock, and it is still contemplated to lay out a large amount, in order that puddling, rolling, &c. can be carried on with advantage, whilst the Association entertain the idea of manufacturing steel on their premises. The cheapness and abundance of the material for the production of charcoal, and the inexhaustible supply of ore, afford great encouragement for the pursuit of this enterprising undertaking to a very large extent. Great Britain, we believe, presents the market to which the iron and steel of Woodstock will soon be shipped in considerable quantities. From the circumstance of this establishment giving support to a large number of artisans and other persons residing in the vicinity, and from the fact of its being in point of skilful enterprise, and expenditure of capital, the most important and promising company of the day, it must command the best wishes and commendation of all who may feel interested in the welfare of the Province."

S.J. Daily Telegraph - Apr. 22, 1848 ADVERTISEMENT: York and Carleton Mining Company. Notice is hereby given, that the General Annual Meeting of the stockholders of the York and Carleton Mining Company will be held at the Secretary's Office in Prince William street, in the City of Saint John, on Tuesday the 9th day of May next, at 11 o'clock, to choose Directors and transact other important business. Thos. Vaughan April 22. Secretary."

St. Andrews Standard - Aug. 19, 1848 The Woodstock Sentinel of the 15th says:- IRON FOUNDRY.- We paid a visit, on Saturday last, to the Iron Foundry, recently erected in this village by Mr. Nelson Baker, and were much pleased with the state in which we found the establishment. Many of the castings were of a description that would do credit to much older and larger establishments upon comparison, some of them were found to be equal if not superior to Bangor castings. We trust that the enterprising proprietor will meet with that success which is justly his due."

St. Andrews Standard - Oct. 14, 1848 and N.B. Courier - Oct. 14, 1848 Carleton Iron Works - We have great satisfaction in announcing to our readers that by the spirited exertions of the Carleton and York Mining Company, the extensive Iron Works in the vicinity of Woodstock are fast approaching completion. The furnace, 45 feet in height from the abutment to the floor, is completed, a steam engine is in the course of erection on the premises, and the rails are being laid down to convey the ore from the mines to the smelting furnace. Operations are also about to be commenced to clear out the Creek on which the Iron Works are situated which, when completed, will admit steamboats coming close up to the works to load or discharge their cargoes, thus securing for the Company water communication with the harbor of St. John for the produce of their mines, without subjecting them to the disadvantage of an overland conveyance. We understand that at present there are about 100 men constantly employed about the premises, and the most sanguine expectations are entertained of the complete success of the undertaking. The benefits which the successful prosecution of this enterprise must secure to the inhabitants of that section of the Country, and to the public at large, are too obvious to require comment, and too much praise cannot be bestowed on those spirited individuals who have embarked a large amount of property in opening up and rendering available the mineral wealth of that district of the Province. We understand that several of the directors of the Company are on the spot superintending in person the labour of the workmen and that the works may be expected to go into full production in about a couple of months. We sincerely hope that the proprietors of the stock of the Carleton and York Mining Company may reap a rich reward for their enterprise and public spirit. We understand that His Excellency, during his late tour through the County of Carleton, visited the company's establishment and expressed the utmost gratification at the forwardness of the works and the prosperity of their immediate usefulness. - Head Quarters."

URN: 0275 / IDX_Names: Woodstock Fe;

N.B. Reporter - Apr. 6, 1849 Legislature debates. - Carleton Mining Company. - A short conversational debate took place upon this bill; in the course of which Hon. Mr. Crane observed that he was favorable to the encouragement which had been proposed, and more especially since he had learned the prospect of success entertained by the Company from the superior quality of their manufacture. He understood that the article produced was worth twice as much as that which is imported. It was however worthy of consideration, that in a time of unexpected distress in the country, a great deal of valuable property was about to be given to the Company; including a vast amount of cordwood, which in the event of a Railroad being made in that quarter, would prove a source of wealth to the Province. He was satisfied to give the grant; but he thought that a part of the capital should be laid out in making improvements on the land, which would be stripped of its wood, for the purposes of the Company. Hon. Mr. Johnston would make no alteration in the Bill, for it now stood as it did at the first. He had been willing to give the Company a reserve of 10,000 acres of wood, but it was thought better to give them the land and wood on the eastern side of the river. He felt no disposition to retrace what had been done. Hon. Mr. Hatch spoke in favor of the Bill. Hon. Mr. Robertson enquired into the conditions of the Grant. - With all his predelictions in favor of public improvements, he thought 10,000 acres of land too large a Grant for any Company in the Province. Hon. Mr. Simpson observed, that there should be a clause in the Bill to the effect that if the Company ceased their improvements, the lands should revert to the Crown, as it was evident that the design of the Grant was only to assist them in carrying on the business. Hon. Mr. Harrison said that the people had been informed that the Company was to pay a duty of 5 4 per cent upon their manufactures; but as that condition had since been overlooked, he thought that alteration should be made public. Hon. Mr. Robertson was of opinion that either the clause for the land reverting to the Crown, in the event of the works being abandoned, or the condition that the Company must be in existence five years should be attached. Hon. Mr. Botsford was favorable to the Bill, but he thought it should like all other Leases, contain the clause of reversion to the Crown, in the case of the terms not being complied with. He supposed that this clause would be added at the period when the lease would be renewed. Hon. Mr. Kinnear stated that the Government intended in future to be more stringent in the enforcement of conditions. (Here we may remark, that the condition is a duty of 1d per ton, instead of 5 per cent, as was at first contemplated. After a few further observations in the course of which Hon. Mr. Hazen stated (in answer to a question) that the Government had nothing to do with the Bill, which had been brought like any other, before the Legislature, it was passed without a division."

S.J. Chronicle - Apr. 6, 1849 and Weekly Observer - Apr. 10, 1849 and Head Quarters - Apr. 18, 1849 and Miramichi Gleaner - Apr. 17, 1849 New Brunswick Iron. - We have had our attention called to some further specimens of this precious production, (more so even than California gold), and which has just come from Boston, where it had been sent for the purpose of being converted into malleable bars. We have already spoken of the very superior quality of the pig iron, but we were not prepared to be informed that in both states, cast and malleable, it is superior to any known in the world. A bar was taken and wrought out cold into all imaginable shapes, without the least sign of crack or break in its appearance, and in such a way that the very best Russia and Swede iron in the market could not withstand; and its superior toughness is such, that orders have been given to furnish the iron work for some large ships, of this native production, which is to be of not much more than half the weight now used for that purpose."

Weekly Observer - Jan. 16, 1849 and Miramichi Gleaner - Jan. 23, 1849 The Iron Works. - On Thursday, the first sample of pig Iron was produced at the Company's Foundry. The quality is said to be very superior, and such as is capable of being manufactured to great advantage into steel. We do not profess to judge of these matters, but from a specimen now in the office we should think, from its brightness, the fineness of its grain, and the hardness of the mass, that its quality must surpass most pig iron. Those acquainted with it think it will be too hard for castings; but, though much is yet to be learned respecting it, those most interested in its success are well pleased with its appearance so far. The engines work well; and everything at present about the establishment has a prosperous aspect. Many teams are employed now daily in hauling wood to the coal kilns, and others in bringing the ore from the mines to the furnace. - Sentenil."

Head Quarters - Jan. 24, 1849 and N.B. Courier - Jan. 27, 1849 and S.J. Chronicle - Jan. 26, 1849 and St. Andrews Standard - Jan. 31, 1849 Carleton Iron. - On Monday last we examined a specimen of Carleton Iron in its malleable state, which had been brought to this City by Mr. Stephens, of the Carleton Iron Works, for presentation to his Excellency the Lieutenant Governor, as the fruits of these extensive works. This specimen was ""puddled"" in the forge of Mr. 2 V.A. Hartley, Blacksmith, in Woodstock, and formed into a neat horse-shoe, which was afterwards handed over to the armourer of the 1st Royals, who polished one side, leaving the other with the finish which Mr. Hartley's beautiful hammering had given it. The ""puddling"" process, and the forging of the horse-shoe, were completed in less than three hours. The Iron appeared to be soft, the grain very fine, and apparently as tough as the finest Russia Iron. The polish produced by the Armourer was very fine, and, in the opinion of good judges, indicated a very superior description of metal. This specimen was presented to his Excellency on Monday, by Mr. Allan, of the firm of Harris and Allan, St. John, and Mr. Stephens, of the Iron Works, accompanied by the Hon. the Surveyor-General, and James Taylor, Esq., M.P.P. We understand that His Excellency expressed himself much pleased with the specimen presented, and with the prospect of benefit to the country, which the successful prosecuting of these works cannot fail to secure. The Iron Works are now producing 4 1/2 tons of excellent Pig per day, which quantity the managers hope, in a short time to increase to eight tons, which it is expected, will be the average produce of the works in their present state."

URN: 0275 / IDX_Names: Woodstock Fe;

Head Quarters - Jul. 11, 1849 and S.J. Chronicle - Jul. 13, 1849 and St. Andrews Standard - Jul. 25, 1849 and N.B. Courier - Jul. 14, 1849 and Weekly Observer - Jul. 17, 1849 Carleton Iron Works - Our readers will recollect that about two months ago we noticed that the Carleton Iron Works had been stopped, by the hearth giving way - the stone of which it had been composed being burned up by the intense heat of the blast - but we are glad to learn that these works are again in successful operation. The stone of which the hearth for the furnace was originally composed was imported from New York, but turned out to be of rather inferior quality, and burned out in less than twelve months. The new hearth is supposed to be of better quality for resisting the action of the fire, and it is also constructed on a better plan; bottom being circular, presents an equal surface to the heat instead of the angles formed by the square stones composing the former hearth. The works are now producing their former quantity of iron daily, and constant employment given by this really valuable enterprise to over 100 hands, besides a number of teams, has been of great advantage to that portion of the Province during the late unexpected depression in other branches of industry."

Morning News - May 18, 1849 At a meeting of the York and Carleton Mining Company, held at the Company's Office in this City on the 8th inst., the following gentlemen were appointed Directors:- Messrs. James Smith, Thomas Allan, John Owens, Henry Vaughan, James R. Tupper, N.S. Demill, Allan McLean, James Harris and Thos. Vaughan. And at a subsequent meeting of the Directors, Mr. James Harris was elected President; Mr. James Smith was appointed Treasurer; and Mr. Thos. Vaughan, Secretary."

N.B. Courier - Nov. 10, 1849 York and Carleton Mining Company. - Mr. William Stevens, the Agent of this Association, has recently returned from England, which country he visited with a view of personally ascertaining the opinion of scientific men, of the quality and value of the Iron manufactured at Woodstock, and also of inducing extensive purchases in Great Britain. We are happy to say, that in the discharge of these offices he has met with the most gratifying encouragement. We quote from the certificate of Mr. Mushet, - in his line one of the most able men of the age and whose writings are highly appreciated by the scientific world - the following sentence, whilst we would remark that the entire document possesses a very satisfactory character:- ""This pig iron is dense, white and convex upon its service, indicating great richness of quality."" ""Remarkable for its fusibility, and enters into a fluid state at a degree of heat far below the melting point of ordinary cast iron."" ""It is admirably suited for mixing with less carbonated iron, to produce castings of great strength."" ""For bar iron this sample is found to produce a fine variety of cold tough iron."" ""It is well adapted for cable iron, for baths, and for wire-drawing, and, with careful puddling, would yield excellent tin-plate blooms."" ""For steel, the iron is found to possess great strength and body. It hardens well at a low temperature, and carries a most penetrating edge."" ""It is an article of high value as a steel producing iron."" We have seen specimens of pen knives and files, now in the possession of the York and Carleton Mining Company, very recently made from the produce of their works; and so far as we can judge, these articles are not excelled in beautiful finish by any imported; whilst we are well warranted in the supposition, that in point of utility they embrace all the qualities which are desirable. Mr. Charles Sanderson, of Sheffield, an extensive manufacturer, and a gentleman who has spent several years amidst the iron works of Germany, in order to obtain a mastery of such pursuits, thus remarks in a letter to Mr. Stevens, - ""Your ore is good, and free from silex; it carries within itself such a mixture as will supply its own flux, and thus you are enabled in a great measure to dispense with lime. This will prove a great advantage to you, because the addition of fluxes to facilitate the fusion of the earthy matter contained in the ore, reduces the percentage of the product, and increases the consumption of fuel in like ratio."" ""The business, although now small, has nevertheless within it the elements of a magnificent concern."" It is with pleasure that we give publicity to the present brief notice. The product of a new branch of our Provincial industry is now fairly before the British people, who in the end will prove to be customers for it, to the full extent of supply. It is highly gratifying to be apprized, that the early prospects of the Company will be more than realised by a steady profitable conversion of the recently valueless ore, of Woodstock into any form which it may be made to assume, by the application of the enterprise and industry of our persevering countrymen."

Weekly Observer - Nov. 20, 1849 York and Carleton Mining Company. - We are glad to learn that the Iron ore produced at the York and Carleton Mines has received the approbation of some of the most extensive manufacturers in England. Mr. Stevens, the agent of the Company, has recently returned from Great Britain, where he met with very great encouragement in obtaining orders for a supply of the iron. Articles manufactured from it are unsurpassed for beauty and finish by any

St. Andrews Standard - Oct. 3, 1849 Destruction of the Carleton Iron Works by Fire!-We regret to learn that the buildings belonging to the Carleton Iron Company, at Woodstock, was accidentally destroyed by fire on Wednesday last. All the extensive buildings connected with the Company's Works were consumed, but the extent of the damage to the apparatus and machinery used in the manufacture of iron has not been ascertained. There was no insurance on the Works, and the loss will probably not be less than from œ3000 to 4000. We sincerely regret this disaster, as it has for the present checked the usefulness of the Company which promised so much good to the Country generally."

URN: 0275 / IDX_Names: Woodstock Fe;

Head Quarters - Oct. 3, 1849I regret to inform you that the very substantial building, recently erected in the upper village by the York and Carleton Mining Company, for the purpose of a Foundry, was destroyed yesterday afternoon by fire, arising from an explosion, occasioned, it is said, by a collection of gas. All the out buildings, consisting of coal stores, blacksmith's shop, &c., were saved by the exertion of the people, who hurried to render what assistance they could. The fire engine was on the spot in a very short space of time, considering the distance the company had to haul it. Everything was done that man could do to arrest the devouring element, but all was in vain to save the main building. I have not heard whether the furnace was much damaged or not; the engine has received some injury, to what extent I do not know. It is estimated that the loss is between two and three thousand pounds. This is an event that is to be deplored. The spirited and enterprising company will probably not mind it much, but, independent of their loss, the public will suffer in consequence of the suspension of the works for a short time, which must be the necessary consequence of this disaster. Many were depending upon those works for employment, and as some time must elapse before they can be got fairly in operation again, you will readily perceive that the melancholy circumstance is both a private and public loss. ... I am, Sir, your obedient servant, Gossip"

Headquarters - Oct. 3, 1849 Carleton Iron Works - We regret to learn that the principal building at the Iron Works, belonging to the York and Carleton Mining Company, has been destroyed by fire the past week. For particulars we refer our readers to our Woodstock correspondence."

St. Andrews Standard - Oct. 24, 1849 and Headquarters - Oct. 24, 1849 and Nova Scotian - Oct. 29, 1849 We understand that it is the intention of the York & Carleton Mining Company, forthwith to erectbuildings to supply the place of those recently destroyed by fire.- The breast work will be replaced by one of stone, and the whole of the buildings will be composed of the most substantial materials, and no pains will be spared to prevent a recurrence of the accident which has caused so much loss to the Company. We trust that their enterprise will at last receive a due reward.- Carleton Sentinel."

Royal Gazette - Apr. 3, 1850NOTICE York and Carleton Mining Company. A further Instalment of five per cent of the Capital Stock of this Company is required to be paid in by the Stockholders, at the Company's Office, in the City of Saint

John, on or before the 6th May next. By Order of a Meeting of the Stockholders. 1st April, 1850 John Owens, Treasurer."

Royal Gazette - Apr. 17, 1850 NOTICE To be Sold at Public Auction, at the Coffee House Corner, in the Market Square, in the City of Saint John, on Tuesday the twenty first day of May next, at twelve o'clock noon:- 66 shares of the Capital Stock of the York and Carleton Mining Company standing on the Books of the said Company in the name of William Stevens; the same being sold in pursuance of the provisions of the Act of Incorporation of the said Company, for the non-payment by the said William Stevens of the sum of œ286, and interest, being the amount of two several assessments upon the said shares, duly made by the said Company, and payable respectively on or before the fourth day of February, and the eleventh day of February last. John Owens, Treasurer."

Royal Gazette - Apr. 24, 1850 York and Carleton Mining Company. Notice is hereby given that the Annual General Meeting of the Stockholders of the York and Carleton Mining Company, will be held in the City of Saint John, at the Company's Office, in Prince William Street, on Tuesday the 14th day of May next, at 10 o'clock, a.m., for the purpose of electing Directors, and transacting other business. April 20. Thos. Vaughan, Secretary."

Royal Gazette - Feb. 27, 1850 NOTICE 66 shares of the Capital Stock of the York and Carleton Mining Company will be sold at the Company's Office, in Vaughan's Brick Building, Prince William Street, in Saint John, on the first day of April next, at 12 o'clock noon, in consequence of non-payment of Instalments, (if not 5 paid previous), with all costs attending to it. 27th Feb. 1850 John Owens, Treasurer."

St. Andrews Standard - Feb. 27, 1850 County of Carleton. - William Stevens, Esq., late manager of the Carleton Mining Association, has been presented with an Address, signed by the High Sheriff, and upwards of two hundred inhabitants of the county, in which they speak in high terms of the exertions he has used in bringing into notice the mineral resources of the Province. In noticing the difficulties which have arisen Mr. S. and the company, they say: - With the causes which have led to your separation from the York and Carleton Mining Company, we have nothing to do, neither do we wish to express an opinion thereon; but the shareholders in the corporation will doubtless bear joint testimony with us, that they are indebted to your scientific knowledge and experience for many of the advantages of which they now boast the possession of. In replying to this address, Mr. S. thus alludes to the differences which led to his dismissal, and his future prospects: - With regard to my separation from the York and Carleton Mining Company, I can only say that from the first moment of my acting as their Agent, in my time of my discharge, I served them honestly and faithfully, and to this time I am conscious of having given any cause for the course they have pursued towards me. They have circulated a report that I have withheld information obtained in England at their expense. That I positively deny - It is but too evident that covetousness has been the ruling cause of dismissal. The cruel and unmerited treatment received by me from them, was first painfully felt; but a kind Providence has directed us to a valuable discovery of excellent Iron ore which we have secured under the great seal of the Province. Myself and son intend proceeding immediately to England for the purpose of introducing it to the notice of capitalists, and no exertion shall be wanting on our parts to bring Iron Works into successful operation."

Royal Gazette - Jan. 2, 1850 and Royal Gazette - Jan. 30, 1850 NOTICE York and Carleton Mining Company. In compliance with a Resolution passed at a Meeting of the above Company, held on the 31st December last, that a further installment of Ten per cent. on the Capital Stock be paid in to the Treasurer:- Therefore, a further installment of Ten per cent. of the Capital Stock of this Company is required to be paid in by the stockholders at the Company's office in the City of St. John, on or before the fourth day of February, 1850. January 2, 1850 James Smith, Treasurer."

Royal Gazette - Jan. 9, 1850 and Royal Gazette - Jan. 30, 1850 NOTICE York and Carleton Mining Company. A further instalment of seven and two thirds per cent of the Capital Stock of this company is required to be paid in by the Stockholders at the Company's Office, in the City of Saint John, on or before the 11th February next. 24 January James

Carleton Sentinel - Jun. 18, 1850 NOMINATIONS. - ....Mr. William Steeves would second nomination ... of Mr. (H.H.) Beardsley ......Four years ago he (Stevens) came here to lookafter our mineral resources, - he had sent some of the iron to England where it had been converted into steel, and proved equal to Russian, but the York and Carleton Mining Company wished to monopolize the trade and prevent other Companies from engaging in the business, they thought they had a monopoly but it was not so. He had a lease, and went to England for the purpose of getting up a Company and introducing British capital into the Province, - but while there he saw an advertisement in the Mining Journal offering the Company's works here, for sale, inserted in his opinion only to further frustrate his design of getting up another Company, and to prevent the introduction of Capital into the Province. Monopolies were injurious to a Country, and he warned the Freeholders of Carleton against sending a man to the House interested in the York and Carleton Mining Company. He was satisfied other Companies would be got up and called the attention of Freeholders to the benefits to be derived from them. Iron could be sold at remunerative prices, wood, and all kinds of farming produce need not be put down to a very low price and paid for in goods. He did not wish to injure the Company in any way, he wished them success, but there was plenty of room for another - for several more."

N.B. Courier - May 18, 1850 and Weekly Observer - May 21, 1850 and Carleton Sentinel - May 28, 1850 York and Carleton Mining Company. - The annual meeting of the Stockholders in this company took place on Tuesday the 14th instant, when Messrs. James Smith, James R. Tupper, Allan McLean, Thomas Allan, N.S. Demill, Henry Vaughan, James Harris, John Owens, and Thomas Vaughan were elected Directors for the ensuing year. At a meeting of the Board on Wednesday, Mr.

James Harris was re-elected President; Mr. Allan McLean was appointed Manager; Mr. John Owens, Treasurer; and Mr. Thomas Vaughan, Secretary."

Head Quarters - Sep. 4, 1850 and N.B. Courier - Sep. 7, 1850 and Weekly Observer - Sep. 10, 1850 and St. Andrews Standard - Sep. 11, 1850 and S.J. Chronicle - Sep. 13, 1850 Carleton Iron Works. - We are happy to learn that the works of the Carleton Mining Company are now all but completed, and that the Company will commence smelting Iron ore as soon as the furnace can be heated to the proper temperature. It will be recollected that these works were totally destroyed by fire some months ago, and have since been built of stone and brick instead of wood, as formerly, and we trust they will now be secure against the recurrence of a similar accident. The company deserve great credit for the spirited exertions which they have made to rebuild their establishment, and recommence their useful operations."

Novascotian - Sep. 16, 1850 The Carleton Iron Works in New Brunswick, which were destroyed by fire a few months since, have been rebuilt with stone and brick, and will again be in active operation in a few weeks."

Royal Gazette - Apr. 23, 1851York and Carleton Mining Company. Notice is hereby given, that the Annual General Meeting of the Stockholders of the York and Carleton Mining Company, will be held in the City of Saint John, at the Company's Office, in Prince William Street, on Tuesday the 13th day of May next, at 10 o'clock, a.m., for the purpose electing Directors, and transacting other business. Saint John, 21st April, 1851 Thos. Vaughan, Secretary."

S.J. Chronicle - Aug. 1, 1851 New Iron Foundry. - We learn that the Iron Foundry in Woodstock, erected by Mr. James Everirr, and now owned by Mr. Robert Hay, of that place, is in active operation. Fifty moulding boxes were in sand on Saturday last, and would be filled with metal during the day. This is pretty well for one day's casting, in a small town in the interior of the country - Head Quarters."

S.J. Chronicle - Jan. 28, 1851 ""We learn that the Woodstock Iron Company feel greatly indignant at the people of the United States, in the face of law, refusing to admit their iron at the invoice price, and valuing it themselves at so high a rate as to raise the actual duty of 30 per cent to 40; and finding this insufficient to keep it out, gave them notice that 10 per cent more would be immediately charged. While we are admitting their products at more nominal duties, this is the way they return the concession made them. Will we never learn wisdom by experience?"

N.B. Courier - May 17, 1851 At the annual meeting of the Stockholders of the York and Carleton Mining Company, held on the 13th inst., the following Stockholders were elected Directors:- Messrs. James Harris, John Owens, James Smith, James R. Tupper, Allan McLean, J.T. Smith, Henry Vaughan, Thomas Allan, and Thomas Vaughan; and at a meeting of the Directors, James Harris, was re-appointed President; James Smith, Treasurer; and Thomas Vaughan, Secretary."

Royal Gazette - Nov. 10, 1852 Notice. York and Carleton Mining Company. At a meeting of the Stockholders of the York and Carleton Mining Company, held on Saturday 6th instant, it was resolved, and carried unanimous, that a further instalment of five per cent on the Capital Stock be paid into the Treasurer of said Company, at the Office of D. & T. Vaughan, in Saint John on or before Saturday 11th of December next. James Harris, Treasurer November 8, 1852"

Carleton Sentinel - Nov. 20, 1852 and St. Andrews Standard - Dec. 15, 1852 and S.J. Chronicle - Dec. 3, 1852 and N.B. Courier - Nov. 27, 1852 and Weekly Observer - Nov. 30, 1852 IRON WORKS. - We are pleased to learn that the York and Carleton Mining Company are about to recommence operations at their works at the Upper town. The iron made at these works heretofore was too hard, and an English gentleman has undertaken to remedy the evil, which he thinks can be done by mixing an inferior description of ore with that before used. We also learn that the Company with which he is connected have agreed to take all the iron that can be made at these works, for five years, at a stated price, should the experiments to be made prove successful."

Royal Gazette - Apr. 27, 1853 notice. York and Carleton Mining Company. At a Meeting of the above Company, held on Wednesday, 13th instant, it was resolved that a further call of Five per cent, on the Capital Stock be paid to the Treasurer 4 at the Company's Office, in Prince William Street in Saint John, on or before Friday the 29th May next. James Harris, President. Saint John, 18th April, 1853."

Miramichi Gleaner - Dec. 7, 1853 York and Carleton Mining Company. - On Friday last the operations of the York and Carleton Mining Company at the upper village were suspended for the winter and we have much pleasure in facing before our readers an outline of the Company's intentions and prospects, as given to us by way of the Directors. It appears that until this last experiment, some difficulty had been experienced in making the exact kind of iron to suit the English market. - The iron which had been previously made had not that uniformity of character which would enable buyers in Sheffield to determine its real value, one lot proving very good whilst another was so mixed with Manganese and other metals, that it was almost useless. The Company accordingly, determined to put the matter into the hands of the Messrs. Saundersons, the most respectable Steel Makers in Sheffield to send over an Engineer to test the real value of the minerals and the actual quality of the iron. In consequence of this arrangement the Messrs. Saunderson engaged Mr. Smith, then Manager of the Ystalyfera Iron Works in South Wales, to come out. The success of the first attempt was recorded in the Sentinel at the time. - Since then the Furnace has been rebuilt and remodelled after the most approved shape of the English Furnaces, and after some unavoidable delay last summer in getting the hearth-stones and materials, the furnace was blown in on the third of September. From that time until its stoppage upwards of 300 tons of iron has been made at a regular uniform description, and such as is admirably adapted for all sorts of steel and best iron purposes. In his report to the Directors Mr. Smith states that no difficulty exists in separating the Manganese, and other metals, and furthermore that the Iron can be produced at a price which would enable this province to be exporters rather than importers of the better description of bar iron. The operators of the Company are therefore temporarily suspended until arrangements can be made to carry on the works on a more extended plan, and until machinery for making bar iron suitable to the wants of 11 the country can be procured. Mr. Smith is now about starting for England to make the necessary arrangement for enlarging the Works and carrying them on regularly and extensively. Among other improvements contemplated, there is to be a railway to the Mines at Jacksontown, and two or three more furnaces are to be built, with machinery to convert the whole of the iron, if necessary, into bars. - On Mr. Smith's return in the spring no time will be lost in getting the works into active operation. - Sentenil."

Royal Gazette - Dec. 14, 1853 Notice. York and Carleton Mining Company. At a meeting of Stockholders of the above named Company, held in Saint John on Tuesday the 6th last. It was resolved that a further call of three per cent on the Capital Stock of the said Company be paid to the Treasurer on or before Saturday the 14th day of January next. James T. Smith, Treasurer. December 12, 1853."

3 Royal Gazette - Mar. 23, 1853 Notice. York and Carleton Mining Company. A Meeting of the Stockholders of the above Company will be held on Wednesday, 13th April next, at 3 o'clock p.m. at the Company's Office, in Prince William Street, Saint John. Thomas Vaughan, Secretary. 20th March, 1853."

N.B. Courier - May 14, 1853 York and Carleton Mining Company. - At a meeting of Shareholders of the above Company, held at their office in St. John on Tuesday the 10th inst., for the purpose of electing Directors for the ensuing year, the following persons were duly elected:- James Harris, Thomas Allan, James Smith, James Thomas Smith, Thomas Vaughan, John Owens, Allan McLean, James Moran, and James R. Tupper. And at a meeting of directors, held on the same day, James Harris was elected President, and James T. Smith, Treasurer, and James Robinson, Jun., was appointed Secretary. James Robinson, Jun., Secretary."

URN: 0275 / IDX_Names: Woodstock Fe;

Carleton Sentinel Nov. 26, 1853 YORK AND CARLETON MINING COMPANY. - On Friday last the operations of the York and Carleton Mining Company at the Upper Village were suspended for the winter; and we have much pleasure in laying before our readers an outline of the Company's intentions and prospects, as given to us by one of the Directors. It appears that until this last experiment, some difficulty had been experienced in making the exact kind of iron to suit the English Market. The Iron which had been previously made, had not that uniformity of character which would enable the buyers in Sheffield to determine its real value, one lot proving very good, whilst another was so mixed with Manganese and other metals, that it was almost useless. The Company accordingly determined to put the matter into the hands of Messrs. Saundersons, the most respected Steel Makers in Sheffield, to send over an engineer to test the real value of the minerals and the actual quality of the iron. In consequence of this arrangement the Messrs. Saundersons engaged Mr. Smith, then Manager of the Ystalyfera Iron Works in South Wales, to come out. The success of the first attempt was recorded in the Sentinel at the time.- Since the Furnace has been rebuilt and remodelled after the most approved shape of the English Furnaces, and after some unavoidable delay last summer in getting the hearth-stones and materials, the furnace was blown in on the 3rd of September. From that time until its stoppage, upwards of 300 tons of Iron has been made of a regular uniform description and such as is admirable adapted for all sorts of Steel and best Iron purposes. In his report to the Directors Mr. Smith states that no difficulty exists in separating the Manganese, and other Metals, and furthermore that the iron can be produced at a price which would enable this Province to be exporters rather than importers of the better description of bar iron. The operations of the Company are therefore temporarily suspended until arrangements can be made to carry on the works on a more extended plan, and until machinery for making bar iron suitable to the wants of the country can be produced. Mr. Smith is now about starting for England to make the necessary arrangements for enlarging the Works and carrying them on regularly and extensively. Among other improvements contemplated, there is to be a railway to the Mines at Jacksontown, and two or three more furnaces are to be built, with machinery to convert the whole of the iron, if necessary, into bars. On Mr. Smith's return in the spring no time will be lost in getting the works into active operation. We sincerely congratulate the Company on the improved prospects before them, and hope by this time next year to see the various departments in good working order. We are sure the inhabitants of the Upper Town will not care how soon the smoke of the furnaces is seen, and the ringing of the forge hammer is heard amongst them. We will give a description of the present works, grounds, &c., in our next."

Royal Gazette - Nov. 30, 1853 Notice. York and Carleton Mining Company. A meeting of the Stockholders of the the above Company will be held on Friday the 30th day of December next, at 3 o'clock, p.m., at the Company's Office in Saint John, for the purpose of taking into consideration the propriety of of increasing the Capital Stock of the said Company. By order of the Board of Directors. James Robinson, Junr. Saint John, 26th November, 1853. Secretary."

Royal Gazette - Nov. 30, 1853 York and Carleton Mining Company. A meeting of the Stockholders of the above Company will be held on Monday, the 5th day of December next, at 3 o'clock, p.m., at the Company's Office, in Saint John. By order James Robinson, Junr. 21st November, 1853 Secretary."

Carleton Sentenil - Mar. 17, 1855 Parliamentary Debates. - From Mr. Taylor's Reports (Continued from 6th page). - Saturday, 10th March, 1855. The House went into Committee of the whole on a Bill introduced by Mr. Connell to incorporate the New Brunswick Mining Company. Mr. Connell stated that the bill was a transcript of a Law that ceased to exist last summer. The capital of the Company to be œ30,000. Fifteen per cent to be paid down. And the stock to be divided into shares of œ25 each. - Bill agreed to. A Bill committed to facilitate the operations of the New Brunswick Mining Company. Mr. Connell fully explained the objects of the bill, by stating that Mr. Stevens went to England last summer, saw several parties there who would have advanced capital, but on examining into the matter it was ascertained that the Law was about expiring; and they would not do so until another act passed. The present bill was an exact copy of the law Incorporating the York and Carleton Mining Company, with the exception that Mr. Stevens name was inserted in this. He was anxious to have it pass at once, in order that Mr. Stevens might go immediately to England, which no doubt would be the means of introducing a large amount of capital into the country, which all must admit was very desirable. Mr. End would be willing to give every facility for the purpose of introducing capital into the country, and opening up its resources. He was aware that a few years ago a bill to incorporate the York and Carleton Mining Company, which did little good to anybody. He would like to get further information as to what effect the present bill would have, and whether it would go to lock up any more of the lands of the country; if so he would oppose it as there was far too much locked up already. Hon. Solicitor General was as anxious as any one to open up the resources of the country, but he wanted to take the proper steps to do so. And in order to obtain further information he would move that the chairman report progress, and that the bill be referred to the Mining Committee. Hon. Mr. Smith had little doubt but what the bill was all right; but the subject was a very different one to deal with, and he would like to have further information, and also in reference to the lease given to Mr. Wolhaupter. Mr. Connell, in answer to the question of the Hon. Member from Gloucester, (Mr. End,) would inform the committee that the bill would not lock up any lands, as Mr. Stevens was the owner of it. He felt anxious for the reasons that he had already given to have the bill pass now. Mr. Steadman thought that the right to all mining operations should be in the owners of the soil; and that if Mr. Stevens was the owner of the soil he was better without the present bill than with it. Hon. Surveyor General believed that the object of the mover of the present bill was, to have it become law, so that Mr. Stevens might go to England at once for the purpose of inducing parties there to advance capital for mining operations. If that was the case he could see no objections to it. He therefore hoped that it would not be mixed up with the general question as it would cause delay, and be the means of putting it off for another year. His Honor the Speaker did not think that it was necessary to refer this bill to the mining committee after the explanation given by the Hon. Member from Carleton, (Mr. Connell,) as the object was merely to give a lease for the purpose of continuing the rate of duty as it is at present. On the question being taken the motion for reporting progress was carried, and the whole subject referred to the committee on Mines and Minerals."

URN: 0275 / IDX_Names: Woodstock Fe;

Headquarters - Nov. 7, 1855 York and Carleton Mining Company. - This Company have had their furnaces in blast a little over four months, during which time they have made six hundred and twenty tons of iron of a very superior quality, and commanding the highest prices in the British market. They have suspended operations for the present for want of charcoal, but intend blowing in again in December next. They have expended during the past summer a large amount of money in creating increased facilities for their future operations - that is, in building Coal Kilns, and a kiln for roasting ore; and are now almost to commence the building of a railway from their mines at Jacksontown to the furnace at Lane's Creek, for the transit of iron ore. We sincerely hope that this enterprising Company may eventually reap a rich reward for their outlay, as well as for the energy and perseverance, often under very disadvantageous circumstances, with which they have

Carleton Sentinel - Oct. 27, 1855 YORK AND CARLETON MINING COMPANY. - We are happy to inform our readers that the operations of this Company have been highly successful this season. They have suspended operations for a short time, and therefore blew out their furnace this week. They are out of stock at present. Mining operations are being prosecuted with activity. It is expected they will resume operations, or in technical phraseology will blow in again about 20th December. The Furnace has been in blast for a little over four months, and in that period has made 620 tons of Iron, of a very superior quality. The Company had a contract with a Mr. Saunderson, of Sheffield, England, who furnished a sample of such quality as he wanted; and we have had much pleasure in the information that the Iron manufactured by the Company is decidedly superior to the sample. The reason, we have been informed, of exceeding the quality required was in expectation of making a larger quantity than was contracted for, in anticipation of further demands, and thus raise the character of the Iron in the British market. These facts show that the works have been judiciously and effectively managed, and we hope will continue so, until the Company be amply remunerated, and the resources of the Province, particularly those of Carleton, be more fully developed. [NOTE Crimean War needed iron]"

Carleton Sentinel - May. 15, 1856 We have much pleasure in stating that the York and Carleton Mining Company have resumed operations in making iron; that they commenced blowing in on the 16th ultimo, and are daily doing a good

Royal Gazette - Oct. 8, 1856 Notice. At a meeting of the Stockholders of York and Carleton Mining Company held this day, it was resolved to make a further call on the Stockholders of said Company of five per cent on the Capital Stock, to be paid to the Treasurer of said Company within thirty days from the date hereof. James Harris, President. Saint John, 15th

S.J. Chronicle - Sep. 26, 1856 The York and Carleton Mining Company are about extending their works by the erection of puddling furnaces and rolling mills for the purpose of making malleable iron. The quality of their pigs is peculiarly well-adapted for making the best description of boiler-plate, as well as bars, equal to the best Russian and Swedes iron.- Carleton

Carleton Sentinel -Feb. 21, 1857 and St. Andrews Standard -Feb. 25, 1857 NEW BRUNSWICK IRON. - A correspondent of the Colonial Presbyterian writing from England says: I learned yesterday, with no little satisfaction, that a specimen of New Brunswick iron which had been forwarded to Messrs. Douglass & Westcott of Liverpool, to have analysed, is pronounced to be one of the richest ores known to be in existence.- It was also thought that the specimen sent was not very well chosen, and that in all probability much better specimens of the ore may yet be forwarded. When it is considered that the United States are in a measure dependent on England for iron, and that iron ore could be sent to England as ballast, for less cost than it can be sent from some parts of England where it is found - but where there is no coal, to others where coals are to be obtained, the value of the New Brunswick mineral treasures, at some future early day, must be very obvious."

Carleton Sentinel - Nov. 7, 1857 Of course our readers who are interested in the prosperity of this County are interested in the Iron Works, so-called. These works are not now in operation, as is well known. The Company, we believe, have suspended operation, pending the manufacture of the pigs, now on hand, at the Forge Co. Works, at Straight Shore, Saint John. We visited this establishment a short time since, and found some ten or fifteen men busily engaged in the curious process of puddling the Woodstock Iron and converting it into bars for ship knees. Puddling the iron is performed by the following process. The pigs, broken into lesser pieces, are thrown into an oven and subjected to an intense blast, which reduces them to a fluid state. The molten mass is kept constantly in motion by means of an iron scraper with a long handle, until all the slag is destroyed, and it becomes a porous irregular heap of soluble iron; it is then subjected to the force of a steam hammer, by which it is made to assume the desired form. We sincerely hope the experiment being tried will prove successful, and that we may soon hear of the resumption of work at Upper Woodstock, with the energy which has marked the proceedings of the York and Carleton Mining Company heretofore, and with sure prospects, to them, of success."

New Brunswicker - Apr. 6, 1858 Nova Scotia Iron. - It is said that from some experiments made in casting cannon at Woolwich, it has been proved that a mixture of Nova Scotia iron with Swedish, makes the best ordnance. We have no doubt that in the course of time, when the mines and minerals of the lower Colonies are better known that they will attract attention abroad, and become a valuable source of trade. The superior quality of iron found in Carleton County, in this Province, is beginning to be appreciated. New Brunswick offers a wide field for the explorations of the geologist."

Morning News - Mar. 19, 1858 New Brunswick Iron Works. - We intend to offer a few remarks upon this subject in our next."

URN: 0275 / IDX_Names: Woodstock Fe;

Morning News - Mar. 22, 1858 New Brunswick Forge Company. - We are gratified to know the works of this company are in a flourishing condition, so far as their limited operations will allow. There is a wide field for the enterprise, St. John alone furnishing a market for all the iron that can be manufactured in the shape of Ships' Knees, Straps, Shafts, Cranks, Ship's Anchors, &c., &c.; even if the supplies of the works were ten times greater there would be a demand in our immediate vicinity. We paid a visit to the works a short time since - they are situate at the Straight Shore - and were agreeably surprised to find an establishment under such encouraging auspices. The result of our visit satisfactorily proved to our mind that we have not only the material in our Province to carry on extensive iron operations, and thereby prevent the importation of tens of thousands of pounds worth of such merchandize; but also the enterprize and abilities to render the business highly remunerative. The only thing we lack is capital - capital enough to enable our people to go to work with vigour, upon an extensive scale. One of the greatest necessities of the age is Iron. A country possessing this mineral, may be considered rich in the true sense of the word. The greatness of England rests upon her iron beds. This Province, we are told abounds in iron ore. The mines of Woodstock are considered to be superior and highly productive. It is from this quarter that our ""Forge Company,"" now under consideration, draw their supplies. The iron is brought down in vessels in ""pigs"", and conveyed over to the works. We observed upwards of a thousand tons piled on the wharf, ready for smelting. A gentleman from Pennsylvania, who has long been connected with the iron works in that State, was in our company, and he pronounced the Woodstock iron, which he closely examined, as of a superior description. It was defective in some respects, but in others far superior to any in Pennsylvania. On the whole, he pronounced the Woodstock iron suitable for any purpose for which it might be required in our Province. The works consist of an immense shed and appliances. There are on the premises a smelting furnace, steam engine and trip hammer. The iron is thrown into the furnace, and after undergoing a certain degree of heating, is brought out and put under the trip hammer, which falls upon it with ponderous force, and in a short time it is converted into what is called a ""bloom"", which is the first shape of malleable iron, and is then ready for manufacturing purposes. The works, however, are conducted upon too limited a scale, to be very profitable. At present 12 tons of iron are manufactured in a week. We are informed that five times twelve tons might be disposed of at very little additional cost for labour, if the machinery were extensive enough. There is iron in abundance and a demand, as we before stated, for all the

Ships' Knees, &c., that can be made; but, we presume the want of gold and not iron or enterprise, stands in the way of entering more largely into the business. For example, a Rolling Mill is required for making merchantable iron; and in place of one puddling furnace, there should be at least six. There appeared to be metal and facilities enough upon the premises to warrant us in drawing these conclusions. In every country in the world where iron works have been prosecuted, they have turned out to be highly remunerative, and the districts round about flourishing. We have the advantage in this Province of having the iron at our very doors; and we earnestly trust that the New Brunswick Forge Company will be enabled after a while to go into the business much more extensively. The supplies at Woodstock, we are told, are inexhaustible. We certainly think that the works are entitled to Legislative consideration. If a loan could be obtained through Provincial guarantee (the Company making the Province secure) it would lead to most beneficial results, not only to the Company but to the Province at large. After visiting the works at the Straight Shore we called in at the Foundry of Messrs. Fleming & Humbert, and examined an iron shaft which had been made at the Company's works, Straight Shore, for the steamer Emperor. It was 12 feet long, and weighed 3,600 lbs. It was in process of being turned by the steam machinery of Messrs. Fleming & Humbert. Here then was a fair specimen of what can be done in our Province. The iron is taken out of the earth at Woodstock, converted into pig iron, sent down to St. John, put into the puddling furnace at the Straight Shore, and thus rendered malleable; and then it is placed in the hands of our enterprising friends at the Phoenix Foundry, for finishing and polishing off, for the use of one of our fast steamers. The strength and quality of this shaft is pronounced to be equal to any thing of the sort that could be made in England, and yet the cost is far less than if it were imported from the United States. T.E.G. Tisdale, Esq., is President of the Company; and it is our anxious desire to see the works extended, so that

Royal Gazette - Dec. 4, 1861 Notice. Saint John, 29th, November, 1861. A meeting of the Stockholders of the York and Carleton Mining Company will be held at their Office, Saint John, on the fourth day of January next, at 3 o'clock, p.m., on special business of the Company. James Harris, president."

Carleton Sentinel - Nov. 23, 1861 Several gentlemen from England accompanied by members of the York and Carleton Mining Company, arrived there on Tuesday, for the purpose of inspecting the works of that company at Upper Woodstock, with a view of purchase on the part of the first named. It is to be desired that the iron works should be put into operation again. It is distressing to see so much capital lying idle, while there is such an excellent field for the manufacture of a quality of iron, which has been proved to be very superior."

Carleton County Sentinel - Feb 22, 1862 and Headquarters - Feb. 26, 1862 and Morning News - Feb. 28, 1862 Mr. Best, one of the two gentlemen who have become the proprietors of the Iron Works, Upper Woodstock, arrived here a few days ago, and already has commenced operations, having a crew of men at work repairing the foundation, engines, &c. Mr. Best informs us that he finds the buildings, machinery, &c., in quite as good a state as expected, and expresses his intention of having the foundry in active operation by the first of May. We learn, incidentally, that one of the proprietors has returned to England to obtain, among other necessaries, over one hundred practical workmen for the establishment. We know the gentlemen engaged in this great industrial undertaking will receive the warmest wishes, for their success, of our community."

Headquarters - Feb. 26, 1862 The Warrior and Carleton Iron. - No British subject who reads the newspapers, but has been deeply interested in the construction and the repeated trials of the iron-clad ""Warrior"". But Carleton County may take an especial interest in this vessel; we are informed on the best authority that seven hundred tons of the iron used in the plating of the ""Warrior"" was made from the pig iron produced at the foundry at Upper Woodstock, and that the English Company which has purchased that foundry has contracts with the Imperial Government for further supplies of the iron. - Woodstock

URN: 0275 / IDX_Names: Woodstock Fe;

N.B. Reporter - Jul. 4, 1862 The Carleton Sentinel informs us of the successful operation of the Iron Foundry at Upper Woodstock. Our opinion always has been that the quality of the Iron produced at Woodstock could not be excelled in any part of the world, and it is pleasing to find this excellent manufactory resumed after its short suspension."

Carleton Sentinel - Jun. 21, 1862 and S. J. Daily Globe - Jun. 23, 1862 and New Brunswicker - Jun. 24, 1862 IRON WORKS. - We are pleased to learn that the Furnace of the Iron Works was put into blast, for the first time, under its present proprietorship, on Tuesday last, and the result was highly satisfactory, the quality of the casting proving better than the average formerly. We trust that this is but the beginning of a continued series of successes which shall wait upon the further prosecution of this very important enterprise."

Morning News - Jun. 25, 1862 Woodstock. - The Iron Works at Woodstock are again in full blast. The property recently changed hands."

Morning Freeman - Jun. 26, 1862 The Iron Foundry. - The new Charcoal Iron Company which has purchased and set once more in operation the works of the old York and Carleton Mining Company, made the first cast from the foundry on Tuesday last. We understand that the working of the foundry thus far has been most satisfactory to those interested. Mr. Best, the Manager, and Mr. Smith, a principal owner, being present at the casting. They seem to entertain no doubt but that the result will be successful in a hugh degree; and speak confidently of an increase in the number of furnaces and an enlargement of the operations of the company. The recommencement of these works forms an era in Carleton, and, we believe, in the Province. To day we learn that the furnace is now burning that grey iron which is precisely the description which the proprietors require and have expected. All little lingering doubts which may have existed, as to complete success have

Carleton Sentinel - Dec 12, 1863 The English Admiralty, after repeated severe tests, have found that the iron plates made from iron ore obtained at Woodstock, New Brunswick, is superior to any iron found in the British empire for resisting heavy

S.J. Daily News - Jun. 2, 1863 From the lengthy notice of the Woodstock Iron Works which appears in the Carleton Sentinel of the 30th ult. we extract the following: -We have 10 kilns - they are made of brick - for making charcoal, their holding capacity in the aggregateis 510 cords of wood, yielding 75,000 bushels of coal per month, and consuming in the year over 10,000 cords of wood - the year of forty weeks, twelve weeks being about the average time of stoppages in the year. The amount of ore consumed or manufactured is 10,000 tons per year. The number of men employed, on an average during the year is 100, who receive an average of about $1.75 per day, making $42,000 expended yearly for manual labor, without reference to the teams employed &c. The whole current expense of the establishment reached last year, in which there was but 16 working weeks, $40,000. For the present year it will probably reach $75,000; this with one furnace. Excavations have already been made for a second furnace which is to be erected immediately and then, of course, the expenditure in everything but expense of running the machinery will be nearly doubled. Besides the material before named there are consumed at the Works as a flux 800 tons of Limestone per year, which comes from the Company's land at Guimic. Except from some casualty the furnace is not out of blast, or the fires allowed to subside but once a year; this is necessary to replace the hearth of the furnace which burns out in that time. The fire brick heretofore used has been brought from England; but the proprietors of the works have a party out now exploring upon the Tobique, under the direction of their intelligent engineer, Mr. Cadman, in hopes of finding a stone, which resists the action of fire, in sufficient quantities to answer the purpose. During the past season there was yarded for the Works, in the space of three months, 10,000 cords of wood. During the 16 weeks of the past year in which the Works were in full operation there were 789 tons of iron turned. All the iron thus far sent to England has been sold to one concern, and that solely for one purpose, the iron plating of ships for the Royal Navy, for which this iron has proved, after the most rigid tests, the best adapted of any made. Of course the demand for it is largely in excess of the capacity of the present works to produce the iron, the character of which seems most firmly established in the English market, where it ranks higher than the best brands of Swedish iron, and commands a larger price in the pig, than ordinary bar iron. Its points of excellence consist in its greater density and highly carbonized character. There are now at the Works some 250 tons of iron which is engaged and waited for in England."

S.J. Daily Globe - Jun. 3, 1863 Woodstock iron... (see story in Carleton Sentinel and Daily News)..."

S.J. Daily News - Apr. 20, 1864 Mr. Connell will, it is thought, be a candidate for the vacant seat in Carleton Co. It is rumored that he will be opposed by Mr. Best of the Iron Works..."

Colonial Farmer - Aug. 1, 1864 The Carleton Sentinel says that the Woodstock Iron Works employ 27 teams hauling ore. The teams average 7 1/2 tons per day each. The Company pay $486 dollars weekly for this service alone. A number of other teams are engaged hauling charcoal."

S.J. Daily News - Aug. 10, 1864 Prof. Hinds report abbreviated (see Carleton Sentinel of Aug. 6)"

URN: 0275 / IDX_Names: Woodstock Fe;

St. Andrews Standard - Feb. 10, 1864 and S.J. Daily Globe - Feb. 12, 1864 New Traffic.- The Woodstock Iron Company, during the last week, transported over the N.B. & C. Railway, upwards of 100 tons of their iron, which is now being shipped at this port ..."

Headquarters - Jul. 27, 1864 and N.B. Courier - Jul. 23, 1864 and Morning Freeman - Jul. 28, 1864 and Miramichi Gleaner - Aug. 6, 1864 Iron Mines. - There are now twenty-seven teams constantly employed in hauling ore from the Iron Mines, Jacksontown, to the Works. The teams average 7 1/2 tons per day each, or a total of 202 1/2 tons in all, being 1205 tons per week. Forty cents per ton is paid for hauling, which thus puts in circulation, weekly, $486 for this service alone, chiefly among the farmers of Jacksontown, who employed their teams thus when other duties on the farms are not pressing. Besides there are a number of teams hauling charcoal from pits, in Williamstown and elsewhere, and there is likewise a considerable quantity of wood being hauled in constantly. These items of a great industrial enterprise being prosecuted here, cannot, we presume, be uninteresting to any of our readers. - Carleton Sentenil."

S.J. Daily News - Jun. 1, 1864 Mr. Best of the Woodstock Iron Works, will not be a candidate for the representation of Carleton County at the approaching election."

Carleton Sentinel - Mar 5, 1864 IRON ORE IN AROOSTOOK. – Dr. J.C. Weston of Bangor, a member of the Board of Agriculture, in a report upon ""The influence of Manufacturers on Agriculture, says that Maine has an abundance to supply the smelting furnaces in many localities where the necessary fuel can be cheaply furnished and the means of transportation provided. The most promising ore is found in Wade Plantation, in this county. He says that iron has remarkable strength and tenacity, and like its counterpart in Woodstock, N.B. is the best for sheathing our iron gunboats, and hence its national importance. Great Britain has used plates manufactured from the Woodstock ore in the construction of the Black Prince having ascertained by experiment, that while plates made from other iron were shattered by projectiles from an Armstrong gun, these were only slightly indented."

S.J. Morning Freeman - Oct. 25, 1864 Progress. - The quantity of iron turned out at the Woodstock Iron Works during the whole of last year was 700 tons. This year, from January to the present time, no less than 2000 tons has been turned out. This is a marked evidence of progress. - News"

St. Andrews Standard - Aug. 30, 1865 The Carleton Sentenil which keeps its readers well informed on what is passing says - ""Mr. Sills, who represents, we believe, an English and American Company, has during the past few weeks been engaged exploring the county, on the eastern side of the river, in the localities of Professor Hind's geological survey, making himself more completely acquainted with the character of our Iron and Copper ores. He has found abundant proof of the justness of Professor Hind's testimony as to the abundance and richness of those minerals and is now negotiating for the purchase of land in Glassville and other localities, having in view the erection of smelting furnaces.In this connection we may mention that Mr. Best has gone to England in the interest of his company; and Mr. Wm. Stevens is also in England negotiating with every probability of success for the starting of a new Iron furnace at Wakefield."

S.J. Daily News - Jul. 26, 1865 RICH IRON ORE. - Mr. Thomas Everett, Jacksontown, has left with us a specimen of Iron ore taken from the mines on his farm, where they are now raising it for the Iron Works. This piece is in size 3x10x5 inches, and weighs upwards of 17 lbs., and contains over 60 per cent. pure iron. The seam from which this piece was broken is now open 4 rods and is 40 feet wide, solid like this specimen. With facilities for conveying wood and other material quickly and cheaply, the reproductive industry which would be put in operation, working our inexhaustible iron beds, is beyond our just conception - Woodstock Sentinel."

St. Andrews Standard - Jun. 28, 1865 The Carleton Sentinel says that the Woodstock Branch Railway Company have ordered the issue of a prospectus for procuring stock and proceeding with the line from the Iron Works to the St. Andrews Railway at Eel River, under the provisions of their Act of Incorporation of 1864."

S.J. Daily Globe - Sep. 19, 1865 Carleton Co. - Wm. Stevens, Esq., who went on avisit to England in the interest of a new iron smelting concern, has returned with favorable reports of his mission and the probability is that another smelting furnace will be established at Jacksontown ere long."

S.J. Daily Globe - Aug. 27, 1866 Mr. Best has returned from his trip to England, and has given the Carleton Sentinel most hopeful reassurances that the very important Iron Works with which he is and has been so closely connected, and with which his interests may be more completely identified in the future, are to be continued in operation with the same force and the same extent as heretofore."

S.J. Daily News - Jan. 10, 1866 The Woodstock Iron Works people are sending over the St. Andrews Railway for export a large quantity of iron."

St. Andrews Standard - Jan. 24, 1866 The Charcoal Iron Company, we are glad to learn from Mr. Best, have now their new furnace in successful blast, and they propose running both to their full capacity hence forward.-[Sentenil"

URN: 0275 / IDX_Names: Woodstock Fe:

S.J. Daily Globe - Nov. 5, 1866 The Woodstock Iron Works are advertised to be sold on the 1st of May next."

St. Andrews Standard - Nov. 21, 1866 The Woodstock papers say it is the present intention of Mr. Best to shut down operations at the Iron Works during the winter. The loss to the County will be severe."

S.J. Daily Globe - Jan. 7, 1867 As might be expected, the suspension of operations at the Woodstock Iron Works is felt throughout nearly the whole county of Carleton. The employment which had hither to been given to men and horses in furnishing ore and wood to the works is withdrawn, and with it a large amount of money. Hopes are entertained that operations will be resumed in the Spring."

S.J. Morning Freeman - Jun. 11, 1867 and St. Andrews Standard - Jun. 19, 1867 and St. Croix Courier - Jun. 14, 1867 The Woodstock Iron Works have, we understand, been purchased by Mr. Best, from the Commercial Bank, and, as soon as arrangements can be made for a supply of wood, the operations will be commenced again. Mr. Best's experience as former manager of the works will now do him good service. - Globe"

Carleton Sentinel - June 15, 1867 IRON WORKS.- We learn with pleasure that Mr. Besthas made arrangements for the purchase of the Iron Works, and that they will be in operation in November next. The successful prosecution of these works is a matter of the first importance to our County and this intelligence will be hailed with satisfaction. Governor Deardson (?) and Mr. Cass. both acquainted with, or interested in, the manufacture of iron, examined some specimens of the Woodstock works pig to-day, and they regard it as very valuable and of a character which will command a ready sale in the American

Morning Journal - Mar. 20, 1867 Notice of Sale. - On the first day of May, A.D., 1867, at eleven o'clock, a.m., at Chubb's

Corner (so called) in Prince William Street in the City of Saint John in the Province of New Brunswick, will be sold By Public Auction: The lands, erections, mills, furnaces and machinery, mines and other the premises conveyed by William Ellis Smith to the York and Carleton Mining Company by Indenture of Mortgage bearing date the Seventeenth day of January in the year of our Lord one thousand eight hundred and sixty two, which said Indenture of Mortgage is recorded in the office of the Registrar of Deeds and Wills in and for the County of Carleton in Book Y of Records, pages three hundred and sixty (360), three hundred and sixty one (361), three hundred and sixty two (362), three hundred and sixty three (363), three hundred and sixty four (364), three hundred and sixty five (365), three hundred and sixty six (366), three hundred and sixty seven (367), three hundred and sixty eight (368), three hundred and sixty nine (369) and three hundred and seventy (370) and which said land and premises are in the said Indenture of Mortgage described as all and singular the several lots, pieces and parcels of land and premises hereinafter mentioned and described, that is to say, ..."

S.J. Morning Journal - May 3, 1867 The Woodstock Iron Works, land, &c., for sometime advertised for sale in the MORNING JOURNAL, were sold by Mr. Stewart on Wednesday, for $18,450, the Commercial Bank being the purchaser."

St. Andrews Standard - Aug. 19, 1868 The Woodstock Iron Works.- We are glad to see that Mr. Best has returned from England after a successful mission in relation to the iron works at Woodstock, and to learn from that operations will be commenced at once.- Globe"

Carleton Sentinel - Aug 22, 1868 Mr. Best, we are pleased to say, arrived here on Thursday evening, and the Iron Works will be put in blast as soon as possible."

Daily Telegraph - Aug. 25, 1868 and S.J. Daily News - Sep. 7, 1868 New Brunswick Hematite Iron. - We have received specimens of white fibrous iron from Hematite Ore mined in New Brunswick. It is of extreme hardness, capable of scratching glass, and of remarkable purity. It is also exceedingly tough, Robert Mushet, of Coleford, England, stating that he has twisted nail rod cold, made from it, which exhibited a toughness equal to the Llondross or Teviotdale Iron. Charles Sanderson says he is using the iron as samples. He is the well known steel maker, and says ""the steel made from it hardens perfectly for file making. The Pembroke Iron Works, Pembroke, Me., is using it with great success for axe iron and edge tools. We understand the deposits of this ore in the vicinity of Woodstock, New Brunswick, are practically inexhaustible. It has been largely and successfully tested in the casting of chilled car wheels, both in England and in this country, and in the former country by John Brown & Co. of Sheffield, for armour plates. - Scientific American."

URN: 0275 / IDX_Names: Woodstock Fe;

Carleton Sentinel - Jun. 6, 1868 It is with great pleasure, that we refer to an advertisement in to-day's issue, of Mr. Best, for wood for the use of the Iron Works at Upper Woodstock. The resumption of business at this establishment, of which the advertisement gives practical indication, will be hailed with satisfaction throughout the county. Mr. Best was in Town during the early part of the week making preliminary preparations, and leaves for England in a few days, intending on his return, should a sufficient quantity of wood be obtained by that time, to start one of the furnaces immediately. By November, at the latest, he anticipates getting thoroughly under way. We wish the enterprise every success."

St. Andrews Standard - Jun. 10, 1868 We are glad to learn that Mr. Best is making arrangements to again start the Iron Works at Woodstock. He will get to work in the fall, say October or November. A firm in Boston has contracted for all the iron that can be produced by one furnace."

Headquarters - Jun. 10, 1868 The Woodstock Iron Works, that have been closed some time, will, it is said, resume operations in the Fall. Mr. N. Best, the Manager, is now advertising in the local papers for a supply of cordwood, the first indispensable requisite. He expects on his return from England - whither he is going - about November, to commence work immediately. The Globe says that a firm in Boston has contracted for all the iron that can be produced by one furnace. It will be a good thing for the county if the furnaces are kept in full blast. It will be an immense pity if the impossibility of carrying

S.J. Daily News - Oct. 9, 1868 OUR MINERAL RESOURCES. - The article in our issue of the 30th Sept., under the above caption having come under the observation of a gentleman who has recently returned from a visit to Oromocto, he has favored us with the inspection of some fine fossils and specimens of coal dug by himself out of the bank of the Oromocto River, thus confirming the supposition of Mr. Best, of the Woodstock Iron Works, of the extension of the great carboniferous basin of New Brunswick to the Oromocto Valley. The coal which has been shown to us appears to beof good quality, but the vein from which it was taken is not of workable thickness. The fossils may, however, afford data for a scientific opinion as to the existence of larger deposits of this valuable mineral, and we are authorized to say that such information would be given by the possessor of these fossils to the gentlemen now engaged on the geological exploration as may facilitate their researches, should they be in need of or desirous of obtaining it."

St. Croix Courier - Sep. 3, 1868 WOODSTOCK IRON WORKS. - The Woodstock Acadian contains the following:- ""Mr. Best is engaged in making preparations for the resumption of operations at the Iron Works. He has on hand a considerable stock of ore, and has a large quantity of coal at the kilns in Newburgh, - ample stock for a run of one furnace for a few months. So much, however, has to be done, preparatory to a commencement that it is not probable that the furnace will be put in blast before the first of November next. We trust that these works have now resumed operations never again to be permanently, or otherwise than for a short time, closed. The effect upon the county will be felt this coming winter, in the extension of employment, and an increase in the amount of money in circulation. And now, that our Branch Railway is open, and the United States capital and enterprise are turning to some extent in this direction, it is to be hoped that the making of charcoal iron in Carleton will not be confined to one furnace, but that the demand will be such as to lead to further

Carleton Sentinel - Sep. 5, 1868 N.B. iron article in Scientific American."

Carleton Sentinel - Jan 9, 1869 The furnace at the Iron Works is now in full blast. The first casting was drawn off on Saturday last."

Morning Freeman - Jan. 12, 1869 The Woodstock Iron Works are again in full blast."

St. Croix Courier - Jan. 28, 1869 The Woodstock Iron Works have again commenced operations, with fair prospects of doing a good business. Mr. Best, we learn, has secured both the capital and the market necessary to give permanency to this important undertaking."

Daily Telegraph - Jul. 28, 1869 Several hundred tons of pig iron, of choice, quality from the Woodstock Works, are lying on the Wharf at St. Andrews for shipment to Pembroke, Me., and England, chiefly."

URN: 0275 / IDX_Names: Woodstock Fe;
Daily News - Feb. 2, 1870 Commercial Bank... Vernon ... Ladds ... Assets, January, 21st 1870 ... (include) ... York and Carleton Iron Works"

S.J. Daily News - Feb. 7, 1871 Commercial bank. In reply to a question respecting the Woodstock Iron Works it was stated that a gentleman was expected by the last steamer from England, who, it was expected, would purchase the property, but he did not come. ....."

Daily Telegraph - May 3, 1871 Commercial Bank. - ... Mr. James Milligan asked why the land, 12,000 acres, in connection with the Woodstock Iron Works, was not sold. He knew all the land in that vicinity, and he thought that $4 an acre could be obtained for that lot independent of the Iron Works. The President explained that the Directors were waiting the result of negotiations with an English firm before deciding to sell the land separately. ..."

Carleton Sentinel - Nov. 23, 1872 The agent of some Ontario Company has during the week, been prospecting the property formerly belonging to the York and Carleton Mining Company in this county, and now owned by the Commercial Bank. While satisfied with the extent and richness of the iron ore abounding in the County, we judge the probabilities of this Company and the Bank closing a bargain are not very favorable although the representative informs us that his company will probably start Iron Works somewhere in this vicinity."

S.J. Daily News - May 7, 1873 Commercial Bank. - .... Your directors very much regret that they are unable to report, as they had hoped to do at this meeting, that all liabilities had been paid. They have been corresponding with parties in England and the United States with reference to the sale of the Iron Works property at Woodstock, and have given parties in England until the month of June to examine the works and decide upon a purchase, which they trust will result in a sale of that valuable property, and your Directors feel that nothing has been lost by their unsuccessful efforts to dispose of this property heretofore, the land having very much increased in value. While negotiations with reference to the sale of the above mentioned property have been proceeding, your Directors have disposed of some of the properties held by the Board, and are anxious to find purchasers for the whole remaining properties; but they do not deem it advisable to sacrifice such as are paying interest on the value they place upon them until they have disposed of the Iron Works and while other matters over which they have no control are settled. .... James Vernon."

S.J. Daily Telegraph - Sep. 27, 1873 The Woodstock Iron Works have not been sold, but only large tracts of land attached to them. These important works are still in the market."

Carleton Sentinel - Sep. 27, 1873 The Commercial Bank has sold the timber lands, formerly belonging to the Charcoal Iron Works, to the N.B. Railway Company."

S.J. Daily News - May 22, 1874 Commercial Bank... The Iron Works at Woodstock are still unsold, although the timber lands were sold last fall for $24,000, but negotiations are now on foot for their disposal. ....Vernon."

URN: 0275 / IDX_Names: Woodstock Fe;
Daily Telegraph - Nov. 13, 1874 The Iron Ores of Carleton County. - It has been known for a long time that iron is found in great abundance in the County of Carleton, but although a number of years since blast furnaces were erected near Woodstock, for some reason or other they did not succeed, and the Province is still in almost entire ignorance of the nature and character of the ore beds of Carleton. We, therefore, propose to place before our readers such facts as we have been enabled to gather relative to the subject. The County of Carleton is traversed, for many miles, by a series of iron beds,

some of which first show themselves at Jacksonville, two miles west of the Saint John river; thence, running some degrees to the east of north, they can be traced continuously for a distance of five miles, and again recur on both sides of the Saint John, not far from the mouth of the Shiktehawk river directly on the line of the New Brunswick Railway, where wood is abundant; and still further at Glassville, eight miles from the Saint John. There seems, however, to be another series of beds which show themselves a short distance north of the foundry land (now owned by A. Gibson, Esq.), and again at the mouth of the Coldstream, four miles from the New Brunswick railway. It may not be out of place here to remind our readers that there is a great difference between a vein and a bed of ore. The former is generally uncertain in its size, from the fact of its being the result of a fissure filled with vein matter; while beds, which are evidently subordinate layers between stratified rocks, are generally from their constitution much more constant in their size. The Carleton iron beds occur in slates, which in the neighborhood of these beds are generally of a purple color, thus serving as a guide to the ore deposits. The beds vary in width of from 2 to 14 feet, those of larger size being intersected by small beds of seams of slate. The ore is a red hematite, so called from its redness when reduced to powder. Its texture is frequently slaty, and the beds dip at a high angle. Many thousand tons have been removed by open quarrying, and hundreds of thousands of tons can be mined without the aid of hoisting or pumping machinery by merely running in levels on the beds, which, owing to the nature of the hills, would readily drain themselves. Wood for the purpose of making charcoal is extremely abundant, as the extent of forest in the neighborhood of the Shiktehawk is almost unlimited. From an analysis of some of this ore made by John Mitchell, F.C.S., in 1862, we find the following percentage yield of several of its constituents. Metallic Sulphuric hosphoric Iron Acid Acid No. 1… 34.87 0.78 1.32 No. 2 … 35.15 0.59 0.98 No. 4 … 48.32 0.59 1.06 No. 7 … 36.85 0.57 1.06 These averages show a high percentage of phosphorus, which as Bauerman remarks, ""is one of the most unwelcome ingredients in iron ores, from the ease with which it passes into the metal during the smelting process, producing the most injurious effects if present in more than a very small proportion. Wrought iron containing not more than 3/10ths per cent of phosphorus is not sensibly affected in tenacity, but is only rendered somewhat harder; with one-half per cent it becomes somewhat cold short or incapable of being wrought cold under the hammer without breaking; with 8/10ths per cent the cold shortness is very decided; and 1 per cent makes the metal very brittle. The tenacity of cast iron is also sensibly diminished by phosphorus, so that the metal made from the worst kind of bog ores cannot be employed for castings requiring great strength; but this is counterbalanced by the properties of acquiring great fluidity and taking good impressions, which render it proper to be used for small and intricate ornamental castings."" In an analysis of the Woodstock hematite, A.F. Wendt, Esq., M.E., found 3.45 per cent of phosphoric acid and .06 of antimony. A specimen of pig iron obtained at the old furnace Mr. Wendt found to contain only a trace of phosphorus, while the analysis of Woodstock pig obtained by him from another source gave 1.03 per cent, from which it may be inferred that some of the beds are free, or nearly so, from phosphorus while, others contain a large percentage. Mr. Wendt says that the iron made from this ore could be used for puddling, and would make a good rail, on account of the manganese in it. Mitchell's analysis giving as high as six per cent of oxide of manganese in one specimen. Mr. Wendt also remarks that it would take a long and detailed examination to prove which beds are fit for working. By the dry assay Mr. Wendt obtained 41 per cent of metallic iron from Woodstock ore. With reference to some of the ore beds of Carleton being comparatively free from phosphorus, we give an analysis made in August, 1873, in London, by Messrs Johnson & Sons, Assayers to the Bank of England, of a piece of ore from a bed in Glassville, situated near Mr. Love's house, which gave - Manganese 23.00 per cent. Iron 8.70 "" "" Sulphur 10 "" "" Phosphorus 15"" "" This analysis, compared with others, conclusively shows that the ore beds of Carleton are of very different compositions. Such being the case, we think this matter well worthy the attention of the Government of New Brunswick, which might, at a comparatively small expense, cause an investigation to be made by some competent person who could obtain specimens of the ore from a depth of say 70 or 80 feet:- all the mining hitherto has not been to a greater depth than 25 or 30 feet. In order to obtain these specimens the diamond borer could be advantageously used. Iron ore deposits frequently vary in composition as the depth increases, hematite and limonite sometimes change to magnetite. The metallurgy and chemistry of iron demand much knowledge and experience, and we entertain no doubt but that were these brought to bear on these ore beds of Carleton, a great and lasting benefit would be conferred on the country."

S.J. Daily News - May 10, 1875 and Carleton Sentenil - May 8, 1875 Commercial Bank Matters. - The Commercial Bank disposed of its assets in this County, by public auction on Friday last week. Among other property sold was the Iron Works, Upper Woodstock, comprising lands, buildings, machinery, &c., which was knocked down to D. Munro & Co. for $2,430. We understand that of some $90,000, due here the Directors have realized $70,000; or the operations of the branch of the Bank in this Town, from its establishment, has been attended with a loss of $20,000. - Carleton Sentinel, May 8th."

URN: 0275 / IDX_Names: Woodstock Fe;

Daily Telegraph - Jul. 26, 1876 Geological Survey of Canada - The Iron Ores of Carleton County. - We yesterday morning received from Messrs. Dawson Brothers, Montreal, a copy of the Report of the Progress of the Geological Survey of Canada, for 1874-1875. The survey is conducted under the supervision of A.R.C. Selwyn, F.R.S., F.G.S., who makes such a magnificent display of Canadian minerals at the Centennial Exhibition. The typographical execution of the work is most beautiful, and we have seldom seen better plans than those which accompany the Report. Passing over for the present, many important discussions, and turning to the 97th page, we find a matter discussed in which the Province of New Brunswick in general, and the county of Carleton in particular, are especially interested. We there find the Report of Mr. R.W. Ells, B.A., of the iron ore deposits of Carleton County. The Carleton ore beds, until within a few years, have received but little attention from mineralogists, and we are now beginning to attract the observation of those best able to pronounce upon their merits. What we want to know is, does Carleton County possess beds of ore sufficiently free from impurities and rich enough in metal to yield an adequate return to the investment of capitalists under skilled and economical management? From the Report of Mr. Ells, we learn that the ore exists in beds of great extent. We will however, give his own words. He says:- The outcrops of iron ore, as will be seen by the map are quite numerous, extending in a general north-east course from Campbell's corner, near Jacksonville, to Flanigan's Hill, on the river St. John, (a distance as we notice by the map of many miles). The ore is found in a series of hills, with an average height of about 300 feet above the wharf at Woodstock. These in the vicinity of Jacksonville, are known as Moody's Hill, Iron Ore Hill, Maple Hill and Flagstaff Hill. Beginning near Campbell's Corner, at Moody's Hill, we find four openings, three of which are of considerable size, and have yielded a quantity of iron ore, amounting in all to about 20,000 tons. The ore is a rich looking compact hematite embedded in dark rusty slates. The second opening, Theodore Kearney's, is a quarter of a mile north-east of the first and near the summit of the hill. Here, the containing beds are red and green clay slates, the red slates being strongly charged with hematite, (red iron ore), and are all very much twisted. This bed of ore is of unequal width, ranging from five to fifteen feet, and a large quantity of ore has been removed from it. None of these beds of ore have been worked to a greater depth than twelve feet. Iron Ore Hill is the chief place from which the ore used in the Woodstock furnaces was taken. The veins or beds of ore vary from one to sixteen feet in thickness and have not been worked deeper than twenty feet. About 50,000 tons of ore have been extracted, the principal openings being about twelve in number, though there are many more smaller ones. On the east side of the river St. John several exposures of iron ore have been noted. An examination of this part of the country was made by Mr. Edward Jack, of the Crown Lands Department, and myself, and specimens obtained from all localities that were accessible. The first exposure of red and green slates on the east side of the river, noted by us, occurs near the junction of the Lower Newberg Road, with the river road. Mr. Jack found indications here of a deposit of hematite, which, however, is probably unimportant. The associated rocks are of a quartzose nature. Leaving the main river road at the village of Hartland, the road to Glassville runs up along the south bank of the Becaguimec river, and on the lot No. 2, occupied by Jas. Thomas, the beds of red hematite are again seen. The ore occurs here in small veins, three in number, from one to two feet in thickness, and very black on weathered surfaces. In connection with this bed is a very curious banded limestone, containing about 8 per cent. of iron, and a large proportion of manganese. Going up the Becaguimec river road, we found the next exposure at the fork of the Coldstream and the Becaguimec. At Miller's Corner, according to the report, iron ore again appears on a lot owned by Mr. W. Love. Numerous blocks of ore are found on the slope of the hill, which must be from a bed of considerable size; the exact thickness, however, could not be ascertained, but the outcrop was seen by Mr. Jack on a former visit. In the parish of Brighton, at Pole Hill, the so-called ores have been seen by Mr. Jack, and are pronounced by him to be similar to those of the Becaguimec. No complete analyses have been made of those from this side of the river, but simply determinations of iron. We gather from Mr. Ell's Report that the iron ores of Carleton County, so far as they have been assayed, show a large percentage of phosphorous, which is the greatest enemy of the iron smelter, as it renders iron cold, and short or brittle when cold. It is also one of those deleterious substances in iron which cannot be easily got clear of, since the phosphorous which is found in the ore has such an affinity for iron that it passes readily into the pig, according to the report. Mr. Wendt, of Columbia College School of Mines, found 1,032 of phosphorous in pig made from productive ore. Bannerman says (page 33, edition of 1872) that wrought iron containing more than three-tenths per cent. of phosphorous is not sensibly affected in tenacity, but is only rendered somewhat harder; with one-half per cent. it becomes somewhat cold-short, or incapable of being wrought cold under the hammer without breaking; with four-fifths per cent. the cold shortness is very decided, and one per cent. makes the metal very brittle. We can easily understand from this, the reason why the Woodstock iron was not adapted to manufacturing uses, inasmuch as Mr. Wendt's assay shows more than one per cent. of phosphorous in the pig, and we have been informed that the specimens of ore on which he operated were taken from all of the ore beds on which the Carleton iron mining company worked, the whole having been crushed together, and the assay made from the resulting powder. Of one thing we are sure, from Mr. Ells' Report that the County of Carleton has an unlimited supply of iron ore, which is not only found at Jacksontown, but also at Glassville, many miles distant, and this not in one, but in many beds. We believe from the observations of others that the cost of raising and delivering this ore on the cars of the New Brunswick and Canada Railway would not exceed $1.25 per ton, as it can be obtained easily by surface work, and that there would be no necessity for expensive machinery for draining purposes or lifting ore, since the levels can be run into the hills in many places where the draining or lifting by machinery would not be required. The County of Carleton may challenge any portion of the Dominion in so far as quality of iron ore is concerned, and although the quality of the beds which have been opened, has been inferior - there is no reason why beds of pure ore may not be found in some section of the County, for we know that beds or veins of pure ore may occur in near proximity to inferior ones. It would be well if the county of Carleton would investigate this matter and employ for a period not exceeding one year, the services of a competent metallurgist to inspect and determine the value of the different iron ore beds which occur in that county, many of which have never been examined. We have but little doubt, that careful explorations of this County, accompanied by well executed assays of the ore beds would bring to light valuable metalliferous deposits, which when iron again became of sufficient value, could be profitably worked, and the working of which would add to the population of the magnificent County of Carleton; enlarge the markets for agricultural produce and merchandize, assist New Brunswick in competing in manufactures of iron and generally add to the resources and wealth of the Province."

URN: 0275 / IDX_Names: Woodstock Fe;

Daily News - Apr. 20, 1880 Iron Mining. - Negotiations have been going on lately between an American party and the company that own the Upper Woodstock Iron Works, with a view to transferring the mine and works to the American. Mr. David A. Munro, Registrar for Carleton county, represents the interests of the company. He had an interview with the government and was assured that all assistance in the way of continuing the charter, etc., would be given that they could give. He was also assured by Mr. Gibson that he would use his influence with the N.B.R.R. to have a track laid from Woodstock up to the mine, if right of way was given. Sanguine hopes are entertained that ere long these important works will

Daily News - Aug. 7, 1880 Iron Mining. - Immense buildings at the Charcoal Iron Works, Upper Woodstock, are being put up by W. & C.C.L. Co., at a cost of $25,000. The lumber is being supplied by Fred Hale, Esq., of Woodstock. Mr. Watson expects to start the furnace about the last of September. It is probable, however, that difficulty in procuring wood at that season of the year will effectively delay operations until February. Large quantities of ore will be taken from the Mines in the meantime. Mr. M. Campbell of Jacksonville, has contracted for running the ore at the Mines, and taking it to the works at

Daily News - Aug. 10, 1880 A Sketch of Jacksonville. - .... The Iron mining Industry. - [by a roving reporter] - ...... Before closing my rambling notes I must call the brief attention of your readers to the Iron Industry in Carleton. The mines, as you know, have lately passed into the hands of a Rhode Island company, represented here by Messrs. Charles H. Salisbury and James H. Sturdee, through whose kindness with information regarding the present and past state of the iron mining industry in the County of Carleton and prospects of the company now in charge. The mines are situated on an eminence called Iron Ore Hill, on what is known as the Risteen property. Several shafts or pits have been sunk, the largest of which is a tremendous sized cavity fronting on the farm house of Mr. John Camber, which has in past years yielded not less than 70,000 tons of crude ore. Much doubt prevails as to the quality of the ore. Professors hind, Bailey and, I think, Robb have inspected the mines at different times and formed reports thereon which have been somewhat conflicting and all much at variance with the views of Mr. Best, the proprietor of the mines between the years 1861 and 1870. Messrs. Smith and Best worked the mines with vigor, but found the ore cantankerous and very far from being as productive as generally supposed. Prof. Bailey, in his mineralogical report, devotes some space to the mines and states that assays taken of the ore had proven it to contain over sixty per cent of pure metal, an estimate very much astray in the opinion of practical workers in the ore. Mr. Best puts the percentage at about half of that, and says the Mines cannot be worked with profit, and that he (Best) is the only man in Canada who can work them anyhow in which estimate of himself Mr. Best is not less astray than Prof. Bailey. Certain it is, however, that the N.B.R. Co., after considering the proposition to extend a branch track to the Works at Upper Woodstock, have refused to make the venture with perhaps a very necessary sagacity. The pits are at present being cleared out, and mining will commence at once. Jacksonville, Aug. 8, 1880."

Daily News - Dec. 8, 1880 Iron Mining. - A strong crew of men are raising iron ore on the Iron Co.'s claim at Jacksonville. Several parties in the neighborhood are employed in hauling the ore to the works. In the meantime about fifteen or twenty tons are brought in daily, principally by Messrs. Owen Saunders and George Hovey's teams. On Saturday last, one of the teams belonging to Mr. Saunders hauled in one load weighing over five tons."

S.J. Daily News - Jul. 14, 1880 Woodstock Charcoal Iron Work. - A large party of men, under the direction of Mr. James Watson, are at work on the grounds and buildings of the old Woodstock Charcoal Iron Works at Upper Woodstock. It has been found necessary to discard the machinery, engines, etc. formerly in use and the old buildings have been levelled, so that iron mining operations will not commence this year."

S.J. Globe - Jul. 21, 1880 The Iron Works at Upper Woodstock, N.B. are to be put in operation, a dozen or more men being now engaged repairing the furnaces and erecting new buildings under the direction of Mr. Thos. Watson, a gentleman from England, who informs us that he expects to be ready to start the fires sometime in November next. The ore is obtained three and a half miles from the works, which are located on the west bank of the St. John River. The ore yields 35 to 40 per cent iron, which is of extra quality. Thirty-five tons of ore every day will be used, and when in full blast the enterprise will give employment to 120 men. The iron will be extracted by the use of charcoal, in the manufacture of which, Mr. Watson says, a great saving will be effected in expense by gathering the fumes arising from the pits and extracting therefrom by chemical process an acid extensively used in dying fabrics. - Aroostook Pioneer."

S.J. Daily Telegraph - Jun. 5, 1880 Woodstock. - Iron Works. - Mr. Salisbury, from Rhode Island, was here last night and is ready to pay over the purchase money for the iron works at Upper Woodstock as soon as arrangements are assured for the extension of the Woodstock branch railway to the works. I learn that a number of those parties across whose lands the railway will run are willing to treat on favorable terms, while some others are holding out. It would be a great boon to this place should those works start. Probably there will be as many as 200 men employed. It is said the ore is of good quality."

Moncton Daily Times - Jun. 7, 1880 and Morning Freeman - Jun. 12, 1880 Woodstock Iron Works. - The Woodstock correspondent of the Telegraph writes: Mr. Salisbury, from Rhode Island, was here last night and is ready to pay over the purchase money for the iron works at Upper Woodstock as soon as arrangements are assured for the extension of the Woodstock branch railway to the works. I learn that a number of those parties across whose lands the railway will run are willing to treat on favorable terms, while some others are holding out. It would be a great boon to this place should those works start. Probably there will be as many as 200 men employed. It is said the ore is of good quality."

Daily Telegraph - Jun. 10, 1880 Iron Works. - It is said that Mr. Salisbury and others interested in the purchase of these works have gone to Fredericton to make the necessary arrangements with the N.B. Railway Company relative to the extension of the road to the works."

URN: 0275 / IDX_Names: Woodstock Fe;

S.J. Globe - Jun. 16, 1880 The Woodstock Iron Works. - A despatch to the News says that the sale of Woodstock Charcoal Iron Works was effected yesterday to Salisbury and Sturdy, representing an American Iron Company. Messrs. L.P. Fisher, H.A. Connell, D.A. Munro and F.P. Sharp, late owners, receive a nominal sum of $8,000 which, however, bears no proportion to cash value of property."

S.J. Daily Sun - Jun. 17, 1880 Woodstock Iron Works. - Mr. Salisbury, a capitalist, of Rhode Island, has completed the purchase of the Woodstock Iron Works for a Company. Arrangements have been made with the New Brunswick Railway to run a branch to the mines. Operations have already commenced in repairing the buildings, furnaces, etc., and securing the large quantity of wood which will be needed. The works are at present in charge of Mr. Watson, mining engineer. Although the Company is not fully organized, it is understood that it will consist of capitalists from New York and Rhode Island. Mr. Salisbury is confident, from what he and the engineers have seen of the ores and the facilities for smelting, that large operations can be successfully carried on."

Daily Telegraph - Jun. 17, 1880 Sale Complete. - The Woodstock Charcoal Iron Works of Upper Woodstock, which formerly belonged to the York and Carleton Mining Co., and of late owned by Messrs. D. Munro, P. Fisher, H.A. Connell and Frank Sharp, have been sold to Messrs. Salisbury & Sturdee, representing an iron company in Rhode Island. They were sold for the nominal sum of $8,000, principally to have the works opened. The late owners were anxious to have the works in operation, and were not desirous of asking the full value, owing to the tract that a large number of men will be employed. The mining privilege covers about nine square miles of land surface. The furnace and other works, situated near the river, is on a separate tenet of land, containing some 65 acres. The repairs of the furnaces, etc., have already commenced. There will probably be 100 men or more employed at once. The right of way through the land has been obtained from some of the property owners for the extension of the N.B. Railroad from the railway bridge to the smelting works, and it is to be hoped that others will give way for the general benefit of the undertaking. If the owners of land bordering on the river could realize the benefits they will derive by having these works again started, they would not hesitate for a moment to give encouragement to the enterprise. Arrangements have been made with the directors of the N.B. Railroad Co. to build the branch as soon as the land can be obtained from the owners. Mr. Thomas Watson will be the manager here, and, jidging from appearances, he is a gentleman well capable of making the enterprise pay. Mr. Watson hopes to be in a position to ship some iron by October next."

Bay Pilot - Jun. 17, 1880 Woodstock Iron Works. - The Woodstock correspondent of the Telegraph writes: - Mr. Salisbury, from Rhode Island, was here last night and is ready to pay over the purchase money for the iron works at Upper Woodstock as soon as arrangements are assured for the extension of the Woodstock branch railway to the works. I learn that a number of those parties across whose lands the railway will run are willing to treat on favorable terms, while some others are holding out. It would be a great boon to this place should those works start. Probably there will be as many as 200 men employed. It is said the ore is of good quality."

Weekly Freeman - Jun. 19, 1880 The Woodstock Iron Works have been sold to Messrs. Salisbury & Sturdee, representing a Rhode Island firm."

Daily News - Jun. 21, 1880 Mining In Carleton Co. - Negotiations have at last produced results and the charcoal iron works at Upper Woodstock and the mines at Jacksonville have been sold by the former owners, Lewis P. Fisher, David Munro, Henry A. Connell and Frank P. Sharp, Esqs., to Messrs. Charles H. Salisbury and James H. Sturdy, the representatives of a large iron mining company in Rhode Island. The question of right of way has been decided and the New Brunswick Railway Co., from the curve in the track below the bridge, are to construct a branch line along the bank of the river, which is very favorable for such purpose, to the works at Upper Woodstock - a distance of one and three quarter miles. The largest of the furnaces at the works alone is capable of producing 2,500 tons of pig iron per year, which amount would be the product of 7,500 tons of ore. Several hundred men will be furnished with employment in hauling the ore, in working at the mines and at the works. Work in clearing away for repairs and rebuilding necessary to the resumption of operations have already commenced at the works under the direction of Mr. F. Watson, jr., C.E."

URN: 0275 / IDX_Names: Woodstock Fe;

S.J. Daily News - Jun. 22, 1880 The Woodstock Charcoal Iron Works. - A Sketch of Iron-Mining in Carleton County and Some Facts Regarding Recent Prospects. - As announced in yesterday's News the Charcoal Iron Works at Upper Woodstock and the mines at Jacksonville have passed into the hands of Messrs. Charles H. Salisbury and James H. Sturdy, representatives of a large iron mining company in Rhode Island. A short sketch of the various attempts which have been to manufacture iron in Carleton County may not prove uninteresting. Although the articles of agreement would express a simple transfer of property between Messrs. L.P. Fisher, D. Munro, H.H. Connell and F.P. Sharp, former owners and the purchasers, there is reason to believe that the Shaw Bros., of Maine, are really the operating party in the case. A Crown mining lease was granted to the York and Carleton Mining Company in 1847, that corporation being composed of James Harris, John Allen, James Smith and Capt. McLean, Esqrs., Messrs. Owens & Duncan and Messrs. D. & T. Vaughan. They were the first parties who operated the mines which are situated on what was then called the Nelson property, and the works at Upper Woodstock by their instructions, under the supervision of Mr. Jas. Stevens, who also placed the machinery in position, were constructed immediately. The machinery which consisted of two blowing engines and boilers and a pig-iron puddling apparatus, was provided by Messrs. Harris & Allen. This company turned out at the works about 1,000 tons of iron per annum during the time they held the ownership, which was until 1861. At that time the works passed into the hands of the Woodstock Charcoal Iron Company, composed of two individuals, Messrs. William Ellis Smith and Norris Best, of Sheffield, Eng., both of whom were experienced in the working of iron in different mines in England. Prof. Bailey, in his mineralogical report, speaks very highly of the quality of the ore obtained at the Jacksonville mines, stating that assays had proven the ore to contain over sixty per cent of pure metal - a proportion which, if true, would make the ore one of the most valuable mining properties in America. He spoke of the fact that it was used for plating the war vessels of England in preference to any other, when the truth was that the ore employed in this way amounted to but a few tons and was nearly all used at one shipyard, having been obtained as an unsaleable article for a ruinously low figure. No more of the ore was ever used in the British navy. When Messrs. Smith & Best took hold of the mines and works, which they obtained for $50,000, Mr. Best being the active manager in the business, the puddling machinery was discarded and though twice as much metal was harvested as by their predecessors, only one of the two furnaces was used until 1864, when the English market, to which the produce was wholly shipped, offering good inducements both furnaces were employed and 4,000 tons of iron manufactured, requiring 13,000 tons of crude material and 16,000 cords of wood at the works. The fuel used was all hard wood until 1870, when it was found by experiment that poplar wood could be profitably employed. Experiments were the rule of things under the management of these gentlemen. It was found necessary to essay in everything to produce good results, as for instance, Mr. Best's discovery that a furnace could be used for over a year without renewal, when no charcoal furnace had ever been known to stand more than one third of that time. Immediately after this large rise in business (1864), the Bessemer steel manufacturing process having been perfected and a certain quality of ore being only suitable for use in the article, the English market was practically shut off and the company had to turn their eyes to the United States, to which shipments continued to be made until 1870, when the works stopped. As the ore was mostly on the surface and extended over a large area in the parish of Wakefield, proprietors of land, among whom might be mentioned Messrs. J. Good, Hamilton and Scott Emery, mined on their own account and obtained an average price of 65 cents per ton for the ore delivered at the works, the distance to which, from headquarters at Upper Woodstock, varied from two to three miles. Mr. Michael Campbell, of Jacksonville, worked the main pit at the Iron Ore Hill, as it was called, almost entirely, and about 150 men and 60 horses were employed all the time, including farmers who, with their teams, could take the ore to the works profitably at 40 cents per ton. When the property passed out of the hands of Messrs. Smith & Best in 1870, it passed into the hands of Messrs. L.P. Fisher, D. Munro, H.H. Connell, and F.P. Sharp, who retained it allowing the works to go into decay, until purchased by Messrs. Salisbury & Sturdy as described. A prominent mining authority thinks the successof the venture very doubtful, and says that the mines at Beckaquimic afford much better chances than those at Jacksonville. During the time that the mines were held by Messrs. Smith & Best an immense quantity of limestone was required per week for the furnaces, which could be obtained in any quantity close to the ore at Beckaquimic. This gentleman states that in other ways also, especially in the matter of wood, which can be got cheaper and of better quality at the latter place, the works could be run much more advantageous than at Woodstock. The influence which brought about the recent purchase is doubtless due to the belief that phosphorized iron can be made available for steel manufacture, which is, however, a subject

Chignecto Post - Jun. 24, 1880 The sale of the Upper Woodstock iron works has been completed, to Salisbury and Sturdee, representing a Rhode Island firm. The price paid was about $8,000."

URN: 0275 / IDX_Names: Woodstock Fe;

S.J. Globe - Nov. 6, 1880 Woodstock Iron Works. - The building destroyed by fire last night, belonging to the Woodstock Mining Co., had been repaired and refitted lately, so that it was a very valuable part of the property. It contained the Director's, Manager's, Accountant's, Analyst's and other offices, besides one flat for a store. The laboratory was entirely destroyed and also a very valuable collection of books and instruments belonging to Professor Shuyadt, the mineralogical analyst, and also instruments and books belonging to Mr. Watson, C.E. Besides this, data and memoranda which Prof. Schuyadt had made since his arrival at the works, were also consumed. The work of refitting, repairing, and when necessary, rebuilding, is nearly completed now at the above works. Besides the old kilns for making charcoal, which will be operated, four circular kilns of a new pattern have just been finished. These are of brick, 30 feet in diameter, and are cone shaped, resembling somewhat a stack of hay in shape. They each have a capacity of 30 cords of wood, which can be changed into charcoal in 6 or 8 days. To get the cord wood to the works a branch railroad is being constructed to Woodstock, a distance of nearly two miles, to communicate with the N.B.R., so that wood can be obtained anywhere along this line and be easily brought to the works. the contract for building this branch has been taken by John E. Stewart, Esq., who is a well known road builder. He has thirty men employed, with the necessary horses and implements. These are working in sections, so that the work is going on very rapidly. Mr. Stewart thinks he will be ready for track laying next week. The engine of 120 horse power for blast purposes has been taken apart and necessary repairs made. The old foundation has been entirely removed and replaced with one of stone and brick. On this a cast iron frame of eight or ten tons has been set, and the engine attached thereto. This frame, the heaviest cast ever turned out of a foundry in this part of the Province, as well as the other parts necessary, is from the foundry of Connell Bros. The engine has two 16 in. cylinders of 4 ft. 10 in. stroke. These both drive a shaft having two pinions which gear into two larger wheels, on the shaft of which is the immense fly wheel. Also on this shaft are two cranks that drive the pistons that work in the air cylinders are very large - 5 ft. in diameter and 5 ft. stroke. At each end of these cylinders there are two large valves to receive and deliver the air which passes into a large cylindrical air chamber 20 feet long and 5 feet in diameter, which is built like a steam boiler. The air passed out of this chamber by means of somewhat complicated piping into the oven over the boiler furnaces there to be heated and thence into the great base furnace where the ore is smelted. To generate the steam there are five flue boilers 40 feet long, two of which are 4 and three are 3 feet in diameter. Each boiler is supplied with water glass, gauge cocks and safety valve. These are arranged in a unique and convenient plan, the work of Connell Bros. The Company seem to be sparing no expense in fitting the foundry up in a first class manner. To one somewhat unacquainted with such things many of the appliances and apparatus seem very strange. The first thing necessary now is wood for charcoal. This cannot conveniently be obtained until snow makes good hauling. By that time the branch line will be equipped and the charcoal can be immediately manufactured. The work of smelting will very probably then commence."

Bay Pilot - Nov. 11, 1880 On the night of Tuesday the 2nd inst., the store and office building of the Woodstock Iron Works, with the analysts laboratory were destroyed by fire; loss $17,000 to $20,000. Insured for $7,000 in the Western

Daily News - Nov. 12, 1880 The Woodstock Iron Company. - Charles H. Salisbury and Lycurgus Sales, of Providence, Rhode Island, and Franklin Greene, of East Greenwich, Rhode Island, J.H. Sturdee, of Massachusetts, all of the United States of America, and Thomas Watson, jr., of Whitby, Yorkshire, England, have filed in the office of the Provincial Secretary a memorandum of association for the incorporation of a company to be styled The Woodstock Iron Company; the object of the company is the mining and manufacture of iron and wood ..?.., and other business incidental thereto, with a capital of twenty thousand dollars ($20,000), to be divided into two thousand shares of one hundred dollars ($100) each. The office or principal place of business is to be at Upper Woodstock, in the county of Carleton."

S.J. Globe - Nov. 12, 1880 The Woodstock Iron Company - composed of Chas. H. Salisbury and Lycurgus Sales, of Providence, R.I.; Frank Greene, of East Greenwich, R.I.; J.H. Sturdy, of Massuchusetts, and Thomas Watson, jr., of Whitby, Northshire, Eng, - have filed in the office of the Provincial Secretary a Memorandum of Association, - capital $20,000 in two thousand shares of $100 each."

Daily News - Oct. 18, 1880 The Woodstock Iron Mines, Etc. - Jacksonville, Oct. 15. - There seems now to be a fair prospect that the Iron Mines here will start shortly after snow begins to fly. This is because it would be impossible to supply the furnaces with wood before there was a chance to haul it. Since my last letter to you a good deal has been done. The works have been fixed up till they are ready to go and new buildings for accomodation of the rackers have been put up at the mines. Tenders are advertised by the company for supplying the works with beech, birch and maple wood in large quantities. Mr. Best the former lessee of the property used poplar and found it well adapted for required purposes. The farmers right about here haven't much wood, but there will not be much trouble in getting it a little way from the corner. A number of our farmers will keep their horses to work at the mines during the winter."

St. Croix Courier - Sep. 16, 1880 The Woodstock Iron Works will not commence the manufacture of iron till about the first of January next, for the reason that wood enough cannot be procured before that date to insure a constant supply. To suspend after starting would cause of loss of several thousand dollars. The works will consume daily the coal made from seventy-five cords of hardwood. About seven thousand cords have already been engaged to be delivered at $1.95 per cord. The product will be sent to England to be used in the manufacture of car wheels, as none but charcoal iron is produced in England, which imports largely from Norway and Sweden. The supply will hereafter go from the United States and Canada.-

S.J. Globe - Aug. 31, 1881The Iron Works. - The Jacksontown ore raised and taken to the works during the winter has been exhausted, and now men are at work at the mines raising ore, and quite a number of teams are engaged in hauling it in. The charcoal got out in the winter and spring has been pretty well used up too. The furnace has worked off more in the time than anticipated. A shipment of the pig iron has been sent to the Londonderry Car Wheel Works to be tested for car wheels, which require a specially good grade of iron."

URN: 0275 / IDX_Names: Woodstock Fe;

S.J. Daily Telegraph - Jun. 17, 1881Sussex. - Iron Ore for Londonderry. - A special freight train left Sussex, today, having 44 cars attached, 11 of which were loaded with iron ore for Londonderry."

Daily News - Jun. 25, 1881 The Jacksonville Mines. - Iron ore is being mined at Jacksonville at the rate of twenty tons per day. It is hauled to the works, a distance of three miles, for forty cents a ton by the farmers. The management expect to do much larger business as soon as the trade is properly located."

Carleton Sentinel - May 14, 1881 The furnace at the Iron Works, Upper Woodstock, was put in blast, on Tuesday afternoon, with good results."

S.J. Globe - May 18, 1881 The Woodstock Iron Works began work on Monday."

S.J. Globe - May 20, 1881 Iron Works. - Last Thursday the iron in the smelting furnace chilled so much that when tapped it would not run off. It was feared that the furnace would have to be taken down, but by increasing the blast sufficient heat was generated to permit the metal to be drawn off, so that now the furnace is in full blast and working admirably. It is thought the mishap occurred by using charcoal made from poplar, which did not yield as much heat as the harder woods."

Carleton Sentinel - May 21, 1881 The Foundry has commenced work, and it is at present under good progress. A difficulty threatened itself at the beginning of operations, but this happily has been overcome. The trouble was that a chill promised to occur, on account of the furnace not being sufficiently heated. The smelted ore is now drawn about four times in each 24 hours, and the process of running the molten iron into pigs, is on exceedingly interesting operation to witness."

S.J. Daily Sun - May 26, 1881 Woodstock. - Horrible Accident at the Iron Works. - A Man's Body Torn to Pieces. - (Special to the Sun). - Woodstock, May 25. - A horrible death occurred here to- day. William Jones, aged 39 years, a workman employed at the Iron Works, Upper Woodstock, was this morning accidentally caught by the spokes of a large fly-wheel and literally torn to pieces. His body, being several times forced through a space between two beams nine inches apart, was so horribly mangled as to be wholly unrecognizable. The unfortunate man leaves a wife and two young children to lament their terrible bereavement. An inquest was held before Coroner C.P. Connell, M.D., and a verdict returned in accordance with the

Carleton Sentinel - May 28, 1881 A fearfully shocking and fatal accident occurred at the Iron Works, Upper Woodstock, on Wednesday morning. The sad particulars by which Wm. Jones, a man some thirty odd years of age, was so suddenly crushed out of existence, are as follows. The very large and ponderous fly wheel of the engine had become stationary while it was just on its centre, and the deceased was called in to assist in starting it. The wheel worked partly above and partly below the floor of the engine room, the space between the two floor beams in which the wheel moved being about nine inches. In order to start the wheel two men were pushing upon it from one side while the unfortunate deceased was pulling down on it at the other. When the wheel started Jones in some way slipped and fell over one of its arms or spokes, and was at once carried down and through the narrow space between the floor timbers, being instantaneously, of course, almost ground to a powder. The face, strange to say, was comparatively uninjured, but the heart, entrails, and remaining portions of the body were scattered into fragments. The remains were gathered up and placed in bags, and an inquest held by Coroner Dr. Connell, when a verdict of accidental death was returned. A liberal contribution was made by the Coroner, Jury and citizens of Upper Woodstock, for the afflicted and much sympathized with family of the deceased, consisting of a wife and two children. The remains of the deceased were interred on the afternoon of the day of the accident. Coming as this accident does so soon after the death of young Ganong, has cast a pall of gloom not alone over the entire community at Upper Woodstock, but as well upon the citizens of this town."

S.J. Globe - Oct. 3, 1881 Woodstock. - ... The leading industry, in the way of factories, in the place is the Woodstock Iron Works at Upper Woodstock, but I was informed that these works were shortly to be shut down for several months on account of the scarcity of coal. Mr. Chas. McLean took a fraternal interest in us, and a visit to the works with him was very interesting. About 800 tons of pig iron is being turned out per week, the casting being done at noon and 6 o'clock p.m. each day. Te people of Woodstock take a great pride in the works and seem quite disgusted with strangers who do not go up to

S.J. Globe - Oct. 6, 1881 Iron Works. - Smelting at the Woodstock Iron Works has been suspended. The furnace was blown out last Thursday for the first time since the smelting was commenced this spring. The work has been suspended on account of the charcoal being used up and want of wood for more. Probably smelting will not be re-commenced until the spring. In the meantime a new furnace will probably be built and wood and charcoal and ore provided for next season's use."

Chignecto Post - Sep. 1, 1881 The St. John Telegraph says the stock of iron oreraised during the winter at the mines of the Woodstock Iron Works, is completely used up, the furnace consuming more than was anticipated. The company have a number of men at the mines raising ore and are having it hauled with teams. Their stock of charcoal is running low, which will have to be renewed. The company have shipped a quantity of pig-iron to Londonderry, N.S., to be worked up into car wheels. It requires a good grade and this charcoal iron is said to be the best for that purpose."

URN: 0275 / IDX_Names: Woodstock Fe;

S.J. Daily Telegraph - Sep. 2, 1881 Carleton County Notes. - Iron Works. - The stock of iron ore raised during the winter at the mines is completely used up, the furnace consuming more than was anticipated. The company have a number of men at the mines raising ore and are having it hauled by teams. Their stock of charcoal is running low, which will have to be renewed. The company have shipped a quantity of pig-iron to Londonderry, N.S., to be worked up into car wheels. It requires a good grade and this charcoal iron is said to be the best for that purpose."

Fredericton Capital - Sep. 22, 1881 New Brunswick Iron.- The iron plates of the famous American war ship Kearsage, which destroyed the more famous Alabama, were made of Woodstock iron. It is said to be the hardest iron in the world."

Carleton Sentinel - Sep. 24, 1881 and S.J. Daily Sun - Sep. 26, 1881 It is the intention of the Woodstock Iron Company to erect at once a second furnace, at their works, Upper Woodstock. It is said that the Company feel quite assured of a great success in connection with this important enterprise."

S.J. Daily Sun - Aug. 5, 1882 Over $1000 worth of cordwood belonging to the Woodstock Iron Company caught fire and was burned at Muniac a few days ago."

S.J. Daily News - Feb. 2, 1882 The Carleton County Iron Mines. - It is probable that a boom in iron mining throughout Carleton County will take place in case the attempt of Congressman Carlisle to have a measure introduced at Washington to allow manufacturers, smelters and others to import from Canada, free of all duties and imports, iron ore, said ore to be manufactured in the United States and not be again exported in otherwise than a manufactured form is successful."

S.J. Globe - Jan. 27, 1882 Iron Works. - There seems little prospect at present of the iron works being in operation next season. This time last year large quantities of cordwood for charcoal had been contracted for, but no steps seem to have been taken in this direction so far this winter. It is feared the enterprise so far has been a losing one, and there is probably little hope of making it a paying investment until the coal can be obtained cheaply."

Carleton Sentinel - Jul. 29, 1882 Over a thousand dollars worth of cord wood belonging to the Woodstock Iron Company, was burned at Muniac on Tuesday evening."

S.J. Globe - Jun. 5, 1882 Woodstock, June 2. - Iron Works. - The Iron Works Co. are taking steps to resume operations at the works at Upper Woodstock during the summer. The ore mined near the works has been tested in different proportions with Spanish ore and the combination is stated to give an excellent quality of Charcoal Iron. The Spanish ore will be brought direct from Obbervian Peninsula to St. Andrews coming thence to the works by rail. Considerable improvement will be made at the works. A new crucible will be put in the large furnace and other parts filled up so that the capacity of the works will be enlarged. The greatest interest is taken in the fortunes of this industry here and the livliest hopes are expressed that it will be financially successful."

S.J. Globe - Aug. 6, 1883 Iron Works. - J.H. Sturdy, Esq., of Attleboro, Mass., who is one of the principal owners of the Woodstock Charcoal Iron Works is here now looking over the property of his company. He is accompanied by James Aninghast, Esq., the company's solicitor. It is an open secret that the operations of the works when running for the company were very badly managed. It is thought under different management the enterprise would be remunerative. At all events, from what has already been made known, there are strong hopes the works will ere long be again set in operation."

Daily News - Apr. 4, 1884 Sale of Iron Works. - A correspondent writes: A Sheriff's sale takes place on the 30th of June next, at Woodstock, when the property of the Woodstock Iron Company will be sold, by virtue of an execution against said company in favor of certain conditions. These works at Jacksonville is of a very superior character but three unsuccessful attempts have been made by various parties to operate the works successfully. What is chiefly required is a market and a skilled superintendant."

S.J. Globe - Dec. 8, 1885 Katahdin Iron Works. - .... Mr. Ernest Sjostedt as Resident Manager. The latter gentleman is well known in Carleton County, New Brunswick, having spent a short time at the Woodstock iron works. He is a Swedish gentleman and is a graduate of the University of Upsala, as well as of the Stockholm School of Mines, and all the work of rebuilding the Katahdin Iron Works has been done under his immediate supervision. ...."

Daily Telegraph - Jun. 12, 1889 Woodstock, June 10.- The masonry about the Woodstock iron works is in course of being torn down and the material, used for building purposes. Mr. H.A. Connell is utilizing a large quantity of the stone in his building in course of erection for an electric light station."

Daily Gleaner - Jun. 3, 1890 Woodstock Iron Works.- The Woodstock Press learns that the negotiations for the purchase of the iron works at Upper Woodstock by parties who intended running them have met with suspension. The parties who proposed purchasing intended importing foreign ore to mix with the ore here, but they could not make a rate for freight of this imported ore over the N.B.R. that would guarantee going into business though the difference between their request and Mr. Cram's offer was not very large."

URN: 0275 / IDX_Names: Woodstock Fe;

Evening Gazette - May 3, 1890 Negotiations are proceeding through H.A. Connell, for the purchase by Chicago parties of the Iron Works at Upper Woodstock. A point in the negotiations has been reached which renders the probability of the transfer, referred to, being soon made very encouraging."

Daily Telegraph - May 3, 1890 There has lately been a little stir about the Iron Works, that have lain idle for a number of years. It is stated that it is probable the works will be operated again. The interesting purchasers were to make an examination of the property this week. With this in view, some attention has been given to putting the premises in some degree of order for inspection."

Carleton Sentenil - May 3, 1890 Negotiations are proceeding through Mr. H.A.Connell, for the purchase by Chicago parties of the Iron Works at Woodstock. A point in the negotiations has been reached which renders the probability of the transfer referred to, being soon made very encouraging. It appears that there have been more than one company interestedly enquiring of late, with regard to those works, among them one in England."

N.B. Reporter - May 7, 1890 The Iron Works. - There is again a prospect of Carleton county reaping some benefit from mining operations. The Sentinel says that negotiations are proceeding through Mr. H.A. Connell, for the purchase by Chicago parties of the iron works at Upper Woodstock. A point in the negotiations have been reached which renders the probability of the transfer referred to being soon made very encouraging. It appears that there have been more than one company interestedly enquiring, of late, with regard to those works, among them one in England."

St. Croix Courier - May 8, 1890 Negotiations are proceeding through H.A. Connell, for the purchase by Chicago parties of the iron works at Upper Woodstock. A point in the negotiations has been reached which renders the probability of the transfer referred to being soon made very encouraging."

Moncton Daily Transcript - May 8, 1890 It is said the Woodstock iron works are to be again opened."

Fredericton Daily Gleaner - Sep. 10, 1890 Iron Works Bargained For. - It is reported that the iron works at Upper Woodstock have been bargained for, and that the sale will be completed as soon as the company in England can be heard from."

Moncton Daily Transcript - Sep. 15, 1890 It is said that the iron works at Upper Woodstock are about to pass into the hands of an English company."

Woodstock Dispatch - Dec. 5, 1894 Death of Norris Best. - Mr. Norris Best, wellknown in Woodstock in connection with the iron works at the Upper Corner, died in Montreal, last Sunday, of paralysis. He was born in Bilston, Staffordhsire, Eng., and came to Woodstock in 1861, taking charge of the iron works. He left when the works closed in 1868, and lived for some time in St. John, afterward moving to Montreal. Mr. Best married a Miss Allan, daughter of Jas. Allan of Harris & Allan, iron founders, St. John. His wife and one daughter survive him. The remains of the deceased were brought to St. John for burial."

Woodstock Dispatch - Sep. 18, 1895 Upper Woodstock Iron Works. - It is not generallyknown that, but for one reason, the iron works at Upper Woodstock would now be running in full blast. An English syndicate had been writing with regard to the works, and had quite made up their minds to buy, going so far as to send representatives out to examine the location and to arrange for the transfer of the property. But, the whole business was spoiled, because the English syndicate could not get a proper title to the property. The land, it seems, is owned by a number of people, scattered all over the face of the earth, and it has been found impossible to effect an arrangement with them. The syndicate would have nothing to do with the property, until they could get a clear title. An authority on the subject tells the Dispatch that the iron at Upper Woodstock would find a ready market, and he further says that it is only a question of time when the works will be re-opened."

St. Croix Courier - Dec. 1, 1898 The old iron works at Woodstock have been purchased by a Chicago firm and a tramway will be built to the ore beds so that abundance of ore can be easily brought to the works at the Upper Corner. As the ore is said to be the finest in the world for the manufacture of high grade steel, the industry will be a large and permanent one."

St. Croix Courier - Oct. 20, 1898 The iron works at Woodstock may be re-opened in the near future. A Chicago company will take over the property. A test has been made of the iron and it was found satisfactory. It is said the quality of this iron makes it particularly adapted for anvils, dropforges and such like."

URN: 0275 / IDX_Names: Woodstock Fe;

Woodstock Dispatch - Oct. 26, 1898 Upper Woodstock Iron. - The following is contributed by a valued occasional writer to the Dispatch. - It is stated that there is a probability of the Upper Woodstock Iron Works being shortly reopened, this if true is good news. Many of the older residents of Woodstock can remember the time when the vicinity of the Iron Works was a stirring place and teams were constantly employed hauling the pig iron to Richmond Station for shipment. This was before the construction of the Woodstock branch railway. It appears from the report of James Cadman, Esq., enquirer of the Iron Works that in the year 1864 the quantity of wood required for the Iron Works was 12,000 cords, a quantity estimated to strip 400 acres. The production of pig iron for the same year was estimated at 2,750 tons. The manager of the Charcoal Iron Company at that time was Norris Best, Esq. The Company had under lease 5,000 acres of land but in quarrying the ore ground had been opened up over a surface of less than two acres and the greatest depth penetrated in any one place was 20 feet. In the year 1864 there were employed at the mines and about the furnace at Upper Woodstock 75 men. Twelve teams with drivers were employed in hauling ore while to cut the cord wood required the labor of about 150 men for 12 weeks and the hauling of it furnished employment for 60 teams and drivers for the same length of time. In addition a number of teams were employed in hauling pig iron to Richmond for shipment. The Woodstock charcoal iron had a wonderful reputation in its day. At the first provincial exhibition held at St. John in 1851 (which by the way was the same year the first World's Fair was held at Crystal Palace in London) the report issued by the commissioners stated: The samples of iron and steel from Woodstock seem to be of the very first quality; the iron has been bent and twisted when cold in every direction but without showing the least injury to the fibre. It would be hard to devise a more complete proof of the quality of the article."

Woodstock Dispatch - Aug. 2, 1899 The Iron Works - So much has been said and written about the restarting of the Iron Works at Upper Woodstock that the public is about as skeptical of that, as of new railways, pulp mills, and such like. It may be accepted as a fact, however, that capitalists are making inquiries about the iron privileges, and something may yet

Carleton Sentinel - Jul. 29, 1899 Our Iron Ore. - Iron ore in this vicinity exists in scarcely exhaustible quantity. The developments of the works at Upper Woodstock when in operation established the excellent quality of the ore, for the manufacture of iron, for specific and important purposes. Lately there have been rumors afloat to the effect that the work of smelting was to be resumed with the old works restored. The circumstances of the iron trade at present would seem to justify the rumors mentioned or, at all events would justify the hope that the necessities of the present would compel a resort to the means of supply which abounds here. All the leading papers are admitting the present famine in iron all over the world. Said a railway man the other day in Montreal to a Star reporter: The demand for iron at the present moment is far greater than the supply. We practically cannot get it for love or money. Carnegie's mills are working seven days a week, and twenty four hours a day, and yet they find it impossible to keep pace with the demand. They are probably turning out $1,000,000 worth of iron work a day, and from these figures you may be able to form some idea of the nature and dimensions of the present demand. The railways of Canada find it absolutely impossible to secure rails for their tracks. At the present moment they want 64,000 tons, and can't get a pound. The English and French foundries can hardly provide enough iron for their local markets, so that the question of importing cannot be entertained. Within the past year the Russian government has ordered 1,800,000 tons of rails. And a Montreal despatch to the Globe says: The famine in iron all over the world is beginning to be felt in Canada in various ways. Among them are delays in various works of construction because of the impossibility of securing the iron needed. Among the chief sufferers is the Grand Trunk Railway Company, which has found itself unable to complete the new Victoria bridge by the time contemplated, because it cannot get the iron girders required. More than that, the company had planned to have gone so far ahead with their new office this year as to enable the interior work to be done during the coming winter, but in view of the impossibility of securing the iron from Pittsburg all that can be done is to complete the foundations and wait until next spring to resume the work. Several other big building enterprises are in the same position. Both the big railways may have to curtail their plans for double tracking because they cannot get the rails. To the fact that Great Britain and Russia have placed so many orders with American foundries is the scarcity of iron ascribed."

Woodstock Despatch - Sep. 25, 1907 Mr. Stackpole, a Bangor man has been granted by the government a miners right to search for minerals from a point on the Meduxnakeag up to and including Iron Ore Hill."

S.J. Globe - Jun. 15, 1912 Old Times in St. John - 1850 - The Manufacture of Iron Ore From Native Iron Commenced in the Province. - By Clarence Ward. - ... At the very beginning of the year 1849 the manufacture of iron from native ore was commenced in New Brunswick. The works at Woodstock were then first put in operation and they have since been continued with perfect success. A very large quantity of iron has been produced, smelted with charcoal from the adjoining forests, which has proved of such excellent quality as to command the highest the highest price in the United Kingdom. In whatever light it is viewed this is a most important event for New Brunswick. We have heard it asserted that there is scarcely a county in this province in which iron ore has not been found to exist. We are aware that there are large deposits in st. john, Kings, Queens and Westmorland, and some of these deposits are in close proximity to workable seams of bituminous coal.'

URN: 0275 / 0001 / 0087 / IDX_Names: Woodstock Fe; New Horton Copper; Dorchester Copper;

North Shore Leader - Nov. 7, 1952 Fundy Bay Copper Holds Large Area. - (Toronto Globe and Mail). - Fundy Bay Copper Mines, Ltd., holding a 20 square mile concession a few miles east of Dorchester, New Brunswick, advises that results to date indicate a possible large tonnage of low-grade copper ore can be developed with additional work. Mill tests on ore samples conducted by Lakefield Research Ltd., indicate a higher copper recovery. The ore could grade between 0.50 and 0.75 per cent copper. Each ton of concentrates could contain 6 ounces of silver, as well. Officials advise that the property is now being looked over by Ventures, Ltd., and diamond drilling is expected to be undertaken in the near future. Fundy Bay also controls the New Horton coppermine in Albert county, southwest of Dorchester, where channel sampling has shown 2.75 per cent copper over width of 15 feet. Diamond drilling has covered a strike length of 800 feet and both ends are still open. A further concession of 30 square miles coveringan iron-manganese prospect is held north of Woodstock, New Brunswick. McPhar Geophysics, Ltd., is now finishing a survey of part of the area."

URN: 0275 / 0002 / 0691 / 0007 / Z2 / G3 / GYP / A2 / X1 / J8 / GEOL / IDX_Names: Woodstock Fe; Quaco Manganese; Markhamville Manganese; Lake George Antimony; Sandstone, Building Stone, Monument Stone, etc.; Granite; Gypsum; Albert / Kings County Oil Shales; Grand Lake Coal; Albert Mines; Geology - General;

Daily Telegraph - Jun. 30, 1876 Our Woods and Minerals at the Centennial. - The minerals of New Brunswick, which are treated in the second part of Messrs. Bailey and Jack's pamphlet, consist of iron, copper, manganese, antimony, gypsum, bituminous coal, bituminous shale, albertite, building stones and sandstones. Deposits of bog iron ore are found in several parts of New Brunswick, the best beds being above the rocks of the coal measures in Queen's, Sunbury and York. These measures sometimes cover considerable areas attaining a thickness of 4 or 5 feet, but no attempt has as yet been made to remove or smelt them. An analysis of some ore found in Sunbury yielded 47 per cent of metal. Of the red hematite of this Province, our authors say:-The iron ores of Woodstock were first discovered by the geological survey of the State of Maine, under Charles T. Jackson, as early as the year 1836, having been traced by him from the Aroostook region in the State above named northeastward to the St. John River, and more recently to the eastward of the latter in several bands for a distance of fifteen or twenty miles, or over a large part of the northern and northeastern portions of the County of Carleton. The principal locality from which the ore has been removed is in Jacksontown, about three and a half miles from Woodstock, and about two miles from the west bank of the St. John river. As seen at this point, the ore beds (portions of which are a true hematite, while others are a hydrous peroxide or limonite) are somewhat irregularly interstratified with a of clay slate, usually bright red or brownish red in the immediate proximity to the ore, but elsewhere of a pale grey color, and highly inclined. The width is from six inches to eight feet, the average thickness being about three and a half feet ....?.... their ....?.... variable. About 40,000 tons are said to have been smelted at the Woodstock works while in operation, the resulting metal being remarkable for its great hardness and strength, and admirably adapted for the manufacture of steel. It contains a considerable percentage of manganese. Copper ores exist in considerable quantities, the best being found in the rocks of the southern coast of the Province. The attempts so far made to work these ores have as yet met with but small success, although aspecimen from Salmon River is said to have yielded 62 per cent. of copper. It is to be hoped that the copper beds f this Province will eventually become profitable. With regard to the manganese beds found in this Province, our authors say:- Deposits of black oxide of Manganese consistingchiefly of pyrolusite but associated with more or less ofmanganite, are not of uncommon occurrence in connection with the rocks of the Lower Carboniferous formation, and have been mined to a greater or less extent at several points, such as Markhamville, Quaco and Shepody Mountain. At each of these localities the mineral is met with in connection with limestones lying at or near the base of the series, being distributed through the latter partly in the form of veins but chiefly in irregular masses or Pockets, some of which are of remarkable purity. The most important deposits which are being at present worked are those of Markhamville, under the direction of the Victoria Manganese Company. These were first opened in 1863, since which time the whole amount of ore removed has been about 6000 tons, the annual production varying from 500 to 1500 tons. Owing to the distance of the mines from railway transport, eleven miles, the ore is subject to a cartage of $3 per ton; but notwithstanding this drawback is profitably worked, the price at Sussex varying according to the quality, from $15 to $50 per ton. Manganese is also met with to a limited extent in rocks more ancient than those of a Lower Carboniferous age, near Bathurst, and in those of the Huronian system in King's County, and it is probably from these in part that the ores above described have been derived as secondary products. Another important metal is antimony, which is found at Prince William, and here again we cannot do better than to quote from the pamphlet:The occurrence of Stibnite, or Grey Sulphuret of Antimony, at Prince William, seems to have been known for a number of years, but attracted little attention until about the year 1862, when fresh discoveries indicated a considerable body of ore having been made, several companies were formed with a view to its development. Through the explorations of the latter the mineral was found to be more or less abundantly spread over an area of several square miles occurring chiefly in white quartz veins or veins of quartz and spar, intersecting hard clay slates and sandstones of undetermined age. These veins vary in thickness from a few inches to six feet, the ore being irregularly distributed through the quartz in strings or veinlets, sometimes attaining a thickness of twelve to fifteen inches. A large portion of the ore hitherto raised has been obtained within a short distance of the surface by means of trenches dug on the course of the lodes, but several shafts have also been sunk, attaining the depth of one hundred feet or more. In connection with these on the property of the Lake George Mining Company, somewhat extensive works have been erected, embracing an 80 horse-power engine, a 30 horsepower air compressor engine, a Burleigh steam drill, Blake's crusher, rollers, jiggers, etc., as well as furnaces for desulphurization and smelting. From these, when in full operation, 15 tons of metal were obtained about every six weeks; the charges (of 500 cwt.) yielding from 45 to 56 per cent. of reguins. The fluxes employed are charcoal, soda or salt cake and rosin. The value of the metal on the ground is 12 to 14 cents per pound. It is partly exported in cakes or ingots to the United States, being valued in Boston at $12.25 to $12.75, gold, per ton, and partly employed on the ground in the manufacture of Babbit metal (containing 15 to 20 per cent. of antimony with lead and tin, or in the better qualities with lead, copper and tin), valued at from 20 to 50 cents per pound.Gypsum or plaster is found in great abundance in this Province, as it is also in Nova Scotia. The largest deposits at present known are at Hillsboro', in Albert County, where the total head of rock is from 90 to 100 feet, about 70 of which is composed of soft plaster or true gypsum, which rests on beds of hard plaster of unknown depth. At Hillsboro', during the season of 1875, 129,000 tons of plaster were quarried, 5,500 tons of which were shipped in rock and 47,200 barrels ground and calcined. The uses of plaster are too well known to require any mention. The value of the deposits of plaster in this Province must increase year by year. Our authors do not give a very encouraging view of the coal mining prospects of this Province, and we quote their remarks in full: More than a third of the Province of NewBrunswick is occupied by rocks of the coal formation, which present the usual variety of conglomerates, sandstones and shales, met with in other coal regions, together with numerous and characteristic fossil remains. Seams of coal are also met with at various points, but so far as at present known, are all of inconsiderable thickness, only one, that of Grand Lake, attaining a thickness (22-26) sufficiently great to be capable of working. Being, however, usually nearly or quite horizontal, such beds as do occur cover considerable areas, and when sufficiently near the surface are readily removed. For the same reason but little information can be obtained from the surface as to the possible occurrence of thicker beds beneath, and it is necessary to resort to borings in order to prove the latter. The results so far obtained in this direction are certainly unfavorable to the existence of any such beds, or even to the probability of any great thickness to the coal formation as a whole in this region, but the latter being unconformable to the older beds upon which it rests, and these being highly disturbed, forming troughs and ridges beneath the carboniferous rocks, it is impossible that the latter may really at some point attain a much more considerable thickness and include workable beds of coal. The only locality in which mining operations for this mineral are at present conducted is in and about the Newcastle River and the shores of the Grand Lake, in Queen's county. The beds here having a thickness of about two feet, are usually met with within ten or fifteen feet of the surface, and have been removed at a great number of points over an area of over one hundred square miles, indicating a total productive capacity of about 154,948,147 tons. The coal is a true bituminous coal of the caking variety, and is employed both for household and blacksmith's use. The total annual production is at present about 3,000 chaldrons, which, delivered in the city of St. John, is sold, according to quality, from $4.50 to $8.00 per chaldron.Bituminous shales are found in considerable quantities in Albert County, and at one time an attempt was made to employ them largely in the manufacture of il, as much as 63 gallons to a ton being obtained, but this oil was unable to compete with the cheaper article from the wells. The same shales yield 7300 feet of gas per ton, and in 1865 some 2000 tons of shale was sent to the United States to be made into gas. With regard to Albertite, which is amongst the most remarkable of mineral products, our authors say:-This remarkable mineral, occurring in connection with the calcareo-bituminous shales or pyroschists above described, was first discovered by accident about the year 1850, and has been by some regarded as a true coal, by others as a variety of jet, and by others again as more nearly related to asphaltum. It resembles the latter closely in appearance, being very black, brittle and lustrous, with a broad conchoidal fracture, and like asphaltum is destitute of structure, but differs in fusibility and in its relation to various solvents. From the true coals it differs in being of one quality throughout, in containing no traces of vegetable tissues, and in its mode of occurrence, which is that of a vein and not that of a true bed. This vein occupies an irregular and nearly vertical fissure, has a varying thickness of from one inch to seventeen feet, and has been mined to a depth of 1,162 feet. The accompanying shales are in some portions abundantly filled with the remains of fossil fishes, (Paleoniscus) and it is not improbable that it was from these, in part at least, that the mineral was derived, existing perhaps at first in a fluid condition (in which state it has in some instances become the cementing material of conglomerate), and subsequently hardened into its present form. Vegetable remains are almost entirely wanting. Between 1863 and 1864, inclusive, 154,800 tons of albertite were shipped. It is capable of yielding 100 gallons of crude oil of 14,500 feet of gas per ton, and when employed with other coals it leaves as a residuum a valuable coke. About 120 men are employed at the Albert Mines.Among building stones our authors make mention of granite and syenite which form extensive beds, particularly in the county of Charlotte. Both yield good building materials, the red granite being capable of receiving a high polish, and it being possible to obtain blocks of it of any size up to 30 or 40 feet in length and 4 or 5 feet in thickness. The Bay of Fundy Red Granite Company vein gives employment to about 110 men.With regard to sandstones our authors say: This stone, commonly known in the United States as Nova Scotia stone, has been long known and highly prized, the Budreau Quarries having been first opened in the year 1856, since which time there has been shipped from that locality an annual amount of from 5,000 to 7,000 tons. The Caledonia Quarries were first opened in 1864, and now ship annually from 4,000 to 6,000 tons, while large quantities are also removed from the other localities mentioned above. The particular qualities for which these stones are prized are their colour, the facility with which they may be cut, dressed or ornamented, and their durability. The prevailing color in the Dorchester quarries is a yellowish or olive gray shading on the one hand ...?... a chocolate brown and on the other into a bluish grey, while at Mary's Point a portion of the rock is pale, purplish red, the latter being the most

S.J. Daily Sun - Jun. 10, 1885 The Geological Survey. - ...... In New Brunswick Prof. Bailey and W. McInnes will continue the survey in the section of the interior of the province as well as along the upper St. John, while R. Chalmers will explorethe northern portion and the district around the Baie des Chaleurs, with special reference to the surface geology thereof. In the report of progress recently issued, which is an unusually large and valuable one, containing nearly 800 pages, interesting reports appear from Prof. Bailey and Mr. Chalmers on the geology of western New Brunswick - the former treating of the structure and relations of the older rocks with characteristic clearness and ability, and Mr. Chalmers of the surface geology, the character of the soil, forest growth, etc., of the same region. A new geological map of this region embracing the western part of Sunbury, the greater part of York county, and the southern parishes of Carleton on a scale of four miles to an inch accompanies this report along with others, and appears to be one of the most detailed and accurate geological maps of any part of the province yet published. It is drawn largely from surveys made by Messrs. Wallace Broad and W. McInnes as well as from those of the Crown Land Department, while the geology has been studied by such well known men as Hind, Robb, Bailey, Matthew, Ells and others. No new minerals of economic importance have beendiscovered in the district, those which exist having beenpreviously well known; but the antimony mines at Prince William, York county, are described by Prof. Bailey, and the iron ore deposits of Carleton county referred to. Mr. Chalmers also describes the mode of occurrence of the bogiron at Maugerville. The geological survey of the province, which is now well advanced towards completion, shows that good work has thus far been done in mapping the rock structure and limits of the different groups, and many of the facts brought out in investigating the problems connected with its geology will have a permanent place in science."

S.J. Daily News - Oct. 14, 1864 Our Mineral Resources. - The development of the mineral resources of the Province is daily acquiring increased importance, not only in consequence of the gradual decline in the lumber trade which has so long been one of our most lucrative sources of profit, but because the attention of American and English capitalistsis being turned to our mineral lands to a greater degree than at any former period. This remark applies more particularly to the Americans, who are quietly securing the most valuable mining properties as yet opened out, and are anxious to extend their operations wherever a suitable and promising field for the investment of capital presents itself. The antimony mines of Prince William are in the hands of a Boston Company who will prosecute their development with energy and undoubted advantage. Parties from the same city are making careful enquiries respecting the range and probable extent of theiron bearing rocks of Woodstock with a view to share in the profits which those remarkable ores offer to enterprise and capital. Albert County itself bears witness to the singular advantages which the mining industry, properly directed, is capable of affording - its Albertite, Gypsum and building materials finding a greedy market in the United States, and the fortunate owners of the mining locations, well deserved profits for their investments. But we should like to see the people of the Province share, as they certainly ought to do, in the advantages presented by the mineral treasures of their own soil, and it was with much satisfaction that we noticed at the late exhibition at Fredericton a very marked increase in the representation of our mineral wealth. In describing the general features of the exhibition we glanced at the display exhibited by Professor Bailey, Mr. Matthew and Professor Hind, and we now propose to notice more at length the results of the explorations made during the past summer by the last named gentleman in the Northern part of the Province. Our readers are probably aware that Professor Hind has been engaged in ascertaining the probable area occupied by the already celebrated ""Quebec Group"" of Sir William Logan, the distinguished Canadian Geologist, which he discovered to exist on the Upsalquitch River in the county of Restigouche, in the early part of the summer. The ""Quebec Group"" is now known to be the great metalliferous formation of America, and it has long been recognized as such under different names, but without a suspicion of their relation to one another, by the American and Canadian Geologists. It was in 1860 that Sir William Logan first ascertained the true connection of the different metal bearing rocks of Canada and the United States, and because he satisfied himself that they constituted but one great metalliferous group and that this group was enormously developed in Lower Canada, and particularly near Quebec, he named it the ""Quebec Group,"" and as such it will very probably be recognized by the geologists of all the different States of the Union in which it is known to occur. As already stated, Professor Hind discovered in the early part of this summer that the ""Quebec Group"" comes to the surface on the Upsalquitch and the Nepisiguit Rivers, having there a breadth of about forty miles. He has subsequently ascertained that this important group stretches through the Province, and enters the State of Maine south of Woodstock, and extends a few miles north of that town - forming a belt across the Province not less than 30 miles broad. His collection of rock specimens with their associated minerals, at the late Exhibition, was chiefly from this group as it occurs in New Brunswick; and they were obtained from four lines of exploration which he has made across it. Among the minerals exhibited with the mother rock were copper bearing diorites, black magnesian slates which are supposed to be one seat of the gold not only of New Brunswick but of Nova Scotia and Canada. There were exhibited also what are called the ""Glauconite Slates"", an important member of the ""Quebec Group"", together with red slates and their associated iron ores, purple manganese slates, porphyries red and green, and gold obtained from the drift gravels and sands of the Nipisiguit, Upsalquitch, Tobique, Campbell river, Serpentine, &c. It results from a study of the mineral collection exhibited by Professor Hind that some idea can be obtained not only of the mineral resources of the localities which have been the scene of his operations, but also of the direction in which practical miners should expend their energies. It will be apparent to every one that the ores of metals exhibited by themselves, without relation to their geological range or distribution, cannot convey to a stranger, or to scientific men who may be consulted by capitalists, an adequate idea of the mineral wealth of a parish, county, or Province, because such ores may represent the richest portion of a mineral vein which would soon become exhausted if vigorously worked, as, unhappily, the dear bought experience of many in this Province is able to prove; but when metalliferous rocks extending over a hundred miles or more in one continuous belt are discovered and properly described, we feel satisfied that it requires time only to reveal the mineral treasures which experience and science assures us they contain. The map which illustrated the geology of the carboniferous area in the valley of the Tobique points out to any and every enquirer the place where to find his sandstones, his grits for millstones, his limestones, his gypsums, his firestones, housestones, argillites, &c., and a map of the ""Quebec Group"" of New Brunswick would point out the copper bearing rocks, the manganese and iron series, the lead and antimony series, and we hope in due time the rock in which the eager prospector may find his gold. We shall look for Professor Hind's report with much interest, and are glad to learn from himself that he intends to spend the remaining portion of the season in examining the geology of Albert, King's, Queen's, Charlotte and St. John Counties. We must not omit to notice the beautiful sea green and red argillites, the dolomitic limestone and the fine blue slates of the Upper Silurian rocks which lie to the North of the ""Quebec Group"" in this Province. Although they have not exhibited much metalliferous wealth, yet they are rich in valuable materials for construction and decorative purposes."

Miramichi Gleaner - Oct. 15, 1864 Provincial Exhibition. - We are indebted to the St. John Globe and Telegraph, for full particulars of the Provincial exhibition which was brought to a close on Saturday last... The display of the richness of our rocks and the deposits in the bowels of the earth, must ultimately prove of great service to our people. ... Minerals. - The Mineral Resources of the Province are well represented. Some very fine specimens of antimony are shown by the New Brunswick Antimony Company, and masses of Pig Iron with the ores yielding the metal are sent by Mr. Best, of the Woodstock Iron Company. Albertite, from the mines in Albert County, and coal from Grand Lake, are displayed in fine masses. Our townsman, Mr. Matthew, exhibited his beautiful collection of New Brunswick minerals, which has cost him many year's labour, and Professor Bailey's Cabinet attracts general and well deserved attention. Professor Hind displayed a large assortment of specimens of Minerals in the matrix or mother rock, and arranged in geological order. The plan adopted by Professor Hind is worthy of special notice, as it exhibited not only the mineral itself, but the rock in which it is found and its geological relation to the rocks. His explorations during the past summer was confined to the country northwest of a line between Fredericton and Bathurst, and consequently, only about one half of the province is represented by the collection exhibited. The carboniferous area in the valley of the Tobique, 26 miles broad, illustrated by a geological map, showing the relation of the gypsum series, the limestone and sandstone series in that valley, with specimens ofhonestones, millstone grits, sandstones for grindstonesand building purposes, ochres, refractory materials, polishing powder, &c. which abound in the Tobique country. Four sections stretching across the country, occupied in part by the great metalliferous belt of North America, called the ""Quebec Group"", are represented in detail. The most interesting rock specimens from these sections, which averaged forty miles in breadth, are Drift Gold, from no less than eight different localities, viz., the Nepisiguit, the Portage River, the Upsalquitch, the Little Southwest Miramichi, Campbell River, Serpentine River, and two from tributaries to the Tobique. I noticed also the copper-bearing Diorites of Campbell River and the Tobique; the Iron ores from Woodstock, the Becaguimec and Southwest Miramichi with their associated Red Slates and Limestones; the Porphyries of the Serpentine, the right hand branch of the Tobique and the Nepisiguit, some of them copper bearing. The beautiful red and green conglomerates from the Blue Mountain Range on the Tobique, were shown as materials suitable for ornamental and constructive purposes; the Jasper series of Campbell River and the red and sea-green argillites from near the mouth of the Tobique, were exhibited with the same object. The traps and fossiliferous limestones from Cap Bon Ami, near Dalhousie, with their associated honestones, also found a place in this collection, together with moulding sands from the St. John and Yellow Dolomites or Magnesian Limestones, galena from the Tobique and copper ores from the St. John. - The collection exhibited by Professor Hind derives value from its scientific arrangement. A study of the different sections showed where each species of rock with its characteristic mineral might be found throughout the country explored. An Upper Silurian Dolomite, for example, holding the chain coral in profusion, was shown to mark the limit northwards of the ""Quebec Group"" on the Upsalquitch and on the Tobique; the same rock probably stretching continuously from one point to the other; so also with the Red Slates, with which the Woodstock iron ores are associated; these were represented in the different sections, as appearing on the Southwest Miramichi, a few miles above Boiestown; on the Becaguimec and on the Upsalquitch and Nepisiguit, thus showing the extensive range of this important rock with its iron ores. The copper-bearing Diorites were also represented in three of the sections, and the purpic slates with their associated manganese ores were shown to stretch from the Tattigouche to the Upsalquitch and beyond. The advantages of a scientific arrangement in illustrating the mineral resources of the Province can not be over-estimated, for, however numerous and beautiful isolated mineral specimens may be, they do not afford the miner or capitalist the requisite information respecting their distribution and probable commercial value. The following is from the Telegraph, Oct. 10, Fredericton, Oct. 8. - ... Minerals. - For the best collection of New Brunswick minerals the first prize has been awarded to Professor Bailey whose cabinet is much admired by all, the specimens being so classified, arranged and labelled that even the unscientific observer may understand them. The Professor in his late tour through the Counties of King's, Queen's and Albert, has added a large number of new specimens to his collection, and his Cabinet embraces specimens from almost every locality in the Province. I noticed Iron Ores from Carleton, St. John, Charlotte, Victoria, Queen's and Gloucester; and lead ore, from nine different localities.There are specimens of Gold, too, but of course no discoveries have yet been made in sufficient quantities to be of any service ...

To attempt a mere enumeration of the different mineral specimens would be a hopeless task, and indeed it is a matter of surprise to persons less enthusiastic than the Professor, that during his comparatively short residence in the Province has made so perfect a collection of its native minerals. Professor Bailey has taken the first prize for useful minerals of New Brunswick. The second premium for New Brunswick Minerals has been awarded to Mr. G.P. Matthew, whose collection is highly creditable. Mr. Matthews has taken a prize also for Combustible Minerals of N.B., the only collection exhibited."

St. Croix Courier - Dec. 29, 1955 Bathurst Ore Grade 'Slightly Higher' Than B.C. Consolidated. - N.B. Mining Industry Worth Ten Million A Year. - Fredericton. - Sparked by M.J. Boylen's multi- million ton base metal strike near Bathurst three years ago, prospecting, aerial surveys, diamond drilling, geophysical operations and mine plant construction carried on throughout the province by individuals, resident and non-resident mining companies and groups has kept at a pace that is adding an estimated more than $10 million to New Brunswick's economy this year. Major developments during the current year include initial shipments of concentrates by the fledgling industry's two producers, Burnt Hill Tungsten Mines wolframite tungsten mine and Anacon Lead Mines' Keymet base metal operation, plus discovering a Middle River Mining Company zinc-lead-silver deposit in the Rocky Brook-Millstream district. Little Information. - Since its official announcement a year ago of a rich lead-zinc-copper-silver strike at Little River, 32 miles from Newcastle, American Metals Corporation and its subsidiary Heath Steele Mines, Ltd., have disclosed little information relative to their mining activities or any new base metal discoveries. However, Heath Steele has forged ahead and its no. 1 shaft is now down 450 feet, and it is crosscutting to one ore zone approximately 200 feet distant. A second shaft is being collared about two miles from no. 1, a third deposit is being readied for stripping and a site is already cleared for a proposed mill. Drilling has indicated substantial tonnages of sulphide deposits containing lead, zinc, and copper, and plans are being actively developed which can result in the property being placed in production within the next year or two. Across the province between Woodstock and the Maine border, Strat Mat, a Strategic Materials subsidiary, has discovered 200 million tons of manganesein six ore deposits. Large Supply. - J.C. Udd, president, Strategic Materials, says much of this ore can be brought out by low cost quarry methods as the deposits are sufficiently wide and covered by little overburden. Based on present United States consumption of ferromanganese, it could supply total US requirements for 25 years. He says the deposits are favored with an exceptionally good location, being practically on a railroad to Saint John, which is an all year deep water shipping port less than 200 miles from the orebodies. Important also, he adds, is the fact that within a distance of seven miles from the manganese ore bodies Strategic controls a high grade lime deposit, and that limestone, or the resultant lime, is essential in the electric furnace production ferromanganese. He claims the Woodstock ore is amenable to sulphuric treatment and a newly discovered method makes it possible to extract a high grade manganese economically, provided sufficient power is available at wholesale rates. Pilot Plant. - Following completion of its construction within eight months, Mr. Udd says Strategic's new pilot mill near Niagara Falls, ont., will treat its N.B. manganese ore for about three months to lead to studies and design of a large production plant in this province. The company, he explains, is now assured that electric power will be available in New Brunswick in time for the projected large plant at a satisfactory price, and 'we definitely intend to build a production unit in Woodstock as soon as we can obtain 20,000 kwh of power.' He adds the company would require 20,000 kwh within two years and 100,000 kwh within five years. Provided the latter amount of power is available, the proposed plant would employ around 500 men. Mr. Udd is convinced that N.B. is going to have a complete, integrated metallurgical and chemical industry as the ore is there to warrant it. On the site that put New Brunswick on the Canadian mining map, 20 miles southwest of Bathurst, Brunswick Mining and Smelting Co., a St. Joseph Lead operation, is steadily going ahead on separate stripping and shaft projects. At its Brunswick site, where 23 million tons of ore have been proved the company will finish stripping overburden before the end of the year and has an access road to a depth of well over 32 feet to provide ore for its pilot mill more than fifty per cent completed. Before sinking a shaft the company plans to strip a 1,700 by 300 foot section to a 250 foot depth. Earlier this year, it erected a $350,000 pilot mill at Brunswick to test ore from its Brunswick-Anacon properties and has since been testing ore from its Anacon shaft operations, some five miles away. At Anacon, where 30 million tons of ore have been proved, construction of a permanent collar for the sinking of a second shaft to a depth of 2,000 feet is rapidly nearing completion. Ore reserves at

Brunswick are grading two per cent lead, five per cent zinc, 0.40 per cent copper, 1.58 ounce silver, and at Anacon 2.5 per cent lead, 6.6 per cent zinc, 0.52 per cent copper and 2.17 ounce silver. Pending the erection of a 4,000 ton concentrator - already in the planning stage - at a location not too far from the Brunswick-Anacon operations, concentrates from the pilot mill will be stockpiled in five storage pits, or shipped to a smelter for refining. To date BM and S has spent $3 1/2 million on its doubleheader operations and at present is employing 117 with a monthly payroll of around $36,000. A few miles farther to the southwest, New Larder U, another Anacon Lead Mines operation, expects to have its shaft finished by the first of the new year. It is already down 800 feet with another 600 to go before starting lateral levels. Anacon Lead will be spending more than $2 1/4 million before completing its program at the site. Already in the planning stage is the construction of a mill of a minimum 1,000 tons and it is possible an even larger one will be required. The mine is reported capable of going to 2000 feet, and the plant being geared for an extensive underground program. The break is said to be continuous for 4,600 feet and ore found to date is medium grade with massive sulphides containing lead, zinc, silver and copper. Survey Work. - Besides the work being carried on at their mining properties, both Anacon Lead Mines and St. Joseph Lead Co., are doing geophysical surveys on 600 claims in the Bathurst area. They report some 'intriguing' anomalies turned up that warrant further investigation. Key figure in both companies, M.J. Boylen claims the Bathurst ores are grading slightly higher than Consolidated Mining and Smelting in B.C., and that the district is assured a $125-million milling plant, including a lead smelter, within a few years."

URN: 0275 / 0126 / 0368 / 0045 / IDX_Names: Woodstock Fe; Nigadoo; Keymet; Burnthill Tugsten;
St. Croix Courier - Dec. 29, 1955 Bathurst Ore Grade 'Slightly Higher' Than B.C. Consolidated. - N.B. Mining Industry Worth Ten Million A Year. - Fredericton. - Sparked by M.J. Boylen's multi- million ton base metal strike near Bathurst three years ago, prospecting, aerial surveys, diamond drilling, geophysical operations and mine plant construction carried on throughout the province by individuals, resident and non-resident mining companies and groups has kept at a pace that is adding an estimated more than $10 million to New Brunswick's economy this year. Major developments during the current year include initial shipments of concentrates by the fledgling industry's two producers, Burnt Hill Tungsten Mines wolframite tungsten mine and Anacon Lead Mines' Keymet base metal operation, plus discovering a Middle River Mining Company zinc-lead-silver deposit in the Rocky Brook-Millstream district. Little Information. - Since its official announcement a year ago of a rich lead-zinc-copper-silver strike at Little River, 32 miles from Newcastle, American Metals Corporation and its subsidiary Heath Steele Mines, Ltd., have disclosed little information relative to their mining activities or any new base metal discoveries. However, Heath Steele has forged ahead and its no. 1 shaft is now down 450 feet, and it is crosscutting to one ore zone approximately 200 feet distant. A second shaft is being collared about two miles from no. 1, a third deposit is being readied for stripping and a site is already cleared for a proposed mill. Drilling has indicated substantial tonnages of sulphide deposits containing lead, zinc, and copper, and plans are being actively developed which can result in the property being placed in production within the next year or two. Across the province between Woodstock and the Maine border, Strat Mat, a Strategic Materials subsidiary, has discovered 200 million tons of manganesein six ore deposits. Large Supply. - J.C. Udd, president, Strategic Materials, says much of this ore can be brought out by low cost quarry methods as the deposits are sufficiently wide and covered by little overburden. Based on present United States consumption of ferromanganese, it could supply total US requirements for 25 years. He says the deposits are favored with an exceptionally good location, being practically on a railroad to Saint John, which is an all year deep water shipping port less than 200 miles from the orebodies. Important also, he adds, is the fact that within a distance of seven miles from the manganese ore bodies Strategic controls a high grade lime deposit, and that limestone, or the resultant lime, is essential in the electric furnace production ferromanganese. He claims the Woodstock ore is amenable to sulphuric treatment and a newly discovered method makes it possible to extract a high grade manganese economically, provided sufficient power is available at wholesale rates. Pilot Plant. - Following completion of its construction within eight months, Mr. Udd says Strategic's new pilot mill near Niagara Falls, ont., will treat its N.B. manganese ore for about three months to lead to studies and design of a large production plant in this province. The company, he explains, is now assured that electric power will be available in New Brunswick in time for the projected large plant at a satisfactory price, and 'we definitely intend to build a production unit in Woodstock as soon as we can obtain 20,000 kwh of power.' He adds the company would require 20,000 kwh within two years and 100,000 kwh within five years. Provided the latter amount of power is available, the proposed plant would employ around 500 men. Mr. Udd is convinced that N.B. is going to have a complete, integrated metallurgical and chemical industry as the ore is there to warrant it. On the site that put New Brunswick on the Canadian mining map, 20 miles southwest of Bathurst, Brunswick Mining and Smelting Co., a St. Joseph Lead operation, is steadily going ahead on separate stripping and shaft projects. At its Brunswick site, where 23 million tons of ore have been proved the company will finish stripping overburden before the end of the year and has an access road to a depth of well over 32 feet to provide ore for its pilot mill more than fifty per cent completed. Before sinking a shaft the company plans to strip a 1,700 by 300 foot section to a 250 foot depth. Earlier this year, it erected a $350,000 pilot mill at Brunswick to test ore from its Brunswick-Anacon properties and has since been testing ore from its Anacon shaft operations, some five miles away. At Anacon, where 30 million tons of ore have been proved, construction of a permanent collar for the sinking of a second shaft to a depth of 2,000 feet is rapidly nearing completion. Ore reserves at Brunswick are grading two per cent lead, five per cent zinc, 0.40 per cent copper, 1.58 ounce silver, and at Anacon 2.5 per cent lead, 6.6 per cent zinc, 0.52 per cent copper and 2.17 ounce silver. Pending the erection of a 4,000 ton concentrator - already in the planning stage - at a location not too far from the Brunswick-Anacon operations, concentrates from the pilot mill will be stockpiled in five storage pits, or shipped to a smelter for refining. To date BM and S has spent $3 1/2 million on its doubleheader operations and at present is employing 117 with a monthly payroll of around $36,000. A few miles farther to the southwest, New Larder U, another Anacon Lead Mines operation, expects to have its shaft finished by the first of the new year. It is already down 800 feet with another 600 to go before starting lateral levels. Anacon Lead will be spending more than $2 1/4 million before completing its program at the site. Already in the planning stage is the construction of a mill of a

minimum 1,000 tons and it is possible an even larger one will be required. The mine is reported capable of going to 2000 feet, and the plant being geared for an extensive underground program. The break is said to be continuous for 4,600 feet and ore found to date is medium grade with massive sulphides containing lead, zinc, silver and copper. Survey Work. - Besides the work being carried on at their mining properties, both Anacon Lead Mines and St. Joseph Lead Co., are doing geophysical surveys on 600 claims in the Bathurst area. They report some 'intriguing' anomalies turned up that warrant further investigation. Key figure in both companies, M.J. Boylen claims the Bathurst ores are grading slightly higher than Consolidated Mining and Smelting in B.C., and that the district is assured a $125-million milling plant, including a lead smelter, within a few years."

URN: 0275 / 0276 / GEOL / IDX_Names: Woodstock Fe; West Beach; Geology - General;
Daily Morning Telegraph - Jun. 22, 1865 Prof. Bailey's Report. -To the incipient Geologist nothing can well appear more hopeless than the endeavour to reduce the chaos of rocks that are upheaved and tossed about in this part of our Province, to anything like an intelligible order. The alteration which they have suffered from heat renders it very difficult even for the skilful Geologist to arrive at a knowledge of their succession, which can only be attained by means of the fossils which remain unaltered. Till within the last few years little progress was made in mastering these difficulties. Some eminent Geologists had led the way to the interpretation of the stony record. Dr. Gesner had made a Geological Survey, in which some important facts were observed. Prof. Johnston had constructed a Geological Map. Dr. Robb's observations were also of a very important character. To Dr. Dawson of Montreal and Dr. Hitchcock of Massachusetts, we are indebted for solving some of the great difficulties. Science was also laid under obligations to Messrs. Hartt and Matthews - with some other young Geologists, prior to Professor Bailey's surveys, which, we feel happy in testifying are of the highest value. We have sincerely to thank the Professor for his arduous labours, and for the admirable orderly report in which the Geology of Southern New Brunswick is now brought before us. If any of our readers who take an interest in our Provincial Geology, will, in the first place, visit Portland, and examine the rocks from Fort Howe onward to the Kennebecasis, he will see what is held to be the most ancient sedimentary deposits in our Province. This group - on which, if all were now in the order of deposition, all the other rocks would repose as their base - consists of different kinds of rock, of which limestone is a prominent member. The rocks of this series are found stretching from the Narrows, on the St. John, to Hammond River, with various outcroppings on the road to St. Andrews. Upon these lowest strata there lies another group, which stretches from the Falls along the rear of the City - from which it is separated by the valley of the Marsh - to beyond the Coldbrook nail-factory. The next group is that which is seen all through our streets, set on edge with their ripple marks, worm tracks and shrinkage cracks, and running in a similar direction with the Portland and Coldbrook rocks. In these St. John rocks there has been found quite a number of fossils, especially trilobites. Another group occurs in the neighborhood of Kingston and other places, which from want of fossil remains seems difficult of relegation to its exact place in the series. Then there is another set, which from its character has been called the ""Mica Schist Formation"", and which may be seen in the district of Prince William, and occupies a very large space in the Province. All these series to which we have alluded belong to Silurian or first ages of the Earth. Then come the Bloomsbury and Little River groups, belonging to the Devonian Age; after these the sub-carboniferous and carboniferous - occupying very large portion of the centre of the Province, - and full of interest to us, as containing the most important deposit that has yet been found in the earth - the rand motor, the black geni which can invoke from the waters the giant who turns the mills of manufacturing kingdoms - steam. There are many other strata of more recent formation, to which we need not now particularly refer. We are sorry to find our Geologists generally agreeing in the opinion that, while what was popularly called the Carboniferous formation is to be found widely extended over our Province, yet the greater part of the area will be found unproductive; in fact that only a small portion of the Province contains the middle or true Carboniferous, the upper and the lower seldom presenting seams of Coal sufficiently thick to be workable. This portion is in the Grand Lake region. The sub-carboniferous, however, is wealthy too, inasmuch as it immediately overlies the Devonian, in which are the wonderful oil springs. Large portions of King's, Queen's, Albert, Westmorland, and other Counties are of this formation, and from the presence of albertite, bituminous shales and oil springs, it is predicted that at no distant day many may find themselves suddenly made rich, as they have been in similar formations in Pennsylvania and elsewhere. We may hear any day of an oil spring being struck in the neighborhood of Hillsborough or Dorchester, as companies are now at work boring for the precious fluid. Another product of great commercial value belongs to this series, namely, the Gypsum, which forms an article of large export to the United States. The limestones of the Province are of great value, those of the Portland series as well as others of more recent date. Next in commercial importance, if not superior to all - is the Iron - the finest deposits of which are tobe seen at Woodstock, and which may yet be found in manyother parts of the Mica Schist Formation; and that has also been found at West Beach and Black River, and other portions of the Cordaite Shales. Then come the Vernon, Alma, Gordon, and Williams Copper Mines, in the last mentioned Group. The antimony of Prince William, the manganese of many districts, and the silver, lead and gold which may yet be found in other localities. The great value of these Geological observations lies in directing the attention of the miner to those districts where he may expect to find the ores of which he is in quest. One might well suppose that the mere division of the rocks of our Province into Groups, known as the Portland, or Coldbrook, or St. John, would be of little service to that end; but when these different series are connected with similar formations, possessing the same fossil fauna and flora in other countries in which the peculiar riches of the formations are well known, it will be seen at once how valuable are the observations that have accomplished this object. Thus, when it is known that the fossils peculiar to the English, Pennsylvania and Nova Scotia coal measures, are similar to those of the Grand Lake Mines, we have confidence that that district may yet be found rich in Coal. Also when we find the various characteristics of the sub-carboniferous the same in all oil region, we have great confidence that in the districts where are Gypsum, Salt springs, Albertite, and bituminous shale, will also be found the precious petroleum, while we are prevented from expending time and money in looking for any valuable seams of Coal over a large region where yet small quantities of the precious deposit may be found. Professor

Bailey's report not only connects the various rocks in our Province at distant points, possessing common character and of the same age, but also in most cases and as far as has been possible, he has also connected them with the formations in other lands - thus enabling us to study all the better our own Province by giving us fixed and well known points with which to coordinate others where the same groups appear, while the characteristics are presented by which we can attach the special knowledge to that which we may possess of the general principles as laid down by Lyell, Murchison, Miller, Dawson, &c. In some instances this has not yet become possible, as in the case of what has been called the ""Mica Schist"" Formation, the exact age of which has not been determined but may soon be discovered. We have with this report, at least in connection with some of the copies, a Geological map of the Southern portion of the Province, in which an attempt has been made to give an idea of the districts in which the various groups of rocks are to be found, and which is very useful as a guide, although no doubt a fuller knowledge of the Geology of this part of the Province will make many changes in the shadings. It is quite possible that in various places there may be ""outliers"" of the Carboniferous or other formations, that the Portland, or St. John, or other groups, may be found intruding into districts now supposed to be occupied by other strata. This no one knows better than Mr. Bailey, but the map is nevertheless a most important guide, as we can learn so much more by the eye than by the ear. We trust that Mr. Bailey will continue his observations, and give us from time to time the results at which he may arrive. With other surveys and explorations, (such as the valuable one of Prof. Hind) we trust the time is not far distant when we shall have a tolerably full and accurate knowledge of the archaic history of our Province. No doubt the vast forests which cover the land impede the progress of the explorer, but as the farmer and the woodsman advance so will the man of science follow, reaping wisdom from the rocks, to fill yet fuller the great granary of Geologic truth. Connected with Mr. Bailey's report are several most important Geological papers, especially by Messrs Hartt and Matthews to which we

URN: 0275 / 0757 / IDX_Names: Woodstock Fe; Bull Creek;

Morning News - May 12, 1856 The St. John River - Carleton Copper Mines - Woodstock - Steamers, &c. It may not be generally known that there exists in the vicinity of Woodstock a copper mine of vast extent, the operations connected with which have not as yet been conducted on a very large scale. From the investigations of a scientific gentleman we learn that the quality of the ore is equal if not superior to that of the copper mines hitherto discovered in any part of England. A company of wealthy gentlemen belonging to the latter country have already invested considerable capital, with a view of having the resources of the mine near Woodstock developed and made available. The Company, it is said, are prepared to go to any extent, and in a short time several hundred men are expected out from England to proceed with the work. In addition to this Mr. Stevens informs us that a mill is about to be erected in order that the ore may be pulverized prior to being sent to England to be made into copper. The value of other mineral resources in the vicinity of Woodstock is every day becoming more apparent. At a place called Hardscrabble several tons of iron are daily smelted, and a large number of men

URN: 0275 / 2044 / IDX_Names: Woodstock Fe; Maugerville Bog Iron;

Fredericton Capital - Dec. 2, 1880 and S.J. Daily Sun - Dec. 4, 1880 The Company owning the Woodstock Iron Works have purchased from Messrs. Glasier and Banks the bog iron mines on their property on the eastern side of the river, about four miles below this city. The ore will be roasted and then taken to Woodstock, to be used to mix with that from the mines there; the former producing a soft and the latter a hard metal."

Fredericton Capital - Dec. 9, 1880 The Woodstock Charcoal Iron Company have purchased from Mr. Banks the right of mining iron ore on his farm below the city, and have contracted with Mr. John Cassidy to get out three hundred tons immediately. A furnace will be erected at once."

Fredericton Capital - Dec. 18, 1880 The Woodstock Iron Company began operations last week, on the property lately leased by them in Sunbury County. They have been very well rewarded so far, having already struck on a vein of the ore two feet thick only a yard below surface. They roast the ore on the grounds."

S.J. Daily Sun - Jul. 26, 1881 The Iron Works. - The Woodstock Iron Works, which were reopened April 10th, are now in full blast. They consume thirty cords of wood per day, besides that which is burned into charcoal for them elsewhere. The manager, Thos. Watson, calculates the number of men working in and for the establishment at 360. Of these 45 are at the works, 80 are at Muniac, 80 at Newburgh and another squad at Bumfraw. The works are making pig iron from a mixture of Jacksontown and Maugerville ore. The latter is bog ore, and is used to soften the product of the Jacksontown. The mixture has been, heretofore, in the proportion of six and a half of the former to two and a half of the latter, but just now, in the execution of an order from the Londonderry Iron Works for car wheel iron, the ores are mixed in the proportion of five to four. The bulk of the pigs made here are to be shipped to Sheffield, England, for the use of cutlery manufacturers. Very little has been sent away from the works so far. The fires are kept burning perpetually, night and day, Sunday and Monday, and the iron is drawn off every six hours, five tons at a time. A charge consists of 900 lbs. or ore and 70 lbs. of broken limestone, and 50 per day are used, 18 bushels of charcoal being employed with each. The waste coal is used in the smelting furnaces, and the escaping heat and gases drive the blast engine. These works are a big thing for Carleton County. Shipment of the iron will begin on the laying of the broad gauge to the N.B. and C. depot, when no transfer of the iron will be required."

Daily News - Mar. 17, 1881 Jacksonville. - The Iron Mines. - The Mining Company seems to have about given up working the mines here, and to have transferred their energies to the mines at Maugerville. It is said that Messrs. Admiral and Saul Nelson are about to form a Syndicate to start an opposition concern."

S.J. Daily Sun - Mar. 21, 1881 Says the Carleton Sentinel, of Woodstock, N.B.:-Coal making is the order of business at the

[Iron] Foundry. They have on hand about 50,000 bushels ofcharcoal. The kilns are in constant operation. The bog- iron taken during the winter from Maugerville, Sunbury County, for the Woodstock Iron Works, still lies at Gibson awaiting transportation to Woodstock. The delay is said to be due to some trouble between the two companies with respect to the ownership of the little branch track laid down by the Iron Company at Woodstock. Some 400 tons of bog iron have been taken out and prospecting will be continued this spring."

Carleton Sentinel - May 7, 1881 Upper Woodstock. - The Foundry is now waiting for the word go. Bog-ore from below Fredericton is now being placed in the yard. The Company has been hampered in the prosecution of the branch of the business by the difficulty in procuring cars to deliver the ore. Matters are now improving in this respect, and we hope ere long to chronicle the actual commencement of work."

URN: 0275 / 2044 / IDX_Names: Woodstock Fe; Maugerville Bog Iron;

S.J. Daily Sun - Nov. 4, 1890 Board of Trade. - St. John as the Possible Centre of Great Iron Works. - Discussed by Edward Jack, C.E., Alfred Markham, G.F. Matthew and Members of the Board.. - Charcoal Pig Iron Could be Made Here at $15.50 Per Ton. - ... As there were some gentlemen present who were interested in mining matters, however, the meeting might profitably discuss that question. Geo. Robertson said that Edward Jack had placed in his hands some time ago a most valuable paper dealing with the agricultural and mineral resources of the province and the suitability of St. John, owing to its limestone deposits and other advantages, as a place for the establishment of extensive iron smelting works. In view of that he had thought it would be a good move to invite the iron men here and place the advantages of the city before them. Mr. Robertson went on to argue that having the coal, and we believe the iron, having the limestone, and he was sure we have the men, there was no good reason to believe that this city would in time become the centre of a great iron shipbuilding industry. Edward Jack, C.E., delivered a very interesting and important address. He said that with a view to comparing the fertile belt of New Brunswick with England, he with F.H. Hale, M.P., and J.S. Leighton had accompanied W.H. Boyce, a Norfolk (England) farmer of high standing through a portion of Carleton county. They went up one side as far as Wicklow and came down through Centreville to Woodstock. It was a fine day and they had a splendid chance to examine the country. Mr. Boyce declared that the county of Carleton compared favorably with Norfolk, which is claimed to be the finest agricultural county in England. He further said, in looking at the sheep and lambs, that a better market could be found for them in England than in the United States if the proper pains were taken to fatten them. This could be done in the late autumn and early winter. Mr. Boyce further said that for men with families and having capital the fertile belt of New Brunswick was far better than the northwest. They would like it a great deal better. Passing then to the mineral resources of the provinces, Mr. Jack said that last spring the necessity being felt for a better knowledge of the iron ores and fluxes of the Bay of Fundy region, application was made to the dominion government for the engagement of Ernest Sjostedt to examine and report upon them. Mr. Sjostedt was a native of Stockholm, a graduate of Stockholm school of mines, a practical metallurgist, and who had been engaged in the manufacture of iron for ten years in America, part of the time as manager of the Katahdin works. He was therefore a most valuable man. But the minister of the interior had declined to recommend any appropriation for the purpose. Not to be deterred because of that, some gentlemen in St. John and elsewhere put their hands in their pockets and defrayed the expenses of two months exploration by Mr. Sjostedt on the Bay of Fundy coast. A very valuable report was the result. Mr. Jack said that the iron, coal and other mineral deposits of New Brunswick should be explored by practical men. The geological survey had done an admirable preliminary work that was the credit to the dominion, but it must be followed up by definite exploration by practical men who could tell the economic value of each deposit. The result should be embodied in a report accompanied by a map. There was now no small map of New Brunswick. There should be such a map, accurate and cheap, and having distinctly traced the mineral areas of the province. This exploration and the preparation of such a map would take two season's work. Speaking of a bog iron deposit below Fredericton, Mr. Jack said it would make good car wheel iron and could be delivered at St. John for about $2 to $2.50 per ton.It was better than that at Woodstock or Nictaux and probably as good as Katahdin. There was a deposit of magnetite on Bartholomew's River of probable great value, and a less valuable one in Gloucester county. But the most important statement Mr. Jack had to make was that using iron ores from the Bay of Fundy, fluxes from St. John, and charcoal pig iron could be manufactured here for $15.50 per ton. This allowed $1 for depreciation of plant and for repairs, and including the bounty of $2. And by mixing ores that are known to exist the product would equal the best Swedish. W.H. Thorne said that the consumption of high grade iron is limited in Canada, which would be a difficulty in the way of such an enterprise. Swedish iron, he said, cost about $4 a hundred. Wm. Grieg said that there would be money in it for ordinary iron at Mr. Jack's figures. Mr. Markham said that car wheel iron cost about $33. He was satisfied Mr. Jack's figures were correct. He had been with Mr. Jack one of those interested in Mr. Sjostedt's work, and had read most of the report, which was not yet in full in their hands. But it was most remarkable in the discoveries of iron ore made by Mr. Sjostedt, especially on the Nova Scotia side. Mr. Grieg remarked that ordinary pig iron cost $21 a ton. Charcoal iron was manufactured at Three Rivers. Their quotations were $25 per ton. Mr. Jack noted the fact that Mr. Sjostedt had in his own operations imported limestone from St. John and manganese from Sussex. Geo. Robertson was surprised to hear that the Fredericton deposit alluded to by Mr. Jack was superior to Woodstock ore. He had thought the Woodstock ore exceedingly valuable. He had also thought the Nictaux deposit very valuable. G.F. Matthew said the difficulty with the Woodstock and Nictaux ores was the presence of phosphorus. But some of the ores up river had a good deal of manganese in them and he had no doubt more valuable ores than that at Woodstock could be found. But the Bay of Fundy coast was as available for St. John as these. The deposits at Londonderry and in the Cobequid Hills are carbonates and probably free from phosphorus. Magnetic ores generally are. But magnetic ores are hard to smelt, and for that reason the mixture of bog ores is very desirable. Their are fair indications of an iron deposit at Quispamsis. There are some large boulders on the surface and exploration would probably reveal a bed of ore lower down. As to limestone, St. John had great deposits. There are also easy facilities for securing coal, and while perhaps not as favorably situated as Londonderry for the reduction of ores, the business could probably be carried on successfully. At all events St. John was a good place for the establishment of smelting furnaces for the second process in iron manufacture. Andre Cushing said that St. John had fine facilities for iron manufacture. Parts of Nova Scotia are more available to St. John than to Halifax or any other important centre. There was a very valuable deposit or iron at Whycocomagh, C.B., which, when the marine railway is completed, will be at our doors. It is remarkably free from phosphorus and easily workable, having been fully tested. He regarded St. John as an excellent central point for the obtaining of ores; and for facilities in manufacturing iron it was as good as any place in Canada at least. As a seaport there were fine facilities for procuring scrap iron, now so largely used in manufacture. He did not think that the idea of establishing important iron works here in the future as at all chimerical but a practical and economic possibility. A. Markham said that at Sparrow's Point, near Baltimore, great blasting furnaces had been erected. There was neither coal nor ore there, but this point had been selected because of its facilities for procuring these by vessel. The work of the chemist is now the most important one in connection with blast furnaces. No iron or steel is now made from any one deposit. The different ores are mixed in the desired quantities to produce any particular grade, and the work of the chemist is therefore the most important. There is now talk of establishing big furnaces on the Jersey flats, near New York. The United States imports immense quantities of ores from Spain and from Cuba. If, therefore, ores can be found, as is believed, in large quantities along the Bay of Fundy, St. John is a most desirable place for the establishment of blast and smelting furnaces. Mr. Matthew pointed to the presence of manganese in the province in large quantities as another important consideration. Mr. Grieg said that a large English company talked of establishing extensive works at New Glasgow ... ? There was some informal discussion,

St. Croix Courier - Mar. 26, 1959 Buchanan's Speech. - ... Base Metal development. - The presence of base metal ores has been known for many years. It was not until recently that the other larger reserves which areknown now to exist were discovered and proven by surveys and drilling operations. These ore bodies indicate a great potential industry when the demand for such products provides reasonable profit incentive for production. During the years immediately following World War II there was a boom in the demand and price of base metals. The price of lead rose from 6« cents to 21« cents per pound and the price of zinc from 8¬ to 17 cents. Prices fell to about 9« cents per pound in 1949. During the crisis brought on by the Korean situation, base metal products were stock-piled by the United States at high average prices. Since that time prices have gradually declined to 11« cents for lead and 10.3 cents for zinc in 1958. Additional depression factor has been the imposing of quotas by the United States in October, 1958, which limited exports to 80 per cent of the average for the previous four years. Production of lead in the United States in 1958 was 21 per cent less than for 1957 and the lowest since 1890. Production of zinc last year was 24 per cent less than in 1957 and lower than for any year since 1933. The matter of base metal supplies and markets has been the subject for discussions by the representatives of 32 nations at a conference under the auspices of the United Nations held in London in September, 1958. This was followed by a similar meeting in Geneva in November, 1958 and plans are being made for a third meeting. It is in this atmosphere and depressed market prices that private enterprise is facing problems of investment in developing of known base metal ore bodies for potential production. May I also say, Sir, that it is at this particular time as well that risk capital is being employed which is giving returns which cannot be equalled. Many millions of dollars have been invested since1953 in survey, exploration and development work. Investments by Brunswick Mining and Smelting Co. Ltd., are estimated at 25 million dollars - may I repeat this - 25 million. Some disparaging remarks have been made but I do not believe they understood. May I also say I received a letter in connection with the manganese at Woodstock - and an additional 25 to 30 million dollars will berequired in preparation for the full scale production. Heath Steele Mines has made a capital investment of over 15 million dollars and there is prospects of further investment of a similar amount when production and concentration resumes. Many other interested companies have invested smaller amounts bringing the total to more than 50 million dollars. These facts are set out in greater detail in the Interim Report of the Commissioner on Mines tabled in the house recently. May I comment in that regard. This was certainly a most excellent report and I trust it will be read by the members of this assembly. Production. - Long term estimates and future demands indicate an increase in the world demand for lead in the next 25 years of approximately 50 per cent and an estimated increase of 62 per cent in the demand for zinc is indicated for the same period. It seems hopeful therefore that in the not too distant future prices will increase to a point where production from the base metal ore bodies in New Brunswick could be carried on at a profit."

Morning Journal - Feb. 16, 1866 Rock Records of New Brunswick - A Lecture, by Professor L.W. Bailey, A.M. (continued) : But through all this time there is nothing to tell us of our own Province, and when we do again find itparticipating in these events, what a change appears, what a scene of desolation meets our gaze! In place of the fertile valleys and wooded slopes, which in the ages last enumerated must have given shelter to such vast herds of animals, roaming even to high northern latitudes, and enjoying a warmth almost tropical, we now behold only vast fields of ice, covering the land and descending as glaciers from the higher mountain-summits, or swept along as floes and icebergs by the cold polar currents. Not a living thing remains; all is devastation and ruin. This was the great Glacial or Drift period in our history, and the evidences of its action may be seen in all portions of the Province. Wherever the rocky beds are laid bare, their surface may be seen to be worn and polished, or else to be deeply scratched and grooved as if by a cutting instrument of great power. All prominent ledges have been broken down, and the fragments detached from them may often be found at great distances from their original beds. Masses of rock occur about your city, which must have come from the cliffs of Kingston, crossing the Kennebecasis in their course. Pieces of the Woodstock iron ore are found on the slopes of the hills at Fredericton, while smaller pebbles are sometimes seenwhich would even seem to have travelled from distantCanada. Even masses of enormous size were sometimes moved, and left at great elevations on our mountain chains. Near the granite quarries in Queen's county I have seen detached and rounded masses of rock fully 30 feet in diameter, and which could not have weighed less than 4,000,000 pounds; while even on the summit of Mount Katahdin, in Maine enormous diluvial boulders are found at the height of 4,500 feet above the sea! They have invariably been transported in a southerly direction, showing that the moving force, whatever its nature, was one proceeding from the north! Geologists are divided in opinion as to the condition of America during this glacial period. All, of course, look to ice as the principal agent in producing these effects, (for water alone would be powerless to move such heavy masses,) but one party would assign the process to the action of glaciers; and the other to that of icebergs. The former supposes an elevation of the land sufficiently great to have caused the formation of one universal glacier, similar to that which now covers much of Greenland, and which, moving southward by the slope of the continent, ground away the summits of protruding ridges, furrowing and polishing the rocks like a gigantic rasp, and carrying along the worn materials frozen to its mass, we scatter them again when melted by a summer sun; the other, on the contrary, supposes a depression instead of an elevation of the land, this depression allowing the cold polar currents, which even now bring such quantities of bergs and floating ice along our North Atlantic coast, to carry the same farther west, and melting by contact with the Gulf stream or other equatorial currents, to deposit their burden, as is being done by the icebergs of the present day off the banks of Newfoundland. Which of these two theories is correct we cannot now stop to inquire. Both are ably maintained, and both would seem to account satisfactorily for the effects observed; - and it is with these that we have principally to do. What object may we ask was to be gained by thus replacing a warm and genial climate, a landscape teeming with luxuriant vegetation, and an animal life even richer than than that of the tropics, by a season of wintry cold, shrouding much of the earth in a dreary mantle of ice and snow? We have our answer in the words of Agassiz: ""The glacier was God's great plough, and when the ice vanished from the face of the land, it left it prepared for the hand of the husbandman. The hard surface of the rocks was ground to powder, the elements of the soil were mingled in fair proportions, granite was carried into the lime regions, lime was mingled with the more arid and unproductive granite districts, and a soil was prepared fit for the agricultural uses of man,"" - a soil not only capable of sustaining a vigorous vegetation, for this existed even before the glacial period, but a soil fitted for the growth of cereal crops, a grain growing soil, ""one especially adapted to those plants most necessary to the higher domestic and social organizations of the human race."" But the glacier was not the only agency involved in producing this result. Whether we accept or not the theory of great elevation during the Ice period, it is certain that towards the close of that period the land was depressed from two to five hundred feet below its present level, and that in our own Province all that portion now possessing a less elevation was then below the water. The river St. Lawrence was then a wide arm of the sea, and Lake Champlain was a deep bay, tenanted by whales and seals. The river St. John was a long estuary, extending certainly as high as Fredericton, while the Grand Lake and other smaller sheets of water were connected into one extensive tract, covering the great central basin of the Province. By these waters, whether lacustrine or marine, the materials already roughly distributed by the agency of ice were rearranged, flooded 18 streams filled the great valleys deep with fertile soil, and spread over the bare rocks a rich covering of earth. And when the land rose again, as it did before the introduction of Man, the draining which ensued still further carried on the fertilizing process, carving out the present channels of our river valleys, leaving here and there broad belts of rich alluvium and scattered sheets of water, either lakes or ponds, the great reservoirs to supply the land with constant moisture. All portions of the Province abound with evidences of both the depression and elevation of this period. Beneath some parts of your own city are beds of clay, filled with marine relics, (star fishes, shells, &c.), which were deposited when the waters covered the place where they are now found. All along the coast of the Bay of Fundy similar deposits may be seen, as well as along the St. John river, where also the the beautiful terraces which enrich its banks, as at Fredericton and Woodstock, mark the successive and interrupted epochs in the period of emergence. From the events of this period we may attempt to draw some conclusions as to the length of time involved in our great geological record. The beds of sand and gravel, washed down by torrents from the rising land, often obstructed the former beds of streams and rivers, and turning these latter from their course, compelled them to seek new channels, often by carving them through solid rock. The Niagara River, thus diverted from its proper bed, was made to excavate the wild and deep gorge, seven miles long, which now connects the Falls with Lake Ontario. The same may in part be true of the St. John and of most of the rivers in your Province. The St. John formerly poured its waters into the Bay of Fundy probably by two channels, one crossing from the Kennebecasis to Courtenay Bay, the other, more directly, from the South Bay to Manawagonish. Both of these, during the Glacial period, became filled with the thick beds of sand and gravel which still occupy them, thus compelling the river to seek a new exit by carving out the wild and picturesque channel through which it

URN: 0275 / G3 / LIME / GEOL / IDX_Names: Woodstock Fe; Granite; Lime - General; Geology - General;
N.B. Courier - Feb. 19, 1842 Geology Of New Brunswick. - A report of the labours of Dr. Gesner, in exploring the mineral resources of the Province, during the past year having been made public, we have much satisfaction in referring to the work as affording further satisfactory evidence in confirmation of the generally received opinion that New Brunswick is rich in mineral resources. In his late researches, we are glad to find that in order to meet the views of His Excellency the Lieutenant-Governor, Dr. Gesner has directed his attention to the agricultural character of the districts explored; and the features of the uncleared lands have accordingly been examined, with a view of making them at once available for settlement; and so favorable have been the results of these enquiries, that several new settlements have already been projected in districts selected for this purpose. Dr. Gesner returned to the City last week after locating a party of settlers at Eel River, and another party are now preparing for departure to the same vicinity. A present benefit will thus be reaped from the labours of our Provincial Geologist by many deserving families, who might otherwise have proceeded to the United States, or remained as drones about the City, and at times a positive burthen upon the community. Having copied from the Royal Gazette the short reports made to His Excellency from time to time, during the progress of last year's exploration, it is not perhaps necessary for us to make any lengthy extracts from the detailed Report, in which Dr. Gesner has ably and minutely set forth, all his discoveries as well of a topographical as of a geological nature. We cannot, however, omit noticing the valuableand extensive deposit of Iron Ore near Woodstock, in the county of Carleton, which, on several accounts, offers advantages for the manufacture of iron and steel scarcely to be found in any part of Europe, and which is capable of supplying the whole of North America for many centuries to come. - With respect to the Great Coal Field of New Brunswick, we quote a paragraph from the Report 2 giving a description of that very extensive deposit, which will give some idea of the immense mine of wealth possessed by our Province:- [see Gesner's Report.....] It must be gratifying to Dr. Gesner to find thatthe Marl and Lime discovered by him in the counties of Charlotte and Saint John, are coming into use, and that the former is found to be of great value in agriculture, as proved by a letter from Mr. Joseph Walton, an intelligent farmer at St. Andrews, in the Report beforeus. We have before noticed the immense advantage resulting to the Province from the Granite found on the Saint John. The demand for the article in this City, increased greatly during the past year, and in some cases could not be supplied. When the vast coal field above described, and the immense beds of Iron Ore and other valuable minerals known to exist in the Province, are brought into use and made to supply the existing demands, then will the benefits of the present geological exploration be fully developed. It is expected that the Survey will be brought to a close next season, when a Geological Map of the Province will be completed, and the characteristic features of the Province, in a geological point of view, will then be easily ascertained."

S.J. Daily Sun - Apr. 2, 1881 Mining in Maine … long … …Bartlett … The iron mine at Mount Katahdin in the north of the State must not be passed over. It has been in operation with varied success for a number of years, and now turns out 500 tons of pig iron per month. A market is here afforded for New Brunswick manganese, an ore not yet known to exist in Maine and which is indispensible in the purifying of iron. This mine belongs to the iron-bearing belt of rocks of which the Woodstock Iron Mine forms a part and which runs some distance into New Brunswick. There is every possibility that mineral may bediscovered in paying quantity in the western part of this Province, and particularly in Charlotte County, where several mines are in operation already, at Mascarene. The indications along the coast of the Bay of Fundy show mineral in several places, and it is hoped that this important industry of mining which is springing into operation all around us will soon be carried on in many places in our own Province."

URN: 0275 / G6 / IDX_Names: Woodstock Fe; Bricks - General;
S.J. Daily Telegraph - Oct. 30, 1847 ADVERTISEMENT: Tenders Will be received by the subscriber, until Wednesday the 10th day of November, for making 200,000 Brick at Lane's Creek, parish of Woodstock, for the Iron Works about to be erected at that place. Good clay and sand may be found on the spot, and every facility afforded for the making. - The Bricks to be 9 inches long, 4 1/2 inches wide, 2 1/4 inches thick, and to be in readiness for delivery on the 1st of June, 1848. -Also-2,000 cords of good hardwood, in lots of 50 or 100 cords each, to suit different persons, to be delivered on or before the 1st of May, 1848. 3,000 barrels of Charcoal, in lots from 10 to 100 barrels each, to be delivered on or before the 1st of September, 1848. Also - Refuse and Merchantable Lumber, of various kinds - Tenders to express the price per thousand feet. Scantling of various dimensions, as may be required - proposals to express the price per Thousand feet, to be delivered when required, after the 1st of March next. All the above articles to be delivered on the Company's premises in Woodstock, as specified above. Satisfactory security for the due performance of the above Contracts will be required. Further particulars made known on application to W. Stevens, Agent. WOODSTOCK, October 23, 1847."

St. Andrews Standard - Jun. 1, 1853 Woodstock. - We promised in our last to give a short notice of the improvements going on in this place… Across the bridge we see an extensive brick yard just put into operation by Mr. Elisha Baker. - The Messrs. Davis are nearly ready to start a new Iron Foundry; the machinery is all up and everything on the ground to commence operations. There is also a good prospect of another company being got up to smelt iron ore; if started, this, in addition to the old company, will make quite stirring times here. - [Carleton Sentenil"

Carleton Sentinel - May 28, 1864 and St. Andrews Standard - Jun. 12, 1864 and S.J. Daily Globe - May 30, 1864 The Charcoal Iron Co., will have shipped from the Works, Upper Woodstock, by the last of this month, within a space of 20 days, 1,000 tons of pigs, over 900 tons of it within a fortnight, on rafts. Owing to late advices from England, we understand Mr. Best will have to run the works to their utmost capacity, in order to supply the largely increasing demand for the Iron.

and will probably have to erect still another furnace before the end of the year. The Company are preparing to manufacture red brick on a very extensive scale this summer."

Carleton Sentinel Dec. 3, 1853 As we promised last week, and for the information of those of our readers who have not seen them we now proceed to give a short sketch of the Iron Works, &c., at the Upper Town and the operations there carried on. TheIron Ore is brought a distance of three miles from theirinexhaustible mines in Jacksontown, and laid on a layer of wood placed on skids to admit air underneath and piled alternately with layers of wood and charcoal to a height of 6 or 7 feet in long piles, about 20 feet wide, here it is roasted or calcined until it becomes easily broken into suitable sizes for the Blast Furnace. Charcoal is made in 6 large kilns, holding from 40 to 50 cords each, 3 taking about 8 to 10 days from the time of packing in the wood, to taking out the charcoal, which, when made, is taken to large Storehouses for use. On the yard we also saw some of the new Iron Ore, lately discovered in immense quantity about 300 yards from the Furnace - this ore a Clay Iron Stone, we were informed, when mixed in certain proportions with the other, produced an Iron superior to any ever manufactured here. There were piles of a new limestone from the Sheriff's Hill, only about 600 yards from the Furnace, lately found - the nearness of this last effecting a great saving of transport, the Company having formerly to go 10 miles for Limestone. We next visited the Tunnel-head, where the furnace is filled or charged with the Charcoal, Ores, and Limestone, the Furnace is 35 feet high and 10 feet wide at its greatest width. The Engine house contains 3 Steam Engines for the Blast Furnace, of which only one was working, being sufficient to drive two large Iron Blowing Cylinders, which acting like immense Bellows were continually forcing air into a large Receiver, from whence it is conducted through pipes to the bottom of the Furnace, and there blown in through 3 Tuyeres, set close to the fusing mass of materials and having water continually passing through them to prevent their melting. Steam is raised in the Engine-house by the Gas or waste heat from the Furnace, being conducted under and returned through the Boilers - the same heat taken from the Furnace in another direction, when requisite, heats the air passing through the heating ovens, thus giving Steam and Hot-blast without any extra expense, and effecting a very great saving of fuel. - There was a third Engine supplied with steam, from the same Boilers, and used to set in motion a Circular Saw, and a large hammer for Blooms from a Puddling Furnace adjoining. On our way to the Casting-house, we were shown a Lime-kiln, Mortar-mill, Blacksmith's shop and Brick-yard, all very convenient for the Company's operations, and on their own premises. In the Casting-house we observed a man moulding Pig patterns to run the liquid Iron into - another was wheeling out the Cinders as they cooled. Being near Casting time we walked about, saw large heaps of the Cinders or Slag extending in the River, on the bank of which, the Pig Iron is piled in 3 ton heaps ready for shipping - the landing is one of the best on the river and accessible at all times during the navigation season. Close by the Casting-house is the line laid down in the preliminary survey of the St. Andrews and Quebec Railway, which, when completed will put these works in communication with the seaboard during the shutting up of the river navigation. It is now time to cast, or draw off the Iron melted during the previous 12 hours, and on returning we found men busily engaged tapping the Furnace, below where the melting Cinder was lava-like flowing over. The liquid Iron flowed along a Gutter in the sand, and soon filled one of the Beds of moulds or Pigs we saw making, it was then directed into another, and continued running until a third was filled, being, as we were informed, over three tons - this is done twice in 24 hours. As the Iron was near done running a large flow of Cinder came rushing out and was led over one side of the Gutter where it soon formed a small pool of liquid fire. We now wended our way homeward and in passing, must not omit mentioning the Company's Store and Boarding house, between which the road already partly graded runs to the mines at Jacksontown, - here the Railway is to be placed for the transport of the Ores and Limestone which lie in one continuous route. As we stated in our last the result of the present experiments has proved highly satisfactory, Iron can be produced of excellent quality and abundant quantity, and the Company are so far encouraged as to meditate an enlargement of their Capital Stock which the Act of Incorporation empowers, with a view to operations on an extended scale and the manufacture of the Iron into Bars. We wish them that success which their enterprise well deserves, and with which we think the destinies of this flourishing County particularly interwoven. No need of going to California or Australia if the mineral wealth of our County be only properly developed. Carleton possesses a Steel-making Iron Ore in quantity sufficient to render Great Britain independent of Sweden or Russia for generations, and which only requires an outlay of some of the superabundant capital of Britain to make it as well known in London and Sheffield as the best works of those Countries. We repeat, our County is rich in Mineral wealth.We have seen a very rich specimen of lignite, the outcropping of Coal found not over 3 miles from where we write, which, ignited well and burnt away leaving but very little residue. We have also been shown Silver-leadfluxed and melted from Ore found in this our County. These sources of Mineral wealth and our high Agricultural Capabilities warrant the inference that Carleton is soon to be destined to take rank as one of the richest Counties in the Province of New Brunswick."

Royal Gazette - Apr. 1, 1857 Recently passed: An Act to revive, continue and amend an Act to incorporate the New Brunswick Mining Company."

Royal Gazette - Apr. 15, 1857 Cap. XXXIV. An Act to revive, continue and amend an Act to incorporate the New Brunswick Mining Company. Section. Section. 1. First meeting to be 4. Provincial Act continued held in London in force. 2. Capital, its amount 5. Verified names of officers and shares and the stock to be filed. 3. Assessment of shares 6. Act not to interfere with Act to be under Imperial 18, Vic. 1, n.8. Act. Passed 26th March 1857. Whereas the first meeting contemplated in the said Act was not held in conformity with the provision of the same; - Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That the first meeting of the said Corporation shall be held in London, under the provisions of the Imperial Act hereinafter referred to, within one year from the passing of this Act. 2. The capital stock of the said Corporation shall consist of sixteen thousand pounds sterling, and be divided into six hundred and forty shares of twenty five pounds each. 3. Whensoever it may be deemed necessary to levy and collect assessments on the shares held and owned in England, the amount so assessed shall be collected under and by virtue of the provisions of the Imperial Act, intituled An Act for the Incorporation and regulation of Joint Stock Companies and other Associations, 19th and 20th Victoria, Cap. 47. 4. The aforesaid Act to incorporate the New Brunswick Mining Company shall in all things be revived and continue in force except as far as the same may be inconsistent or at variance with the provisions of this Act. 5. That the names of the President and Directors and Stockholders of the said Corporation, and the amount of stock belonging to each, verified by the oath of the President of the said Company, shall be filed in the Office of the Provincial Secretary of this Province within one year from the passing of this Act, and so on annually during the existence of the said Corporation. 6. That nothing in this Act shall interfere in any way or repeal the provisions of the eighth Section of the said Act, intituled An Act to incorporate the New Brunswick Mining Company."

Carleton Sentinel - Mar. 14, 1857 March 11th - A Bill to revive and continue Act incorporating the New Brunswick Mining Company was reported as agreed to with certain amendments."

URN: 0275 / GEOL / IDX_Names: Woodstock Fe; Geology - General;

Carleton Sentinel - Aug 6, 1864 Prof. Hind's Geological Explorations.-Many of our readers are aware that Professor Hind has been specially instructed by the Government to examine, and report upon, a particular series of Rocks, which have been ascertained to exist in this Province, called the ""Quebec Group"". But few, we imagine, know the nature or importance of this formation, or in what particulars it is of interest to geologists or to the public at large. The ""Quebec Group"" is the name given by Sir W.E. Logan to a series of strata which are distinguished by the extent and value of the minerals they contain. It is the great metalliferous rock series of North America, and abounds in the ores of iron, copper, antimony, lead, nickel, cobalt, and even silver and gold. Most of the newly discovered mines in Canada belong to this group of rocks. In it are found the celebrated copper deposits of Lake Superior, and the less known copper mines of Canada East. The gold of the

Chaudiere Valley is derived from the ""Quebec Group"", and the greater number of the minerals sent by Canada to the International Exhibition, at London, which attracted so much notice, were the products of this great metalliferous belt. Its true character was first ascertained in the immediate neighborhood of Quebec, in 1860, and in honor of that ancient city, Sir William Logan gave it the name it at present bears. Its thickness in Canada is not less than 7,000 feet, and we understand from Prof. Hind that its thickness in New Brunswick will not fall short of, if it does not exceed, the development it has in Canada. The ""Quebec Group"" extends in a narrow band, or in bands of varying breadth, from Gaspe to near Montreal. It then passes in the form of a very narrow belt into Vermont, New York, Virginia and Georgia. The gold so long since obtained from auriferous drift of Georgia, and which now probably supplies the Confederates with no inconsiderable portion of their sinews of war, comes from rock belonging to the Quebec Group. Professor Hind has already ascertained that the breadth of this important formation is not less than 40 miles in the Counties of Restigouche and Gloucester, and about 47 miles on a line drawn from North West from Long's Creek to about 13 miles beyond Woodstock. On the South West Miramichi and Shiktehauk the breadth of the formation is about 10 miles. With the valuable ores of iron in our own neighborhood, we are all familiar, and the different branches of industry to which they have already contributed, and have in fact created. It is with much satisfaction that we are enabled to state upon the authority of Prof. Hind, that these ores not only exist over a tract of country, already known to be at least 30 miles in length, but they occur in two or more parallel lines, from 2 to 8 miles apart, and with the ores are associated bands of limestone. Drift clays and sand cover the outcrop of these deposits to a small depth in some parts of their course, but it is probable that over a considerable area of their known development they will be practically available. The country where they occur, particularly between the two Shiktehawks, is well wooded and in parts very fertile. It will not fail to strike the reader that we have thus, in our own immediateneighborhood, all the material requisites for great mining industries to spring up. Ore in abundance, limestone for smelting purposes, and timber for fuel, besides a fertile soil for farming pursuits. These are natural gifts which only require the hand of man to make them available and, commercially, most valuable. What we require is capital, and that will soon reach us when the resources of the country become known, and those resources described in a manner which shall inspire the confidence of scientific men in Europe, to whom capitalists are now in the habit of appealing for an opinion on subjects connected with mining enterprise, remote from their own observation. We understand that Prof. Hind is now about to ascend the Tobique and its south eastern tributaries to ascertain the outcrop, or north western limit, of the Quebec Group in that direction. We are aware that deposits, and very favorable indications of other metals, besides iron, are known to exist in our county within the limits stated above, and we confidently hope that ere long, these hidden treasures will be profitably brought to light. A great step has been gained in establishing the existence of so broad a belt of the metalliferous rocks of North America within the limits of the Province, and we trust that every facility will be afforded to Prof. Hind to investigate and describe the mineral wealth of the ""Quebec Group"", which he has already shown to occupy no inconsiderable portion of this and adjoining Counties."

URN: 0275 / GEOL / IDX_Names: Woodstock Fe; Geology - General;

Royal Gazette - Apr. 18, 1866 Cap. VIII. An Act to incorporate the Aberdeen Iron Company.Section. Section. 1. Company incorporated, 9. Suit against share-proviso. Holder, how brought. 2. Capital. 10. On trial, what proof 3. First meeting, when held. Is sufficient. 4. Votes, how apportioned. 11. Production of 5. Shareholders, for what Register prima facto liable. Evidence. 6. Assessments, how levied 12. Dividends, how and & collected, when paid. 7. Shareholder not to vote 13. Joint stock alone unless all calls are paid up. Liable. 8. Company not liable for any 14. Time and place of trust to which share may be holding meetings. Liable. 15. Amount to be subscribed within two years. Passed 16th April 1866. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That Charles Connell, Robert A. Hay, George H. Connell, Charles P. Connell, M.D., William M. Connell, their associates, successors and assigns, shall be and are hereby declared to be a body corporate and politic, by the name of ""The Aberdeen Iron Company,"" and by that name shall have full power and lawful authority to have, hold, own and enjoy in any way, real estate in this Province, in fee simple or otherwise, and may alienate, encumber, lease, sell or otherwise deal with the same in any way; and shall by that name have all the general rights, powers and privileges, and be subject to all the liabilities incident to Corporations by Act of Assembly in this Province, for the purpose of digging and mining ore and converting the same into iron, and vending the same, and such other business as may be incidental thereto, and for establishing and maintaining wharves, buildings, erections, furnaces, forges, engines, machinery, implements and things as may be necessary and convenient for carrying on said business and operations; provided nevertheless, that the aggregate value of real estate to be held by the said Corporation in this Province at any one time, shall in no case exceed the value of one hundred thousand dollars. 2. The capital stock of the said Corporation shall be twenty thousand dollars of current money of New Brunswick, divided into one thousand shares of twenty dollars each; provided however, that the said Corporation shall have power to increase the said capital stock to a sum not exceeding two hundred thousand dollars. 3. The first meeting of the said Corporation for the organization thereof, shall be called by the said George H. Connell, or in the case of his death, neglect, or refusal, by any one of the parties named in the first Section of this Act, at such time and place as he may appoint, by publishing notice of the same in two public Newspapers published in the county Carleton, for ten days previous to the day of such meeting, provided that such notice shall be published within three years after the passing of this Act. 4. Each and every person owning a share in the capital stock of the said Company shall be a member thereof, and shall be entitled to vote at all meetings of said Company ..?.. And members may give as many votes as they own shares, and may vote by proxy, such proxy being a stockholder and authorised in writing. 5. Each and every shareholder in the said Corporation shall be and be held liable to the said Company for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, or for the purposes of, or to carry on the operations for which the said Company is incorporated, which call or assessment may be sued for by the said Corporation, and recovered in any court of Record within the Province. 6. The Company, or the Directors if empowered by the bye laws of the Corporation, shall have power from time to time to levy and collect assessments upon the shares, or upon such of them on which the amount subscribed has not been paid up, of such sums of money as may be deemed necessary for carrying on the business, or for the purpose or operations of the said Company; and whenever any assessment shall be made as aforesaid, it shall be the duty of the Secretary or Treasurer of the said Company to give notice thereof in a public Newspaper printed in the County of Carleton, requiring payment of the same within not less than thirty days; and if any stockholder shall neglect or refuse to pay to the Secretary or Treasurer the amount of such assessment or any part of such amount, at the time in such notice prescribed, the same may either be sued for and recovered in the manner prescribed in the last preceding Section, or the Secretary or Treasurer may advertise all such delinquent shares for sale at public auction, giving at least thirty days notice of the time and place of such sale, by publishing a notice thereof in some one public Newspaper published in the County aforesaid; and all shares on which the assessment or any part thereof is not paid, with interest from the time such assessment became due, may be sold to the highest bidder; and after retaining the amount due on such assessment, and all interest due thereon, and all expenses of advertising and selling, the residue (if any) of the moneys for which such shares shall be sold, shall be paid over to the former owner or owners thereof, and a new Certificate or 4 Certificates of the shares so sold shall be made and delivered to the purchaser or purchasers thereof. 7. No shareholder shall be entitled to transfer or vote upon any share after any call shall have been made in respect thereof until he or she shall have paid all calls for the time being due on every share held by him or them. 8. The said Company shall not be bound to see to the execution of any trust whatever, express implied, or constructive, to which any of the said shares may at any time be subject; and the receipt of the party in whose name any such share shall stand in the books of the said Company, or if it stands in the name of more parties than than one, the receipt of any one of the parties in whose name the same shall stand in the Register of the stockholders, shall from time to time be a sufficient discharge to the said Company for any dividend or other sum of money payable in respect of such share, not withstanding any trust to which such share may then be subject, and whether or not the said Company shall have notice of such trust, and notwithstanding the owner or owners of such share or shares shall not have joined in such receipt; and that the said Company shall not be in any way bound to see to the application of the money paid upon such receipt. 9. In any action or suit to be brought by the said Company against any shareholder, to recover any money due for any call, it shall not be necessary to set forth any special matter, but it shall be sufficient for the said Company to declare that the defendant is the holder of one or more shares in the said Company, (stating the number of shares,) and is indebted to which the calls in the said Company in the sum of money to which the calls in arrear shall amount, in respect of one call or more upon one share or more, (stating the number and amount of each of such calls), whereby an action hath accrued to the said Company by virtue of this Act. 10. On the hearing of such action or suit, it shall be sufficient to prove that the defendant, at the time of making such call, was the holder of one or more shares in the said Company, that such call was in fact made, and such notice thereof given, as is directed by this Act; and it shall not be necessary to prove the appointment of Directors by whom such call was made, nor any other matter whatever, and thereupon the said Company shall be entitled to recover what shall be due upon such call, and interest thereon, unless it shall happen either that any such call exceeds the prescribed amount aforesaid, or that due notice of such call was not given. 11. The production of the Register of the shareholders shall be prima facie evidence that the parties whose names are therein entered as owners of shares are shareholders, and of the number and amount of their respective shares. 12. No dividend shall be paid in respect of any share, until all calls and assessments then due and that and every other share held by the person to whom such dividend may be payable, shall have been fully paid. 13. The joint stock and property of the said Company shall alone be responsible for the debts and engagements of the said Company. 14. The time and place of holding annual or semi-annual, and all special or other meetings of the said Corporation, as also the number, eligibility, duties and powers of Directors, officers and servants, their continuance in office, removal, or disqualification, the filling up of vacancies, the time and manner of election or appointment, and any and every other matter and thing whatsoever, connected with the objects and purposes for which the said Company is incorporated, may be established or regulated by bye laws of the said Company, to be made at any meeting of the said Company, or adjournment thereof, which bye laws, not inconsistent with this Act of Incorporation, they are empowered to make. 15. Unless fifteen per cent of the capital stock of the said Company shall be subscribed and

Colonial Farmer. - Jul. 10, 1871 Geological Report. - Continued. V. Calcareous Clay Slates in Carleton and Victoria Counties. - The narrow strip or belt of red conglomerate just described, together with the northwestern boundary of the outlier in Brighton, constitute, with their continuation on the strike on either hand, the limit of the non-calcareous slates; beyond which to the northwest, without any perceptible change of attitude or general conditions, commences a set of calcareous slates and quartzite, extending on the St. John River, to and far beyond the Province line. These rocks, which present a remarkable uniformity in character for very great distances, precisely resemble those which have been described by yourself as occurring and attaining a great development on Temiscouata Lake and the river Madawaska, and for a great distance down the St. John River, and are in probability the continuation of the same series, which you have determined to be Upper Silurian. The general description of these rocks given in the Report of Progress for 1849-50, page 60, is so concise and graphic, and at the same time, in its main features, so precisely applicable to those now under notice that I may be excused for quoting it here. ""The next five miles across the measures are occupied on the west side of the lake by calcareo-argillaceous slates, occasionally interstratified with noncalcareous bands, and some of the beds are more arenaceous than others. The colors, are dark bluish grey, light grey and black; the divisions of the original bedding are obliterated, and in fresh fracture it is only by the colors, the differences of which are often very obscure, that the stratification can be made out; but the action of the weather and water on the ice-rounded or moutonnee forms which come upon the lake, distinctly shown the bedding by the unequal wear of the more or less calcareous layers, the one standing out in beads, and the other reentering in grooves. The beds are almost universally thin, and the surfaces give a pictorial 4 display of a vast variety of the most complicated contortions, sometimes in folds leaning over each other to the northwest, and sometimes in involved arrangements which it is quite impossible to disentangle or understand without a larger exposure than usually appears. - Combined with the contortions there are often disruptions or dislocations which, however, show no veins of interposed foreign material; the torn and twisted mass having been apparently compressed together and become cemented in such a way that, except for the colors or unequal wear, it would never be suspected that it has been disturbed at all. In some parts, however, these contorted rocks are cut up by a multitude of small veins of calcareous spar."" I have to add to the above description that the bands of non-calcareous quartzite in the region explored by me, although in general conformable, appears sometimes to cut the rocks transversely to their strike; they vary from eight to thirty feet in thickness, and are usually traversed by small strings of calcspar. Where they abut upon the river banks the exposures are usually more extensive, than at other points, as if, from their superior hardness, they had more effectually resisted atmospheric influences and the erosive action of the river. There also occurs in this region a few apparently isolated patches of limited extent, of more or less pure limestone, probably lenticular in form, sometimes of a slaty structure, and sometimes massive. In two instances which came under my observation, where the rock seemed to have undergone little alteration, I discovered a few obscure fossils forms which, however, were scarcely visible except on weathered surfaces; but which have been recognized by Mr. Billings as Upper Silurian. Intercalated with the calcareous slates of this region are some remarkable bands of ferruginous red and green slates, sometimes traceable for great distances on the strike. The first and most important set of these bands is that in which are situated the deposits of iron ore which have been mined at Jacksontown, near Woodstock, and which, in their continuation to the northeast, display at their outcrop near the Beccaguimic, twelve miles from Jacksontown, very considerable quantities of a similar ore, being an impure slaty hematite. In the Beccaguimic district there are three parallel bands of red and green slates about half a mile apart; one of these only, that nearest the river, appears to contain workable deposits of ore. - Towards the southwest the Jacksontown band is traceable to the boundary line, it was charged with iron pyrites. Another band of the red and green argillites is traceable from Flanigan's Hill, in Simonds, to East Glassville, a distance of nearly eight miles, and has yielded in some places good specimens of hematite and specular iron; it is five and three quarter miles across the strike from the former. It 5 would seem reasonable to expect that these bands would serve to mark the structural arrangement; but as their attitude in every instances where they were observed is vertical, and their associations with other bands obscure from want of exposures, I have been unable as yet to make them available for this purpose. A remarkable band of diorite was observed in crossing the road passing through East Glassville, about two and a half miles south of Miller's Corner. - It appears to run in conformity with the slate rocks, and is 150 yards wide where it crosses the road; in its continuation to the northeast on the strike, it appears to run into a ridge of considerable elevation terminating at three miles distant in Garforth Mountain, which is about 800 feet high. The succession of rocks observed in the vicinity of the diorite band in traversing it from north to south is as follows: 1. Calcareous slates, being the prevailing rock of the country. 2. Black slate, a very thin band. 3. Diorite band, 150 yards wide, coarsely crystalline, of a prevailing dark-green colour, with many seams and joints filled with; 4. Slaty limestone eighteen feet thick. 5. Highly ferruginous decomposing calcareous slate. 6. Another band of diorite of a laminated or gneissoid aspect and narrower than the former. 7. Calcareous slate, as at the commencement of the section; the whole of which is comprised within a breadth not exceeding 500 yards, the attitude of all the rocks being vertical. In the region underlaid by the calcareous slates, the soil is, as might be expected, superior for agricultural purposes, to that in which the rocks devoid of

Carleton Sentinel - Jan. 30, 1925 Interesting Letter Written by Late Dr. L.W. Bailey. - To His Wife in the Early Sixties - Copy Found Among His Effects - Woodstock Without 'Electric Lights' - Visits Glassville in 'Forest Primeval' - Meets Many Pleasant People. - 'Mr. Selwyn is here and we have had some talks and one long walk together. He is quite the opposite of Dr. Hunt in appearance, manner, and, I mayadd, opinions. He is very tall, as thin as a lath, with long spindle legs, (with which he gets rapidly over the ground), with a rough pock-marked visage and shaggy beard - altogether not a prepossessing looking man, but not unpleasant in conversation. He holds some very different views on certain geological points from Hunt, and the two have already had some pretty sharp debates. I think I can see trouble ahead between the two, but this, of course, is between ourselves. We came up to Woodstock by the evening express, last Tuesday, getting here about midnight after a series of delays. The woods were on fire all along the route and sometimes the cars would be full of smoke. A large pile of cordwood blazing close by the track lit up the forest in grand style as we rolled past it. Near Cranberry station the cars stopped a few feet from a burning bridge. We had already run on trellis-work for some distance, and as we looked out from the window nothing could be seen but the sleepers and the foul lake below (breeding thousands of mosquitoes) the blazing bridge in front and the general darkness all around. For half an hour the men were carrying water from the lake to extinguish the flames, while we were in expectation of having either to pass the night in this cheerful spot or to run back to the almost equally cheerful McAdam Junction. However, their efforts were at last successful and very slowly, with a good deal of misgiving as to whether the bridge would give way and plunge the engine into the depths below, we got over, and sped on our way to Woodstock. It was past twelve o'clock when we reached here; no coaches to meet us at the cars, no lights in the town, and a delightful uncertainty on our part to which way to turn. Neither of us knew anything about the place, but after nearly breaking our necks over piles of railway sleepers, and taking an involuntary bath in the waters of the Meduxnakeag, we at last reached an hotel (not the one we wanted) where we again encountered more sleepers. We passed what remained of the night at the Cable House, and next morning shifted our quarters to the far more comfortable and clean house of Mrs. Donaldson. Wednesday we spent about Woodstock, visiting theiron mines, works etc., and in the evening went to Mr. Connell's, where we had been invited, finding a party of some thirty or more of the young and fair of this good town, with whom (2nd Miss Connell) I had a quadrille. Connell has a fine house and everything very nice - a beautiful garden etc. On Thursday and Friday we were out on our expedition to Glassville, which consists of one house and seven log cabins out in the forest primeval. Yesterday we spent in town, taking tea in the evening with Mr. Connell and finishing up at the house of a Mr. Grover, (whose son will come to college next year). It is a very fine house, nothing in Fredericton to equal it.

Here we met, besides Mrs. Grover and daughters, a Mr. Pumpelly and daughter from New York, very pleasant and accomplished people, the daughter a fine singer; also Sheriff and Mr. Dibblee and Mr. Edward Jack. Mr. Selwyn - late Director of Canadian Geological Survey. Dr. Hunt - Dr. T. Sterry Hunt, the famous chemical geologist."

Gazette - Aug. 30, 1899 Our Mineral Resources. - The government of New Brunswick has recently issued in pamphlet form the report of Prof. Bailey prepared in the year 1897 and 1898 on the mineral resources of New Brunswick. Prof. Bailey was a member of the staff of the geological survey of Canada and made this report originally for the federal government. In order that the province might possess a comprehensive report on the minerals of New Brunswick a number of copies were procured by Surveyor General Dunn for general distribution. The report is exhaustive and deals historically as well as otherwise with the mineral production of the province. The exploitation of the ironmines at Woodstock and the efforts to found blast furnaces at that locality are dealt with exhaustively.The manufacture of oil from albertite which at one time was a most important industry in Albert county and St. John are fully described. The search that has been made for gold, copper, silver, and lead are fully described and a whole chapter is devoted to manganese mining. It will be information to most people to know that fully half a million dollars worth of manganese has been mined and exported from New Brunswick. Prof. Bailey also goes extensively into the history of antimony mining and gives some valuable facts concerning the operation of the coal fields of the Province. The report is most interesting as it shows that while up to the present time there has been no great development of the mineral resources of New Brunswick, the province has yielded quite extensive quantities of coal, gypsum, manganese, albertite, iron, lime and building stone, and that there are immense stores of these materials hidden away under the surface of the province. Prof. Bailey does not draw a very rosy picture of the future for mining in this province, but at the best his report is based on a hurried survey of the province. It is however the most important evidence on the question since that of Dr. Gesner which is now almost forgotten."

St. Andrews Standard - Feb. 25, 1863 Minerals of New Brunswick - The North-eastern British Provinces of North America contain natural resources which, if properly developed and applied, would make them the greatest commercial and manufacturing commonwealths on the Atlantic seaboard. Thus coal and iron are the two grand minerals for manufacturing and for driving machinery, and those minerals are found in abundance, both in New Brunswick and Nova Scotia. At present we will only refer to New Brunswick, which has the elements of incalculable wealth stored up within its bosom. The carboniferous system of rocks covers an area equal to more than one third of the entire province. In Albert County, a rich carboniferous mineral -called by some coal, and by others asphalt - exists in great abundance. It surpasses all other minerals on our continent in the production of kerosene, and about 18,000 tons per annum have been mined during the past three years. A seam of rich cannel coal has also been found in the same country. Iron ore exists in considerable quantities nea rWoodstock, and smelting works on an extensive scale, were at one time in operation there, very fine iron being produced. - Gypsum, copper, lead, potter's clay, &c. are also found in large quantities."

Carleton Sentinel - Oct. 22, 1850 MINING IN NEW BRUNSWICK. - By information received from the New Brunswick papers and from private letters, we learn that the Mineral resources of the sister Province are at last about to be developed. During the past six months more than twenty Mining leases have been granted by the Government, in the counties of Albert and Westmorland. Upwards of two thousand chauldrons ofBitumen, or Mineral Pitch, have already been raised at Hillsborough, and will soon be ready for shipment to the United States, to be employed in the manufacture of gas.Beds of excellent coal from two to six feet in thickness, have been pierced at Meranquin, and a party of English Miners have been engaged to commence the working. A Mr. Steadman has also opened a vein of coal in the neighborhood of Shediac, and is now exploring anasphaltum mine near the Petitcodiac River. Surveys we understand are made with great energy, and there is much competition among the purchasers of mining leases. It is stated that 100,000 tons of asphaltum might be shipped next season from one mine. At present the completion of a railway three miles in length, is required to aid itstransport to the river. The Black Lead mine of St. John, has been well penetrated, and it is understood that the proprietors have made a profitable investment. The ironworks of Carleton County, which were unfortunately consumed by fire last season, have been rebuilt, and have commenced the manufacture of iron from the ore of Woodstock. These facts are encouraging to the inhabitants of New Brunswick, and fully confirm the predictions formerly made by Dr. Gesner in his geological reports published some ten years since. But in an equal degree they disprove the statements of Dr. Robb, and conflict with the statements put forth by him in Professor Johnston's recent Agricultural report. The mineral resources of this fine Province are evidently underrated. The opening of the above mines has aroused a new energy, and all no doubt contribute largely to the prosperity of that Province, where all the mines and minerals are under the control of the Legislature, and open to the competition of its inhabitants. - HALIFAX COLONIST."

N.B. Courier - Sep. 27, 1851 We have been favored by the Directors of the Mechanics' Institute with the following Report, which we have much pleasure in publishing: Report on the Industrial Exhibition, Held at Saint John, On September 9th, (and following days,) 1851. To the New Brunswick Society for the Encouragement od Agriculture, Home Manufactures and Commerce throughout the Province. On the 11th of June last, W.J. Ritchie, M.P.P., the President of the St. John Mechanics Institute made application to the New Brunswick … Class 1. Raw Materials: Sec. A. Minerals. The Exhibition was by no means complete in this department, although the Museum of the Institute, which was thrown open to the public, contains a great variety of the useful Minerals of the Province. We could wish to have seen at a glance, a series of the Provincial Rocks and Minerals of economic importance, and shall expect it at some future Exhibition. The Minerals exhibited on the present occasion were, many of them, of considerable interest. We may mention - A mass of native Black Lead, of which a large and valuable vein exists near Indian Town, and is now profitably mined by a Joint Stock Company. Samples of prepared Black Lead, exhibited by the St. John Black Lead Mining Company: this article seems well adapted to supply all the wants of our Provincial housekeepers. Asphatum or Asphaltic Coal, (for there is adoubt as to its true nature,) is a valuable Mineral, mined by a private Company in the Parish of Hillsborough, Albert County, and is already largely in demand for the manufacture of Gas. Soft bitumen, or Naptha, from the Petitcodiac, where it issues from the earth in a liquid form, and afterwards hardens by exposure to air. Asphaltic Shale, from Albert and Westmorland Counties; this is an article, the use of which in making gas, waterproof cements, pavements, &c., is increasing every day. Mineral Paint (an earthy oxide of iron, orferruginous earth,) from Shediac; this substance occurs in various parts of the Province, and is yet destined to replace all the forms of ordinary paint as a covering for wood work, &c. exposed to risks by fire. This present sample was exhibited by the Messrs. Gilbert. Mineral Paint, (an earthy oxide of Manganese,) from Albert County; an article which may yet be brought into use. Black lead, we may observe, is considered to be a good kind of mineral, or fire-proof paint; and we would suggest to the St. John Black Lead Company, that they should make some experiments upon the subject. Alabaster, or White translucent Gypsum; this is another of the varied Mineral products of Albert County; we observe specimens of it now for the first time on public exhibition, with great satisfaction; there is a square block of it, a vase turned from it, by Mr. McCoach, and a head carved in alto-relievo, on the same material, by Mr. Foulis. Its admirable purity and general qualities are well seen in these specimens, but none of them exhibit the beautiful polish of which it is susceptible. There is also a magnificent group of Chrystals of Gypsum, from Kings County, but their economic value is small as compared with the massive form from Hillsborough. Lime. - There is a cask of beautiful white Limeexhibited. This is one of our staple productions, and the St. John Lime is unsurpassed for its purity and general fitness for the purposes of the builder. The Limestone contains less than two per cent. Of impurities.Salt, by Joe Brand, of Sussex Vale; this salt is of first rate quality for farmers' purposes, and we are much pleased to learn that its manufacture has been resumed at the springs, and that Mr. Brand is enabled to sell it as low as the imported salt.Honestones, from the Kennebeckasis; these seem to be of good quality, and work either with water or oil. They bite well, and will compete with the Honestones of Woodstock or Miramichi, which are now coming into repute. Lead Ore. - Of this there are samples from King'sand Charlotte Counties, and Iron Ore from one or two places; but no information is given as to the probable supply from the various localities. The samples of Iron and Steel, from Woodstock,seem to be of the very first quality; the Iron has been bent and twisted, when cold, in every direction, but without showing the least injury to the fibre. It would be hard to devise a more complete proof of the quality of the article. We understand that the manufacture of Woodstock Iron will now be carried on vigorously by a Sheffield firm, who have become aware of its admirable qualities and adaptation for the making of Steel. Pipe Clay. - This article is from Albert County, and is exhibited by Mr. Foulis. It has a very good color, and seems to be well adapted for the manufacture of

URN: 0275 / LEGI / IDX_Names: Woodstock Fe; Legislation, etc.;

Royal Gazette - Feb. 28, 1838 Also - at the same time and place, will be offered, a lease for fifty years of the Mines and Minerals comprised within the Parish of Wakefield, in the County of Carleton, subject to the following restrictions: Conditions and Restrictions. That the purchaser shall have five years to explore and select his Mining grounds, and open any shaft or shafts; that after the expiration of the said five years, the purchaser will be confined to such mines only as he may have opened and worked, and shall then have in operation;and should it happen that during the said term of fifty years, any mine should not be worked for the space of twelve consecutive months, the said mine so remaining unworked, shall revert to the Crown, and that a per centage equal to one twentieth part of the produce of the mine, under the authority of the said lease, be exacted from and paid by the lessee or lessees, after the expiration of ten years from the date of the sale or 4 lease. Thos. Baillie, Com. Crown Lands. Crown Land Office, February 20, 1838."

Royal Gazette - Jun. 13, 1849 Cap LVIIAn Act to facilitate the operations of the York and Carleton Mining Company. - Passed 14th April 1849. Whereas the York and Carleton Mining Company have invested a large sum of money in commencing and carrying on their operations in the manufacture of iron in theCounty of Carleton, and have, by Petition to the Legislature, prayed that their present Lease for twenty five years may be extended to the term of ninety nine years, and that the present reservation of five per centum on the value of the Ore raised may be commuted into a fixed duty of one penny per ton on the Iron smelted, and that such other encouragement may be extended as may be deemed just; And whereas it is considered advisable to afford every encouragement to the said Company in the prosecution of their important enterprise. 1. Be it therefore enacted by the Lieutenant Governor, Legislative Council and Assembly, That from and after the passing of this Act, it shall and may be lawful for His Excellency the Ileutenant Governor or Administrator of the Government for the time being, by and with the advice and consent of the Executive Council, to revoke, cancel and annul the present Lease, and to issue a new Lease in lieu thereof, for the term of ninety nine years, to commence at and from the date of the former Lease. II. And be it enacted, That it shall and may be lawful for His Excellency the Lieutenant Governor or Administrator of the Government for the time being, by and with the advice and consent aforesaid, to reserve in the said Lease a Duty of one penny per ton on the Iron smelted by the said Company, in lieu of the Duty of five per centum now reserved in the present Lease. III. And for the further encouragement of the said Company; Be it enacted, That there be granted to His Excellency the Lieutenant Governor or Administrator of the Government for the time being, the sum of one thousand five hundred pounds, to be applied towards the purchase of ten thousand acres of Wilderness Lands by the said Company, situated on the north eastern side of the River Saint John, in the said County of Carleton, to be selected by and surveyed at the expense of the said Company; and that the said money shall be applied as aforesaid, whenever it shall be made to appear to His Excellency the Lieutenant Governor or Administrator of the Government for the time being, that the said Company have smelted at least three hundred tons of Pig Iron at their Works in the said County of Carleton. IV. And be it enacted, That this Act shall not come into operation or be in force until the first day of September next."

URN: 0275 / LEGI / IDX_Names: Woodstock Fe; Legislation, etc.;

Royal Gazette - Apr. 18, 1855 Cap XVII. An Act to incorporate the New Brunswick Mining Company.Section. Section. 1. Company incorporated. 5. Liability of shareholders 2. First meeting, how to the Company. called. 6. Capital may be increased. 3. Capital, amount, and 7. Shares may be assessed for time of payment. business. 4. Liability for debts. 8. Act to be void on a certain failure. Passed 3rd April 1855. Whereas the efficient opening and working ofMines in the Province of New Brunswick will be highly advantageous to the Province: And whereas the amount of capital necessary to be invested in such an undertaking renders it essential that the Company engaged therein should be incorporated; Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:-1. That William Stevens, his associates, successors, and assigns, shall be and they are hereby erected into a Company, and declared to be a body politic and corporate, by the name of ""The New Brunswick Mining Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by 10 Act of Assembly of this Province, for the purpose of opening and working of Mines in the Province of New Brunswick, and establishing all necessary works therewith connected, and for the convenient carry on and managing the same. 2. The first meeting of the said Corporation shall be held at Woodstock, in the County of Carleton, and Province of New Brunswick, and shall be called by any one Member of the said Company, by giving at least twenty days notice in the Royal Gazette published in this Province previous to such meeting. 3. The capital stock of the said Corporation shall consist of the sum of thirty thousand pounds, to be paid in such money as shall at the time of the several payments hereinafter expressed be a legal tender in this Province; fifteen per centum of the said capital stock to be paid in before the said Corporation shall be entitled to purchase any property, real or personal, or incur any debts; and the remainder of the said stock to be paid at such time and times, and in such parts or portions as the business of the Company shall from time require, the whole amount of such capital stock to be divided into twelve hundred shares of twenty five pounds each. 4. The joint stock and property of the Company shall alone in the first instance be responsible for the debts and engagements of the said company, and no creditors, or person or persons having any demand against the said Company, for or on account of any dealings with the said Company, shall have recourse against the separate property of any shareholder on account thereof, except in case of deficiency, or where the joint stock of the said Company shall fall short of or not be equal to the payments of any debt, due, or demand against the same, that then and in such case the goods and chattels, lands and tenements of each shareholder, shall and may be levied upon and seized respectively to satisfy such debt or demand, to the amount of the share or shares or interest of such shareholder in the joint stock of the said Company, but no more; and such amount, or so much as may be necessary to satisfy such debt, due, or demand, shall and may be levied and seized by process of execution in the same suit in which such debt, due, or demand may be recovered against the said Company. 5. Each and every shareholder in the said Corporation shall be held liable to the said Company for each and every call or assessment made (not however to exceed in amount the stock subscribed for) for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, or to carry on the operations for which the said Company is incorporated, and shall and may be sued for by the said Corporation, and recovered in any Court of Record within the Province. 6. So soon as the said capital stock shall have been paid in and expended for the purposes of this 11 Corporation, it shall and may be lawful for the said stockholders, at any general meeting to be for that purpose called, to increase the said capital stock from time to time in such sums as they may deem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power from time to time to increase the number of shares accordingly. 7. The said Company shall have power to levy and collect assessments upon the shares, from time to time, of such sums of money as may be deemed necessary for carrying on the business of the said Company; and whenever any assessment shall be made by the stockholders of the Company; it shall be the duty of the Treasurer to give notice thereof in a Newspaper printed and published in this Province, and also in the Royal Gazette, requiring payment of the same within thirty days; and if any stockholder shall neglect or refuse to pay to the Treasurer the amount of such assessment upon his shares at the time prescribed, it shall be the duty of the Treasurer to advertise all such delinquent shares for the sale at public auction, giving at least thirty days notice of the time and place of such sale; and all shares upon which the assessment is not then paid, with interest from the time such assessment became due, shall be sold to the highest bidder, and after retaining the amount of such assessment and interest due on each share, and the expenses of advertising and selling, the residue, if any, shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser; provided always, that no assessment shall be made except by a vote of the stockholders and a majority of all the shares. 8. Unless fifteen pounds per centum of the said capital stock shall be actually paid in for the purposes of the said Corporation, and a certificate of such payment made and verified on oath by the Directors of the said Corporation, or a majority of them, (which oath any Justice of the Peace is hereby authorized to administer) shall be filed in the Office of the Secretary of the Province before the expiration of three years after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the expiration of the said three years."

Royal Gazette - May 16, 1855 Cap. XLIV. An Act to facilitate certain Mining operations in the County of Carleton. Licence to W. Stevens to work Mines to fix rate of duty. Passed 12th April 1855.Whereas William Stevens, of Woodstock, in the County of Carleton, is the owner of certain lands in which Iron and other ores are said to exist; And whereas for the introduction of British capital for the purpose of opening up and working said Mines, it is desirable to fix the rate of duty on the iron smelted; Be it therefore enacted by the Governor, Legislative Council, and Assembly, - That the Governor in Council is authorized and empowered to grant to William Stevens, of Woodstock, in the county of Carleton, a licence to work the Mines on such lands as the said William Stevens shall produce the title of, or the right of mining obtained from the owners of the soil; suchlicence shall fix a rate of duty of one penny per ton on all iron smelted, and one per cent on all other

Morning Freeman - Feb. 28, 1861 Legislature.... A bill to amend incorporating York and Carleton Mining Company, agreed to

URN: 0275 / LEGI / IDX_Names: Woodstock Fe; Legislation, etc.;

Royal Gazette - May 1, 1861 Cap. XLVII. An Act in amendment of and in addition to an Act to incorporate the York and Carleton Mining Company. Section. Section. 1. Act 40, V.c. 73, 3. Act voidable on non a. 4, repealed. fulfillment of specified 2. Joint stock and conditions. property clause responsible for the debts. Passed 12th April 1861. Whereas the existing individual liability of the shareholders of the capital stock of the York and Carleton Mining Company for the debts and engagements of said Company, as enacted in the fourth section of the Actof incorporation thereof, passed in the tenth year of the Reign of Her Majesty Queen Victoria, and intituled An Act to incoporate the York and Carleton Mining Company, has tended to prevent the investment of capital in the said Company and hereby greatly to limit its operations and usefulness:- Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 7 1. That the said fourth section of the said Act of incorporation shall be and remain in force, and shall apply to such only of the debts, contracts, engagements,and liabilities of the said Company as shall be due or owing, or shall exist, or have been made or entered into, at or previous to the time of the passing of this Act, in reference to all which it shall continue and remain in full force, and that so far as relates to the debts and engagements of the said Company that shall be contracted, made, or entered into after the passing of this Act, the said fourth section of the said Act of incorporation shall be and is hereby repealed. 2. That from and after the passing of this Act, the joint stock and property of the said Company shall alone be responsible for the debts and engagements of the said Company contracted, made, entered into, after the passing of this Act, any thing in the said Act of incorporation to the country notwithstanding. 3. That unless ten thousand pounds of the said capital stock of the said Company, over and above the amount already subscribed for and taken, shall be actually subscribed for and taken by bona fide shareholders, and twenty five per centum of the said additional amount shall be actually paid in for the purposes of the said Corporation, and a certificate of such payment, made and verified on oath by the Directors of the said Corporation, or a majority of them, (which oath any Justice of the Peace is hereby authorized to to administer,) shall be filed in the office of the Secretary of the Province before the expiration of two years after the passing of this Act, the operation of this Act shall cease, and the shareholders of the said Company shall be liable for the debts and engagements of the said Company contracted between the time of the passing of this Act and the time when its operation shall cease, and for all the subsequent debts and engagements of the said Company, in the same manner as is provided and enacted in the fourth section of the said Act of incorporation."

URN: 0275 / LIME / IDX_Names: Woodstock Fe; Lime - General;

St. Croix Courier - Dec. 13, 1956 Three Concerns Examine Big Deposit at L'Etang Harbor. - See 'Definite Interest' In Area Lime. - St. George.- 'Definite Interest' is being expressed by private enterprise in the development of a large deposit of limestone at L'Etang Harbor, President Harold Atkinson of the Charlotte County Board of Trade has announced. 'At least three different concerns are interested enough to have examined the deposit within the past six months,' Mr. Atkinson said. Approximately 35 million tons - 'only a fraction' of the total deposit - exist above sea level and 'continuity in depth and quality was proved by diamond drilling this summer.' Describing the quality of the limestone as 'extremely high', Mr. Atkinson said the deposit forms part of the shoreline of L'Etang Harbor, referred to in British Admiralty charts 'as the finest natural harbor in British North America.' The firms interested in the deposit, described as high calcium content limestone, would extract for different purposes: as a 'flux' used in industrial processes of various kinds such as the manufacture of paper and the refining of ores, as the main ingredient in the production of chemicals. Reputable Firms. - Mr. Atkinson said all the firms interested and the uses they would make of the deposit are 'reputable.' He would not hazard a guess about the extent of plant and payroll required at L'Etang Harbor if a development took place. The number of men employed for example, would depend on which of the three uses companies interested would make of the deposit. A cement plant established at the site would, of course, bring the highest payroll to the county, he said. The property on which the deposit exists is owned by Mrs. J. Sutton Clark, of St. Stephen and negotiations with interested parties are being conducted by Clarence T. Clark of Edmundston In a statement explaining the basis of current interest in the deposit released to the Courier this week, Mr. Clark said the demands for cement in Canada and the United States was the 'driving force' behind it. He added the prospect of a manganese smelter at Woodstock was causing a search for good limestone to be used as a flux in the refining process. His statement: 'The U.S. tariff on imports of lime and limestone continues to be a deterrent to the development of this deposit. The excellent harbor and approaches with possibilities for harbor and shipping facilities offers the greatest inducement to development. 'The continuing demand for cement in Canada and United States, necessitating huge imports from Europe, is the driving force in the current interest. Negotiations are proceeding on a basis of use of one million tons of limestone per year, projected over 50 years. 'The proposed smelter or refiner of manganese ores in the Woodstock area has necessitated a search for high grade limestone within shortest possible radius of Woodstock. 'All negotiations to date are purely on an investigational basis and until all contributing factors have been explored, no concrete plans for actual plant layout and construction can be undertaken.'"

URN: 0275 / LIME / G6 / IDX_Names: Woodstock Fe; Lime - General; Bricks - General;
N.B. Courier - Jul. 19, 1856 ADVERTISEMENT: The York and Carleton Mining Company. Capital, £30,000 In 1200 shares of £25 each, With Power to Increase, by the Issue of New Shares, to £100,000. Eighty seven and one half per cent of the present Capital has been paid up. Directors: James Smith, Allan McLean, John Owens, Thomas Allan, Thomas Vaughan, James Thos. Smith, Henry Vaughan, J.R. Tupper, President - James Harris Treasurer - James Smith Secretary - James Robinson. Office - Prince William Street, St. John. The above Company was incorporated by an Act of the Provincial Legislature, passed in the year 1847, and is now engaged in the manufacture of Charcoal Pig Iron, at their Works in the Parish of Woodstock, in the County of Carleton, N.B. In order to extend their operations to the manufacture of all descriptions of malleable iron, they propose to increase their Capital Stock to £60,000, by the issue of 1200 additional shares. Their Works are situated at the Upper Village of Woodstock, where they own from 30 to 40 acres of Land, intersected by a fine stream of water. They consist of One Blast Furnace, with a hotblast apparatus; Two 5 feet diameter blowing Cylinders, driven by two Engines of 30 horse power each, which affords a surplus of blast sufficient for two more furnaces; One Tilt Hammer, driven by a ten-horse engine; One Puddling Furnace; Eight Brick Kilns for making Charcoal; Two large Coal Houses, and Two sheds; One large Kiln for roasting ore; One large Storehouse; One boarding house, with Barn and Outhouses; Three small houses, and Three Barns; One Lime Kiln, and Brick Yard; and a never-5 failing supply of Water, brought to the Works by an aqueduct, from a distance of about half a mile. They have also three Tracts of Land containing 600 acres, about 100 acres of which are under cultivation, and the remainder is covered with the finest forest woods; it lies within from one to three miles from the furnace. In addition to this, they own another tract of 10,000 acres, of fine hardwood land, specially selected by the Company; and purchased by them from the Crown, and paid for by a bonus (which the Provincial Government gave) of Five Pounds per ton, on the first three hundred tons of Iron made at the Works. This land, for which no part of the paid up capital was expended, the Company now propose to throw into the common stock, in order that all the subscribers to the new stock may participate in it, in proportion to the number of Shares they may respectively take. The Mining Lease of the Company covers a tract six miles in length by one mile and a half in breadth, is for a period of ninety-nine years, and is subject to a royalty of one penny per ton on all Iron produced. The Ore is of the very best quality; the supply is inexhaustible; and wood fuel of the very finest descriptions, not only abounds in the immediate vicinity of the works, and in all the surrounding country, but both it and charcoal can be obtained at very low rates from the upper country, through which the Saint John River, for a distance of upwards of seventy miles, and its numerous tributaries, flow. Limited as the present works are, the Company can now produce about 1800 tons of charcoal Pig Iron annually, and by the construction of an additional Blast Furnace, they would be enabled to double that quantity. Having already large surplus appliances to their present Furnace, the cost of an additional one, with which they could be connected, would not exceed £2,000. Heretofore, owing to their limited capital, they have been obliged to confine their operation to the production of Pig Iron, which has been purchased by English manufacturers, and by them has been converted into the different and much more valuable varieties of Iron and Steels, specimens of which may be seen at the Company's office, St. John. Their Pig Iron, though returning a very large profit upon the cost of production, is much less remunerative than the Bar, and Plate Irons and Steels. At present the English manufacturer derives all that additional profit. The proposed increase of capital, which at the present time need not exceed £15,000, will enable the Company to produce all those different varieties. The Pig Iron which they have exported has been produced at their works at from £4 10s. 0d. To £4 17s. 6d. Currency per ton, has been sold by them at £7 sterling per ton in England, and been there re-sold at £7 6 10s. They can produce, with the additional works contemplated, all the different descriptions of Irons and Steels, and at prices proportionally low. With the proposed new works, the cost of production would be very materially reduced, as a double quantity could be produced with a trifling increase of labour, the Superintendent, Furnace Master, Clerks, and other leading men, who are all now necessary for the one Furnace, being quite competent, with the assistance of a few laborers, to manage two or more. The Company have at their office, where they may be seen, the correspondence of several persons of high standing and extensive practical experience in the Iron business, and also tables made up by them, shewing the cost of production, and the average selling prices of the different descriptions of Irons and Steels. The following statement of the cost and prices of a few of the varieties will shew the very large profits which might be realized by the Company, if they were enabled, by an increase of their works, to produce them:- Cost of production per Average selling price ton, at the Works, cy. Per ton cy. Pig Iron, £4 17 6 Pig Iron, £8 10 0 Merchant Bar, 12 1 10 Merchant Bar, 22 10 0 Plate Iron, 14 0 0 Plate Iron, 27 10 0 Spring Steel Bars 11 10 9 Spring Steel Bars 28 6 0. The Iron produced at these works has already attained a very high reputation in England, and ranks among the best Irons in the world. It is peculiarly adapted for the finest qualities of Spring Steel, and is no doubt equally well adapted for Blister and Cast Steels. The Company offer this Stock to the public, in the fullest confidence that it will prove not only a safe but highly profitable investment for capital. Their facilities for cheap manufacture and transport are not surpassed in America; while the daily increasing demand for Iron and Steel, both in the Provinces and the United States, affords them ready and convenient markets for all that the most extensive works would enable them to produce. Our own Province alone would probably consume the whole product of the present and contemplated additional Furnace; and the consequent saving of freight, together with their other advantages, would enable the Company to compete successfully with the English and all other manufacturers. The fullest information as to the property and business of the Company - the supply of ores and wood - the quantity of Iron annually produced - and all other matters connected with the Company, can be obtained at their Office in Saint John. Form of Application For Shares To the Directors of the York and Carleton Mining Company, I request that you will allot me Shares in the above Company; and I agree to accept the same or any smaller number, and pay the deposit and calls thereon, and execute the deed when required. Name in Full … Occupation …

St. Croix Courier - Feb. 26, 1874 Iron.- We frequently hear a great deal regarding the resources of New Brunswick; they are spoken of as if they were hidden things of priceless value, which were to be brought to light at some unexpected moment by some unexpected agency, some wondrous lamp which in the hands of the peasant would cast its brilliant rays on glowing gold, precious stones of the first water, and countless other undescribed sources of wealth. It would seem as if we never would, by united action, bring to bear on this subject the aid of the skilled scientists who have made various industries their special study. It has been too commonly the way among us to undertake large operations under the guidance of unskilled men, and this relates particularly to mining and to manufactures requiring especial skill. If we wish a house plastered we call for the services of the plasterer, but if we are desired to invest our money in some lead or iron mine, the subject is generally brought to our notice by some retired merchant who has a greater redundancy of speech than of money; he will talk learnedly of Sulphurets or Carbonates, while he is entirely ignorant of the composition and properties of the substances about which he is talking. The natural result of investment under these circumstances, would be disastrous failure, bringing ruin on the investors and deterring many other capitalists from investing in promising undertakings even should they be under skilled guidance. We are led to make these observations by some remarks which we lately saw in the St. John Telegraph on the subject of New Brunswick iron. We have often made theenquiry, what is the cause of the failure of the Woodstock iron works; at one time we are told that the best iron was made there, at an other that it was nearly valueless. We hear again from Professor Hind and others, that large beds of iron exist in Carleton County on both sides of the St. John, 15 or 16 miles above Woodstock. We have it from good authority that 50 tons of iron per day are used in the foundries of the Province, which is imported either from Great Britain or the United States, and for which high prices are paid. We are also told, on equally good authority, that iron can be made in New Brunswick for $20 per ton, provided the ore beds which are found in Carleton and St. John Counties.....?.... neighborhood of Bathurst and Dalhousie are of sufficient size, and of good enough quality, to warrant the undertaking. The Provincial Government has of late being doing a great deal towards settling the Province, and we sincerely hope that these hardy Scotchmen have had all the skilled advice that they could have, and that the settlement of New Kincairdshire will prove a success. Yet New Brunswick requires the encouragement of other industries as well as farming; perhaps even more, since the Province, after all, is more a manufacturing than farming country. Would it not be well, therefore, for the Provincial Government to investigate the subject of iron manufacture in New Brunswick, and let us know whether our iron ores are not available for the purpose of manufacture, and their quality and extent, so that if possible we may keep among us the vast sums of money which annually leave our shores to pay for raw iron? Could not the Government employ a proper mining engineer and chemist skilled in iron who could make examinations of iron localities, make assays and report to the Government the extent, position and quality of such beds and veins and the cost of fuel, etc.; such report would be of incalculable benefit, as it would if favorable, at once induce moneyed men to embark their means in blast furnaces. Our own, as well as all the other counties in the Province, is deeply interested in this matter, and the North as well as the South nearly equally affected by it. We hope, therefore, that the representatives of Charlotte will give this matter their attention at this session of the House.

URN: 0275 / X1 / IDX_Names: Woodstock Fe; Grand Lake Coal;

Carleton Sentinel - Sep. 19, 1868 and S.J. Daily News - Sep. 29, 1868 OUR MINERAL RESOURCES. - Norris Best, Manager of the Woodstock Iron Works, has written a letter to the Sentinel in reference to our mineral productions. As any development of the resources of our country is a matter of interest to the whole people we quote a portion of the letter:- ""I am afraid the Government of this Province (nor yet of the Dominion) have never fairly entertained the immense advantage the mines and minerals (especially coal and iron) may be and are to the Country in which they are known and found to exist in this Province. It is probably not generally known that a very great part of the area of this Province is underlaid by that most valuable of all treasures, coal; that these measures, somewhat triangular in shape, and extend from Bathurst on the North to Nova Scotia on the East, its apex being at the Oromocto Lake, and its North-western margin running from thence to Bathurst and approaching the Bay of Fundy on the Southeast; and yet with the certainty of this, it is, I think, almost as certain that only the South and South east sides of this great carboniferous basin have as yet been explored. What may be the result of the present explorations now being conducted under the superintendence of Sir William Logan, and the expense of the Dominion Government, it is of course impossible to tell. - The writer of this, however, took an opportunity of impressing the great value of the coal and clay-ironstone deposits of this Province upon the mind of the Hon. John Rose, the Finance Minister of the Dominion, who evinced the most lively interest in the subject, and promised to write Sir Wm. Logan personally thereon. One thing, however, is quite clear, that hither to our people have striven to a mass wealth, and allow the prosperity and progress of the Province to depend upon the getting and exporting of lumber, at best but an uncertain and speculative operation, rather than dig deeper for the more permanent and inexhaustible treasures of the earth. Could our Government realize the fact, that for (a comparatively speaking) small sum they could set at restthe (to some minds) vexed question of the existence of the clay iron-stone at the Grand Lake, the Valley of the Oromocto, and other places, they would confer a boon upon the Province and Dominion, the effect of which would be incalculable. When we look at the fact that we are importers of Pig Iron into this Province alone of probably 2,000 tons per annum, demanding a corresponding export of $40,000 in gold for the same, when we ourselves might be not only making our own iron, but exporters of it also, it is, I say, a most surprising matter that no continuous efforts have hitherto been made to obtain so desirable a result, this not having reference alone to the amount of labor and capital that would be employed and expended, but also to the royalty that would accrue to the Government for and from the working of the same."" Mr. Best promises at another time to show the resources of Carleton County for the production of Charcoal Pig Iron. We shall be glad to hear from Mr. B. on this subject. Information relative to the Iron and coal interests of New Brunswick cannot be too widely circulated. Mr. Best also expresses anxiety to have the interests of New Brunswick duly cared for in the negotiation of the Reciprocity Treaty, and alludes to the action taken in the Nova Scotia Legislature. This anxiety is quite natural. We fail to see, however, the value of following Nova Scotia's example by sending an independent deputation to watch proceedings at Washington. The Wilkins-Annand Government urged that course more from bad feelings towards the Dominion authorities than from a desire to guard the interest of Nova Scotians. A similar display of factiousness on our part is unnecessary. In the hands of the Dominion Government we feel confident our great maritime, fishing and mining affairs are perfectly safe. It is now just as much their interest as it is their duty to look after such matters, and we have no doubt they will be duly cared for in any negotiations with the Washington authorities."

URN: 0275 / Z2 / IDX_Names: Woodstock Fe; Sandstone, Building Stone, Monument Stone, etc.;

Loyalist - Oct. 1, 1847 Woodstock Iron Works. - It appears that the Charter granted at the last session of the Legislature, to a Company, for the purpose of working the Woodstock Iron Mines, has fallen into vigorous hands, who are determined to commence operations without delay, and upon an extensive scale. Mr. Stephens, (the younger) and a practical workman from England, are now at Woodstock, and from conversations with them we glean the following information. - It has been determined on that the buildings for rolling and smelting shall be constructedwith red sandstone, and the stone is already nearly all quarried, at the Red Rapids, on the Tobique, about 65 miles (by water) above Woodstock. No site has as yet been purchased for the works to be erected on. The mouth of the Meduxnakik (at Woodstock village) has been talked about, and also the mouth of Lane's Creek, where it falls into the St. John; about 2 1/2 miles above Woodstock village. -- The latter will probably be the site. Some of the owners of property at the Village appear anxious that the works shall be erected there, in the expectation, perhaps, that the value of property would be thereby enhanced. It is a mistaken notion. The noise of the works would be found extremely disagreeable, and the village would soon be covered with dust. Lane's Creek will be found quite near enough. If the Works shall be erected at Lane's Creek, it will be under the following advantages. Water power to a considerable extent will be secured to propel the machinery; the Works will be within 3, or 3 1/2 miles of the mine, from whence it is the Company's intention to construct a railway, the descent of which will be gentle the entire distance, so that the loaded cars will run down of themselves, and a horse will haul back several of them when emptied; and the Works being situated on the bank of the St. John, the iron can be put directly on board of boats, and floated down stream. In England, and other countries, where iron is found, it is generally embedded deep in the earth. - A shaft must first be sunk, at great expense, levels opened, and then ore is usually found in small branches. A powerful Steam Engine is then required (with a building to be erected for it) to pump the water out of the mine; pumps must be set, &c. - And after all this expense, the ore is obtained at vast labour, must be conveyed to the shaft, and then hauled up by machinery. But here the ore is to be found up to the very surface of the ground - and of an excellent quality, and yielding fifty three per cent of iron! -- and nothing more is necessary than to make an opening in the side of a hill, and load the cars from a supply apparently inexhaustible! Then the facility with which it can be conveyed to the bank of the river, (where the works will be erected) and the iron conveyed to market by water, is also very great. Contrast this with the vast expense attending the operation in England, and it will be seen at once that it will much more than compensate the stockholders for the difference in wages. Questioning the English operative the other day upon these points, (a man who has been engaged for many years in the iron works of England) he emphatically exclaimed that he did not think there was another such iron mine as this, and possessing equal facilities for being worked, in the known world. The working of this mine cannot fail to add much to the wealth and prosperity of the Province, and to the County of Carleton in particular. We wish the Company every success."

Morning News - Oct. 9, 1861 Provincial Exhibition. -Coldbrook Iron Works. - We must here notice the productions of the ""Coldbrook Iron Works"", which consisted of a sample of ""New Brunswick Magnetic Iron Ore,"" and nails manufactured from the same; White and Grey Scotch Pig Metal; Puddled and Scrap Balls; a Taper Bat, rolled for ship knees; Spike Rods; specimens of Cat Nails, Ship Spikes, &c., &c., all of which were briefly described in printed bills sent for distribution. The display was very creditable to the enterprise of the proprietor, Wm H. Scovil, Esq. Crandall's Grindstone Factory. - There were samples of good looking Grindstone, of a bluish cast, and excellent grit, from the Grindstone Factory of Mr. J.Crandall of Moncton, which is situated on the Petitcodiac River, about seven miles below Moncton, and is capable of turning out large quantities yearly for exportation to New York and Boston where it brings a remunerative price. This factory has been in operation for a length of time. A similar one has just been started by the Messrs. Seaman on the North Shore. The Minerals, Etc. - We have before noticed the extraordinary collections of mineral ores, stones, clays, fossils, &c., and it is only justice to several painstaking gentlemen of taste to give the names of those by whom they were exhibited. The largest and most varied collection was probably that arranged with the greatest neatness by William R. Payne of Portland. There were, we believe, in his several cases not less than four hundred specimens of all kinds of ores, marbles, slates, shales, &c., &c., and we were informed that the quantity exhibited was not a tithe of the whole number in the possession of that young gentleman, who has given his attention to the science for several years and has personally gathered the various specimens shewn by him, in all parts of the Province. Mr. George Matthew had two cases systematically arranged, containing many valuable mineral specimens. The brothers Matthews, we were informed, have also devoted considerable time and labor to the collecting of geological information. Mr. Matthews specimens were not entered in time to compete for the Prize or Diploma. Mr. Lunn, Civil Engineer, sent a very handsome case of beautiful specimens which attracted considerable attention. Mr. Robert Foulis' collection was an extraordinary one and would have shewn to more advantage had it been arranged with just a little more system. List of the Prizes. - The following is a list of the persons to whom Premiums were awarded by the Judges.- 6 Mineral Kingdom. Best collection of New Brunswick Minerals, William R. Payne, Portland; second best, Wm. Lunn, C.E., St. John. Best collection of mineral paints, Charles C. Barnes, Westmorland; second best, William R. Kent. Best collection building stone, Peter Cormack, St. John. Ores of Metals, Robert Foulis, St. John. Best collection Lime, Limestone, &c., Jas. Pearson, Kings Co.; second best, Benjamin Reynolds. Bricks, Tiles, &c., Thomas Davidson, Saint John. Pottery-ware, Warwick & Hayward, Saint John. Salt, J. Brand, Sussex. Best Grindstones, Sprague, Soule & Co., Gloucester; second best, Seaman Bros."

Miramichi Gleaner - Jul. 25, 1837 and N.B. Courier - Jul. 15, 1837 A fine specimen of magnetic Iron Ore, brought from Mispeck last week, has been analyzed by Mr. Foulis, who found it to contain 70 per cent of pure Iron. - Mr. F. requests us to state that he will gladly receive any specimens of Ores, found in the Province, and in return, will give his opinion gratuitously respecting their contents, and in cases that come within his power, a complete analysis."

Morning News - Sep. 12, 1859 An Important Discovery near St. John. - A deposit of iron ore has lately been discovered at a distance of about 12 miles from this City, which promises to become a source of wealth to all concerned with it, and to the Province at large. About a year ago, Mr. A. Phillips, an English gentleman, acquired possession of a small tract of land in this County, and upon examining it, ascertained that there were favorable indications upon it, of the existence of iron ore. An exploration was made which proved successful, and a portion of the ore was transmitted to England for analysis. A professional gentleman connected with the Mining School, Bristol, assayed four samples and the result gave an average produce of sixty five per cent of pure iron. He adds to the certificate that ""pure ore"" is exceedingly rich, and according to the analysis lately made by Dr. Percy, contains less silica than any at present worked in this Country."" This was on the 31st January last, and Mr. Philips being thus encouraged determined to make a thorough examination of the locality with a view to ascertain the extent and richness of the deposit. Excavations were made, and the result exceeded all expectations. The ore became more abundant and even of a better quality than that which was first extracted. The iron, too, has proved of the very best description - exactly suited to the manufacture of steel, and from its extreme ductility, of iron wire. The ore has been submitted to practical men in this country, who bear a very strong testimony to its great value. The iron appears upon examination to be remarkably fine and of a close texture, and is said to be superior to any produced from the iron mines of England and Wales. It seems, therefore, to be an unquestionable fact, that within a short distance from this City, a most valuable discovery has been made, by which the resources of the Province will be greatly extended. From the situation of the ore, the facilities afforded for its manufacture and shipment, we regard the enterprise as a most encouraging one for the investment of capital. The spot is now almost uninhabited, but in a few years, the labours of a busy population will effect a change and render the scene as attractive as any in New Brunswick. - Church Witness."

Daily Telegraph - Apr. 28, 1880 West Beach. - ... But though nature has been so parsimonious in many of her gifts towards this place, its ledges have long been known to contain deposits of iron. So long ago as 1853 a schooner load of ore was shipped by the late George Ball, of Mispeck. Mr. Ball made great efforts to continue the work, but owing to the want of energy and perhaps of means in the people of those days the scheme was abandoned. Quite recently, however, a lively interest has been manifested in the matter and already a stock company is talked of being organized. Some specimens of the quartz were lately tested at the Londonderry iron works, with the most satisfactory results. Mr. James Dolan, lately assayer of the Swedish Iron Works, Massachusetts, has made an analysis and pronounced it equal to the best Pennsylvania Iron. Should the mineral resources of the district turn out as Mr. Dolan anticipates, he feels sanguine that should our own people evince any reluctance towards putting money in the concern, he will have no difficulty in getting American capitalists to do so. He has corresponded with several, all of whom have signified their willingness to take stock should the prospects prove good. The property owners are elated at the prospect of the mine proving a real bonanza, and places which a few years ago could be purchased at nominal prices, now command good sums. Should the speculation be firmly established it will doubtless enhance the value of real estate in the district, and confer pecuniary benefits on its people, deprived as they are of the natural advantages which more favored localities possess."

Daily Evening Globe - Dec. 26, 1862 Mineral Localities of New Brunswick. - A Paper Read Before the Natural History Society of New Brunswick, At Its Last Meeting, By Mr. G.F. Matthew. - As no systematic list of the various mineral localities in the Province has heretofore been published, and the greater number still remain unknown to those who have not access to the few existing sources of information on the subject, I have endeavored to supply a want by collecting the numerous notes scattered through Gesner's report on the Geology of New Brunswick, adding thereto notices of localities discovered since his survey was brought to a close. In this work the writer has received valuable aid from his brother, as also from the late Dr.Robb and Mr. Wm. Payne of Portland. As the two branches of Natural Science, Geology and Mineralogy, are so intimately connected, it will be necessary, in order to obtain a comprehensive view of the character of the mineral deposits mentioned in the accompanying list, to give sketch of their geological distribution. The Province of New Brunswick is mostly occupied by unaltered rocks of aqueous origin. It is traversed, however, by three metamorphic bands which originate in a district of the same character, occupying the greater part of the County of Charlotte, and extending thence westwardly into the State of Maine. The northern land, pursuing a N.N.E. course through the Counties of York, Northumberland and Gloucester, terminates on the Bay of Chaleur. The 4 southern, of which the intermediate band passing through King's County is a subordinate spar, skirts the Bay of Fundy on its northern side as far as Chignecto Bay. A metamorphic district, of which little, however, is known, also exists about the head waters of the Tobique, Upsalquitch and Nepisiguit Rivers. The triangular area intervening between the two bands of altered and igneous rocks is occupied by an extensive coal formation, having deposits of Limestone and Gypsum, principally in the lower beds of the basin. On the triangular side of the first mentioned metamorphic band is another large and comparatively level district in which calcareous and argillaceous shales, of Silurian age, prevail. No great variety of minerals has been found in either of these flat districts, nor is it to be anticipated that there will be. Those, however, which do occur, are mostly of economic value (ores of iron, coal, gypsum, &c.) To the metamorphic bands and the district in which they unite therefore, we may look for the principal and more varied accessions to our mineral wealth. The following remarks regarding the southern metamorphic district are based upon the writer's own observations.The limestones of St. John Co. to which the localities in Portland pertain may have been produced by chemical deposition; for, although, they are only partially altered in many places, no fossils, except obscure vegetable remains have been detected in them. From the abundance of magnesian silicates we might suppose that these calcareous beds are, in part, ""dolomite."" The granite and gneiss of the limestone district contain tourmaline, epidote and laumontite, and small quantities of the sulphurets of iron, copper and lead, besides their ordinary constituents. Epidote is eminently characteristic of the trappean beds of Upper Devonian age, which extend in a double curve from Musquash to Bloomsbury Mt., and probably beyond. It is usually accompanied by quartz, specular iron and chlorite. Sheldon's Point is in this belt, and the minerals of Kingston and Clifton occur in stratified greenstone, probably of the same age; while those of Cape Spencer, West Beach and Black River are in overlying beds of sedimentary origin, largely charged with volcanic products. It will be seen that none of the zeolites found in the Triassic traps of Nova Scotia have yet been detected in the Devonian beds of volcanic origin on the North Shore of the Bay of Fundy; these latter seeming to hold (with the exception of chlorite and prehnite) anhydrous silicates only. The N.S. zeolites have been met with at only one locality in the Province - the Island of Grand Manan. It is not improbable, 5 therefore, that the trap of this island, like that of Isle au Haut and the North Shore of the Basin of Minas, is an outlier of the great masses which skirt the southern shore of the Bay of Fundy. Mineral Localities. - (This list was prepared three years ago for a supplement to Dana's Mineralogy which was not issued owing to the illness of the author of that work. I therefore feel that I am now at liberty to place it at your disposal. Alterations in the arrangement of some localities have been made, a few unimportant ones struck out, and others added. The marks used to distinguish the character of the specimens are similar to those in Dana's Mineralogy, viz: those which may be had in good specimens are underlined, (!) is added where they are remarkably good, (!!) where the specimens are unique. (NOTE - underlined articles are bracketed with square brackets, i.e. [coal] Albert County Grindstone Point and Island - Lignite, Iron Pyrites, Barytes. Hopewell - Gypsum, Selenite, [Alabaster].Albert Mines - Albertite !! Pollet River, 15 miles up - Coal. Shepody Mt. - Pyrolusite, [Calc spar], (rhombs with Manganese), Iron Pyrites, Native Alum, a clay. Turtle Creek - Coal. Carleton CountyWoodstock - Copper Pyrites, (mined) Wad, Bog Iron Ore. At Iron Mines - Hematite, Limonite. Charlotte County Beaver Harbour - Red jasper, Chlorite. Campobello island; at Welshpool - Iron Pyrites, Galena, Blende, Erubescite, Copper Pyrites. At head of Harbor de Lute - Galena, 4 in. vein. At Head Harbor - Iron Pyrites, Copperas. Deer Island, on N.W. side - Magnetic Iron, Calc Spar, (in Amygdaloidal) Hornstone, Quartz, (in trap). Digdeguash R., at Hog Island - Red jasper. On W. side of entrance - Calc Spar, (rhombs, in conglomerate,) Chalcedony, (in Greenstone,) At Rolling Dam - Graphite. Grand Manan Island, between Northern Head and Dark Harbour - Amethyst, Agate, Jasper, Hornstone, [Thompsonite, Stilbite, Heulandite, Calc Spar, Zeolite (Mesotype?), Apophyllite], Specular Iron, Magnetic Iron. At Whale Cove - Calc spar ! Heulandite ! Laumontite ! Stilbite ! Semiopal ! At Fish Head (2 miles S. of Eel Brook) - Chlorite, (abundant in qtz). At Ross's Island - Quartz Crystals. White Head - Chlorite, Quartz Crystals. At Kent's Island - Veined Marble. L'Etang Island and Harbour - Marble, Serpentine, Chlorite, Iron Pyrites. Le Tete - Galena, Erubescite, Copper Pyrites, Barytes. 6 Magaguadavic R., at entrance - Veins of copper pyrites, Malachite, Azurite. One eighth of a mile E. - Galena. Red Head, (on Mace's Bay) - Red jasper. Seeley's Cove, Hill 1/2 mile N. of - Quartz crystals, Calc spar, Magnetic Iron, Iron Pyrites. St. Stephen, 4 1/2 miles N. of - Graphite (in greywacke). Molybdenite, (in gneiss.) Milltown - Pyrites. Simpson's Island, on the Shore - Copper glance, Malachite. [See note]. Waweig R., 3 miles up, at Cormick's Mills, - Pyrites, Feldspar, Schorl and Garnet, (in boulder). At Bartlett's Pond - Quartz crystals. At Oak Bay - Hepatic Pyrites, in greywacke.) Gloucester County Bathurst - Malachite, (in coal). Eight miles from, on Tete-a-gouche R. - Manganite, (in crystals and crystalline,) [Copper Pyrites]. Kent County Buctouche R. - Coal. Cocaigne R., on branch, 3 miles from bridge - Coal. Richibucto R., 3 miles above Ford's Mills and at

Big Brook - Coal. At Bass R. - Iron pyrites. Half mile W. of Liverpool - Bog Iron Ore. Kouchibouguaasis R. - Coal. Kings County Belleisle Bay, on N. Shore - Galena, (in limestone), veins of chalcedony, Jasper and Hornstone, (in trap). One and a half miles W. of Bull Moose Hill, on farms of Northrup and Benson - Large bed of Magnetic Iron. Clifton - [Orthoclase], (xls) Epidote, [(Pistacite)]. (common xls.) [Chlorite], (abundant granular,) Prehnite, all in bedded greenstone, Quartz crystals, Specular Iron. Hammond R., at Sherwood's - Graphite, (in limestone). Hampton, and at Darling's Lake, in loose pieces - Agate, Carnelian, Red jasper. Kingston, on ridge S. of village - Magnetic Iron, Magnetic Pyrites; also, Chlorite and Red jasper. Nerepis, near Hatfield's Mill - Iron Pyrites, (in greywacke). Near Mather's Inn - Amethyst, Quartz Crystals, Feldspar. Norton - Near Choat's Mill, on road to Belleisle - Argentif. Galena. One mile N. of Baxter's Inn - Specular Iron (xls) and Red Hematite. Quispamsis - Pyrites, Copper pyrites, Galena, Laumontite. Sussex, 1/4 mile from church, on McReady's farm - 7 [Selenite !] (hexagonal xls. forming in the mud of a spring.) [There are two fine groups of crystals from this locality in the Museum of the Mechanics' Institute.] Eight miles from Station, on Dutch Valley road - [Manganite], Pyrolusite, [Barytes.] Upham - Brine springs.Four miles E. of Titus Mill - Gypsum Northumberland County Boiestown - Coal. Barnaby's R., opposite mouth - Coal. Chatham - Coal, Iron Pyrites. Newcastle - Coal. Queens County Grand Lake, at Grand Point - Fossil Trees, containing Barytes, Pyrites, Copperas. Salmon River, (on Crawford's farm) - Coal, Caly, Iron Stone, Pyrites, Copperas. Newcastle - Coal mines. Coal Creek - Coal, (formerly mined.) Long Reach, opposite VanWart's - Chlorite. Washademoak River - Coal, (2 1/2 miles from Long's Creek.) Few miles above mouth on S.E. of a small cove - Hornstone, Jasper, Chalcedony, Carnelian, Quartz Crystals. Restigouche County Belledune Point - Verd Antique, Serpentine, Iceland Spar! Dalhousie, near to - [Agate], Carnelian. Point le Nim - Coal. St. John County Carleton, near Falls - Red Calcite. Chance Harbour - [Calc spar] (deep red xls) in quartz veins, Chlorite (in argill and talcose state). Brandy Brook - Quartz crystals. - Epidote (Pistacite) and Hornblende in boulders. Black R. settlement. - [Quartz crystals], Chlorite, Calc spar, Copper Pyrites, Specular Iron !(tabl. xls) Little Dipper Harbour, on W. side - Barytes, quartz crystals, Amethyst (in compact greenstone). Moosepath - Schorl (crystals), Hornblende (crystals), Felspar (red), Muscovite, Albite (?) Musquash, on E. side, Harb. at entrance - Graphite, Pyrites, Copperas. At Shannon's - Serpentine, Verd-Antique, [Chrysotile.] E. side of Musquash - [Quartz crystals] (veins in conglomerate). Portland, [Crow's Nest - Serpentine,] Chrysotile, Steatite, Magnesite, Asbestos. [Drury's Cove] - Indurated Talc, Pyrallolite (?), Graphite, Pyrites.[At the Falls] - Graphite (impure bed 4 ft.) [Fort Howe Hill] - Graphite, Calcite (several forms, viz: dogs-tooth spar, nail-head spar, &c.) [Howe's Road], 1 1/2 miles from St. John - Epidote (in syenite). ! 1/2 mile from road [Tremolite], Steatite, Mica (?). [Lily Lake] - Serpentine, Chrysotile, Talc, (radiated), Steatite, Graphite. [White Augite] (?). Quaco, Light House Pt. - Manganese, ([Pyrolusite]), (bed 4 ft). W. of Point - Lignite. E. of Quaco, Fuller's Creek - Graphite, Iron Pyrites. Farther Eastward - Schorl, Asbestos, Chrysotile, Serpentine. Sheldon's Pt. - [Epidote] (Pistacite and Zoisite), Actinolite, Asbestos, Calcite, Specular Iron, Malachite. Cape Spencer - Specular Iron (crystals), Calcite (crystals), Talc, Chlorite, Asbestos. Ten Mile Creek - Coal in slate and sandstone. West Beach - At Evan's - Quartz Crystals, Talc, Chlorite. Half Mile W. of Evan's - Vein of Magnesite with Talc, Chlorite and Magnetic Iron, Copper and Iron Pyrites, [Hematite], [Specular Iron]. [See note.] Point Wolf and Salmon R. - Iron and [Copper] [Pyrites], Asbestos, Chlorite, [Erubescite], Chrysocolla, [Cuprite.] Sunbury County Oromocto River, N. Branch, 10 miles up - Coal. Lincoln - Wad, Bog Iron Ore. Victoria County Tobique River - Red Jasper, Carnelian, Agate. At mouth, S. side - Galena. At mouth of Wapskehegan R. - Gypsum, Salt Springs. Three miles farther up - Stalactites (abundant). Quisibis River - [Blue Phosphate of Iron] (in clay). Westmorland County Bellevue - Iron Pyrites. Dorchester, Taylor's Farm - Cannel Coal, Clay Iron Stone. On Ayre's Farm - Petroleum, Asphaltum. Grand Anse - Gypsum, [Selenite] (large crystals), Apatite, (vide Gesner). Memramcook - Coal, [(Albertite).] Shediac - 4 miles up Scadouc R. - Coal. York County Harvey Settlement - Wad. Nashwaak River - Coal. Tay Creek - Coal. Pokiok River - Tin pyrites (in granite vein). Three miles from St. John River, in direction of Lake George - Stibnite ! [See note]. 9 In order to obtain a clearer view of the value of the mineralogical resources of the Province as thus far developed, let us take a glance at the more important facts to be deduced from the foregoing list. Many of the minerals noted in its columns are not of economic importance, and therefore will not receive any further notice. Serpentine and marble, both of which are largely used in ornamental work, are known to occur at many localities; but few of those which have been examined yield blocks sufficiently perfect to be useful to the manufacturer. Of such well known and widely distributed minerals as limestone and gypsum it is scarcely necessary to speak. Both, the former especially, are abundant in many parts of the Province. Heavy beds of limestone are common in the southern metamorphic belt, also on the Bay Chaleur. Unaltered deposits may be seen skirting the margin of the great coal field. Gypsum is confined mostly to the Lower Carboniferous series of King's, Albert, and Westmorland; but occurs also in the red sandstone district of the Tobique River. Chlorite or ""pipestone"" and Steatite or ""soapstone"" have been found at a number of places; but no deposit of the latter mineral, sufficiently large to be available for manufacturing purposes, has yet been discovered. Barytes, or ""heavy spar,"" has been met with only at a few localities, and not in any considerable quantity, unless we may except that in Sussex and a large deposit said to occur at Le Tete. This mineral is largely used in the manufacture of white paint, and also for other purposes. It resembles calcareous spar, but differs in cleavage and is much heavier. The only gem which this province has thus far yielded is that very common one called, according to its color, white stone or rock crystal, false topaz, and amethyst. Other varieties of this mineral, such as carnelian, agate and jasper, which are frequently used in jewellery, occur at several places. Garnet is reported from Waweig river, but it has not been found ""in situ"". All the tourmalines mentioned are of the ordinary black variety. It will be seen on examination of the catalogue, that all the metals in ordinary use as well as some others which are more infrequent, occur in this province. But of the commoner ones several have not been found in sufficient quantity to be worth extracting. Indications of tin were observed in the granite of the Pokiok river, by Dr. Gesner. Lead ore has been met with at Tobique River, Norton, Campo Bello, and other places, but not in sufficient quantities as to assure a profitable return to 10 the miner. Zinc blende is found at Campo Bello and a few other localities, but not even so abundantly as lead. This mineral is usually of a dark brown color, and is frequently associated, as at Campo Bello, with galena and copper pyrites. Several ores of copper, chiefly sulphurets and carbonates occur in various parts of the Province, but few of the mines opened in these deposits have been permanently worked. Those of Bathurst and Woodstock have been abandoned. But mining on a small scale is still continued at Salmon River and Le Tete, and experimental operations on the deposit at Simpson's Island have been commenced. Two ores of this metal have been newly added to the list of those already known to occur in the Province. These are the Suplhuret called copper glance, from Simpson's Island and cuprite, or the red oxide of copper found at Salmon River. Iron and manganese are the metals which above all others are most abundant. Heavy ore beds of the former are exposed at Woodstock, Nerepis Road, Bull Moose Hill, West Beach, and other localities referred to in the list. At the first mentioned place the ore has been worked for a number of years. Manganese occurs in greatest quantities and purity near the eastern terminations of the two metamorphic bands to which allusion has already been made. The earthy variety called Wad is also common. The mine near Bathurst which affords beautiful crystals of the grey oxide has been abandoned on account of the irregularity and unreliable character of the deposit. Operations, however, are still carried on at Sussex and Shepody. Of the precious metals, silver has been detected in some of the lead ores, in the ore of antimony near Pokiok, and in the copper ore of Simpson's Island, but only in minute quantities. Gold, so far as we are aware, is yet undiscovered; at least, there is no tangible evidence to show us that it has been found in the Province. If reliance may be placed on the results of the geological survey, the northern metamorphic band, the County of Charlotte, the region about the headquarters of the Tobique, and that part of the southern band which has not been shown to be of Devonian age, are the most promising districts for the gold seeker. The discovery of a rich gold field would undoubtedly give a great spur to the development of our Provincial resources, but, at the same time, would probably have a tendency to attract a lawless and reckless population. Seams of coal have been found at numerous localities within the great central area, covered by deposits of Carboniferous age. Few of these, however, promise to be productive. The unique variety found at Hillsborough has proved to be a mine of wealth to its owners. Operations have also been successfully carried on at the mines on Grand Lake for many years. But in no other part of the Province have beds of this mineral sufficiently large to attract the attention of capitalists, been opened. Those best qualified to judge (Drs. Robb and Dawson) of the productiveness of New Brunswick coal measures, gives us little reason to hope that they will yield stores of fossil fuel as large as, considering the extensive area which they cover, we might anticipate. Still the discovery of extensive beds is not altogether hopeless, for we should bear in mind that a great part of the area underlaid by these rocks remains unsettled and uncleared; and we may traverse parts of it for scores of miles through an unbroken wilderness. Although New Brunswick is not favored with the possession of mineral attractions so brilliant as some of her Colonial sisters, she is not altogether devoid of some solid advantages as the preceding summary will show. The many openings for the advantageous investment of capital, which are to be found in a young and flourishing colony is no doubt the reason why the abundant mineral wealth, with which bountiful Providence has endowed us, still remains undeveloped. As population increases, however, and our wants become more diversified, this source of a prosperous and remunerative commerce will receive the attention which it deserves. Already we see signs of the approach of such a period in the careful investigation which several newly discovered metallic deposits are receiving. [In these remarks I have endeavored as far as possible to occupy ground different from that taken up by Prof. L.W. Bailey in this valuable little publication on the mineral resources of the Province, as exemplified by the metallurgical collection of the University of New Brunswick; considering that a repetition of what has recently been made public would be superfluous.] Addenda. -Iron Ore of West Beach. - The bed of ore at this place inwhich the mine has been opened is included in the upper part of a large mass of coarse reddish-grey conglomerate, dipping to the S.E. at an angle of about 30ø, and distant a furlong from the shore. The pit or quarry from which the ore has been extracted has been opened in a bed of dark, reddish, brown hematite. One or more schooner loads have been taken away, and a quantity still remains awaiting shipment. The conglomerate is abundantly seamed with quartz containing scattered masses and veins of micaceous and specular iron in tabular crystals. Two or three miles eastward of the mine the iron ore again appears on the hill side. Here, however, three or four beds of ore (one of them 20 feet thick) are visible; and the associated rocks are different, consisting of beds of trap-ash, trap-ash slate, and talcomicaceous slate. The ore beds were not traced on the eastern side of Black River. Were it not for their variable thickness they might be sought for here with much probability of success. A continuation of the same rocks holds beds of limestone at Emerson's Creek, a few miles to the eastward. The facilities for working this ore are therefore, in some respects, unusually good, but no smelting operations have hitherto been undertaken. From its association it would appear that this ore was originally deposited in the state of a finely divided ferruginous mud, in a shallow sea and within the influence of active volcanoes. I hope to be able to show at some future time that the accompanying rocks do not possess the antiquity ascribed to them in the geological reports of Dr. Gesner, but are of a later date than the sandstones and shales of St. John, which have yielded such an abundant harvest of Devonian plants. [For the information regarding the two following localities, I am indebted to Edward Allison, Esq.] Copper Ore, Simpson's Island. -The vein of green carbonate (malachite) recently discovered, occurs in a small island, (not exceeding 100 acres in extent) about one mile south of Deer Island, andseven miles from Eastport. The island is composed of trap-rock, through which protrudes a band of slate, with nearly vertical layers, which extends across the island in an East and West direction; it being about four feet wide on the West side, and from ten to twelve feet wide where it terminates in a small cove on the East side of the Island. The copper lode occurs in this slate, and was discovered on the West side of the Island in a beach which extends (from high to low water) abut 400 feet. This beach is composed of rock covered with seaweed, except near high water mark, where it is shingle. The copper lode, where discovered, is about four feet wide, and about 150 feet from low water mark; it has been traced about 150 feet toward the shore and to low water mark. Several tons of this ore have been taken out and sent to Liverpool to be tested. A small sample sent some time since yielded 27 per cent of copper, and nearly four ounces of silver to the ton. The value of the ore as taken out is reported to be £27 stg. per ton. [Pieces of Copper glance (sulphuret of copper) were scattered through the Carbonate which forms the mass of the ore at the surface, and were found to increase when the evacuation was deepened. At a greater depth the ore probably consists of the former compound, as the carbonate seems to result entirely from decomposing agencies at work at and near the surface] - G.F.M. Antimony of York Co. -The vein of antimony recently discovered occurs in York Co., Parish of Prince William, about 20 miles above Fredericton, and is on the S.W. side of the river Saint John. The rise of the land from the river at this place is gradual, till the summit of the slope (about 300 feet high) is reached, when the ground falls away toward Lake George, and the Pokiok Stream. Near the top of the slope a band of primary rock, having a course about N.W. and S.E., protrudes through the soil, and is shown particularly where it crosses the highway. This band of rock contains the vein of antimony referred to. It was discovered in boulders evidently detached from this ridge, and upon uncovering the rock the antimony was discovered imbedded in it. The vein was traced about one quarter of a mile by trial pits, and probably extends further. It appears to be about two feet wide, with a dip to the North of about 45ø. The vein has not been penetrated to a depth of more than six feet. Samples of the ore

Daily Evening Globe - Dec. 26, 1862 Mineral Localities of New Brunswick. - A Paper Read Before the Natural History Society of New Brunswick, At Its Last Meeting, By Mr. G.F. Matthew. - As no systematic list of the various mineral localities in the Province has heretofore been published, and the greater number still remain unknown to those who have not access to the few existing sources of information on the subject, I have endeavored to supply a want by collecting the numerous notes scattered through Gesner's report on the Geology of New Brunswick, adding thereto notices of localities discovered since his survey was brought to a close. In this work the writer has received valuable aid from his brother, as also from the late Dr.Robb and Mr. Wm. Payne of Portland. As the two branches of Natural Science, Geology and Mineralogy, are so intimately connected, it will be necessary, in order to obtain a comprehensive view of the character of the mineral deposits mentioned in the accompanying list, to give sketch of their geological distribution. The Province of New Brunswick is mostly occupied by unaltered rocks of aqueous origin. It is traversed, however, by three metamorphic bands which originate in a district of the same character, occupying the greater part of the County of Charlotte, and extending thence westwardly into the State of Maine. The northern land, pursuing a N.N.E. course through the Counties of York, Northumberland and Gloucester, terminates on the Bay of Chaleur. The 4 southern, of which the intermediate band passing through King's County is a subordinate spar, skirts the Bay of Fundy on its northern side as far as Chignecto Bay. A metamorphic district, of which little, however, is known, also exists about the head waters of the Tobique, Upsalquitch and Nepisiguit Rivers. The triangular area intervening between the two bands of altered and igneous rocks is occupied by an extensive coal formation, having deposits of Limestone and Gypsum, principally in the lower beds of the basin. On the triangular side of the first mentioned metamorphic band is another large and comparatively level district in which calcareous and argillaceous shales, of Silurian age, prevail. No great variety of minerals has been found in either of these flat districts, nor is it to be anticipated that there will be. Those, however, which do occur, are mostly of economic value (ores of iron, coal, gypsum, &c.) To the metamorphic bands and the district in which they unite therefore, we may look for the principal and more varied accessions to our mineral wealth. The following remarks regarding the southern metamorphic district are based upon the writer's own observations.The limestones of St. John Co. to which the localities in Portland pertain may have been produced by chemical deposition; for, although, they are only partially altered in many places, no fossils, except obscure vegetable remains have been detected in them. From the abundance of magnesian silicates we might suppose that these calcareous beds are, in part, ""dolomite."" The granite and gneiss of the limestone district contain tourmaline, epidote and laumontite, and small quantities of the sulphurets of iron, copper and lead, besides their ordinary constituents. Epidote is eminently characteristic of the trappean beds of Upper Devonian age, which extend in a double curve from Musquash to Bloomsbury Mt., and probably beyond. It is usually accompanied by quartz, specular iron and chlorite. Sheldon's Point is in this belt, and the minerals of Kingston and Clifton occur in stratified greenstone, probably of the same age; while those of Cape Spencer, West Beach and Black River are in overlying beds of sedimentary origin, largely charged with volcanic products. It will be seen that none of the zeolites found in the Triassic traps of Nova Scotia have yet been detected in the Devonian beds of volcanic origin on the North Shore of the Bay of Fundy; these latter seeming to hold (with the exception of chlorite and prehnite) anhydrous silicates only. The N.S. zeolites have been met with at only one locality in the Province - the Island of Grand Manan. It is not improbable, 5 therefore, that the trap of this island, like that of Isle au Haut and the North Shore of the Basin of Minas, is an outlier of the great masses which skirt the southern shore of the Bay of Fundy. Gloucester County Bathurst - Malachite, (in coal). Eight miles from, on Tete-a-gouche R. - Manganite, (in crystals and crystalline,) [Copper Pyrites]. Kent County Buctouche R. - Coal. Cocaigne R., on branch, 3 miles from bridge - Coal. Richibucto R., 3 miles above Ford's Mills and at Big Brook - Coal. At Bass R. - Iron pyrites. Half mile W. of Liverpool - Bog Iron Ore. Kouchibouguaasis R. - Coal. Kings County Belleisle Bay, on N. Shore - Galena, (in limestone), veins of chalcedony, Jasper and Hornstone, (in trap). One and a half miles W. of Bull Moose Hill, on farms of Northrup and Benson - Large bed of Magnetic Iron. Clifton - [Orthoclase], (xls) Epidote, [(Pistacite)]. (common xls.) [Chlorite], (abundant granular,) Prehnite, all in bedded greenstone, Quartz crystals, Specular Iron. Hammond R., at Sherwood's - Graphite, (in limestone). Hampton, and at Darling's Lake, in loose pieces - Agate, Carnelian, Red jasper. Kingston, on ridge S. of village - Magnetic Iron, Magnetic Pyrites; also, Chlorite and Red jasper. Nerepis, near Hatfield's Mill - Iron Pyrites, (in greywacke). Near Mather's Inn - Amethyst, Quartz Crystals, Feldspar.

Norton - Near Choat's Mill, on road to Belleisle - Argentif. Galena. One mile N. of Baxter's Inn - Specular Iron (xls) and Red Hematite. Quispamsis - Pyrites, Copper pyrites, Galena, Laumontite. Sussex, 1/4 mile from church, on McReady's farm - 7 [Selenite !] (hexagonal xls. forming in the mud of a spring.) [There are two fine groups of crystals from this locality in the Museum of the Mechanics' Institute.] Eight miles from Station, on Dutch Valley road - [Manganite], Pyrolusite, [Barytes.] Upham - Brine springs.Four miles E. of Titus Mill - Gypsum Northumberland County Boiestown - Coal. Barnaby's R., opposite mouth - Coal. Chatham - Coal, Iron Pyrites. Newcastle - Coal. Queens County Grand Lake, at Grand Point - Fossil Trees, containing Barytes, Pyrites, Copperas. Salmon River, (on Crawford's farm) - Coal, Caly, Iron Stone, Pyrites, Copperas. Newcastle - Coal mines. Coal Creek - Coal, (formerly mined.) Long Reach, opposite VanWart's - Chlorite. Washademoak River - Coal, (2 1/2 miles from Long's Creek.) Few miles above mouth on S.E. of a small cove - Hornstone, Jasper, Chalcedony, Carnelian, Quartz Crystals. Restigouche County Belledune Point - Verd Antique, Serpentine, Iceland Spar! Dalhousie, near to - [Agate], Carnelian. Point le Nim - Coal. St. John County Carleton, near Falls - Red Calcite. Chance Harbour - [Calc spar] (deep red xls) in quartz veins, Chlorite (in argill and talcose state). Brandy Brook - Quartz crystals. - Epidote (Pistacite) and Hornblende in boulders. Black R. settlement. - [Quartz crystals], Chlorite, Calc spar, Copper Pyrites, Specular Iron !(tabl. xls) Little Dipper Harbour, on W. side - Barytes, quartz crystals, Amethyst (in compact greenstone). Moosepath - Schorl (crystals), Hornblende (crystals), Felspar (red), Muscovite, Albite (?) Musquash, on E. side, Harb. at entrance - Graphite, Pyrites, Copperas. At Shannon's - Serpentine, Verd-Antique, [Chrysotile.] E. side of Musquash - [Quartz crystals] (veins in conglomerate). Portland, [Crow's Nest - Serpentine,] Chrysotile, Steatite, Magnesite, Asbestos. [Drury's Cove] - Indurated Talc, Pyrallolite (?), Graphite, Pyrites.[At the Falls] - Graphite (impure bed 4 ft.) [Fort Howe Hill] - Graphite, Calcite (several forms, viz: dogs-tooth spar, nail-head spar, &c.) [Howe's Road], 1 1/2 miles from St. John - Epidote (in syenite). ! 1/2 mile from road [Tremolite], Steatite, Mica (?). [Lily Lake] - Serpentine, Chrysotile, Talc, (radiated), Steatite, Graphite. [White Augite] (?). Quaco, Light House Pt. - Manganese, ([Pyrolusite]), (bed 4 ft). W. of Point - Lignite. E. of Quaco, Fuller's Creek - Graphite, Iron Pyrites. Farther Eastward - Schorl, Asbestos, Chrysotile, Serpentine. Sheldon's Pt. - [Epidote] (Pistacite and Zoisite), Actinolite, Asbestos, Calcite, Specular Iron, Malachite. Cape Spencer - Specular Iron (crystals), Calcite (crystals), Talc, Chlorite, Asbestos. Ten Mile Creek - Coal in slate and sandstone. West Beach - At Evan's - Quartz Crystals, Talc, Chlorite. Half Mile W. of Evan's - Vein of Magnesite with Talc, Chlorite and Magnetic Iron, Copper and Iron Pyrites, [Hematite], [Specular Iron]. [See note.] Point Wolf and Salmon R. - Iron and [Copper] [Pyrites], Asbestos, Chlorite, [Erubescite], Chrysocolla, [Cuprite.] Sunbury County Oromocto River, N. Branch, 10 miles up - Coal. Lincoln - Wad, Bog Iron Ore. Victoria County Tobique River - Red Jasper, Carnelian, Agate. At mouth, S. side - Galena. At mouth of Wapskehegan R. - Gypsum, Salt Springs. Three miles farther up - Stalactites (abundant). Quisibis River - [Blue Phosphate of Iron] (in clay). Westmorland County Bellevue - Iron Pyrites. Dorchester, Taylor's Farm - Cannel Coal, Clay Iron Stone. On Ayre's Farm - Petroleum, Asphaltum. Grand Anse - Gypsum, [Selenite] (large crystals), Apatite, (vide Gesner). Memramcook - Coal, [(Albertite).] Shediac - 4 miles up Scadouc R. - Coal. York County Harvey Settlement - Wad. Nashwaak River - Coal. Tay Creek - Coal. Pokiok River - Tin pyrites (in granite vein). Three miles from St. John River, in direction of Lake George - Stibnite ! [See note]. 9 In order to obtain a clearer view of the value of the mineralogical resources of the Province as thus far developed, let us take a glance at the more important facts to be deduced from the foregoing list. Many of the minerals noted in its columns are not of economic importance, and therefore will not receive any further notice. Serpentine and marble, both of which are largely used in ornamental work, are known to occur at many localities; but few of those which have been examined yield blocks sufficiently perfect to be useful to the manufacturer. Of such well known and widely distributed minerals as limestone and gypsum it is scarcely necessary to speak. Both, the former especially, are abundant in many parts of the Province. Heavy beds of limestone are common in the southern metamorphic belt, also on the Bay Chaleur. Unaltered deposits may be seen skirting the margin of the great coal field. Gypsum is confined mostly to the Lower Carboniferous series of King's, Albert, and Westmorland; but occurs also in the red sandstone district of the Tobique River. Chlorite or ""pipestone"" and Steatite or ""soapstone"" have been found at a number of places; but no deposit of the latter mineral, sufficiently large to be available for manufacturing purposes, has yet been discovered. Barytes, or ""heavy spar,"" has been met with only at a few localities, and not in any considerable quantity, unless we may except that in Sussex and a large deposit said to occur at Le Tete. This mineral is largely used in the manufacture of white paint, and also for other purposes. It resembles calcareous spar, but differs in cleavage and is much heavier. The only gem which this province has thus far yielded is that very common one called, according to its color, white stone or rock crystal, false topaz, and amethyst. Other varieties of this mineral, such as carnelian, agate and jasper, which are frequently used in jewellery, occur at several places. Garnet is reported from Waweig river, but it has not been found ""in situ"". All the tourmalines mentioned are of the ordinary black variety. It will be seen on examination of the catalogue, that all the metals in ordinary use as well as some others which are more infrequent, occur in this province. But of the commoner ones several have not been found in sufficient quantity to be worth extracting. Indications of tin were observed in the granite of the Pokiok river, by Dr. Gesner. Lead ore has been met with at Tobique River, Norton, Campo Bello, and other places, but not in sufficient quantities as to assure a profitable return to 10 the miner. Zinc blende is found at Campo Bello and a few other localities, but not even so abundantly as lead. This mineral is usually of a dark brown color, and is frequently associated, as at Campo Bello, with galena and copper pyrites. Several ores of copper, chiefly sulphurets and carbonates occur in various parts of the Province, but few of the mines opened in these deposits have been permanently worked. Those of Bathurst and Woodstock have been abandoned. But mining on a small scale is still continued at Salmon River and Le Tete, and experimental operations on the deposit at Simpson's Island have been commenced. Two ores of this metal have been newly added to the list of those already known to occur in the Province. These are the Suplhuret called copper glance, from Simpson's Island and cuprite, or the red oxide of copper found at Salmon River. Iron and manganese are the metals which above all others are most abundant. Heavy ore beds of the former are exposed at Woodstock, Nerepis Road, Bull Moose Hill, West Beach, and other localities referred to in the list. At the first mentioned place the ore has been worked for a number of years. Manganese occurs in greatest quantities and purity near the eastern terminations of the two metamorphic bands to which allusion has already been made. The earthy variety called Wad is also common. The mine near Bathurst which affords beautiful crystals of the grey oxide has been abandoned on account of the irregularity and unreliable character of the deposit. Operations, however, are still carried on at Sussex and Shepody. Of the precious metals, silver has been detected in some of the lead ores, in the ore of antimony near Pokiok, and in the copper ore of Simpson's Island, but only in minute quantities. Gold, so far as we are aware, is yet undiscovered; at least, there is no tangible evidence to show us that it has been found in the Province. If reliance may be placed on the results of the geological survey, the northern metamorphic band, the County of Charlotte, the region about the headquarters of the Tobique, and that part of the southern band which has not been shown to be of Devonian age, are the most promising districts for the gold seeker. The discovery of a rich gold field would undoubtedly give a great spur to the development of our Provincial resources, but, at the same time, would probably have a tendency to attract a lawless and reckless population. Seams of coal have been found at numerous localities within the great central area, covered by deposits of Carboniferous age. Few of these, however, promise to be productive. The unique variety found at Hillsborough has proved to be a mine of wealth to its owners. Operations have also been successfully carried on at the mines on Grand Lake for many years. But in no other part of the Province have beds of this mineral sufficiently large to attract the attention of capitalists, been opened. Those best qualified to judge (Drs. Robb and Dawson) of the productiveness of New Brunswick coal measures, gives us little reason to hope that they will yield stores of fossil fuel as large as, considering the extensive area which they cover, we might anticipate. Still the discovery of extensive beds is not altogether hopeless, for we should bear in mind that a great part of the area underlaid by these rocks remains unsettled and uncleared; and we may traverse parts of it for scores of miles through an unbroken wilderness. Although New Brunswick is not favored with the possession of mineral attractions so brilliant as some of her Colonial sisters, she is not altogether devoid of some solid advantages as the preceding summary will show. The many openings for the advantageous investment of capital, which are to be found in a young and flourishing colony is no doubt the reason why the abundant mineral wealth, with which bountiful Providence has endowed us, still remains undeveloped. As population increases, however, and our wants become more diversified, this source of a prosperous and remunerative commerce will receive the attention which it deserves. Already we see signs of the approach of such a period in the careful investigation which several newly discovered metallic deposits are receiving. [In these remarks I have endeavored as far as possible to occupy ground different from that taken up by Prof. L.W. Bailey in this valuable little publication on the mineral resources of the Province, as exemplified by the metallurgical collection of the University of New Brunswick; considering that a repetition of what has recently been made public would be superfluous.] Addenda. -Iron Ore of West Beach. - The bed of ore at this place inwhich the mine has been opened is included in the upper part of a large mass of coarse reddish-grey conglomerate, dipping to the S.E. at an angle of about 30ø, and distant a furlong from the shore. The pit or quarry from which the ore has been extracted has been opened in a bed of dark, reddish, brown hematite. One or more schooner loads have been taken away, and a quantity still remains awaiting shipment. The conglomerate is abundantly seamed with quartz containing scattered masses and veins of micaceous and specular iron in tabular crystals. Two or three miles eastward of the mine the iron ore again appears on the hill side. Here, however, three or four beds of ore (one of them 20 feet thick) are visible; and the associated rocks are different, consisting of beds of trap-ash, trap-ash slate, and talcomicaceous slate. The ore beds were not traced on the eastern side of Black River. Were it not for their variable thickness they might be sought for here with much probability of success. A continuation of the same rocks holds beds of limestone at Emerson's Creek, a few miles to the eastward. The facilities for working this ore are therefore, in some respects, unusually good, but no smelting operations have hitherto been undertaken. From its association it would appear that this ore was originally deposited in the state of a finely divided ferruginous mud, in a shallow sea and within the influence of active volcanoes. I hope to be able to show at some future time that the accompanying rocks do not possess the antiquity ascribed to them in the geological reports of Dr. Gesner, but are of a later date than the sandstones and shales of St. John, which have yielded such an abundant harvest of Devonian plants. [For the information regarding the two following localities, I am indebted to Edward Allison, Esq.] Copper Ore, Simpson's Island. -The vein of green carbonate (malachite) recently discovered, occurs in a small island, (not exceeding 100 acres in extent) about one mile south of Deer Island, andseven miles from Eastport. The island is composed of trap-rock, through which protrudes a band of slate, with nearly vertical layers, which extends across the island in an East and West direction; it being about four feet wide on the West side, and from ten to twelve feet wide where it terminates in a small cove on the East side of the Island. The copper lode occurs in this slate, and was discovered on the West side of the Island in a beach which extends (from high to low water) abut 400 feet. This beach is composed of rock covered with seaweed, except near high water mark, where it is shingle. The copper lode, where discovered, is about four feet wide, and about 150 feet from low water mark; it has been traced about 150 feet toward the shore and to low water mark. Several tons of this ore have been taken out and sent to Liverpool to be tested. A small sample sent some time since yielded 27 per cent of copper, and nearly four ounces of silver to the ton. The value of the ore as taken out is reported to be £27 stg. per ton. [Pieces of Copper glance (sulphuret of copper) were scattered through the Carbonate which forms the mass of the ore at the surface, and were found to increase when the evacuation was deepened. At a greater depth the ore probably consists of the former compound, as the carbonate seems to result entirely from decomposing agencies at work at and near the surface] - G.F.M. Antimony of York Co. -The vein of antimony recently discovered occurs in York Co., Parish of Prince William, about 20 miles above Fredericton, and is on the S.W. side of the river Saint John. The rise of the land from the river at this place is gradual, till the summit of the slope (about 300 feet high) is reached, when the ground falls away toward Lake George, and the Pokiok Stream. Near the top of the slope a band of primary rock, having a course about N.W. and S.E., protrudes through the soil, and is shown particularly where it crosses the highway. This band of rock contains the vein of antimony referred to. It was discovered in boulders evidently detached from this ridge, and upon uncovering the rock the antimony was discovered imbedded in it. The vein was traced about one quarter of a mile by trial pits, and probably extends further. It appears to be about two feet wide, with a dip to the North of about 45ø. The vein has not been penetrated to a depth of more than six feet. Samples of the ore

URN: 0276 / LEGI / IDX_Names: West Beach; Legislation, etc.;

Royal Gazette - May 9, 1860 An Act to incorporate the Saint John Iron Works Company. Section. Section. 1. Company incorporated; name 6. Capital may be and capabilities. increased. 2. First meeting, by whom and 7. Company authorized to how to be called; powers. assess shares; 3. Capital stock, amount, and proceedings against when payable. delinquents. 4. Liability for debts. 8. Corporation to 5. Liability of Stockholders terminate unless 10 per for stock subscribed. cent of capital be paid up within three years. Passed 9th April 1860. Whereas the efficient opening and working of Mines at West Beach in the County of Saint John, and elsewhere in the Province of New Brunswick, will be highly advantageous to the Province; And whereas the amount of capital necessary to be invested in such undertaking, renders it essential that the Company 7 engaged therein should be incorporated; - Be it therefore enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That Alfred Phillips, William Henry Scovil, and the Reverend William Scovil, their associates, successors and assigns, shall be and they are hereby erected into a Company, and declared to be a body politic and corporate by the name of ""The Saint John Iron Works Company,"" and by that name shall have all the general powers and privileges made incident to a Corporation by Act of Assembly of this Province, for the purpose of opening and working Mines at West Beach, in the County of Saint John, and elsewhere in the Province of New Brunswick, and establishing all necessary works therewith connected, and for the convenient carrying on and managing the same. 2. That the first meeting of the said Corporation shall be held at the City of Saint John, and shall be called by any one member of the said Company, by giving at least twenty days' notice in the Royal Gazette published in this Province, and any two of the Newspapers published in the City of Saint John, previous to such meeting; at which meeting the Company shall be declared constituted, bye laws established, and Directors, or a Manager and other officers appointed, as by such bye laws shall be prescribed, and which they are hereby authorized to make. 3. That the capital stock of the said Corporation shall consist of the sum of thirty thousand pounds; ten pounds per centum of the said capital stock to be paid in before the said Corporation shall be entitled to purchase any property, real or personal, or incur any debts, and the remainder of the said stock to be paid at such time and times and in such parts or portions as the business of the said Company shall from time to time require; the whole amount of such capital stock to be divided into three thousand shares of ten pounds each. 4. That the joint stock and property of the Company shall alone in the first instance be responsible for the debts and engagements of the said Company, and that no creditors or person or persons having any demand against the said Company, shall have recourse against the separate property of any shareholder on account thereof, except in case of deficiency, or where the joint stock of the said Company shall fall short of or not be equal to the payment of any debt, due or demand against the same, that then and in such case the goods and chattels, lands and tenements of each shareholder, shall and may be levied upon and seized to satisfy such debt or demand, to the extent of the share or shares or interest of such shareholder in the joint stock of the Company, and no more, and that such amount shall and may be levied by process of execution in the same suit in which such debt, due or demand may be recovered against the said Company. 5. And be it enacted, that each and every shareholder in the said Corporation shall be held liable to the said Company for each and every call or assessment made, not however to exceed the amount the stock so subscribed for, and shall and may be sued for the same by the said Corporation in any Court of Record within the Province. 6. That so soon as the said capital stock shall have been paid in and expended for the purpose of this Corporation, it shall and may be lawful for the said stockholders, at any general meeting to be for that purpose called, or the major part of them then present, to increase the said capital stock from time to time in such sums as they may seem expedient, to a sum not exceeding one hundred thousand pounds, and they shall have power to increase the number of shares accordingly. 7. That the said Company shall have power to levy and collect assessments upon the shares from time to time, of such sums of money as may be deemed necessary for carrying on the business of the Company; and whenever any assessment shall be made by the stockholders of the Company, it shall be the duty of the proper officer to give public notice thereof in two Newspapers published in the City of Saint John aforesaid, and in the Royal Gazette, requiring payment of such assessment within thirty days; and if any stockholder shall neglect or refuse to pay the amount of such assessment upon his shares at the time prescribed, it shall be the duty of such officer of the Company to advertise all such delinquent shares for sale at public auction, giving at least thirty days' notice of the time and place of such sale, and all shares upon which assessment is not then paid, with interest from the time such assessment is due, shall be sold to the highest bidder, and after retaining the amount so due on such shares and interest, with all expenses of selling and advertising, the residue, if any, shall be paid over to the former owner, and a new certificate or certificates of the shares so sold shall be made out and delivered to the purchaser; provided always, that no assessment shall be made, except by a vote of the stockholders, and a majority of the shares. 8. That unless ten pounds per centum of the said capital stock shall be actually paid for the purposes of the said Corporation, and a certificate of such payment made and verified on oath by the majority of the Directors of the said Corporation, (which oath any Justice of the Peace is hereby authorized to administer,) shall be filed in the Office of the Secretary of the Province before the expiration of three years from the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation be terminated at the end of the said three years."

URN: 0309 / IDX_Names: Welshpool;

St. Croix Courier - Nov. 26, 1874 The greater part of the Island of Campobello belonged to the late Capt. Robinson-Owen, and has passed into the hands of Boston speculators who have been incorporated as the Campo Bello Company. Mining, lumbering, fishing, farming, and the task of making the island a summer resort, will be the work of the Company.- Sentinel"

St. Andrews Beacon - Nov. 1, 1894 Can any one furnish the BEACON with particulars of the Campobello Mining Company, which was established some where about 1865. Did it ever operate? Does it own property on the Island? Are its bonds of any value? These are some of the questions that we would like to have answered."

St. Andrews Beacon - Apr. 6, 1899 Campobello Copper Ore. - Several barrels of ore taken from the recently opened copper veins at Campobello island, have been shipped to New York by Messrs. Lord & Wells, who own the large tract of land there, including the Owen Hotel property. The owners have had several blasters at work and are much pleased with the ore taken out. They recently returned to New York, where a quantity of machinery will be purchased and sent to the island. Extensive mining operations are looked for by the residents near Welshpool."

URN: 0309 / IDX_Names: Welshpool;

St. Croix Courier - Mar. 23, 1899 (from Eastport via Bangor News) Copper Mining at Campobello. - Another Attempt to be Made to Open Up the Veins. - It has been known for the past forty years that valuable deposits of copper are to be found on Campobello Island, N.B., and that more than thirty years ago considerable of the ore was taken out of the several veins and shipped west by the former owners. Owing to the cost of getting out the rock very little work was done there and the scheme of copper mining was finally given up as unprofitable, although it was not denied that there was plenty of metal in different parts of the island. The oldest residents of the little Canadian village of Welshpool can remember the first discovery of the metal and the excitement it caused, and the operations of James Seymour, a New Yorker, about thirty years ago are yet easily remembered. He opened up several large veins and shipped a quantity of the deposit away, but little work followed, when a large consignment of the ore was lost while stored on a wharf in this city during the former disastrous fire which is well known to Eastporters. The villagers at Campobello are again looking forward to extensive operations, as work was resumed a few days ago by the present owners of the 1000 acres, which take in most of Welshpool and include Deer Point, on which the large Owen Hotel is situated. Running through this latter point are several deposits of copper and traces of lead and silver are also seen. It is claimed that there is enough of the latter to pay for working the rocks, and copper to the extent of 9 per cent. is also claimed, which can be mined at a profit. The correspondent recently went over the property in company with two New York owners, who have several blasters getting out a supply of the ore. The deposits in three separate places seem to widen as they enter the ground and appear to be from two to six feet in width at Deer Point. Here a cave several feet deep has been dug into the solid rock and a crew with steam drills will soon be engaged. Michael McCurdy, the well known city blaster, has been engaged by the owners and is now at work there. Our Canadian neighbours are looking forward to a revival of business and the opening of a real copper mine. - Cor. Bangor News."

URN: 0309 / LEGI / IDX_Names: Welshpool; Legislation, etc.;

Morning News - Mar. 21, 1860 Fredericton, March 19. - This morning the Bill to incorporate the Campobello Mining Company passed in Committee of the whole."

Royal Gazette - May 9, 1860 7 Cap. LXXXVIII. An Act to incorporate the Campo Bello Mining Company. Section. Section. 1. Company incorporated. 5. Liability for debts. 2. Capital, amount and divison 6. Act void if 25 per into shares. Cent of capital be not 3. First meeting, time and subscribed within one place of. Year. 4. Liability of stockholders for stock subscribed. Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That John J. Robinson, Clement Hemery, Elijah Whitney, George D. Street, John C. Allen, and their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The Campo Bello Mining Company,"" and by that name shall have all the general powers and privileges incident to a Corporation by Act of Assembly of this Province, for the purpose of digging, mining, smelting, and exporting Copper and Copper ore, Lead, Tin, and other metals and minerals, in and for the Island of Campo Bello, and such other business as may be incident thereto. 2. The capital stock of the said Company shall be thirty thousand pounds, divided into six thousand shares of five pounds each. 3. The first meeting of said Company for organizing the same shall be held at such time and place in this Province as may be appointed by a majority of the above named persons, by giving twenty days notice thereof in a Newspaper published in the County of Charlotte. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of or to carry on the operations for which the said Company was incorporated; which call or assessment may be sued for by the said Corporation and recovered in any Court of Record within this Province. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. Unless twenty five per cent of the capital stock shall be subscribed within one year after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be terminated."

URN: 0309 / LIME / G3 / SPRI / IDX_Names: Welshpool; Lime - General; Granite; Mineral Springs;

N.B. Courier - Jul. 28, 1838 Geological Survey. - We omitted to mention in a former number, that Dr. Gesner had re commenced his Geological Survey of the Province; having proceeded to Charlotte County for that purpose. We understand that Gentleman will not publish any account of his proceedings, until he has finally made his Report in the Autumn; but we have reason to believe that his discoveries in that quarter are of a highly interesting nature; and that he has examined the Saint Croix from its source to some distance above Saint Stephen's and the country in that neighborhood, together with the Islands in Passamaquoddy Bay which belong to the British, with the exception of Grand Manan; where valuable Lime and Granite quarries and Mineral Springs have been found. Lead Ore has been obtained on Campobello; and there is an abundance of Marl, which is valuable to the farmers in that quarter, and remarkable tertiary deposits containing numerous fossil shells. These features of the country in a geological point of view are new and interesting; and the inhabitants of this Province generally, may promise themselves much advantage from Dr. Gesner's valuable labours. - Fredericton Sentinel,

URN: 0309 / P7 / IDX_Names: Welshpool; Lepreau/ Pocologan Silver;

St. Andrews Standard - Dec. 23, 1857 Mineral Resources of Charlotte County - Several of our contemporaries have noticed that the copper mine on the property of the Hon. J.J. Robinson at Welshpool, Campobello, is now being worked successfully. - The ore is reported to be of a superior quality, and abundant; it is also asserted that the speculation will prove remunerative to those engaged in it. Specimens of iron ore and coal have also been discovered on Campo Bello, and the adjacent islands. In the Parish of St. George, we understand that some years ago silver ore was discovered in the vicinity of Red Rock, from which some small articles were manufactured, but either owing to the lack of the raw material or want of capital nothing further was done. At Mascarene in the same Parish, and at Old Woman's Oven in St. Patrick, large quantities of copper ore have been sold to the Americans who shipped them to the United States. Since Dr. Gesner's geological survey of this County, it has been well known that the County of Charlotte abounds in mineral resources, which only require capital, skill and energy to develope them. We trust the day is at hand when capitalists will be induced to invest their money in working these mines, and that the investment will prove remunerative to all concerned. We look forward with confidence for brighter days for the County of Charlotte; - the Railway although in its incipient stage of traffic, has convinced every unprejudiced person what may confidently be expected when it is opened to Woodstock, and the incalculable benefit it will be not only to its shareholders, but to this County."

URN: 0310 / IDX_Names: Adams Island;

Daily Telegraph - Oct. 12, 1869 Copper Mines. - Mr. Waters, of London, agent for an English mining company, has bought Jamieson's Island in Quoddy River from Mr. Samuel Dick, for $3,000. The island is quite small but the prospects of rich deposits of copper are very flattering. At Adams' Island two shafts are sunk by a Halifax Company, and the ore obtained is of an excellent quality and tests high. [NOTE - suspect Cunard]"

St. Andrews Beacon - Apr. 4, 1895 ALMOST A TRAGEDY.- Three miners narrowly escape a terrible death.- Shaft-house of the Lord Copper Mine Takes Fire While the Men are in the Mine - Oil Stove Supposed to have been the Cause.- On Adams Island, a little spot of land or rock protruding from the surface of the Passamaquoddy Bay, there came very near being a tragedy, a few days ago. Not everybody knows that Mr. James Lord, of Lord's Cove, has a copper mine that he is engaged in developing on this island, and so far with very satisfactory results. A shaft, about 100 feet deep, has been sunk, and at the bottom a cross section was begun not long since. Over the mouth of this shaft there existed a wooden building about sixteen feet square, but this building exists no longer. It went up very suddenly in smoke a week or more ago, and it was almost a miracle that the miners escaped with their lives. There were three of them in the bottom of the shaft at the time - Isaac Williamson, Robt Byers and John Morrison. Morrison was the first to observe the fire. He called out to his companions, and then fled to the open air. Byers and Williamson, who were working in the cross drift, did not hear what Morrison had said when he called to them, but thinking that something alarming must have occurred, they hastened after him. They were not long in finding out what it was, for as soon as they reached the main shaft they were horrified to see a roaring flame over their heads. Of the two Byers was the first to escape. Williamson was so long getting out that Morrison feared that he had succumbed to the smoke. He rushed into the burning building to find Williamson in a half dazed state near the mouth of the shaft. He dragged him out to the open air, and not a moment too soon, for he was pretty thoroughly exhausted. The three men succeeded in pulling the building down and extinguishing the fire. Had their escape from the mine been delayed a minute longer, they would have perished, as the burning timbers would certainly have fallen into the mine and set fire to the wooden supports. The fire is supposed to have caught from an oil stove, which was burning in the shaft house for the purpose of thawing out dynamite."

St. Andrews Beacon - Jul. 20, 1899 Seeking for Copper. - Mr. James McLeod, who has been prospecting for copper about West Isles for several years, has now a wind-mill pump at work pumping out the old Putnam shaft on Adams Island. He has taken out some magnificent samples. One sample, weighing 60 lbs., taken out the other day, seemed to be nearly solid

Oct. 1930 - Copied from: St. Croix Courier - Oct. 30, 1960 30 Years Ago. - Escaping death by a narrow margin Wednesday when they became imprisoned at the bottom of a hundred-foot mine shaft at Adams Island, Alfred Devereau of Mascarene and Fred Steen of L'Etang were unconscious from suffocating gas fumes resulting from an explosion which drove the hoisting tub at the mine sideways, this effectively blocking the passageway where the unfortunate men lay. They were rescued by Hazen and Charles Lord after they had worked for an hour to free the imprisoned men. Dr. Murray of Lord's Cove was hastily summoned and found the men in serious condition. The copper mine is owned by the Eastern Mining and

URN: 0310 / IDX_Names: Adams Island;

St. Croix Courier - Mar. 26, 1953 Grand Manan Most Likely Area. - Islands Hold Promise of Wealth in Minerals. - (by Chester Allen Dixon). - Perhaps not everyone in New Brunswick has had a touch of PF but there is no denying that the disease has become epidemic, especially in the northern part of the province. Prospecting fever, strictly speaking, is not a disease but rather a pleasurable thrill that is liable to send blood pressure skyrocketing, especially if the 'signs' give promise of striking riches in Mother Earth.Aside from the Adams Island project in the Parish of West Isles, there has been no word yet of any actual development in mining of late in Charlotte County's island parishes. But the chances are that there soon will be activity similar to that now being carried on on the mainland. Most Likely Spot. - Grand Manan seems the most likely spot for a good sized development in respect to prospecting for minerals. One has only to view the massive cliffs along the back of the island to realize that there may exist potential wealth in the geological formations. This is not guesswork. Grand Manan may be in for a big boom in respect to its valuable minerals which, according to history, are known to exist. Nearly a century ago copper was discovered near Sloop Cove and as a result prospectors came from England. They commenced mining operations in 1872, according to a well known historical writer, and the ore - known as grey copper - contained 90 per cent pure copper. The mining crew penetrated 210 feet into the cliff at Sloop Cove close to the beach. As they proceeded they found the quality and quantity of the mineral increasing. The operations were discontinued, probably for want of capital but the exact reason for the abandonment has never been determined. It was generally thought at the time that Grand Manan soil covers a strata of copper. Lumps of Pure Copper. - Prior to 1862, when Moses Bagley discovered copper at Sloop Cove, lumps of the precious mineral 'in its native purity, one weighing several pounds,' were picked up near Eel Brook, Fish Head, and along the shores of Whale Cove, in the North Head District, history records. This in itself should encourage prospecting and the staking of claims where feasible. Indeed it may be that before the summer of 1953 has passed Grand Manan will be a focal point for eager prospectors which in itself will bring an added measure of prosperity. While the surface area of the island is not as extensive as some areas being investigated the great cubic cliffs afford plenty of room for extensive research and tests. Just to view the immensity of the 15 or 20 miles of gigantic rock formations along the western side of Grand Manan is an interesting experience and one that not only produces awe, but to those who are 'mineral-minded' it has a lode-stone effect. A local historian many years ago said that minerals other then copper abound nearPettes' Cove and at Fish Head and vicinity among them baryta. His prophecy that 'the time may come when the hammer of the geologist may strike a blow that will set the miner's pickaxe at work in true earnest' cannot be disregarded in the light of modern development. It is known that in addition to the minerals at Adams Island there are mineral veins at Indian Island and other places in the Passamaquoddy Bay region that would bear investigating. At one period a mine at Indian Island was in operation and the writer remembers having descended the shaft when a school lad. Later this shaft was filled in because of the danger it presented to wandering cattle and sheep, after the mine was abandoned when sea water entered it. The old mine is located on the former John Chaffey property near Little Cove on the eastern side of the island facing Wilson's Beach. Chunks of the mineral may be broken off from ledges at the seashore. It is believed that the mineral veins or strata exist for many miles under the ocean between Indian Island and L'Etete, where mineral deposits also are found and have been mined in the past. Prospecting is now taking place in the L'Etete- Back Bay region. So Charlotte County may yet come into the limelight as has Gloucester County and adjacent territory. Have you bought your pickaxe today?"

URN: 0310 / 0597 / IDX_Names: Adams Island; Simpson Island;

Evening Gazette - Oct. 23, 1891 A company of Boston and Halifax men with Mr. James M. Lord, of Lord's Cove, as manager, have been at work through the summer, with a crew of twelve men, opening up the copper mine on Simpson's Island. Mr. Lordwill shortly begin work on his own account in the Adams Island mine."

St. Croix Courier - May 23, 1929 Mining Leases in Charlotte Are Taken Over. - That mining interests are becoming more interested each day in the mining resources of this province is shown by the announcement made today that the Cold Lake Mines, Ltd., which has large holdings in northern Manitoba, has taken over under option certain copper mining leases in Charlotte county with a view to their development. The properties are located on Adams and Simpson'sIslands, about two miles off Letite, and were workedabout 40 years ago under primitive conditions, and it is said that high grade ore was taken from the property at that time. It is now the intention to further develop this property, it was said. Mining claims held by H.H. McLean, of Letite, have been taken over by the Cold Lake Mines, Ltd. There are at present two old shafts on the property. One already has been pumped clear of water and steps are to be taken immediately to clear the other of water. Mining men have been led to believe that there is a considerable body of commercial ore in this property. Recent samples have assayed as high as $50 to a ton in copper, it was said. Each island is about one mile in length, and about half a mile in width. The property has the advantage of tide water shipping facilities, making for cheaper transportation. - (St. John Times.)"

St. Andrews Beacon - Aug. 4, 1904 Economic Minerals of New Brunswick. - Special attention was directed by the Dominion Geological Surveylast year to the occurrence of mineral deposits, including the nickel ores in the vicinity of St. Stephen, the copper deposits of Letite and West Isles, including Adam's and Simpson's islands, and the other iron ores found at several points in the area around the shores of Passamaquoddy Bay. The relations and probable value of these were ascertained as far as possible. The conclusion arrived at regarding the copper deposits of Adam's and Simpson's islands and of Letite seem to indicate that while small quantities of rich ores are found, the quantity is not sufficient to warrant any great outlay on permanent works. The occurrences are usually small and irregular in their distribution. A large amount of exploratory work appears to have been done at different intervals, but apparently without profitable results. The nickel near St. Stephen occurs in a manner similar to that in which it occurs at Sudbury in Ontario. The mineral occurs apparently in pockety masses which are probably quite local in character. The ore is found at a number of points, but attempts at mining for nickel have been made chiefly at two places, on what are known as the Rogers and Hall farms (the Todd and Carroll mines respectively). A number of assays from both these localities have been made from time to time, all of which seem to show that the percentage of the nickel is practically too low to permit the ores to be smelted after the manner of those of Sudbury. If a process of concentration could be installed on the spot at an expense not too heavy, it is possible that a paying industry could thus be established, the resulting concentrates being shipped to the larger works at Constable Hook in New Jersey, where the final separation and refining could be completed. The impression regarding the formation in which the nickel ore occurs is that it will be found over a considerable area, but probably in many cases so mixed with rock that careful separation would be necessary after mining. But there does not appear to be any well defined contact of the ore body with the adjacent rock, and but little indication of a vein structure is visible. The existence of ore bodies could be best proved by judicious boring with a diamond drill. In the present state of development of the district, but little information can be given as to future values."

Royal Gazette - May 20, 1891 Crown Land Office, May 16th, 1891. To the Owner or Owners of Adams Island, (near outer

Passamaquoddy Bay, Charlotte County), or their Assignees of Lessees (if any), who may claim to have made explorations or actually commenced Mining operations thereon, and all others whom it may concern:Notice is hereby given, that application has been made to me for a Mining Lease of said Island, under the Act 54th Victoria, Chapter 16, and that The Governor in Council will examine into the matter, and take action, &c., as provided for by the 138th Section of said Act. L.J.

URN: 0311 / IDX_Names: Letete Mine;

St. Andrews Standard - Apr. 16, 1862 Gold.- We learn from undoubted authority that gold has been discovered at Le Tete. A small quantity of was taken to Boston by a person and crushed; the result was obtained but not in a sufficient quantity to warrant expense of working. A narrow vein of gold was discovered where persons are now engaged digging copper ore, of which there is an abundance of excellent quality. Efforts will be made, we are informed, in search of more gold during the present season, and people in the vicinity are of the opinion that we shall soon have a New Brunswick ""Tangier"".- The truth is this Province is rich in mineral resources - all that is required is capital and enterprise to develope them."

Carleton County Sentinel - Apr 26, 1862 GOLD IN NEW BRUNSWICK.-The St. Andrews Standard learns that gold has been discovered at Le Tete, a quantity of quartz was taken to Boston, but it did not contain sufficient genuine to pay working expenses. The Standard says that parties are making further explorations, sanguine as to the result."

S.J. Daily Globe - Oct. 6, 1863 We have more than once referred to the Copper mine at L'etete, in which Mr. Woodward is interested. The curious can see at our office a specimen of the copper, the first ever smelted at the mine in this Province, which gives 26 1/2 per cent. for fine copper. The prospects of those interested are most encouraging."

URN: 0311 / IDX_Names: Letete Mine;

Daily Tribune - Jul. 17, 1873 Copper in Charlotte. -This Province is rich in copper ore. Prof. Bailey's report and other scientific documents, as well as practiced investigation, show that many millions of dollars worth of copper exists at L'Etete, and it is the opinion of all who have examined the ore that has been mined that it can be raised at a large profit. There are several mines, more or less developed, in that region. Charlotte is destined to become as famous for its copper as Cumberland, N.S., is for its coal. At the News Room are a number of specimens taken from a mine belonging to Mr. J.G. Woodward that has been recently opened, showing that the ore is exceedingly rich. There are eight or ten workable lodes on this property, and all that is required is capital for their development. Prof. F.B. Nichols reported on two lodes, for a distance of sixteen hundred feet, estimating their product in ore at $1,900,000, or in metallic copper, $10,378,750. He estimates that seven tons of the lode will make one ton of ore, which can be raised, dressed and put on board ship at a cost of only $5, leaving a handsome profit. The capital required is not large."

St. Andrews Standard - Apr. 20, 1879 and Morning Freeman - May 10, 1879 and S.J. Globe - May 2, 1879 The Mascarene Mine. - We learn from reliable sources that the mine at Mascarene, about twelve miles from St. Andrews, is turning out a more reliable investment than was anticipated. It was known to be rich in silver ore, but it was not supposed to contain an auriferous deposit. A recent survey, however, by an expert at Portland, Me., led to its discovery. It appears that a ton of the ore yielded 20 1/2 pennyweights of gold, 10 1/2 oz. of silver, and 357 pounds of lead. The values of these metals are gold $1.03 a pennyweight, silver $1.10 per oz., which with the lead makes the total value of the ore $40 a ton. Mining has not reached beyond 20 feet as yet, and it is probable that further down the ore will be richer. The stockholders are to be

Daily Telegraph - Feb. 3, 1879 Mining Company. - At a meeting of the Mascarene Mining Company, held at St. Stephen, N.B., a few days ago, the following officers were chosen:- President, S.M. Todd; secretary and treasurer, J.D Chipman; directors, E.C. Boardman, G.F. Todd, F.A. Pike, M.N. McKusick, A. McNichol, F.T. Waite. The company has a capital of $100,000 and it is in the hands of St. Stephen and Calais capitalists, who intend to work the mine, as they feel quite sanguine that it is rich in ore. The mine is situated at L'Etete, N.B., and is supposed to be in the same vein as the Sullivan and Lubec mines. There are at present eight men employed. They have gone down sixteen feet and the ore taken out has

St. Croix Courier - Feb. 5, 1879 Mascarene Mining Company.- At the meeting for organization the following officers were elected: President, S.M. Todd; Secretary and Treasurer, J.D. Chipman; Directors, E.C. Boardman, G.F. Todd, F.A. Pike, M.N. McKusick; A. McNichol, F.T. White. The authorised capital is $100,000 and the stock is in the hands of St. Stephen and Calais capitalists. The mine is situated at L'Etete, and the ore is understood to be very rich."

St. Andrews Standard - Mar. 26, 1879 The silver mine at Mascarene, in this County, is reported to be turning out well, and grows richer as the mining proceeds. We trust that it may prove as rich as the Nevada mine. The property is owned by Calais and St. Stephen men. Silver, lead, copper, and even particles of gold have been known to exist in the County of Charlotte, and only require capital and energy to develope these natural resources."

URN: 0311 / 0597 / IDX_Names: Letete Mine; Simpson Island;

S.J. Daily News - Aug. 8, 1876 Charlotte County News. - A copper mine has lately been opened on Simpson's Island, Parish of West Isles. It gives employment to a good many men. The ore is very valuable, and is likely to appear in large quantities. A quantity has been sent to Swansea, England, and has been pronounced very rich. Another copper mine, partly owned by persons in St. John, is being worked at L'Etete, and the ore promises to be very valuable."

County Coal;

St. Croix Courier - Apr. 14, 1910 30 Years Ago. - Mining is about to assume a leading place among Charlotte county industries. It has long been known that this country is rich in minerals which only await the application of capital and enterprise to make them a most productive source of wealth. We are glad to know therefore that their development is no longer a matter of speculation but that operations are now in progress which will become still more active during the coming summer. Considerable activity has lately been manifested at Mascarene. Men are actively employed in the 'Revenue' mine at that place, controlled by St. John parties. An assay of the ore shows that it produces $132 of silver and four ounces of gold to the ton. Great activity prevails at the Dick and Williamson mine, and the sum of $7000 has been guaranteed towards putting up machinery at once. Former assays of the ore from this mine gave $77 in silver and $21 in gold. Within the last few days ore richer than any before found has been struck and the prospects of the mine are constantly increasing. The stock has been increased 100 per cent and holders have no disposition to sell. The Mascarene Mining Co., are also placing themselves in a position to start operations at once, a number of stockholders from St. Stephen and Calais having gone to St. George the other day with that object in view. The stock has recently advanced 50 per cent and no more is to be sold. As soon as spring opens work is to be commencedon Silver Island, near St. George, known as the Bradbury mine, now owned by parties in Boston. The Hartt mine, in the same vicinity, recently owned by Thieckens and McLean, embracing sixteen acres, has recently changed hands and arrangements are being made to work it. It covers part of the same lode as Silver Island, which is known to be so rich. It is stated also that a company will sbortlytake hold of the mines near Moore's Mills, and a gentleman has shown us a fine specimen of anthracite coalfound within a few mines of this town. If all these enterprises go forward this summer, as they promise to do, they will give considerable employment and add materially to the business of the county. Success to them all."

Royal Gazette - May 9, 1860 Cap. LXXXV. An Act to incorporate the LeTete Mining Company. Section. Section.1. Company incorporated. 5. Liability for debts. 9 2. First meeting, time and 6. Act void if 25 per place of. Cent of capital be not 3. Capital, amount and division subscribed within one into shares. Year. 4. Liability of stockholders for stock subscribed.

Passed 9th April 1860. Be it enacted by the Lieutenant Governor, Legislative Council, and Assembly, as follows:- 1. That John Ward, Charles Merritt, John Duncan, Samuel Dick, Richard S. DeVeber, William Davidson, John G. Woodward, George Dick, Edward L. Thorne, John Owens, Henry B. Robinson, their associates, successors, and assigns, shall be and they are hereby declared to be a body corporate and politic, by the name of ""The LeTete Mining Company,"" and by that name have all the general powers and privileges made incident to a Corporation by Act of Assembly in this Province, for the purpose of opening and working Mines in the county of Charlotte, and establishing all necessary works connected there with, and for the convenient carrying on and managing the same. 2. The first meeting of said Corporation shall be held at such time and place in this Province as may be appointed by a majority of the above named persons. 3. The capital stock of the said Company shall be twenty five thousand pounds, divided into two thousand five hundred shares of ten pounds each. 4. Each and every shareholder in said Corporation shall be held liable to the said Corporation for each and every call or assessment made, not however to exceed in amount the stock subscribed by him, for the purpose of enabling the said Company to pay the debts and engagements of the said Corporation, for the purposes of or to carry on the operations for which the said Company was incorporated; which call or assessment may be sued for by the said Corporation and recovered in any Court of Record within this Province. 5. That the joint stock and property alone of the said Corporation shall be responsible for the debts and engagements of the same. 6. Unless twenty five per cent of the capital stock shall be subscribed within one year after the passing of this Act, the operation of this Act shall cease, and the existence of the said Corporation shall be terminated."

URN: 0320 / IDX_Names: East Memramcook;

Morning Freeman - Jun. 22, 1875 Barytes. - Mr. S.C. Charters and others are loading a vessel at Memramcook with Barytes from the mine in Gould Settlement so called. The owners of this mine are sinking shafts and the prospects are exceedingly good. The present cargo is to go to Bath, Maine. - Times."

S.J. Daily Telegraph - Oct. 29, 1875 The barytes mines at Memramcook, are yet at astand still, and probably will remain so for some time. The Boston firm, Messrs. Copeland, Leman, Holmes & Daniels, who leased the property and prosecuted the work last spring have gone into bankruptcy, and a statement of their liabilities places their debts in the Maritime Provinces at nearly $4,000, one of the amounts above, that of the Halifax Banking Company, being $1,000. - Borderer."

S.J. Daily Sun - Aug. 23, 1900 J. Patrick of New York and Mr. Farnham of Londonderry, N.S., are prospecting near Memramcook East for barytes."

Kings County Record - Dec. 20, 1907 E.A. Charters appeared before Hon. F.J. Sweeney, Surveyor General of New Brunswick, at Moncton on Tuesday, as a claimant of a one third interest in a barytes property at Memramcook. The other claimants were also examined. Hearing was due to the application of Mr. Henry M. Paw for a license to work the property. Mr. Sweeney took the matter into consideration and will give his decision later."

Evening Times-Star - Sep. 30, 1910 It is understood that a vigorous development of the Baryta mine at Memramcook, Westmorland, is now going on. Considerable machinery has been placed on the ground and the ore body has been struck showing very gratifying results. The work is being prosecuted by the Canada Paint Co., of Montreal and Toronto, under management of J. Bradley of Three Rivers, P.Q., who spent some time in Sussex and vicinity this spring examining mineral deposits at various points. The existence of a good body of Baryta is known within a very few miles of Sussex. - Sussex

URN: 0320 / E2 / IDX_Names: East Memramcook; Oil and Gas - Kings Co.;

Morning Freeman - Mar. 20, 1880 Mining. - A correspondent of the Sun says. It is said, upon good authority, that the New York and Boston capitalists will commence boring again for oil on the Goodet farm, near St. Joseph's College, Memramcook. The indications give every promise of oil, and should these gentlemen fortunately strike it, immense benefits must result to this section of the country. There is a good barytes mine lying idle for want of capital in the Bonum Goold Settlement, about two miles from Memramcook Station, which if properly developed would pay good profit to any company working it, after a short time and reasonable outlay."

URN: 0425 / IDX_Names: Millstream Iron;

S.J. Daily Sun - Aug. 1, 1888 Magnetic Ore. - Discovery of a Large Vein of Magnetic Iron Ore in New Brunswick.- The Sun is informed by Edward Jack, who has lately returned to Fredericton from a visit to the county of Gloucester, that the station master of the Intercolonial Railway at Bathurst Station showed him a piece of massive magnetic iron ore, which Mr. Jack said was extremely rich. The specimen, the station master informed him, had been taken from a vein 12 feet in thickness, which was situated on the Mill Stream some five miles from the line of the Intercolonial railway. This ore is chiefly confined to the older crystalline rocks of Scandinavia and North America. Sometimes the centre of a mass may be pure magnetic, passing at either side into copper or iron pyrites, which Mr. Jack thinks may be the case with this deposit, as he noticed considerable copper pyrites in a specimen shown him which was said to have been taken from one of the walls of the vein. This vein, the station master said, had been traced on the surface for a quarter mile or so. Mr. Jack says if this ore, which is a very rich one, should prove on analysis to be free from impurities, it would probably be a good one to mix with the brown ores of Old Barns which can be transported to Saint John cheaply by water, and that with good magnetic ore by rail and abundance of brown hematite of great purity, cheaply delivered by water at Saint John, where the rocks are largely of limestone, this city is fated to become at no very distant day one of the chief iron making towns of Canada."

URN: 0425 / IDX_Names: Millstream Iron;

Moncton Daily Transcript - Aug. 1, 1888 Iron Ore in Gloucester County.- The St. John Sun is informed by Edward Jack, who has lately returned to Fredericton from a visit to the county of Gloucester, that the station master of the Intercolonial railway at Bathurst station showed him a piece of massive magnetic ore, which Mr. Jack said was extremely rich. The specimen, the station master informed him, had been taken from a vein 12 feet in thickness, which is situated on the Mill Stream some miles north from Bathurst and distant about five miles from the line of the Intercolonial railway."

Moncton Daily Transcript - Jun. 2, 1888 Some parties in Bathurst and vicinity have taken up a square mile under mining license, and it is said a large vein of magnetic ore now exists thereon."

Weekly Record - Fri., Nov. 30, 1888 (quoting the Halifax Critic) A large deposit of magnetic iron ore of very good quality so far as tested, with veins of valuable yellow sulphuret of copper on either side, is now in the hands of your correspondent for negotiations at reasonable figures. It is in the northern part of New Brunswick, and not far distant from the I.C.R. railway

St. John Globe - Aug. 26, 1889 and Fredericton Capital - Aug. 31, 1889 Magnetic Iron. - A great deposit of magnetic iron ore very pure and rich, containing sixty-six per cent. iron, has been discovered on the north side of Mill Stream, seven miles from the I.C.R., at Beresford platform, seven miles west of Bathurst. This deposit has been traced nearly a mile in length and varies in breadth from ten to forty feet. The assays which have been made on the ore show 66 per cent of iron. Practical men who have seen it pronounce it to be the best and say that the finest steel can be made from it. The ore is worth $7 per ton in the American market. There is plenty of lime stone in the vicinity and white birch on the ground."

Weekly Record - Fri. Jan. 11, 1889 In Gloucester County, N.B., a large bed of magnetic iron ore and copper of valuable proportions is reported...."

Moncton Daily Transcript - Sep. 5, 1889 Discovery of Iron Ore.- A great deposit of magnetic iron ore, very pure and rich, containing sixty- six per cent iron, has been discovered on the north side of Mill Stream, seven miles from the ICR at Beresford platform, seven miles west of Bathurst. This deposit has been traced nearly a mile in length and varies in breadth from ten to forty feet. The assays which have been made on the ore show 66 per cent of iron. Practical men who have seen it pronounced it to be the best and say that the finest steel can be made from it. The ore is worth $7 per ton in the American market. There is plenty of lime stone in the vicinity and white birch on the ground.- Campbellton Pioneer."

Weekly Record - Fri. Jan. 17, 1890 The view of Magnetic Iron Ore near Bathurst, N.B., is showing up finely under development at present being done by American capitalists. Reports also state that a view of quartz near by has under assay shown 2 oz. of gold and 60 oz. of silver per ton. Good result if it is correct and in quantity."

S.J. Daily Sun - Dec. 16, 1892 The Precious Metals of New Brunswick (London Canadian Gazette.) - For some time the attention of the writer has been directed to a section of New Brunswick which lies ten or fifteen miles to the north of Bathurst on the Bay of Chaleur. In this district numerous veins or beds of ore have been found, and two or three companies have heretofore been organized with a view to selling out . The region is still covered by forest, and which has been but little prospected, yet it bids fair at no very future day to become the means whereby much employment may hereafter be given to the industrious habitants who reside on the shores of that beautiful bay. My attention has been specially directed to the part of this metalliferous district which is intersectedby the Little Nepisiguit, or Mill Stream, as it is sometimes called. At a distance of about nine miles from the Intercolonial Railway on Rocky Brook, a branch of the Little Nepisiguit, a quartz ledge, 17 feet in breadth, crops out in a bluff of moderate elevation; this isbounded to the south by slates, which dip at a high angle. The boundary or wall of this quartz ledge to the north appears to be a compact felsitic rock. The ledge shows ore from wall to wall. The predominant mineral is iron sulphide, while the sulphide of lead occurs in it in strings or bunches. The yellow sulphide of copper is also found scattered through it, although in but small quantities. I did not notice any mass of rich ore on the face towards Rocky Brook, but no part of the quartz ledge for its whole breadth was barren; all of it showed more or less of the sulphides. The quartz of which this ledge is composed is of a blackish or bluish-black color. Some specimens broken by my companions, in my presence, along the face gave - Gold … 0.26 ounces per ton. Silver … 14.20 The assay in this case was made by Ricketts & Banks, the well known chemists of New York. Other samples from the continuance of the vein taken some hundred feet east of Rocky Brook, and also in my presence, gave as follows: Gold … 0.7 dwts. Per ton, Silver … 14.3 ozs. Per ton, Lead … 12.63 per cent. The sample in this case weighed 3 lbs., and the assay was made by Mr. McIntyre, F.C.S., of St. John. Another specimen, 14 1/2 ounces in weight, also taken from the vein in my presence, and assayed by the last named chemist, gave Gold ... 0.87 dwt. per ton. Silver ... 18.3 oz. per ton. 100 lbs. of ore taken from an opening made in the vein a few hundred feet from Rocky Brook, were forwarded by me to a friend at Newcastle-on-Tyne, who had an assay of an average sample of it made by Messrs. Cookson & Co., the result being 7 per cent. of lead and 37 1/2 ounces of silver per ton of ore; they did not test for gold. Some specimens said to have been taken from this vein and assayed by J.T. Donald, chemist, of Montreal, gave from one to two ounces of gold to the ton; the silver in some cases was given at from 40 to 60 ounces to the ton of ore. I have seen Mr. Donald's assays of these specimens, but they were sent to him by others, of which sending I have no personal knowledge, as was the case in the other instances above referred to. That this district in New Brunswick is highly metalliferous is shown by the occurrence of a considerable vein of magnetite running parallel to the 17 foot lead above mentioned, and I have also seen a vein of copper and iron pyrites about 3 feet in width which is near the big lead, and undoubtedly crosses Rocky Brook, because, when I was at that stream last year, two men who were with me waded up the brook and returned with a fine piece of copper ore, which weighed 20 lbs. or more. This they had broken off a boulder, which they told me was lying in the brook. The course of these several veins is nearly east and west; the country here is crown land, and, as mentioned above, it is covered by a vast forest, in which one might travel a hundred miles without striking the clearing of a solitary settler. Edward Jack. Fredericton, October 17th, 1892."

URN: 0425 / IDX_Names: Millstream Iron;

Daily Times - May 16, 1892 Mining In New Brunswick. - Some Pointers For Those Interested in Mines and Minerals. - Result of Geological Surveys Made By The Dominion Government. - The summary report of the geological survey department for last year, has just been laid before parliament. The following extracts will be of special interest at the present moment. The work of the Mining Division was continued by Mr. E.D. Ingall, assisted by Mr. H.P. Brummell in the general work of the division. Mr. Ingall furnishes the following notes: In New Brunswick the following points were visited and investigations made. Gloucester County. - Development work was being actively prosecuted on a vein of argentiferous galena by Messrs. Payne and Ellis of Bathurst. The vein is seen on Rocky Brook, a branch of the Millstream; work had also been done on a deposit of magnetic iron ore in the samevicinity. Albert county - Investigations were made in the southern part of this county, where a considerable amount of prospecting was being carried on, notably around Shepody Mountain and to the

Moncton Transcript - May 7, 1894 Mining Property. - It is said that the mining property owned by Messrs. Ellis, Payne and Jack, C.E., situated about three miles from Bathurst, N.B., is to be taken hold of by a Montreal man, who thinks he can successfully operate it. The owners have been at work on the property and all the analyses have shown that there is a sufficient quantity of gold and silver to pay provided the precious dust can be separated. The Montreal man who proposes testing the property has been operating in Mexico and thinks he has a process by which he can make the mine pay."

North Shore Leader - Nov. 1, 1907 To Search For Minerals. - The following have applied for licences to search for minerals: Gloucester County. - Londonderry Iron & MiningCo., on Nepisiguit Millstream, in two places. George Gilbert and William Rogers, near the junction of Restigouche and Youghall Roads.Restigouche County. - W.S. Montgomery, on Big Brook, a branch of the South West branch of the Upsalquitch."

S.J. Standard - Jul. 1, 1910 Mr. Grimmer Sees North Shore Mines. - Surveyor General Conducts Official Investigation in Gloucester County. - Traces of Ore Found At Many Points. - Foreign Capital Is Invested. - Special to the Standard. - Newcastle, N.B., June 30. - Returning from Bathurst, where he conducted an official investigation in connection with the dispute over mining rights in Gloucester County, Hon. Mr. Grimmer, surveyor general, was in Newcastle today, a guest at the Miramichi Hotel. Mr. Grimmer held the investigation toady, the dispute arising over the application received for licenses to search in Gloucester county. Boundaries between the Dunlop property and George Robertson's property is one point in dispute. After hearing claims of the rival parties Mr. Grimmer adjourned the court. Mr. Slipp who was acting in the interests of some of the parties accompanied him to Newcastle. The surveyor general visited the Drummond mines today and also viewed terminals on his present tour. He predicts great development in the near future. Mr. Grimmer spoke enthusiastically of the mineral wealth of the province and is decidedly impressed with Gloucester as a rich mineral county. The fact that such rivalry exists is some indication that great quantities of iron ore exists. 'In fact,' Mr. Grimmer smilingly remarked, 'almost every one is mining.' Foreign Capital Interested. - It is hoped toinduce American and German capitalists, in fact, options are already held on many lands by outsiders. All prospectors are sanguine of success. In addition to the Drummond Mine, iron deposits are known to have been found on Mill Stream in the parish of Beresford, on the Nigadooriver and at Dunlop in the same parish, some eight miles from Bathurst town, and on the Tetagouche River, at a point some twenty six miles from Bathurst and at other places."

URN: 0425 / 0696 / 0030 / 0763 / 0691 / 2030 / X1 / IDX_Names: Millstream Iron; Stewarton; Teahan Mine; Jordan Mountain Manganese; Markhamville Manganese; Philamaroo Silver, Gold, Copper; Grand Lake Coal;

S.J. Daily Sun - Nov. 26, 1888 Mining Matters in New Brunswick. - A New Brunswick correspondent writes to the Halifax Critic: The Markhamville mines are still being worked in the interest of the trustees, and shipments of ore continue regularly. Negotiations are still pending on the Jordan Mountain or Stockton manganese mine. The exact nature of the negotiations are unknown, being enshrouded in a network of secrecy and rumor unfathomable, with hints of equity, law suits, etc. Work of exploration on a property above Waterfordis being quietly and systematically carried on. The principal promoters are from Bar Harbor, Maine, and evidently mean business. They are putting in a large engine and boiler to facilitate the work of development. About 40 or 50 feet have been tested in depth, and a large ore body is being exposed. The ore seems to be a galena, and rich in sulphuret, while, it is said, the quartz gangue carries considerable gold. We expect to hear of a bona fide working and paying mine in this locality before long. It was reported some negotiations had taken placefor the sale of the Freeze mine at New Ireland, in Albert County, but so far nothing definite has been made known. Prospecting for antimony, at or near Cromwell Hill, in the county of Queens, N.B., has been suspended for the present. The work of prospecting and developing on the Grand Lake coal fields is being vigorously prosecuted at present. The DeBertram syndicate have acquired rights on 30,000 acres of land, and testing is being made under the direction of Thomas Williamson, M.E. The prospects are good for the raising of large quantities of coal in this vicinity. A large deposit of magnetic iron ore of very goodquality so far as tested, with veins of valuable yellow sulphuret of copper on either side, is now in the hands of your correspondent for negotiation at reasonable figures. It is in the northern part of New Brunswick, and not far distant from I.C.R. railway and navigation."

S.J. Daily Sun - Sep. 27, 1889 The Mineral Wealth of New Brunswick. - The Bathurst Courier is jubilant over the discovery of iron in Gloucester county. This deposit is found on the northern side of the River du Moulin, seven miles from Beresford Station and a like distance from Bathurst. The seam is said to be a mile long and ten to forty feet wide. The analyst reports a yield of 66 per cent. Of pure metal from the ore which, according to the Courier, is richer than the product of any other Canadian mine. The discovery of this deposit and the recent find of gold at Black Brook, give the Courier great hope that Gloucester may yet be famous for its mineral wealth. Whatever may be the facts regarding these particular discoveries, it is safe to say that New Brunswick affords a good field for prospectors. While mine hunters have scoured the province of Nova Scotia from end to end and side to side, this province, with the exception of a few districts, has been left severely alone. The geological survey has paid some little attention to New Brunswick, but under Dr. Selwyn's management the work of the geological survey has much less economic value than it should have for what it costs. The learned director has a certain scientific curiosity, which is better gratified by the study of fossils than by the discovery of valuable mineral deposits. The study of fossils is a proper business, if carried on by scientists who are engaged for that purpose or who do so at their own instance. Perhaps Dr. Selwyn may be building better than most people know, but from all that may be learned from the printed reports his explorations have not been of much visible worth so far as eastern Canada is concerned and especially this province. Even if the survey were under more practical management it could not accomplish what is usually accomplished by the man who is prospecting for a fortune and minerals at the same time. This adventurer has been long abroad in Nova Scotia, but the greater part of the area of the province has not yet been seen by the prospector or his friend the promoter. What rewards await the future explorer who shall make more thorough search of the earth's treasures, who can say? We know what harvests have been won and are now gathered from the deposits of lime, plaster, freestone, granite, and manganese. The value of our coal fields is still uncertain. That there is iron in abundance in more places than one is well known, but no one can yet say what may be the value of it all. An ore that is not worth smelting this year may, as new methods of working are discovered, be found richer than all others. As yet very little is known about the quantity or kind of the mineral wealth underlying this province. If all were known it could still be impossible to fix a limit to the future economic value."

Daily Sun - Apr. 10, 1891 New Brunswick Geology. - Mr. Chalmers' Report on His Work Last Year. - The Counties of Kent, Westmorland and Northumberland. - Mr. Chalmers left Ottawa on the 5th of June to continue the survey and mapping of the surface geology of New Brunswick, his field of work being the area included in the quarter sheet map No. 2, S.E. This sheet embraces the county of Kent with adjacent portions of the counties of Westmorland and Northumberland. Hisassistants were John H. McDonald of Brockville, Ont., from the date of his leaving Ottawa till the 4th of October, and W.J. Wilson of St. John, N.B., from the 30th June till the 15th of August. The following is Mr. Chalmers' report on the season's work: In the district to which this report relates the surface features are, generally speaking, uninteresting and monotonous, presenting the aspect of a low, level plain, which, however, rises gently towards the north-west margin. Between river valleys this flat middle carboniferous area is comparatively undrained, and hence much wet, barren land exists upon it, and shallow peat bogs are common. Making Weldford Station our headquarters in the first part of the season, we examined the country along the Intercolonial railway to the north and south. Numerous cuttings exposed good sections of the superficial deposits, and the rock surfaces exhibited striae in many places. Two well defined sets of these were observed. The first set occurs along the railway to the north of Richibucto River, the striae trending abut due east, and this course was found also near the coast in the Buctouche and Cocagne districts, varying in some places to points between east and northeast. The second set was seen along the Intercolonial railway to the south of the Richibucto river, the striae there having a nearly north and south course. Good examples of the latter were discovered just south of Weldford Station, where rock surfaces were exposed during the construction of the railway, exhibiting finely preserved striae with a course of S. 5 deg. W. This is upon the watershed between the Richibucto, which flows eastwardly into the Straits of Northumberland, and the Salmon River, flowing south westwardly into the St. John, or rather into Grand Lake, the elevation of this watershed not being more than 200 to 250 feet above the sea. These two sets have evidently been produced by two different bodies of ice, both of which, to all appearance, have been local, the east and west striae by ice which moved towards the straits mentioned, and the north and south set by ice which flowed either northwardly into the valley of the Richibucto, or southwardly towards that of the St. John river. Boulder clay is sparingly found in many places on the higher grounds, but the chief covering of the rocks is a coat of their own debris, in the form of gravels, sands, etc., intermixed with boulders, chiefly local, with which, however, transported ones occur in greater or less numbers. The local debris referred to is unusually masked by stratified materials, the relations of the two being seen in river banks, especially below the 200 feet contour line. The whole superficial covering of the carboniferous rock, indeed, appears more or less stratified in the upper part, and is, generally speaking, deeper than that resting upon the other geological systems or formations of the province. It conceals the rocks from view everywhere, except along river valleys. The millstone grit, in its decay, seems, however, to have crumbled down largely into arenaceous materials. Sandy loam is met with along river courses, and clay beds constitute the basal member of the stratified series in certain places, but are not common; hence the conditions necessary for the preservation of the shells of marine animals in the post-tertiary deposits of this district are rare, and consequently very few of these are found in the fossil state. A noteworthy feature of the surface beds upon the area referred to is the presence of boulders of granite, felsite, diorite, etc., scattered broadcast over them and often embedded therein. The boulders are obviously from the Cambro-Silurian, Cambrian and preCambrian rocks to the northwest. Near the coast and below the 200 feet contour line, however, they are sparingly intermingled, in same localities at least, with others that are not so easily accounted for, and which appear to have been borne thither by floating ice. The direction in which the boulders on the higher parts of the district have been transported is exemplified by their greater or less abundance in the different localities as we recede from the parent beds. For example, along the southwest Miramichi those of granite and other crystalline rocks are unusually large and abundant, and in many cases angular, being near the parent rocks; but as we proceed eastwards across the carboniferous basin they become smaller and more scattered. These transported boulders, are, however, merely the residual specimens of the vast numbers which have been borne thither. Remains of others which have crumbled to pieces are seen in the coarser gravels and sands in numerous places. The other superficial deposits of the district presented no new features worthy of consideration. The evidence regarding the pleistocene subsidence indicates that it may have been slightly less here than in the Bay of Fundy and the Baie des Chaleurs basins. An old shore line, quite distinct, we observed at Galloway, near Kingston, at a height of 150 to 160 feet above sea level. A similar ancient shore line, at about the same elevation, occurs in the Miramichi valley. After Mr. Wilson joined our party on the 30th of June he and Mr. McDonald examined the southern part of the district, following all the roads and streams. While they were engaged I first visited the ship railway, now under construction across the Isthmus of Chignecto, for the purpose of re-examining the formations disclosed in an excavation for docks which is now being at its western end. The excavation is opened in the margin of the Amherst salt marsh, between the mouths of the LaPlanche and Missiguash rivers. The section exhibits in descending order - (1) marsh mud, (2) blue clay holding shells of Mya arenaria, Macoma graenlandica, and the young Buccinum undatum?, (3) peat or humus, (4) red clay, and (5) boulder clay, with local boulders. The bottom of the boulder clay is not reached, although the excavation is upwards of 60 feet in depth. Afterwards I proceeded to Grand Manan, to examine one or two doubtful points there. Striation by ice, apparently from the mainland, and a few boulders evidently belonging to rocks other than those on the island, were observed on the higher parts, 350 to 400 feet above the sea. Returning to Kent County, I then made a canoe trip along the coast and around the lagoons inside of the sand dunes, which here form barriers along the shallow shores. Many interesting facts were noted regarding the formation of the sand beaches, lagoons, peat beds, salt marshes, &c. On the 3rd of October I visited St. John, with a view of re-examining the boulder clay beds at Negrotown Point and the Fern Ledges. In company with Mr. Wilson, I measured a section of them at the latter place, to enable me to make a diagram exhibiting a deposit of stratified clay intercalated therein. From St. John I went to St. Andrews to make some further observations on the glaciation of that section, more especially at Chamcook mountain, etc. It was found that ice had ground completely over that hill, and that the summit, 637 feet above sea level, was scored and polished in a remarkable manner. Regarding the soil of the district examined the past season, it may be remarked that it is, on the whole, good, especially along the coast and river banks, and also on some of the higher grounds between the streams. But large tracts are swampy, or covered with boggy material, constituting so-called barrens. Whereever the natural drainage is sufficient to carry off the surplus waters due to precipitation, the land is fit for cultivation. It is, however, deficient in lime, and requires frequent applications of that material to bring it up to its highest yielding capacity. Good farming districts are found along the Richibucto valley, more especially on Nicholas River and Coal Branch, also in the Kouchibouguacis valley, and in the Buctouche and Cocagne districts. The forests of this part of the province, formerly so dense, and consisting of a mixed growth of trees, such as pine, spruce, birch, hemlock, cedar. hacmatac, etc., are now being greatly depleted. Large areas have been overrun by fires, and present little else but bare trunks and a scanty second growth. The destruction of timber from this cause alone is enormous. During the summer of 1888 the fires which swept over a large portion of the area under review destroyed valuable tracts of the forest. The materials of economic value met with in the district are few and unimportant. Peat is found in extensive bogs along the coast, especially near the Kouchibouguac, the Kouchibouguacis, Aldouane, Richibucto, and in many other places. These bogs are often deep, and produce abundant crops of cranberries. In the interior, large bogs often occur upon the flat, undrained portions of the district, but they are usually shallow, and in many cases support scrubby growth of hacmatac and black spruce. No use has yet been made of peat in this part of the country. Gravel and sand, suitable for ballasting, road-making, etc., were observed in nearly every locality, and clay, available for brick-making, occurs in many of the river valleys. Fine blown sands are abundant everywhere along the coast, forming the dunes or barriers already referred to. In the latter part of the season I visited thedeposit of so-called magnetite, near the head of Millstream, Gloucester County, specimens of which, analyzed by Professor Donald, chemist and assayer, Montreal, are reported to have yielded upwards of 60 per cent of metallic iron, with ten per cent of silica, etc. Considerable portions of the ore appears to be highly pyritous. About two miles distant from this deposit there occurs a vein of pyrites and galena, the former containing traces of gold and the latter of silver,according to an assay made by Mr. Hoffman, chemist and mineralogist to the geological survey department. Field work closed on the 4th of November, and on the 6th I reached Ottawa. W.J. Wilson rendered me good service, and has now acquired such a knowledge of surface geology as to make him an efficient and valuable coadjutor in the work. Cost of season's explorations, $1,005.41."

Fredericton Daily Gleaner - Jul. 13, 1891 and Evening Gazette - Jul. 14, 1891 The Nepisiguit Rich in the More Precious Metals. - Fredericton Gleaner. - Mr. Ed. Jack, C.E., returned on Saturday from a visit to the Nepisiguit mill stream, a river emptying into Bay Chaleur 10 miles north of Bathurst. There is a remarkable display of mineral veinson that river, especially on the small branch which is called Rocky Brook. There is an exposure on one place on this brook of a mineral vein. This exposure is about 25 feet, and is perhaps the largest metaliferous vein in New Brunswick. The ore is a compact galena. Different analyses have given from forty to sixty ounces of silver to the ton. Some of this vein carried more or less gold.Mr. Jack, has brought home with him a piece of copper ore, yellow sulphide, which weighs about twenty pounds. He was not at the vein himself but says that the persons who brought him the twenty pound weight from it, say the vein has a width of six feet. Not far distant from theseveins there is a large deposit of magnetic iron. It seems as if this part of New Brunswick will before long be a great metal producing country. These veins all occur in the older rocks probably Silurian or

Carleton Sentenil - Aug. 10, 1889 Upper Woodstock. - An exploring party of the recently incorporated mining company have been hunting for the Tobique El-Dorado recently. Sol. Perley, one of the most sanguine of the party, has come home for a short visit. He speaks in glowing terms of the glittering prospects of the ultimate success of the enterprise."

URN: 0469 / IDX_Names: Gold Brook;

Carleton Sentinel - Jul. 27, 1889 A Mining Company. - Notice is given in the Royal Gazette, of an application for incorporation of The Northern New Brunswick Mining Company. The objects for which the company seeks incorporation are: The acquiring, holding, selling and conveying of lands and of rights and interests in lands within the province of New Brunswick, for mining and other purposes incidental to mining and the working of mines, and the raising, selling and exporting of and dealing in ores and minerals of all kinds, and all other purposes connected with the business of mining. The chief place of business of the proposed company is to be at Woodstock. The capital stock of the company will be two hundred thousand dollars. The number of shares is to be two hundred thousand, of one dollar per share. The names, addresses and callings of the several shareholders respectively are as follows, of whom the three first named, are to be the provisional directors of the company under the proposed incorporation: John A. Shea, Grafton, Carleton Co., farmer; Solomon Perley, Upper Woodstock, Carleton Co., contractor; John Graham, Woodstock, Carleton Co., grocer; Albert Brewer, Upper Woodstock, Carleton Co., contractor; David W. Jackson, Upper Woodstock, Carleton Co., millwright; Frederick H. Hale, Grafton, Carleton Co., gentleman; Samuel T. Baker, Woodstock, Carleton Co., carriage maker; F. Herbert J. Dibblee, Woodstock, Carleton Co., silver plater; Robert Stephenson, Woodstock, Carleton Co., mechanic; G. Randolph Ketchum, Upper Woodstock, Carleton Co., gentleman."

Daily Gleaner - Aug. 15, 1890 Searching for Gold. - W.C. Burpee, Sol Perley, and party are searching for gold along the Tobique. There has been several glittering specimens of quartz exhibited from that region lately, which has excited interest, and riveted the attention of many of the Grand Falls experts. It is to be hoped the results will pan out well."

Fredericton Daily Gleaner - Nov. 6, 1890 The Precious Ore. - The Woodstock Press says: Messrs. S. Perley and O. Sanders have returned from the Tobique, where they have been prospecting for the precious metal since June last. Dame rumor says they have been very successful."

S.J. Globe - Sep. 6, 1890 During the past two or three weeks a party of gold hunters have been prospecting about 60 miles up the Tobique, on the Serpentine. They have certainly struck it pretty rich, and are now satisfying themselves that gold and silver actually exist there in paying quantities, before they form a company and proceed to develop the mine. This constitutes their second or third trip to the same spot; and while they keep pretty quiet, those in a position to know, affirm their faith in the enterprise. - Carleton Sentenil."

Fredericton Daily Gleaner - Sep. 17, 1890 Prospecting up the Tobique. - There is an excellent prospect on a branch of the Tobique, says an exchange. Parties there have put up a small crushing plant. Assays taken have yielded 36 ozs of silver, and 1 oz 15 dwts gold, to 57 ozs silver, and 1 oz 19 dwts gold. This ought to attract the attention of capitalists."

Moncton Daily Transcript - Sep. 20, 1890 Parties have put up a small crushing plant for gold and silver quartz on the

Carleton Sentinel - Sep. 27, 1890 Mr. Solomon Perley, with Mr. Owen Saunders is meeting with encouraging success in prospecting on abranch of the Serpentine. They have been placer mining this summer, and the sand they have been washing lately has yielded enough gold dust to pay running expenses. Mr. Perley's object is to trace the gold bearing sands to the source in the high ground where, it is confidently anticipated there must be a rich deposit. That there is mineral wealth in that part of the province as well as in this is beyond the peradventure of a doubt."

Daily Telegraph - Oct. 19, 1891 Messrs. Solomon Perley and Humboldt Sharp have been prospecting in the Serpentine branch of the Tobique recently. They were accompanied for a few days this tripby W.N. Goold, M.E., of Sussex. Mr. Goold was favorably impressed with the prospects for gold mining. Should his report be favorable after testing the quartz samples, a regularly organized examination will be made next season of that promising field."

Fredericton Daily Gleaner - Oct. 19, 1891 and Evening Gazette - Oct. 20, 1891 Messrs. Solomon Perley and Humboldt Sharp have been prospecting in the Serpentine branch of the Tobique recently. They were accompanied for a few days this trip by W.N. Goold, M.E., of Sussex. Mr. Goold was favorably impressed with the prospects of gold mining."

Weekly Record - Fri. Oct. 23, 1891 Messrs Solomon Perley and Humboldt Sharp have been prospecting in the Serpentine branch of the Tobique recently. They were accompanied for a few days this trip by W.N. Goold, M.E., of Sussex. Mr. Goold was favorably impressed with the prospects for gold mining. Should his report be favorable after testing the quartz samples, a regularly organized examination will be made next season of that promising field."

St. Andrews Beacon - Aug. 11, 1892 Prospectors returning from the headwaters of the Tobique report a fearful hailstorm, that visited the region drained by the Serpentine and Mamozell, about the second week in June. It was accompanied by a strong wind from the north that drove the hailstorm with terrific violence against the trees and ground."

Daily Telegraph - Aug. 20, 1892 Carelton County. - Mr. Solomon Perley has come home from the Upper Tobique where he has had charge this summer of a prospecting party. The recent rise of water in the Serpentine, where the party were at work, necessitated a stay of proceedings till the waters subsided. The prospectors report that the prospects for gold in paying quantities are excellent."

S.J. Gazette - Aug. 27, 1894 The Tobique Mining Company have just received a stamp mill to enable them to more thoroughly test their ores. The mill is to be taken up the Tobique and set at work on their claim as soon as possible."

URN: 0469 / IDX_Names: Gold Brook;

Woodstock Dispatch - Aug. 29, 1894 Gold Mining. - On Saturday last there arrived in Woodstock a stamp mill, for use by the Northern New Brunswick Mining Co'y, on their prospecting property near the head waters of the Tobique river, six miles from the mouth of the Serpentine. The mill, the first of its kind to come to this Province, is from Fraser & Chalmers, of Chicago. It is used for crushing ore in order to exactly ascertain the amount of mineral in a certain find. When landed at the mine it will have cost about $1,000. It has a crushing capacity of from three to four tons a day, and is run by an engine specially made for it, of five horse power. The whole outfit was brought here in charge of Edward Townshend, who has been working in the celebrated Treadwell mines in Alaska. The mill will be sent to the scene of the operations as soon as the shoes and dyes, which were ordered from New York, arrive. In talking with the Dispatch one of the company said that gold was found in the vicinity mentioned about eight years ago. Solomon Perley, D.W. Jackson, S.T. Baker, Robert Stephenson, Napier Hartley, went up in a party, and tested each vein, and claim to have found gold in each. The quartz reef is 500 feet in width, embracing a series of veins. An assay was made of twenty-seven different veins, and gold found in each vein. The company do not make any very high claims on the surface, they claim that a small percentage of gold in the ore will pay working it. About three years ago they got a lease from the government of fourteen square miles. The company have gone along surely and steadily, and while they tell no big stories, they seem well satisfied that the prospecting machinery they have just received will show that their hopes are well founded."

Woodstock Dispatch - Sep. 5, 1894 Mining in Alaska. - Last week the Dispatch had a local on the arrival of a stamp mill to be used by the Northern New Brunswick mining company on their property situated near the head waters of the Tobique River. The mill will be run by Mr. Edward Townshend, who has had many years experience in Alaska. Mr. Townshend who is a native of Charlotte County, worked in the celebrated Treadwell mine, which was, until recently the property of two men named Treadwell, born in St. Andrews, and now millionaires in San Francisco. One of these brothers discovered a mine containing the largest quartz ledge known in the world at that time. It was 1500 feet long, and 500 feet wide. This mine was situated on Douglas Island, opposite Juneau City. Two hundred men are employed in the mine, including Indians, and they work day and night. The climate, Mr. Townshend says is very humid, and this unfavorable climate and the close application of his work, as a mill wright affected his health so that he had to give up work in that distant part for the present. The gold after being extracted from the ore, is made into bullion bars about eight inches long and is shipped to the mint."

Woodstock Dispatch - Apr. 10, 1895 Gold Mining. - The three stamp mill which the Northern New Brunswick Mining Company purchased last fall, is now at the Forks of the Tobique. It will be removed to the company's areas as soon as the water

Woodstock Dispatch - Aug. 14, 1895 Gold Mine - Solomon Perley took a piece of Tobique gold ore to St. John, and the assay which has been made, is quite satisfactory to the Mining Co. Mr. Perley has returned to the mine."

N.B. Reporter - Aug. 14, 1895 The Northern New Brunswick Mining Co. people who are working on the Tobique are much encouraged by an assay made of the gold ore which Mr. Perley took to St. John. It seems to point to the mine as a certain to be a success."

Woodstock Dispatch - Jul. 17, 1895 The Gold Mine. - News from gold mining operations on the Tobique is to the effect, that the stamp mill has been set up and the crew is now actively at work. More detailed reports will be received shortly."

S.J. Daily Sun - Jul. 30, 1895 Woodstock. - Northern New Brunswick Mining Co. - A Stamp Mill Purchased. - Woodstock, July 27. - Messrs. Sol. Perley and Austin Hartley, connected with the Northern New Brunswick Mining Co., which is carrying on the gold operations on the Tobique, arrived from the scene of operations this morning, after being there two full months. The company purchased a stamp mill, which had been pushed to the Forks last autumn, and after much difficulty was transferred from the Forks to the mining land this spring and summer. The mill, which was started on the 14th of July last, will click at the rate of 95 per minute. Five buildings have been put up, including a mill house 14x36. Water is brought in a fir pipe from the foot of a hill on the opposite side of the stream. Ten veins have been tested and the result has been quite satisfactory. The veins are from six inches to ten feet wide and are lying within a distance of 75 feet, right along the stream. Seven men have been working on the property since operations commenced. The property, which covers some ten square miles, is situated about seventy- six miles from the mouth of the Tobique, and is in Northumberland county, along the banks of the Serpentine, which separates from the main stream at the Forks. The country is described as covered with a mossy growth. Immediately across the river from the mining property is Mount Monal, one of the largest mountains of that mountainous vicinity. A meeting of the directors of the company was held last evening. It is understood that operations will be continued, as the gold promises to be secured in paying quantities."

S.J. Gazette - Jul. 30, 1895 A New Gold Mine - A New Brunswick mining company, which is carrying on gold mining at the head of the Tobique, have started operations. Messrs. Sol. Perley and Austin Hartley, who gave been in the woods all summer, are now at Woodstock. Last fall a stamp mill was purchased by the company, which had been pushed to the Forks, and this spring was placed on the mining lands of the company. It was started on the fourth of July last. They have five buildings on the ground, and a plentiful supply of water. Ten veins of gold bearing quartz have been tapped, and they vary from six inches to ten feet wide, and they lie within a distance of 75 feet right along the stream. The company has ten square miles of land, 76 miles from the mouth of the Tobique in Northumberland County. At a meeting held last night, the company decided to continue operations, as the gold they have discovered is in paying quantities."

URN: 0469 / IDX_Names: Gold Brook;

Woodstock Dispatch - Jul. 31, 1895 Where the Gold Lies - How Work is Progressing onthe Serpentine - The Mining Prospect Good - After two months of hard labor Messrs. Sol Perley and Austin Hartley who have been working at the Tobique gold mine operations arrived in Woodstock bringing with them favorable reports as to the promise of the new field. Mr. Hartley gave the Dispatch some interesting information as to the nature of the country where the mining is going on, and also as to the condition of affairs along that country so much talked of and so little known, comparatively - the Tobique. It will be remembered that the mining operators had to take a stamp mill from the Forks of the Tobique clear up to their field of operations, some sixteen miles on the Serpentine. Many people have the idea that the mine is in Victoria County, but is quite a bit across the line in the county of Northumberland, the Serpentine taking an easterly turn. Getting the mill up was no small job. It had to be loaded on catamarans and several times unloaded, beside being carried in the best way possible by several falls. Finally it was got safely to its destination. The stamp mill was in position toward the end of June, and, they hoped to get it running by Dominion Day, but in spite of all loyal efforts, the next best thing was to start on the glorious fourth, and this was accordingly done amid the enthusiasm of all present. Everything promises well so far. The stamp clicks at the rate of 95 to a minute, and works to perfection. The area covered by the Northern New Brunswick Mining Co., would not be less than ten miles square. There are five buildings erected, including the mill house 14 x 16. Water is brought about 40 rods from a foothill on the opposite side of the stream. Seven men have been working and they have now ten veins tested, proving quite satisfactory. The veins are all the way from six inches to ten feet wide, and lie within a distance of seventy-five feet, right along the stream. The nearest settlement of any kind to the mine is Riley Brook. ...."

Woodstock Dispatch - May 22, 1895 The Northern New Brunswick Mining Co. has secured the services of Henry Matthews, of Malaga, N.S., to take charge of the stamp mill and superintend the mining operations at their gold mine on the Serpentine River, Tobique. At the last meeting of the Company it was decided to get to work at once and open up the mine. The directors and company have great confidence in the value of their find. Mr. Matthews came to Woodstock on Monday, and next Monday he will proceed to the scene of operations accompanied by Solomon Perley."

Woodstock Dispatch - May 29, 1895 After Gold. - The Northern New Brunswick Mining Company will be an anxious body of citizens for the next few months, until they find out the result of the mining operations they are carrying on up the Tobique. Yesterday a party of men named Solomon Perley, Jas. Loomer, Austin Hartley, Owen Saunder and Henry Matthews, the latter a mining engineer started for the Serpentine on the Tobique. The stamp mill which was taken up river last fall is now at the Forks. The party will remove from the Forks up the Serpentine to a place called Gold Brook where the operations will be carried on. This discovery was made thirty-five years ago by Sperry Shea, a Californian miner. All assays made have been successful. The mill has a crushing capacity of three tons of rock a day."

Gazette - May 29, 1895 and S.J. Daily Sun - May 29, 1895 and Weekly Record - Fri., May 31, 1895 Woodstock. - A Party Leave for the Tobique in Search of Gold. - (Special to The Sun). - Woodstock, May, 28. - A mining project in which much interest is taken around here is being put to a very practical test just now. This morning a party of men, under the direction of the Northern New Brunswick Mining company, left Woodstock for the distant waters of the Tobique. They are Solomon Perley, Jas. Loomer, Austin Hartley, Owen Saunders and Henry Matthew, a mining engineer from Harvey. Last fall a stamp mill was taken up as far as the Forks on the Tobique. It had to be left there for the winter. This party will remove it from the Forks up sixty-four miles to the Serpentine, and then up that wandering stream for twenty miles or so, to a place called Gold Brook, where the precious metal is supposed to be hid. The first discovery of gold was made about thirty five years ago. a number of assays have been made of the metal brought out, and it is claimed every time with success. The crushing mill has a capacity of three tons of rock in twenty four hours."

Woodstock Dispatch - Oct. 23, 1895 Work has ceased for the present on the mining property on the Northern New Brunswick Co. on the Tobique. It has been found necessary to close up owing to the winter. Those who have been working there say that the prospect is exceedingly good, and there is no doubt but that the precious ore can be got out in paying

S.J. Daily Sun - Oct. 25, 1895 The Northern New Brunswick Mining Co. have suspended operations for the winter. The Sun was informed yesterday by a person who has been working there a part of the season, that the prospect is encouraging and that it is the intention to prosecute the work vigorously next spring."

Woodstock Dispatch - Nov. 9, 1898 NOTICE. - A general meeting of the shareholders of the Northern New Brunswick Mining Co. will be held atthe office of the undersigned in the Town of Woodstock, N.B., on Monday the twenty-first day of November instant at the hour of three of the clock in the afternoon, for the purpose of electing directors and for the purpose of considering some applications for stock, made by certain parties, and also for the purpose of considering the best way of arranging matters for the purpose of further developing the Co.'s prospect, and such other general business as may be brought before it. Dated at Woodstock, N.B., this seventh day of November A.D., 1898 J.C. Hartley Sec'y Northern New

URN: 0469 / 0275 / IDX_Names: Gold Brook; Woodstock Fe;

Woodstock Dispatch - May 25, 1898 Gold on Tobique. - Prof. Bailey Reports That the Indications are Good. - Possibilities of Iron in This Parish. - The Dispatch has just received the report of the geological survey department for 1897, printed by order of parliament. It contains interesting matter to anyone concerned in the future of this county as a mineral producer. Prof. L.W. Bailey reports on behalf of New Brunswick. What he says of the prospect in this section of both gold and iron ore will afford encouragement to those who believe that these ores exist not far away, in paying quantities. Dealing with gold Professor Bailey says:- Withfurther reference to this subject of possible development of mineral resources, the facts relating to the occurrence of gold in New Brunswick deserve some attention. For many years finds of this metal have been reported, and there seems to be no good reason to doubt that some at least are authentic. Indeed, so impressed have some parties been with the belief that certain tracts, especially those bordering upon the Serpentine River, in Victoria County, are auriferous, that they have incurred the expense of transporting and erecting a small stamp mill into that remote and comparatively inaccessible locality. My visit to the region, made by your desire, tended strongly to confirm the justice of this belief. It is true that I was unable to find any free gold, but the character of the rocks, consisting of glossy slates and schists, together with the nature of the quartz veins by which these were found to be abundantly intersected, and, finally, the evidences of mineralization afforded by an abundance of pyrite and mispickel, were all features favorable to a belief in its occurrence. Should that belief, for the testing of which appropriate samples were selected, be confirmed, it will be important to notice that the same belt of rocks, with evidently the same characters, has a wide distribution in northern New Brunswick, as also that it is the tract in which the larger part of the reported discoveries of gold have been made. At present the greater portion of it is densely forest-clad, and thus removed from ordinary observation. As to iron he has this to say:- The hematitedeposits of Carleton County have been long known and were at one time the basis of somewhat extensive operations, the manganiferous ore proving to be especially well adapted for the manufacture of steel, thus anticipating the subsequent employment of spiegeleisen for a like purpose. It carried, however, also a considerable proportion of phosphorus, and this, together with the increasing scarcity of fuel, was the main cause of its abandonment. By the introduction of improved methods of working (especially the basic process of Thomas and Gilchrist), the presence of phosphorus is now of far less importance, and ores previously regarded as worthless on account of its presence, are becoming available. It is doubtful whether, under existing circumstances, the Woodstock ores could be worked with profit, but, the above facts being taken into consideration, they at least deserve to be ranked among possible reserves."

URN: 0469 / C1 / IDX_Names: Gold Brook; Tobique/ Giberson Gold;

Carleton Sentinel - Apr. 13, 1889 The latest is a company formed for the purpose of discovering and mining the Giberson gold in Tobique which was discovered and lost over forty years ago. This myth takes the place on Tobique of Captain Kidd's treasure on the coast, and many efforts have been made to find it ending in failure."

S.J. Gazette - Sep. 28, 1894 Tobique, Sep. 28. - Parties interested in working the gold bearing rock at Three Brooks are reported to have found the mineral very plentiful in that locality. Some allege that this even exceeds the better known districts on the Serpentine. The crusher is reported to have passed up on its way to the latter. It is rumored that a contract

Royal Gazette - Aug. 24, 1889 Notice of Granting Letters Patent. Public notice is hereby given, that under The New Brunswick Joint Stock Companies' Letters Patent Act, Letters Patent have been issued under the Great Seal of the Province of New Brunswick, bearing date the twenty fourth day of August, A.D. 1889, incorporating John A. Shea of Grafton, farmer; Solomon Perley, of Upper Woodstock, contractor; John Graham, of Woodstock, grocer; Albert Brewer, of Upper Woodstock, contractor; David W. Jackson, of Upper Woodstock, millwright; Frederick H. Hale, of Grafton, gentleman; Samuel T. Baker, of Woodstock, carriage maker; F. Herbert Dibblee, of Woodstock, silver plater; Robert Stephenson, of Woodstock, mechanic; G. Randolph Ketchum, of Upper Woodstock, gentleman; all in the county of Carleton, Province aforesaid, for the purpose of the acquiring, holding, selling and conveying of lands and of rights and interests in lands within the Province of New Brunswick; for mining, and other purposes incidental to mining and the working of Mines, and the raising, selling and exporting of and dealing in ores and minerals of all kinds, and all other purposes connected with the business of mining, by the name of The Northern New Brunswick Mining Company, with a total capital of Two hundred thousand Dollars, divided into Two hundred thousand Shares of One Dollar each. Dated at the office of the Provincial Secretary, at Fredericton, the twenty fourth day of August, A.D. 1889. David McLellan, Provincial Secretary."

URN: 0469 / LEGI / IDX_Names: Gold Brook; Legislation, etc.;

Royal Gazette - Jul. 17, 1889 Notice. We, the undersigned, hereby give notice of our intention to apply to the Lieutenant Governor in Council for incorporation by Letters Patent under the privileges of The New Brunswick Joint Stock Companies' Letters Patent Act. 1st. The proposed corporate name of the Company is The Northern New Brunswick Mining Company. 2nd. The objects for which the Company seeksincorporation are - The acquiring, building, settling and conveying of lands, and of rights and interests in lands within the Province of New Brunswick, for Mining and other purposes incident to Mining and the working of Mines, and the raising, selling and exporting of and dealing in Ores and Minerals of all kinds, and all otherpurposes connected with the business of mining. 3rd. That the office and chief place of business of the proposed Company is to be established at Woodstock, in the County of Carleton, in the Province of New Brunswick. 4th. The amount of the Capital Stock of the proposed company will be Two hundred thousand dollars. 5th. The number of shares is to be Two hundred thousand, of One Dollar per share. 6th. The names, addresses and callings of the several shareholders respectively are as follows, of whom the three first named, John A. Shea, Solomon Perley and John Graham, are to be the first and Provisional Directors of the Company under the proposed incorporation:- John A. Shea, Grafton, Carleton Co., farmer; Solomon Perley, Upper Woodstock, Carleton County, contractor; John Graham, Woodstock, Carleton County, grocer; Albert Brewer, Upper Woodstock, Carleton County, contractor; David W. Jackson, Upper Woodstock, Carleton Co., millwright; Frederick H. Hale, Grafton, Carleton Co., gentleman; Samuel T. Baker, Woodstock, Carleton Co., carriage maker; F. Herbert J. Dibblee, Woodstock, Carleton Co., silver plater; Robert Stephenson, Woodstock, Carleton Co., mechanic; G. Randolph Ketchum, Upper Woodstock, Carleton Co., gentleman. Dated this 15th day of July, A.D. 1889."

URN: 0489 / GEOL / IDX_Names: York Mills; Geology - General;

Colonial Farmer. - May. 15, 1871 Geological Report. - Continued. Although the general colour of these rocks is grey, they are occasionally reddish, purple and yellow, and more rarely of a greenish hue, and sometimes stained black with oxide of manganese; these differences being apparently quite capricious in their modes of occurrence, depending rather upon local circumstances than upon the stratigraphical position of the beds exhibiting them. At the few spots where thin seams of coal have been discovered, they are overlaid by a correspondingly thin band of drab coloured arenaceous and micaceous shale, showing scanty and imperfect impressions of ferns and other coal plants, and rest upon a similar stratum, abounding in nodules of iron pyrites, but destitute of organic remains, so far as I could discover. I am not aware of any true stigmaria underclays of other indications of productive and workable coal seams having been found in the region under notice. Near Thompson's Mills, at the mouth of the Nashwaaksis, about three miles north of Fredericton, two large prostrate trees have been found imbedded in the solid sandstone, one measuring fifty feet long and two feet diameter at the base; of these I have obtained fragments, but the species has not yet been identified. The altitude of the various strata above enumerated, which appears on the whole to be conformable, is nearly horizontal. From local irregularities, however, in the apparent surfaces of bedding, it is exceedingly rare to obtain an unequivocal observation of strike or dip by direct measurement and from the want of continuity of the beds their precise attitude cannot be deducted from bearings and levels taken at moderately distant points. From a somewhat comprehensive series of observations, I believe I am justified in setting down the average dip, throughout the region explored by me, as E 6 deg. - 10 deg S at an angle of 5 deg. This is at and near the rim of the area; as we proceed towards the centre the strata become more and more nearly horizontal. The grey grits and conglomerates being composed of materials little liable to disintegrate by the influence of the weather, especially towards the outer rim, have resisted denudation, and are generally found standing out in bold bluffs or more shelving ridges of various elevations up to 900 feet above tide level; while the softer and more readily decomposed red and calcareous rocks at their base occupy lower ground, and partially influence the course of some rivers; their ruins producing, as might be expected, good arable land. The grey sandstones, on the other hand, produce by their disintegration rather poor and meagre soils; and the uplands overlying these rocks being either for the most part encumbered with looses blocks, or swampy from want of natural drainage, the progress of agriculture in such circumstances slow. The trappean rocks to which I have referred as associated with this group, occur only in connection with its lower members. The areas of these eruptive rocks, of which I have noted seven distinct localities in the region explored by me, are generally of very limited extent, but locally they appear to have exercised a considerable influence upon the character and distribution of the rocks penetrated and overlaid by them. Having thus indicated the general features and conditions of the Carboniferous rocks in this region, I shall proceed to give a few details of the more notable localities in which they were observed. - It has long been known that the great Carboniferous area of New Brunswick has a triangular form, the base resting on the Gulf of St. Lawrence, and the apex situated a little to the west of Oromocto Lake, near the boundary line between the counties of York and Charlotte. It is at this latter point that my observations commence, extending thence in a northeasterly direction to the county of Northumberland, at Boiestown on the southwest Miramichi River. The river Magaguadavic skirts this line transversely just at the apex of the Carboniferous triangle, and seems to have excavated its channel in the soft calcareous and marly rocks at the base of the formation; the country beyond, to the west and north, forming a very extensive elevated plain, underlaid by the metamorphic rocks. The succeeding members, crop out in bold bluffs, nearly 250 feet above and two-thirds of a mile from the river; the apparent dip being N. 70 deg. E. log. 15 deg. Oromocto Lake, which is situated two miles eastward from the brow of a cliff, and is about sixteen square miles in superficial extent, is from 80 to 100 feet below the level of the escarpment referred to, and 370 feet above the level of tide water, while the general level of the great plain to the west is 250 feet; thus presenting the extraordinary phenomenon of a very considerable body of water supported at a height of 120 feet above the plain in the immediate vicinity, and yet draining through a very great area in the oppositedirection. At Lister's Mills ten miles north from the escarpment, and on the north-east branch of the Magaguadavic, the rocks at the base of the Carboniferous series present an interesting development of their peculiar characters where affected by trappean intrusions. Mottled red and green highly calcareous shales and conglomerates, some of the layers holding nodules of pure calcspar, layers of chert and strings of fluorspar, occur mixed with rocks apparently of eruptive origin, and with others bearing much

URN: 0530 / 2031 / IDX_Names: Pokiok River; Burnthill Brook Molybdenite;

Fredericton Capital - May 31, 1881 The Probability of Tin Ore Being Found in York.-Dr. Bailey has in his possession a specimen of tin stone said to have been found by Dr. Gesner, at the Pokiok; as the rock formation in the locality is granite, the statement appears to be not improbable, since this mineral is found in veins or beds, mostly in the former, in granite, gneiss, mica, slate, and clay slate. It is very often found in greisen, a rock composed of quartz and mica; this occurs in the parish of Queensbury, associated with molybdenite an ore frequently accompanying tin. Mr. Jack, of the Crown Land Department informs us that Dr. T. Sterry Hunt some years ago shewed him a piece of tin ore which he had found in the State of Maine, and told him (Mr. J.) that he had better keep an eye out for tin stone in the belt of mica schist whichcrosses the South-West Miramichi near the mouth of the Burnt Hill Stream."

URN: 0530 / Z2 / G3 / GEOL / IDX_Names: Pokiok River; Sandstone, Building Stone, Monument Stone, etc.; Granite; Geology - General;

N.B. Courier - Oct. 7, 1837 LETTER IV. To His Excellency Major General Sir John Harvey, K.C.H. and C.B., Lieutenant Governor and Commander in Chief of the Province of New Brunswick, &c. &c. &c. May It Please Your Excellency: In endeavoring to discover the geological features of any country, and to obtain sufficient data whereby particular examinations are rendered less difficult, I have alwaysobserved that the sea coast, and the banks of the rivers wherever they occur, afford facilities not to be obtained through any other medium, where deep mines and quarries have not been opened. Convinced of these facts I have endeavored to lay before Your Excellency a few particulars relative to the Tantamarre, Memramcook, and Kennebecasis Rivers, and the characters of the formations through which they extend, so far as they were observed on my route. From the two former streams the River St. John is different in two important particulars; one in respect to its inestimable advantage to the country, and another in regard to the sources from which the diluvium on its banks has been derived. That part of the St. John which extends from above the falls into the interior of the country, receives no alluvial matter from the sea, as its navigable channel is elevated at least forty feet above the harbor at low water. The falls which might be considered by some an obstruction to navigation, absolutely extend it to a great distance. The impediments placed at the ""narrows"" and the sudden descent of the water at the falls preserve the level of the river above, which may now be compared to a lake. Were all the obstructions removed, and this majestic stream allowed to pass through a broad open mouth into the sea, dangerous rapids would be formed above, and its use as a common canal, and thoroughfare would be greatly diminished. It is certainly an admirable river where all the rapids are collected at its entrance - where they are locked up by the ocean twice every twenty four hours. The descent from the Meductic falls at Woodstock, (at least one hundred and thirty miles up river) is so gradual, and consequently the current of water so feeble, that long before the river can be emptied, the ""tidelock"" of the falls is closed, and a current throw back into the channel which seems to supply the waste that has taken place during the previous ebb. Instead of receiving constant supplies of sedimentary matter from the wasting rocks of the coast, during each tidal influx of the sea, the elevated situation of the river's bed and the barrier set up at its narrow mouth, prevent the admission of sand and mud, which on the banks of other rivers are so abundantly deposited. Nor do the border of this noble stream require it. Skirted with the detritus swept from the mountain's brow by falling showers, and clothed by the alluvium brought downward by each bubbling brook, a fertile deposit is formed on each of its banks, which are submersed beneath the waters of the vernal ad autumnal floods. About three miles from the Indian House, the limestone formed by the sides of the ""Narrows"", is met and overlaid by conglomerate, which is regularly stratified, and dips north-east. It evidently belongs to the formation of that rock so abundant along the Kennebecasis, being like it in every particular. The Nerepis river empties into the St. John ten miles above the Indian House - at its entrance a great change may be observed in the scenery. Instead of the bold rugged cliff of limestone and conglomerate the shore slopes gradually down to the main river, and cultivated fields decorate its border. Continuing their course in a south-west direction, the highlands already mentioned cross the St. John, and taking within their range the mountains of the Nerepis, they form a distinguishing feature of the Province. Beginning at their base, the great coal district of the country is spread out far and wide in a northerly direction, and its rocks are strongly contrasted with the oval summits of the granitic hills, and the grandeur of this primitive region into which the Nerepis extends. On the shores of Long Reach several beds of clay, sand, and gravel were observed, and to a stranger, the enormous rafts of floating timber, occupied by comfortable cabins, and whole families - the groups of children sporting on the buoyant pine - all moving slowly towards St. John, afford a truly interesting spectacle. Such is the scenery in a Province possessing four thousand miles of navigable lake and river, and such are some of the natural advantages the country enjoys. Advancing up the Long Reach the conglomerate and a coarse sandstone, may occasionally be seen forming bold eminences on the side of the river. At the ""head of the Reach"", there are two islands, apparently formed altogether of alluvial matter, from the particular direction of the current. A long arm of intervale extends along the west side of the river at a place called the ""Mistake"", where a deep creek has often been mistaken, even by good pilots for the main channel; hence this name has arisen. On this part of the St. John there are some beautiful views; at the head of the Reach the river becomes narrow, from this circumstance a blockhouse and battery were erected during the last war, on its eastern side. Not far from the lower end of Spoon Island there isa hill of granite, from which mill stones are quarried. But having passed rapidly up the stream in a steamboat, I am unacquainted with many of the interesting formations along its shores. There can be little doubt, however, that any who shall follow up those limited examinations, will reap a reward for their labour. It would be necessary to travel along both banks of this extensive river, in order to examine faithfully their structure, 3 and collect their minerals; and the time cannot be far distant when the Provincial Government will explore the hidden resources of the country and open up new channels of industry and wealth. A coarse sandstone apparently belonging to the lower strata of a coal basin, and approaching what is usually called the mill-stone grit, was observed at Gagetown, a delightful spot sixty miles from Saint John and thirty from Fredericton. I had not an opportunity to examine its extent, and the indications of coal appearing in that neighborhood. A remark has been made, and perhaps believed to be just by many, that after the timber of New Brunswick has been felled and transported, the resources of the country will be dried up, and consequently, the Province will fall even below the level of the other American colonies - but let any one make an excursion one hundred and fifty miles up the St. John, and that opinion will be discarded from the mind. From Long Reach to the Grand Falls, a distance approaching two hundred miles following the course of the river; there are many tracts of the most fertile soil, and almost every spot along the shores of this admirable stream is capable of cultivation. The vast quantity of intervale between Belleisle Bay and thirty miles above Fredericton is of itself, sufficient to enrich the central portion of the province. Already invested with chains of cultivated fields and rich meadows, occupied by the hardy sons of Loyalists, this useful river offers to its industrious and rapidly increasing population a fair compensation for their labor, and a home for their posterity. Nor is the scenery on the river less pleasing - during the summer months when the floods of spring have subsided, there are numerous landscapes along its embankments that will vie with the richest of other countries. The dark and winding river, shaded by the tops of lofty elms, or crested with the drooping willow - the distant village seen through the fringed opening of the forest - the unwieldy raft and smoking steamboat, make up that singular variety so pleasing to most travellers, and agreeable to the fixed inhabitant. The St. John, between the Falls and Fredericton will probably average a mile and a half in width, and when the number of smaller streams, lakes and creeks, all emptying into this common reservoir are viewed, the quantity of water it conveys cannot appear surprising; and that floods should occur during the heavy rains of autumn, and from the dissolution of the snow in spring are effects common to all rivers of the kind. But it must not be supposed that all the water rushing into this lake-like receptacle, is precipitated over the falls near the city of Saint John. Many from their own observation, have supposed that a subterraneous passage to the sea gives vent to a part of the water. That idea is certainly 4 erroneous. The quantity of water is reduced by evaporation alone - this during the summer months, and under particular conditions of the atmosphere, is quite sufficient to account for the supposed phenomenon. When so large an aqueous surface is exposed to the air during dry weather, the escape of vapor is very great, and it is certain that the river will rise when the atmosphere is dense, and the weather lowering, at times when there has been no previous rain. A circumstance readily explained by the atmosphere being in a condition more or less favorable for the conveyance of water in an teriform state. I have observed many small streams to become dry at their mouths in the summer season, while toward their sources they sent forward a much greater quantity of the evaporating fluid than could be absorbed by the earth. Of all the agents employed in modifying the earth's surface none of more active than water. Its effects are certain whether they are produced by the falling shower or the rushing of the mighty torrents. Particle after particle becoming loosened from the hardest rocks by its disintegrating influence, is swept from the summit of the mountains to form new deposits in the valleys. Even the largest rocks are torn from their native beds and transported by its force to great distances. The soil thus formed is always accumulated at the lowest levels, and distinctly points out the height to which water has risen. The matter collected by these means, whether it is large stones, sand, gravel or mud, is identical with the rocks from which it is derived, unless mixed with decayed vegetables or has undergone some change by chemical affinity. The large tracts of intervale on the St. John river, have thus been deposited from the debris of its surrounding hills, and each successive freshet brings down a new stratum of sediment that semi yearly renders the soil more fertile. The vast accumulation evidently belongs to two distinct and separate periods of time. The first or most ancient is limited in extent, and forms what is generally called the high intervale. It consists of different layers of rounded pebble, gravel, sand, and sometimes beds of clay. These, whenever they appear, occupy a higher level than the more recent alluvium and are seldom or never entirely inundated by the highest floods of the present period. This, the earliest of these collections is well displayed at Fredericton, and the town is built on one of the most beautiful situations. Opposite the Capital of New Brunswick, and near a bark camp village of its aboriginal inhabitants, there is a bed of good clay, and collections of fine sand, may be seen on the level land on the border of the river at other places. These deposits belong to those called by Mr. Lyell, Newer Pliocene, although I have not been able to discover in them any organic remains whereby their relative age might be determined. The other collection of alluvium is comparatively recent, 5 and has been formed by causes now in operation. In it I obtained two species Mtyila and other shells, all belonging to the kinds now living on the shores. This deposit forms almost all the intervale along the river and being placed in the lowest situation, ie. submerged during the floods of spring and autumn. It is more than probable that the site of the river and all its intervale was at one time a Lake, whose surplus waters made their exit into the sea by a passage remote from its present mouth. It was observed that the sediment collected on the borders of the channel increases more rapidly than near the upland. This arises from the particles of alluvium being thrown down in time of freshet before they reach the more remote places, and hence also the coarse materials by falling first, will be found upon the bank, and the finer particles only are conveyed to the lowest and most remote parts. Such is the case of the Mississippi, which has been represented ""as a river running on the top of a long hill or ridge, with an elevation of twenty four feet in its highest part, and a base three miles in average diameter. First, however, remarks that this picture is not very correct, for notwithstanding the comparative elevation of the banks, the deepest part of the river is uniformly lower than the lowest point of the alluvium."" About six miles from Fredericton on the opposite side of the river, and near the Nashwasis, there is a remarkable cliff, averaging one hundred and fifty feet high, and extending some distance along the east side of the Royal Road. This cliff is composed of trap rocks which have been thrust upwards, and now form a lofty dyke in the coal measures, that were found to reach even further westward than the mouth of the Keswick. The precipice presents a bold front, and by constantly crumbling down has formed of debris rudely piled along its base. The trap is of the compact, and amygdaloidal varieties; the latter often contains numerous hollow cavities, and is perfectly vesicular. In other instances these cavities are filled with calcareous spar, and in this respect is different from the amygdaloid of Nova Scotia, which most frequently contains Zeolites. Good specimens of magnetic iron ore were found at the foot ofthe precipice, and a considerable quantity of that mineral was observed among the fractured masses forming the slope. I had much pleasure in being accompanied to this interesting spot by the Hon. J.S. Saunders, and the Rev. Dr. Jacob, with some of the students of Kings College, and the effects produced among the sandstones by the heat that accompanied the elevation of these volcanic rocks, rendered the excursion very interesting to the highly respectable party. A coarse sandstone similar to that observed atGagetown occupies the highest grounds in the rear of 6 Fredericton, the beautiful site of King's College is on this formation, and its massive columns are fine specimens of a similar rock brought from the Nashwaak, a stream nearly opposite the town. Occasionally covered with conglomerate the same rock continues its course near the entrance of the river Keswick nine miles above the capital. At numerous places the strata are covered with large boulders formed of its broken layers, and beds of gravel, sand, and clay. The impressions of leaves and other vegetable remains appear frequently, but in general they are imperfect from being exposed to the vicissitudes of the weather. The St. John here becomes more rapid, and winds its way among a number of islands. These, in summer, are decorated with green meadows, and the drooping branches of lofty elms add much to the natural beauty of the country. About two miles from the entrance to the Keswick on the south side of the river, new red sandstone forms a kind of a belt, and may be seen on both sides of the main stream. At the place where it is crossed by the road, it is very red and contains marl with a considerable quantity of oxide of iron. A bed of limestone is embraced by it, and may be observed forming a small declevity near the turnpike. The limestone is also highly colored, and as far as it was observed contains but few organic remains. Whoever exposes this lime to calcination, will find its quality improve by taking it as far from the surface as possible - by opening a deep quarry, and rejecting such masses as are in contact with its red marly covering. Near this place, I discovered in a mass of greywacke the remains of a beautiful species of a fossil coraline. The branches of this plant are spread out in the hard rock, and yet retain their original beauty, appearing as natural as if they had only been compressed between the leaves of a book. A part of this fossil is in the valuable collection of the Hon. J.S. Saunders, a gentleman of science and to whom I am much indebted for aid in making examinations in this part of the country. Following the course of the road on the south side of the St. John River, and passing over new red sandstone to the distance of two miles, greywacke slate and slate, are the prevailing rock to within two miles of Capt. Cheyne's farm, twenty five miles from Fredericton. These rocks have nothing peculiar in their appearance, and although no good roofing slate was found, it is highly probable it may be discovered here by a proper examination of the schistose hills in the vicinity of the river. The strata are almost perpendicular, and high ridges with deep ravines, give the country a most uneven appearance, and the road a number of hills not to be forgotten by any who have passed over them. Large rolled masses of granite syenite and greywacke are much more common in this than in the eastern parts of the Province, 7 where the solid formations of these rocks are placed at a great distance from the newer deposits on which these boulders are found. If it be true that these detached masses have been swept from their former positions by currents of water, these currents must have acted with less force in the western district of New Brunswick, than in other parts of the world, where they have been exiled to great distances. The effects produced by the watery elements are not, however, less manifest, for the detritus of the neighboring hills is collected in the valleys and the rocks are covered with water now blocks broken from their own strata. At the mansion of the worthy veteran officer, the coarse sandstone was again seen. This rock greywacke, and granite were observed alternately along the road to the Pokiok, where the granite prevails, and extending along the river a number of miles occupies a considerable tract of country. There are many delightful spots on the border of the main river, where it flows from among the mountains of these primary and transition rocks. One of the most beautiful of these is at a place called the Barony, the country residence of the late Judge Saunders. Four miles from the Barony, and forty two from Fredericton, there is the most singular waterfall, called the Pokiock, which rolls over one of the granite ridges of the primary mountain chain previously mentioned. The Pockiok is a narrow chasm in the granite about twenty-five feet wide, seventy-five feet deep, and one-eighth of a mile in length. Into this narrow opening the river descending from its higher channel falls over a perpendicular mass of rock, and bounding from step to step - whirling in oblique cascades, reaches the Saint John. Covered with the transient foam the main stream glides peacefully along, being scarcely disturbed by the introduction of this its noisy tributary. At the head of these falls several mills have been erected by Messrs. Allan, of a respectable family, and the owners of this romantic estate. A bridge is thrown over the dark and narrow opening, where the overhanging trees seem endeavoring to conceal the frightful gap beneath. Upon examining the remarkable chasm, it was found that the hollows on one side are placed opposite the protruberances of the other in such a manner, as to leave no doubt that they were once of contact, and have been separated by an earthquake or some other disturbance, whereby the rocks have torn asunder, and the Pokiock opened. The granite is of two kinds - in one of them the feldspar is of a light red

URN: 0543 / IDX_Names: Lorneville;

Philanthropist - Jul. 17, 1862 A deposit of copper ore has been discovered at Pisarinco, about six miles from St. John."

Carleton Sentenil - Jul. 19, 1862 and N.B. Courier - Jul. 12, 1862 Discovery of Copper Ore at Pisarinco. - Asplendid deposit of copper ore has recently been discovered at Pisarinco, a place distant from the city about six miles. Mr. R. Grace, a resident in that locality who made the discovery brought a portion of the ore to this city to be assayed. Mr. Foulis examined the specimen and ascertained that its specific gravity was 4.32. On separating the ore from the gangue of quartz, sulphur and iron, he found that when subjected to the smelting process it yielded 33 per cent. of copper. Mr. F. says that the sample examined is similar to that found at the Cornish Mines and the copper beds of Sweden; and that if it can be got in sufficient quantities and at moderate expense, it will prove a profitable investment for capital. On digesting the gangue in aqua-regia the proto-sulphate of iron precipitated from solution a small portion of gold. We have been furnished with a specimen of the ore, which the curious in such matters are at liberty to examine. - Courier."

Morning Freeman - Jun. 28, 1862 Our Mineral Resources. - A mine of Copper Ore was lately discovered at Pisarinco, about six miles from the city, on the farm belonging to R. Grace. A sample of the surface mineral has been lately assayed by Mr. Foulis, who designates the Ore a Sulphuret, or Copper Pyrites. The assay yielded 33 per cent. of Metallic Copper. We have just been shown the metallic specimen, and to our judgement it looks like an excellent article. Mr. Foulis also states that he procured a small portion of Gold from the Quartz Gangue. From this favorable position of the mine, and its proximity to navigation, we trust that capital will soon be employed in bringing to light this hitherto hidden treasure."

Gazette - Feb. 24, 1897Spruce Lake Gold. - A morning paper states that gold has been discovered at Frenchman's Creek, near Spruce Lake. A number of gentlemen have secured a prospecting license, from the crown land department, which will allow them to prosecute their work for one year. A company will be formed at once, and active work will be begun early in

Daily Sun - Feb. 26, 1897 Gold Near Spruce Lake. - Why go to Rossland to engage in gold mining when we have good undeveloped mines in our province, said a gentleman yesterday. And then he went on to describe a large tract of land at Frenchman Creek, just back of Spruce Lake, for which he and a number of others had secured a prospecting license from the crown land department which will allow them to prosecute their work for a year. In the meantime a company will be properly organized. The gentleman in question said the silver and gold samples got out give promise of a rich strike. On tests made by experts a yield of at least $50 a ton has been shown. Active work will be commenced as early in the spring

Gazette - Jun. 7, 1897 Local Gold Mine. - The gentleman interested in the mining claim near Spruce Lake commenced operations last week by sinking a shaft about eight feet and they are very much pleased with the result so far, the quartz at that depth is much richer than that was sent to Montreal last fall where it assayed over forty dollars per ton. Work will be continued during this week and if the prospect still continues to improve a company will be formed and the stock placed on the market. Professor Bailey of the geological survey was on the ground during the week and obtained a quantity of the quartz which he will send to Ottawa to be assayed by the government chemist."

URN: 0544 / IDX_Names: Frenchman's Creek;

Gazette - Jun. 14, 1897 The Spruce Lake Gold Mine. - The party which has been prospecting at Spruce Lake has finished its work and returned to the city. The members are well satisfied with the results of their inspection and are positive that gold and silver exist in large quantities. They are now awaiting a report from the government assayer at Ottawa. If favorable as is expected a company will be formed."

Gazette - May 28, 1897 Nuggets of Gold. - Parties interested in the Frenchman's Creek gold mine near Spruce Lake, intend to have a float containing a number of specimens of quartz from their mine in the Jubilee procession on June 22nd."

S.J. Daily Sun - Apr. 3, 1899 The gold fever is becoming quite widespread. April 4th Harry McLellan took up 70 gold areas in Frenchman's Creek, parish of Musquash. Jas. H. Price has taken out a license to search for minerals other than gold and silver in Kent Co. - Gleaner."

S.J. Daily Sun - Dec. 19, 1878 The Lancaster Silver and Lead Mining Association.- A meeting of the Lancaster Silver and Lead Mining Association was held last evening in the Grand Central Hotel, King Square. A motion to make a call of $300 on the members of the company for the purpose of sinking the shaft in the Musquash mine was discussed, but as only eight members were present a committee was appointed to see the rest of the members composing the company in regard to it, and report at the next meeting. It was moved and carried that Mr. William Morris, of Goldenville County, N.S., should be requested to visit the mine and make a report as to the value of the ore he found and the cost of getting it out in sufficient quantities to pay. A number of very good specimens of silver and lead ore were exhibited on the table, and a certificate from the assay office of W.C. Poole, of Georgetown, Colorado, where some of the ore has been analyzed, was read. It certified that the ore was good; and was accompanied by a letter requesting the Secretary to send more ore for analysis when they had explored further down into the vein. The Company also have certificates of analysis from Prof. Chandler, of New York, and others, which pronounce the find a good one. The meeting adjourned at 10 o'clock to meet again the second week in January. This Company was organized about eighteen months since, and they are now prospecting on land owned by Capt. Betts, Mr. Price and Mr. Clark, and part of the Clark estate at Musquash. Its land is situated on the western side of the harbor, and is next to the farms occupied by Mr. Hebern and Mr. Graham, while it is bounded by the harbor on the eastern side, where there is a good chance for building wharves and shipping ore. They have already sunk a shaft 36 feet at considerable expense."

Daily Telegraph - Oct. 5, 1878 ADVERTISEMENT: Lancaster Silver and Lead Mining Company. Notice is hereby given that a meeting of the above Company will be held at the Grand Central Hotel on Tuesday, the 8th day of October, at 8.30 p.m., when a full attendance of the shareholders will be absolutely necessary. Dated at St. John the 30th day of September. Wm. J. Fraser, Secretary."

S.J. Daily Telegraph - Oct. 25, 1878 Mining. - At a meeting of the Lancaster Silver and Lead Mining Company, held at the Grand Central Hotel, Tuesday, 22nd. inst., the directors concluded to resume work at the mine on the 25th inst."

S.J. Daily Sun - Sep. 23, 1879 Silver Mining. - ...... Sault St. Marie.... ...... There is no longer any doubt of the existence of silver in our New Brunswick rocks, and in paying quantities. We have been shown during the past twenty- four hours some samples of silver bearing quartz, which at a distance of only twenty or thirty feet from the surface produces, by careful assay, about 20 oz. silver to the ton and about 30 per cent. lead; and it keeps improving as the shaft is sunk. The ore-streak has been uncovered to a width of six feet. The mine is situated near deep water and not very far from St. John city. In fact, there is reason for believing that we have in New Brunswick what will prove to be a silver mine of great value. Further particulars will be furnished at an early day."

Chignecto Post Sep. 25, 1879 Silver in New Brunswick.- The SUN says; There is no longer any doubt of the existence of silver in our New Brunswick rocks, and in paying quantities. We have been shown during the past twenty-four hours some samples of silver bearing quartz, which at a distance of only twenty or thirty feet from the surface produces, by careful assay, about 20 oz. silver to the ton and about 30 per cent. lead; and it keeps improving as the shaft is sunk. The ore-streak has been uncovered to a width of six feet. The mine is situated near deep water and not very far from St. John City. In fact, there is reason for believing that we have in New Brunswick what will prove to be a silver mine of great value. Further particulars will be furnished at an early day."

S.J. Globe - Aug. 5, 1884 Some of our citizens have been exploring a silver mine in Musquash Bay and have uncovered a 12 in. seam of pay ore. The lode, we are told, is well defined, the location is first class in every respect and from the appearance of the ore it is expected that it will prove a bonanza to the owners. The ore is Argentiferous galena carrying

URN: 0550 / IDX_Names: Loch Alva;

Kings County Record - Feb. 3, 1955 ADVERTISEMENT: A New Brunswick Mining Project. -- A group of Saint John businessmen, whose names are well known in the province, some time ago decided toundertake mineral exploration and development in New Brunswick. They took the initial financial risk. They subscribed a substantial sum and in search of a promising mineral showing they were fortunate in securing a copper discovery of good grade, with surface samples running up to 14.85% copper. At present prices this grade represents approximately $89.00 per ton. To protect this showing some 6,000 acres of ground surrounding it was staked or otherwise acquired. The next logical step was to hire a mining expert and the services of Mr. Carl Bischoff were acquired. Mr. Bischoff is a graduate mining engineer, who has had years of experience with copper, notably with Noranda Mines Limited, highly successful operators in the Rouyn and Gaspe area of Quebec. Mr. Bischoff has completed a geophysical survey, a modern method of locating orebodies and highly successful elsewhere in New Brunswick. The results of this survey will permit the engineer to pin point the most likely ares for early trenching and diamond drilling. The company starts with a good copper discovery, amply protected by claims, all expenses paid and in good standing. It has engaged an experienced mining engineer. It has carried out the geophysical survey and it is now proceeding with the logical steps to outline an orebody. Loch Alva Mines Limited (No personal liability) Not subject to Call 123 Princess Street Saint John, N.B. New Brunswick"
